14. In the programs which the President has sent down to the Congress in recent years, and which he has sent again this year, there are hundreds of items for education

in foreign countries, which include payments to teachers. There is a strange contrast between what we do for foreign countries and what is denied to our own people.

15. If the President of the United States wishes to veto the bill, that is his responsibility. We need a bill designed to meet with the needs of the country, rather than designed to please the President or to fill the needs of any political party or political group.

I have done all I can do. The rest is up to you. You and your fellow representatives must go on from here. Yours is a great responsibility, for you and you alone can solve to a great degree the problems and troubles that now face and will continue to face our public schools.

Sincerely yours,

JOHN A. SCOTT.

CEDAR RAPIDS, IOWA.

Growth of Co-ops

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call attention to an editorial which appeared in the Wall Street Journal of January 22, 1960, as follows:

THE GROWTH OF CO-OPS

The Nation's co-ops are under heavy attack in Congress right now—and properly so—on the ground that they don't pay their fair share of taxes. They have spread into manufacturing and processing—in direct competition with business that must pay the corporate tax rate ranging up to 52 percent.

They weren't always like that. When the co-ops first started, they were usually small groups of farmers who got together to buy equipment that one farmer alone couldn't afford. Or they bought big amounts of seed and fertilizer and so got a bigger discount than one farmer alone could get.

But it wasn't long before they began to branch out into other businesses besides farming. The way it worked was this: The co-ops avoided taxes on their earnings by issuing periodic certificates stating the individual's share of the earnings. The courts held these certificates were not taxable to the members since they had no determinable market value. So the profits made by the co-ops were reinvested in other enterprises. And the members received ever larger notices of their earnings—taxable only when they were cashed in.

Good deal, no doubt. But not a very good deal for all the other taxpayers, including the companies the co-ops were in competition with. So Chairman MILLS of the House Ways and Means Committee is going to work on a plan to force the co-ops to pay more taxes.

But what the growth of the co-ops also reveals, it seems to us, is man's ingenuity. They didn't really begin to grow into combines of all sorts of businesses until somebody discovered there was a legal tax dodge attached to the deal. They're certainly not alone in this; a great many other facets of the economy have their own built-in tax avoidance schemes. The co-ops, to that extent, are only a manifestation of one of the things that's wrong with the country today.

And what's plainly wrong is that the Government takes so much of the average man's earnings away from him that any man in his right senses is going to try legally to beat the tax collector.

We hope this study of co-ops will reveal that eternal truth to Congress. Maybe then they'll decide that patching up the tax structure won't do nearly as much to end tax avoidance and tax evasion as less Government spending and lower taxes.

The Development of Public Economic Awareness

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 9, 1960

Mr. MACK of Washington. Mr. Speaker, the Washington State Junior Chamber of Commerce, through its State committee on governmental affairs has launched a well-thought-out and constructive campaign for a balanced budget and sound fiscal policies at all levels of government—local, State and Federal.

It is a Jaycee creed that "economic justice can best be won by freemen through free enterprise" and that the free enterprise system can only be preserved and made more effective by sound fiscal policies.

The Washington State Junior Chamber of Commerce members hope that others will join them in this crusade for a balanced budget and lowering of tax structures to the end that free enterprise, which has made the United States the strongest and most prosperous Nation in the world, will continue progressing to ever greater achievements in the future than already have been attained.

The program of the Washington State Junior Chamber of Commerce appealed to me as so impressively constructive, that I asked E. Woodford Wayland, chairman of the Jaycee's State committee on governmental affairs to write a paper for me on this Jaycee program so that I might have it printed in the CONGRESSIONAL RECORD. My hope is that other organizations throughout the Nation will join the Washington Jaycees in their patriotic crusade to balance the budget and promote sound fiscal policies at all levels of government—local, State, and National.

Mr. Wayland's paper on the Washington State Jaycee program follows:

THE DEVELOPMENT OF PUBLIC ECONOMIC AWARENESS

(By E. Woodford Wayland, State chairman, project governmental affairs, Washington Junior Chamber of Commerce, Longview, Wash.)

In the State of Washington, an impact has been made on the public's awareness of the national economic plight in the short span of a few months. The publicity received from a planned program on public awareness and its effects has resulted in various favorable comments as well as the suggestion by the Honorable RUSSELL V. MACK, Member of Congress, that the program be outlined so that other areas and communities might be inspired to do likewise.

The response obtained has been achieved through the efforts of the young men of the Junior Chamber of Commerce and in Washington State, as part of the National Jaycee governmental affairs project. Such a project is open for any organization to develop and is one in which any individual may participate. The success of any organization with this type of project is dependent upon its members' ability to face the issue and see its quiet but damaging approach and presence. In the Washington State Junior Chamber of Commerce, more and more young men are accepting their responsibility to safeguard the Nation's economic welfare with the same determination that they used during the past hostilities to safeguard our Nation's physical existence. These same men realize that they have more at stake than any other age group. They are extremely interested in the perpetuation of the free enterprise system and they do not wish to see the economic growth of the Nation stunted by unnecessary tax burdens or detrimental fiscal decisions. It is for these reasons that considerable effort has been expended by the Jaycees in a short period to create awareness among its membership and the public of the urgent need for economic counterweapons such as a balanced budget, a sound fiscal policy for our economy, and a fair, equitable method of taxation.

The method followed by the Jaycees in presenting the program to the State up to the present time has been through the use of resolutions, proclamations, mailings, and direct contact. First, a resolution was introduced to and passed by the Longview, Wash., Junior Chamber of Commerce in December 1959. A copy of the resolution was mailed to the more than 90 Junior Chamber of Commerce chapters in the State of Washington with the notification that the resolution would be submitted to the State organization at their April 1960 convention meeting and that each chapter would have to vote on the submitted resolutions. This action obligated every club to give thought to the facts contained in the resolution. The resolution is as follows:

"Whereas the Jaycee creed contains the statement 'That economic justice can best be won by free men through free enterprise;' and

"Whereas the greatness of the United States of America is a direct result of the free enterprise system and the basic American idea of freedom of opportunity; and

"Whereas an integral part of the free enterprise system is the incentive provided by the opportunity afforded to every individual to make of himself what he will, and to prosper in proportion to his success in taking advantage of the economic opportunities which are available to everyone in our American way of life; and

"Whereas the present income tax laws of the Federal Government tend to stifle economic progress under the free enterprise system, to discourage individuals from putting forth maximum effort, investors from continuing to provide the capital necessary to the development and growth of private business and to thereby stunt the economic growth of our country: Be it therefore

"Resolved by the Longview, Wash., Junior Chamber of Commerce at Longview, Wash., this 3d day of December 1959, That the said member organization go on record in favor of Federal legislation to reduce the basic income tax rate from 20 to 15 percent and to correct the inequities of the present income surtax rates in such a manner that the right to healthy economic growth is preserved for the present and future generations of American citizens; be it further

"Resolved, That the said member organization urges the balancing of the Federal budget and the adoption of all possible practices which will tend to make the operation

of government on every level more efficient and economical."

This resolution was followed up by a statewide mailing to local chapters, the receipt of requested informative literature from the Jaycee national headquarters, publicity in the State Jaycee newspaper, and the personal encouragement of Jaycee officers.

The next task was to convey thoughts concerning the national fiscal policy to the public. A visit with our State Governor, the Honorable Albert D. Rosellini, revealed to us his interest in our project and our concern for the national fiscal policy. In helpful cooperation with our organization the Governor declared the week of January 24 through 30, 1960, as Jaycee National Balanced Budget Week throughout the State of Washington and issued a public statement:

"A STATEMENT BY THE GOVERNOR

"Inflation is a result of our Nation spending more than its revenue. A balanced budget is important because if the Government does not live within its means, every American suffers.

"Our public debt has increased to $285 billion at the start of fiscal 1960 in comparison with the total smaller debt of $237 billion of 67 free world countries including England, Japan, Canada, and Australia, and 7 Soviet bloc nations.

"It is important not to stunt the future economic growth of this country and the actions, opinions, and desires emanating from each State of these United States has a pronounced effect upon the determination of the national fiscal policy.

"Now, therefore, I, Albert D. Rosellini, Governor of the State of Washington, do hereby call to the attention of the people of this State the week of January 24 through 30, 1960, as Jaycee National Balanced Budget Week in the State of Washington and further call upon the people to encourage Congress to effect a program of efficiency in Government and to operate within the national budget for the purpose of limiting and reducing the national debt."

Publicity was then released throughout the State to newspapers, radio stations, and television stations on the Balanced Budget Week and a second and separate proclamation was issued to all Junior Chamber of Commerce chapters for local use. Each chapter was urged to have the Mayor of its community to proclaim a local Balanced Budget Week, using the second proclamation. This proclamation read as follows:

"Whereas a dire need presently exists in our National Government for a return to a sound and practical economy; and

"Whereas one of the most rational means to achieve this worthwhile goal is to balance expenditures with revenue; and

"Whereas the Junior Chamber of Commerce of this city recognizes action must be taken to alleviate the economic threat to the welfare of our democracy; and

"Whereas it is the responsibility of each citizen to inform his elected representatives of his views on matters involving public finances.

"I, _____ _____, do hereby proclaim January 24–30 as Jaycee National Balanced Budget Week in the city of _____ and urge all citizens to take an active interest in the economics of their State and Nation."

The issuance of the State and local proclamations occurred at a time when they could be most effective. Congress had just convened and public thinking was directed towards the Federal Budget.

In reviewing the project to date, the largest single problem has been the complacency of the average citizen towards our economic health. A second problem is that a silent, camouflaged enemy is difficult to fight. Its presence is much like a cloud saturated with inflationary dollars, located above an already drenched area, waiting only to be mistakenly seeded with further deficit spending and unnecessary public expenditures before doing permanent and unestimateable damage.

The assistance of Governor Rosellini, Representative Mack, the mayors, the news outlets, and National Jaycee Chairman Carman E. Kipp, and others has been most helpful to the Washington State Junior Chamber of Commerce in creating public awareness. The U.S. Junior Chamber of Commerce, since its founding, has been instrumental in preserving and promoting our inherited way of life and is privileged, once again, to stand up and be counted, this time in a vital role of restoring our Nation's high standards of economy, the heart of our American heritage.

Return the Farmers to a Free Supply and Demand System Without Disrupting Normal Marketings

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. PELLY. Mr. Speaker, I have been receiving the answers to questionnaires I sent out to a cross section of the people of my congressional district. I felt it incumbent on me to find out their opinions on a number of issues that may well be considered this session of the Congress.

As yet, I have not had a tabulation made, but on the farm subsidy question I did get a count on the first thousand returns which came back to my office.

The question asked was: "Do you favor reduction of agriculture price supports?"

This sample count of the 1,000 returns resulted as follows: 907 replied yes that they were favorable to a reduction in our farm support programs; 93 replied no they were against such a reduction. So the ratio is about 9 to 1 in favor of reduction in agriculture price supports.

In a conversation with our colleague from Oregon [Mr. NORBLAD] he furnished me with the percentage of his constituents who expressed their views on this same subject of farm price controls in a recent poll he conducted. Since his congressional district is more rural than mine I would expect a variation in viewpoint. However, Mr. Speaker, the tabulation of the gentleman from Oregon [Mr. NORBLAD] showed 75 percent of those responding to his questionnaire as opposed to farm controls with 20 percent being favorable to price supports and 5 percent undecided or not taking any position.

An interesting feature of this Oregon poll was that of those who marked their questionnaires saying they were farmers more than a majority said they were against the price-support program.

Speaking of polls, Mr. Speaker, the April 1959 issue of Farm Journal contained the results of their readers' vote. A majority of these farmers voted for the complete elimination of all support prices and controls. An overwhelming majority voted for a reduction of present high support programs. I understand the Farm Journal's circulation of more than 3 million covers all parts of the country.

Another periodical, the Farm and Ranch Magazine published in Nashville, Tenn., in its July 1958 issue gave its readers' views based on a survey. Eighty-seven and one-half percent were in favor of farming being returned to a free supply-and-demand system as soon as possible with minimum Government control. Twelve and one-half percent were against return to a free supply-and-demand system.

I might mention the Farm Journal once more. Earlier this year there was inserted in the CONGRESSIONAL RECORD an article published in the Journal by John Strohm. He had sent questions to agricultural economists at every one of 49 land grant colleges.

What did these experts say in their replies to Mr. Strohm?

According to him 4 out of 5 economists said:

Any laws further hamstringing the free market will hurt the farmer, the consumer and the Nation.

Another of their conclusions was:

The law of supply and demand is not out of date—there is no substitute for the free markets.

Since introducing H.R. 10350 to repeal price-support subsidies and to provide for the disposition of the Commodity Credit inventory without disrupting normal marketings, I have received much and widespread support.

Hereafter are three letters, one from the East, one from the Middle West, and one from the South, which speak for themselves:

WM. CALHOUN HOPE,
PUBLIC RELATIONS,
New York, N.Y., February 16, 1960.

Hon. THOMAS M. PELLY,
Old House Office Building,
House of Representatives,
Washington, D.C.

DEAR MR. PELLY: I wish to take this means of congratulating you upon the introduction of your bill H.R. 10350, which calls for the abolition of price supports and the disposition of the CCC's surplus agricultural commodities through donations to nations friendly to the United States, etc.

To my way of thinking, this is the most sensible farm bill that has been introduced in Congress during the current session, and I certainly do hope that you will be successful enough to steer it through to a point where you can force the House Agriculture Committee to hold hearings on it. I am confident that, once you can get it to the hearing stage, you will find many people that will come forward to testify in favor of it.

I greatly enjoyed reading the grassroots opinion concerning your bill which appeared in the CONGRESSIONAL RECORD on page A1227.

Sincerely,

WM. C. HOPE.

FEBRUARY 13, 1960.

Hon. CONGRESSMAN PELLY,
U.S. House of Representative,
Washington, D.C.

Hon. CONGRESSMAN PELLY: It was interesting to read your discussion of the farm program in the February 10 issue of the CON-

GRESSIONAL RECORD. Without question, your bill is the answer to the present farm plight, but the big problem would be in convincing other Congressmen. We have a small group in our county and they are deeply interested in supporting you on this program. If there would be anyway in which we can assist in this matter, we will certainly do what we can. We hope you are able to get this before the people and Congress.

Respectfully yours,

JAMES L. TAYLOR.

WATFORD CITY, N. DAK.

OLYMPIA, WASH.,
February 14, 1960.

Representative THOMAS M. PELLY,
House of Representatives,
U.S. Congress,
Washington, D. C.

DEAR REPRESENTATIVE PELLY: I commend you for your recent action with regard to farm price supports. It seems to me that legislative action such as you have proposed is long overdue.

Certainly, the farm subsidy program must be termed, by any reasonable standard of judgment a fiasco. It is a fiasco not only from the point of view of folly compounding folly, but also from the point of view of a culture which has not yet attained maturity in its judgment. How else can one interpret the stubborn persevering in obeisance to a pressure group? I suppose this perseverance reflects the awareness of a specter from the past—namely, a declining agricultural system which directly affected the economy of the Nation. Can it be said with any truth, however, that the health of the agricultural system now has direct and large correlation with the health of the economy as a whole? What has been written and said about the industrial complex and the rapid improvements in technology belies such an idea.

One of the things that disturbes me most, however, about the continuance of the price support system which obviously offers so many opportunities for abuse, is the implication of governmental duty that it seems to carry with it. This is a moral question, it seems to me. When one segment of the population has managed to maneuver itself into a position where it regards itself as indispensable, the next step seems to be the attitude that governmental beneficence should shine brighly and unceasingly. There should be no element of risk involved or any intermission in continuously high profits—so it is implied. This, I think it can be shown, often leads to individual and cultural deterioration of the worst and most destructive order. I do not mean to say that obstacles, per se, produce progress and positive advantages; the removal of all obstacles and the shifting of responsibility to a collective and financially bottomless "they" are certainly deplorable, however.

I shall follow congressional reaction to your bill with interest. I think it deserves applause and active support.

Yours sincerely,

EUGENE H. SMITH.

The U.S. Missile Miracle

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. FULTON. Mr. Speaker, last evening I had the pleasure to be a guest at the third Dr. Robert A. Goddard Memorial Dinner, which is held annually in connection with the National Missile/Space Conference in Washington, D.C.

The conference is sponsored by the National Rocket Club and companies in the missile space business, and has as its objective the promotion of policies, programs and legislation to keep the United States in high position in science, research, and development, as well as operational aeronautics, missiles, and space fields.

In the 2-day conference this year there were four panel presentations on the space challenge—its philosophy, legislative aspects, outlook, and a final one regarding space products. I was privileged to participate in the panel on space philosophy, and would have participated in the one on legislation, but duty kept me at hearings of our Science and Astronautics Committee.

As a member of this committee, and as a Member of the Congress of the United States, I am calling to the attention of my colleagues and fellow Americans, the fine address by one of our top military-spale men, Lt. Gen. Bernard Schriever, at the Goddard Memorial Dinner of the Conference.

A LESSON IN DEMOCRACY

(By Lt. Gen. B. A. Schriever, commander, Air Research and Development Command to the National Rocket Club Goddard Memorial Dinner, Washington, D.C., February 17, 1960)

Mr. Chairman, members of the National Rocket Club, ladies and gentlemen, one associated with research and development usually speaks to the future and I have always attempted to put into practice the policy never to look back. On the other hand, honors are usually based on past accomplishments and tonight is honors night. Only a few are publicly honored, and for that matter, even recognized. This is doubly true when there exists a popular image of a "missile mess" and interservice rivalry. I hope, therefore, in some small way this evening, to dispel these misconceptions. If I can bring a little more recognition and appreciation to the many thousands of men and women who have labored so hard in the arena of our national missile program—then I will feel well rewarded for my effort tonight.

I am grateful for your invitation to be with you this evening. I am grateful because it affords me a most welcome and timely opportunity to report to you—and through you, to the American people—on a few thoughts—backed by a few simple facts—about our missile program—and what these facts mean to me.

U.S. AIR FORCE—AEROSPACE POWER FOR PEACE

It is most appropriate that I report these facts to the membership of the National Rocket Club. Your members are in the forefront of our Nation's effort to probe the frontiers of space. We share the same deep sense of inner satisfaction and accomplishment now that we are seeing yesterday's space flights of fancy become today's space flights of fact.

I would hope that the facts that I present this evening—and their meaning—will give renewed strength and courage to any of our citizens who may have grown doubting and faint-hearted about our Nation's ability to compete with Communist Russia. The confusion resulting from the claims and counterclaims concerning our intercontinental ballistic missile program, could have a disturbing effect.

In setting forth my thoughts, and the facts, I will not belabor you with the uninteresting—and well known—details of recent ancient history. Rather, I will tell you of "The Missile Miracle" which has occurred in this country in the past 5½ years. It is a miracle wrought by tens of thousands of dedicated men and women—throughout the length and breadth of the Nation—who have labored round-the-clock to "beat-the-clock." Theirs has been an all-out effort in the Nation's interest. Many of these men and women are in this audience tonight. It is to you and to your colleagues—in science, in industry, and in the military services—to whom high praise and great credit must go for having been the principal architects and builders of this "Missile Miracle." The miracle could not have taken place, if it had not been for the imaginative and daring work done by Dr. Robert H. Goddard and his inspired followers.

You are all well aware of the so-called thermonuclear breakthrough of 1953, which resulted in our scientists telling us that it would soon be possible to carry thermonuclear warheads of very high yield in relatively small packages. This breakthrough made the intercontinental ballistic missile both feasible and a mandatory weapon for our deterrent force structure.

You are also well aware of the fact that in February 1954, Dr. John von Neumann and his colleagues—representing the best scientific and technical brains in America—told the Air Force that an operational intercontinental ballistic missile could be achieved by this country in from 6 to 9 years, provided that an all-out development effort—with the highest national priority was initiated immediately.

Acting boldly and decisively on the recommendations of the Von Neumann Committee, the Air Force immeditely embarked on an all-out development effort to give this Nation an operational intercontinental ballistic missile in the shortest possible time that technology would permit.

On September 1, 1959, the Department of Defense announced to the American people that the Atlas ICBM had become operational. This was just a little over 5 years from the time that the accelerated ICBM program had gotten underway and beat the most optimistic forecasts of the Von Neumann Committee.

On September 9, 1959, a completely operational ICBM was launched by an Air Force Strategic Air Command crew from Vandenberg Air Force Base in California. Lifting from its launch pad, this missile flew its planned trajectory over the full intercontinental distance and struck its intended target with pinpoint accuracy.

In addition to beating the schedule, I can tell you tonight that the achievement of our Atlas missile in reliability, range, accuracy, and destructive power far exceeds the most optimistic estimates laid down by the Von Neumann Committee in 1954 and 1955. At that time it was the consensus of the scientific community that—if all went well—the first operational ICBM's might have a reliability of 50 percent. The Atlas missile today has a reliability very much greater.

Likewise, at that time the most optimistic range hoped for by our scientists was 5,500 nautical miles. The actual range of the Atlas ICBM today is in excess of 7,000 miles.

Last but not least, in 1954 the attainment of a 5-mile accuracy was considered a very logical goal. The accuracy of the Atlas missile today is within 2 miles of the target. I wish to point out in this connection that the accuracy I am citing is not that of a single fortuitous shot. Rather, and significantly so, it is the statistical average achieved by 15 consecutive launches of the Atlas missile. In these launches accuracy and reliability were the primary objectives.

Those of you who have participated in rifle-match competition can appreciate the full significance of this accuracy when I say to you that it is comparable to that of the expert marksman who places 15 consecutive

shots in a 4-inch bull's-eye at a range of 300 yards.

To understand what all this really means in our competition with Communist Russia, we need to consider where we stood in the development of long-range missiles in 1954. At that time our ICBM program was still primarily a research and study effort. It employed only about 300 people on a full-time basis. Long-range test facilities and the necessary missile industry were virtually nonexistent. This was largely due to two reasons. First, a practical demonstration of the thermonuclear principle did not occur until November 1952, when there was detonated a hydrogen device, which, together with the equipment necessary to insure its explosion, weighed many tons. Second, even with intensive and continuing research and development by the AEC, the practicability of packaging a nuclear device of high enough yield and low enough weight to make the ICBM a feasible and militarily useful weapon system, was not established until the winter of 1953–54.

To come from these meager beginnings to where we are today, the Nation had literally to lift itself by its bootstraps. A "business-as-usual" approach would not have brought us even within striking distance of our goals. Unprecedented actions had to be taken—and were taken.

In less than 5½ years, a multimillion-dollar nationwide missile and space-vehicle industry has been created. Today, over 100,000 people are working full time, to bring into the operational inventory our Atlas, Titan, Thor, and Minuteman missiles. Tens of thousands of people also are working on the U.S. Navy's Polaris missile, together with its nuclear-powered submarine base, and on the Jupiter missile developed under the stewardship of the Army. Countless thousands of other American citizens are supporting this nucleus of full-time workers. Moreover, the missile industry rests on a solid foundation. More than a billion dollars worth of vast and complex test facilities, production plants, and fully instrumented missile and space-vehicle test ranges, extending thousands of miles across the Atlantic and Pacific Oceans, have been brought into being.

As the ICBM development program has progressed, the Air Force at every step of the way has had the continuing advice and counsel of the most eminent scientists and engineers in the country. Their guidance has insured the soundness of the technical and management judgments and decisions which were made.

Here indeed is a demonstration of democracy at its best—of democracy recognizing what had to be done in the face of the Communist challenge, and acting forthrightly and decisively to do it.

In this connection, we should bear in mind that the Soviets are an internal power and, as such, had a very important requirement for short-range missiles. Immediately after World War II the Soviets confiscated the German V-2 missile plants. These plants were moved to Russia, where ballistic missile development was immediately begun with the assistance of German nationals who were dragooned into the Soviet service. Since that time starting with short-range missiles the Soviets have been engaged on a high-priority ballistic missile design, development, and production program of ever-increasing scope and magnitude.

As a consequence, at the time of our thermonuclear breakthrough, the Soviets already had a vast development, test, and production base in being, and a significant lead in the field of missilery.

Therefore, when we initiated our own accelerated ballistic missile development programs in 1954, we established the tightest possible time schedules.

These schedules laid down for the Atlas program in 1954 and for the Thor and Jupiter programs in 1955, have been exceeded. The Navy's Polaris missile program, which was the outgrowth of a joint Army-Navy effort on the Jupiter in 1955, is making excellent progress. The Air Force Atlas and Thor missiles and the Army-developed Jupiter missile are in production. The Navy's Polaris is expected to become a part of the deterrent power of the United States later this year. The Air Force Minuteman missile is scheduled to be in the force in significant numbers around mid-1963.

As this great scientific—industrial—military team has grown, and as it traveled the historic and difficult road which has led this Nation to the point where it is today—in terms of operational strategic ballistic missiles and a going scientific and production base—the successes and triumphs have been generously mingled with frustrations and failures. These mixed ingredients are common to any great human endeavor. We just happen to publicize our failures. But who among us would want to exchange our free press for the selective editing that goes on behind the Iron Curtain?

Speaking of failures, as you will recall, less than a year ago there were five consecutive Atlas failures. At the same time, though small attention was given to the fact, we also had our four consecutive successful Titan launches. There was much debate then as to the wisdom of continuing with the Atlas development. The panic button pushers were out in full cry, calling for the cancellation of the Atlas program in favor of Titan.

Today, in contrast, we have had 19 consecutive successful Atlas launchings and the Titan has been having some difficulty. So now the shoe is on the other foot. I have not the slightest doubt about the soundness of the Titan program. I have complete confidence that we will meet our operational date. With the recent successful flight of the complete Titan as well as previous flight tests, all its systems, including the nose cone, guidance and control, structure and propulsion, have been proved to be of sound technical design.

Our job now, as in all development programs, is to establish reliability.

I would therefore, sound a note of caution to those who have doubts and concerns as to the Titan program. Any disruption or degradation of the Titan development program, at this stage, could well have adverse consequences for our national security. I say this because the Titan ICBM has for over 3 years been programed to fill a vital role as an integral part of our deterrent force structure in the critical time period—1962 and 1963. Therefore our national security demands that we press forward with the greatest urgency on both the Atlas and Titan programs.

In looking back over the past few years I have made many strong and fast associations with my fellow workers in our great missile endeavor. The glue which binds these associations has been adversity—more so than success. The explosion of a missile on the stand, or shortly after lift-off, is a bit of death in the life of all those participating. Since I have had the opportunity to meet so very few, I would like to take this opportunity to pay public tribute to the many men and women who, with the high motivation and selfless devotion to the principles which have made this Nation great, have indeed wrought a missile miracle. In so doing, they have demonstrated to the world that our democracy, with its private enterprise system and a free people, is equal to any challenge which the Communists may pose.

What I am trying to say to the many who have met the challenge when the going was toughest has been stated most eloquently by a great American and a great competitor, President Theodore Roosevelt, who said:

"It is not the critic who counts—not the man who points out how the strong man stumbled—or where the doer of deeds could have done them better. The credit belongs to the man who is actually in the arena, whose face is marred by dust and sweat and blood, who strives valiantly, who errs and comes short again and again, who knows the great enthusiasm, the great devotions, and spends himself in a worthy cause, who, at the best, knows in the end the triumph of high achievement, and who, at the worst, if he fails, at least fails while daring greatly, so that his place shall never be with those cold and timid souls who know neither victory nor defeat."

Missile Gap Controversy—II

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the concluding two articles of the series written by Ray Cromley on the current discussion over our defense position. These two articles appeared in the New York World Telegram and Sun on February 10 and 11, 1960:

[From the New York World-Telegram and Sun, Feb. 10, 1960]

BUILDING '60 ROCKETS CALLED DANGER TO U.S. DEFENSES

WASHINGTON, February 10.—Jumping in now to close the possible missile gap of 1962–64 would seriously endanger the security of the United States.

Likewise, if the Russians built all the 1960-type ballistic missiles in 1960–63 that U.S. estimators think they're capable of, Nikita Khrushchev would be endangering his own defense position.

This is the startling private thinking of some of the top U.S. defense men. It is the reason why current U.S. missile production will be relatively small in 1960–62, until new type missiles are ready.

This is the reason why there are some men in the Pentagon who now think that a real missile gap may never develop.

LOOKING BACK

To understand this reasoning we have to go back a few years.

Take the air war in Korea. The Russians had concentrated on jets. The United States was far behind. The Red Mig was so good that they mass produced it. There was a "plane gap." The Russians had a lot of these modern planes. The United States didn't. But by leapfrogging the Mig-15 type plane the United States produced smaller numbers of a better plane, and the air battle in Korea was lopsided in our favor.

U.S. military men believe this lesson was not lost on the Russians.

Again look back several years. There was great furor in the United States that Russians were producing a huge intercontinental bomber fleet. The men who now forecast a missile gap, were forecasting a bomber gap with thousands of superior Russian bombers ready in a few years.

The United States tried to meet that gap, and built a large number of intercontinental bombers, hurried continental defenses at great expense.

NEVER DEVELOPED

But the Russian threat never developed. The Reds decided to leapfrog into missiles. The United States ended up with a considerable supply of intercontinental bombers which quickly were obsolescent.

In top U.S. military circles this Russian bomber red herring is now regarded as one of the major Russian victories—wasting U.S. production and effort in a blind alley.

Now these defense planners see the same pattern developing. They see Khrushchev speaking loudly about how many missiles he is producing.

But while Mr. K. talks, they notice two things:

He is improving his conventional army, navy, and air force in quality. He is producing more conventional weapons, not fewer.

He is not—so far at least—stepping up his missile production sharply. Nor is there evidence that he is planning to do so.

NO EVIDENCE

If Khrushchev were going to produce a great quantity of 1960-type missiles, he'd have to already have started a vast program of missile bases. So far there has been no evidence of this.

But whatever Khrushchev does, U.S. planners think they've learned the lesson of the Korean air battle and intercontinental bomber race.

So, U.S. strategists want to leapfrog today's old-fashioned intercontinental ballistic missiles. They want to turn out only as many liquid-fueled Atlases and Titans as they must in order to get by.

For these missiles with their fixed and well-advertised locations will soon be sitting ducks for Red sneak attacks. They're cumbersome and expensive. They're not versatile. They tie the United States to a vast network of expensive soon-to-be-obsolete type of missile bases.

If turned out in large quantities, they would tie up a great portion of U.S. military effort and organization on weapons and base capable of doing only one job in one way.

The strategists instead aim at jumping right to a new generation of superior ballistic missiles—the solid-fueled Sky Bolt, Minuteman and the advanced Polaris.

These are highly mobile. They get away from the fixed maginot line type of defense. The 5,000-mile-plus Minuteman can be put on railway cars. The 1,500-mile Polaris fits on subs. The 1,000-mile Sky Bolt will nest neatly on B–52's and B–58's.

These new missiles can't be zeroed in by Soviet intelligence men and knocked out on the first lick. They are relatively cheap and can be produced quickly in large numbers. They can do a variety of jobs.

As one defense man puts it:

"If we concentrated on the Atlas and Titan closing the gap now, we'd be condemning ourselves to certain inferiority later. This we can't afford.

"It's not just expense. Once you get a big program like that in motion—bases, men, weapons, electronics—it's hard to turn the juggernaut around. And you find yourself committed to a defense that just isn't quite good enough."

[From the New York World-Telegram and Sun, Feb. 11, 1960]

REDS' FUTURE PLANS KEEP UNITED STATES WORRIED

(By Ray Cromley)

WASHINGTON, February 11.—Regardless of what they might say in public, the top Defense Department strategists are mightily worried that th Soviet Union may overtake the United States in military strength.

But the periods that worry them most are not the ones now being spotlighted. They are the years right after the so-called "missile gap years" are past—1966–67–68–69.

It's not the number of Russian intercontinental ballistic missiles that concerns the military men in looking ahead to these critical years. It's the expected quality of the nextgeneration Red ICBM's.

NOT THE SIZE

And it's not the size of the Soviet Army. It's new Soviet weapons not yet developed for the infantry, for space operations, for the Red navy.

All signs point to whole families of radically different Russian weapons that may come to fruition in another 6 to 9 years.

These will include some of the following weapons projects now under forced draft research by Khrushchev's orders:

A fantastic piloted boostglide bomber that would escape U.S. radar. It would maneuver so adroitly that electronic spy satellites would be hard put to chart its course in advance. This eventually would develop into a space bomber.

A maneuverable intercontinental missile—already theoretically possible—in 6 to 8 years.

New lightweight infantry weapons that would give the individual Russian GI an astounding amount of fire power. A whole series of new missiles for the infantryman.

A new family of highly mobile artillery for the front line troops which would give Soviet Army divisions several times the useful fire power and mobility of American divisions. These projected advances are over and above the current "more artillery" and "more mobility" drives.

Unconventional ammunition—for the infantrymen and for artillery—that would damage wider areas more severely than conventional ammunition.

A widespread underwater surveillance network comprised of a radically new type of detection equipment. It would enable the Russians to pinpoint the locations of U.S. Polaris-firing submarines and other warships and to track them underwater from extremely long distances.

A method of using electromagnetic waves to destroy the effective use of U.S. communications, navigation, reconnaissance and early-warning satellites in operation.

A new series of nerve, disease and psychological gases and fine dusts that could be effectively sprayed by Red planes sweeping at high altitudes across great sections of the United States or fired in by ballistic missiles based in Russia or on submarines.

Long-distance methods for disrupting conventional U.S. radio communications in order to confuse American defenses as a preclude to Soviet attack.

PUSH OBJECTIVES

Not all these projects will be operational in the 6 to 9 years. But some will. The Russians have concentrated heavy teams of scientists to push these particular objectives in an attempt to beat the United States to the punch with new weapons.

The Russians are reorganizing sections of their industry. Crash teams of scientists and engineers quickly exploit breakthroughs when they appear and seek to translate them quickly into actual weapons.

U.S. teams are working on most of these same projects. But there is evidence the Russians are putting in more concentrated effort. Russia is not spending more on research and development than is the United States. But too much of the U.S. effort is devoted to refinements. A great deal of the Russian research is devoted to attempting radical new approaches to defense weapons.

"Something startling and unpredicted could come out of this type of research at any time," says one Pentagon technical man wryly.

Capitol Hill

EXTENSION OF REMARKS
OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. HÉBERT. Mr. Speaker, under leave to extend my remarks, I include the column "Capitol Hill" from the much respected publication Navy—the Magazine of Sea Power for February 1960.

This article is, I believe, of very timely significance, as it discusses the importance of Secretary of Defense Thomas S. Gates' memorandum to the Joint Chiefs of Staff of December 29, 1959. As the article points out, the Gates Joint Chiefs of Staff memorandum is of historic importance in the history of defense organization in this country. By that memorandum, Secretary Gates announced his policy of personally sitting with the Joint Chiefs of Staff during consideration of any matter in disagreement.

This action by the present Secretary of Defense has received widespread acclaim within Congress and in the press. Also, it was the subject of a resolution by the Veterans of Foreign Wars of the United States commending Secretary Gates for his leadership in strengthening the Joint Chiefs of Staff and the principle of civilian control.

This article contains the most thorough analysis that has come to my attention concerning the contents and meaning of Secretary Gates' memorandum to the Joint Chiefs of Staff. I think that after Members have read this article, they will realize that strong enlightened leadership such as that provided by the present Secretary of Defense can make far greater contributions to defense efficiency and organization improvement than is possible by mere changes in organization charts. I commend the article to the attention of Members of the House.

Also, I am including a copy of Secretary Gates' memorandum of December 29, 1959:

CAPITOL HILL

On December 29, 1959 Secretary of Defense Thomas S. Gates, Jr., in his typical businesslike fashion, signed a memorandum to the Joint Chiefs of Staff. This memorandum, issued without the publicity buildup and fanfare which has so often accompanied Pentagon pronouncements, is already being hailed as perhaps the most important step taken with respect to defense organization since the Department of Defense was established in 1947.

The Gates JCS memorandum was a relatively short and very understandable document. In it Secretary Gates notified the Chairman and members of the Joint Chiefs of Staff that he desired to be informed when disagreements begin to develop on an issue in the Joint Chiefs of Staff. Upon being informed, he told them, he and/or the Deputy Secretary of Defense would then thereafter sit with the Joint Chiefs of Staff when the issue in disagreement was under consideration by them.

By so doing, Secretary Gates went directly to the heart of some of the most important problems affecting national security and the survival of this Nation. By his action he did the following:

(a) Asserted in a meaningful manner civilian control over military policy.

(b) Contributed to increased efficiency, effectiveness and promptness of JCS planning, deliberations and policy formulation.

(c) By strengthening the JCS system, cut much of the ground out from under the complaining critics whose only solution to everything they don't like in U.S. defense matters is the establishment of the defeated, disproven, discredited and alien single chief of staff system.

(d) Demonstrated what sound defense thinkers on Capital Hill have long contended—that strong, intelligent leadership in the Defense Department can do many constructive things to improve defense organization within the statutory framework of existing defense laws.

Congressional reaction to the Gates JCS memorandum has been unprecedentedly favorable. In private and public statements, Secretary Gates' action has been lauded by both Democrats and Republicans. One of the most highly respected authorities on defense matters in Congress is reported to have expressed the following opinion of the Gates JCS memorandum: "I consider Secretary Gates' action to be the most far-reaching, fundamental, overdue, and constructive step taken by a Secretary of Defense since the establishment of the Department."

By his JCS memorandum Secretary Gates makes what could be a contribution of historic importance, not only to the Department of Defense but to our form of government itself. The constitutional principal of civilian control of the military is something with which everyone agrees but about which many disagree when it comes to the practical application of these principles. Perhaps the greatest danger to the continuing and meaningful existence of civilian control of the military has been the lack of a simple and effective organizational device for keeping the civilian Secretary informed and in contact with top military policymaking. Until issuance of the Gates JCS memorandum the Secretary of Defense normally was not a participant of the policymaking procedure in the JCS. He waited until either the JCS forwarded an agreed position or the members became irretrievably frozen in disagreement. However, under the new Gates procedure, the Secretary of Defense henceforwurd will not be remote and isolated from the most vital military planning matters. By sitting with the JCS members during consideration of a problem on which there is some disagreement among them, the Secretary of Defense avails himself of the means to be informed as to the background and can gain a firm feel of the problem in disagreement. Thus, any future Secretary of Defense—and it must be assumed that rarely again will there be one who has served such a long apprenticeship as has Secretary Gates at various levels of the Defense Department—will be the beneficiary of a system by which he is immediately brought into intimate association with the information concerning the matters he must decide. It will keep the civilian authority from being remote and isolated. It will assure effective civilian control because it will make the civilian authority knowledgeable.

There are also two other important points covered by the Gates JCS memorandum. For some time defense observers on the Hill have felt that the JCS was under too much Pentagon pressure to agree and avoid presenting split papers to the Secretary of Defense for decision. This process of unanimity for the sake of unanimity was recognized on the Hill as a weakening feature of policymaking. Secretary Gates, in his JCS memorandum, recognized forthrightly that the very nature of matters before the JCS makes it reasonable and understandable that occasional differences of opinion will exist. There is no doubt but what this attitude by the Secretary of Defense will go far toward giving the Nation better defense plans. Also, in keeping with principles of strong and enlightening leadership, Secretary Gates stated in the JCS memorandum that he would make himself available to the chiefs of services individually for consultation and that such consultations would take top priority in his schedule.

Thus civilian and military authority and ability are both enhanced by bringing them closer together at the proper point in the formulation of defense policy.

THE SECRETARY OF DEFENSE,
Washington, D.C., December 29, 1959.

Memorandum for the Chairman, Joint Chiefs of Staff.

Subject: Organization of the Joint Chiefs of Staff and Relationships with the Office of the Secretary of Defense.

Reference: (a) Department of Defense Directive No. 5158.1.

You will recall that reference (a) assigns the responsibility to the Chairman of the Joint Chiefs of Staff for "Keeping the Secretary of Defense informed on issues upon which agreement among the Joint Chiefs of Staff has not been reached, and forwarding to the Secretary of Defense the recommendations, advice, and views of the Joint Chiefs of Staff, including any divergencies."

It is logical to assume that occasional divergencies in views will continue to be experienced within the Joint Chiefs of Staff. In view of the fundamental nature of matters which come before the Joint Chiefs of Staff for study, such divergencies are understandable. It is important, however, that such problems be resolved promptly in order that orderly planning may proceed and, where required, prompt action taken.

It is requested that I be promptly informed regarding any issue on which a difference of opinion is developing within the Joint Chiefs of Staff. I intend that either the Secretary of Defense and/or the Deputy Secretary of Defense will promptly meet with the Joint Chiefs at such times as they consider the issue in question. This procedure will insure that I am fully informed on the problems involved with a view to effecting their resolution in the most expeditious manner possible, and, where necessary, bringing the matter to the attention of the President for his decision.

I would like to emphasize, however, that the above procedure should not be interpreted as precluding any member of the Joint Chiefs of Staff from bringing to my personal attention any matter affecting the Joint Chiefs of Staff or an individual service. I look upon such discussions as matters of the highest priority within the Department of Defense and will gladly make time available in my schedule for such meetings regardless of any other schedule I may have.

THOMAS S. GATES.

Education Aid Dilemma

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the February 11 issue of the La Grange Citizen, a community newspaper in my district is, I believe, a most thought-provoking commentary on the subject of Federal aid to education, and I am including it in the RECORD for the consideration of my colleagues:

EDUCATION AID DILEMMA

How do you compromise your worries regarding Federal aid to schools, with your recognition that only through Federal aid is there assurance that all children in the United States will have at least a sound basic education?

A national committee of economists and businessmen has made the compromise by recommending Federal aid only where States are not financially able to provide facilities needed for adequate education.

Throughout America we have worked ourselves into this educational support dilemma by adhering to the original theory that each community provide the educational facilities for its children. Until the tax burden on real estate property reached the "straw on the camel's back" stage we did little to shift the financing to a broader basis.

During the past several decades there has been increasing admission that the State should supply the education fundamentals. Now there is admission that States, at least some States, will not be able to provide the necessary school facilities unless Uncle Sam helps out.

This trend toward broader base financing of education is recognition that no community can escape the evils arising from poor or mediocre education in any other community. U.S. population is so fluid there no longer is immunization through isolation.

The fear that Federal aid might mean Federal control of education is well founded. The distribution of funds from Washington could very easily be determined to favor those communities that comply easiest and with least resistance to Federal dictates.

A Bill To Provide Pay Increases for Postal Workers and Other Federal Employees

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. HOLTZMAN. Mr. Speaker, I would like to say a few words in behalf of our postal workers and our other Federal employees, who are seeking an increase in salary to offset the increasing cost of living.

I have supported legislation in the past which has given these public servants well-deserved pay increases, and shall support legislation to that effect at the present time. Several bills have been introduced on this subject, and I am introducing a companion bill today, which carries the same provisions as the Morrison bill.

In addition to providing for an upward adjustment in the compensation of our postal employees, the bill will also apply to other employees of the Federal Government.

Much has been said in the past, and will be said in the future, of the need for passage of such legislation. The de-

valuation of the dollar, the continuing spiral of living costs—these are some of the fundamental reasons for supporting legislation of this nature. Over the years the salary level of Federal employees has not kept pace with the increases granted those in private industry. Many workers have been forced to take on extra jobs in order to make ends meet. In so many instances wives of Federal employees have had to seek work to supplement the family income in an effort to provide the bare essentials.

I hope that the Committee on Post Office and Civil Service will see fit to approve this legislation without any undue delay, and I urge my colleagues to support it when it reaches the House floor for consideration.

Connally Amendment

EXTENSION OF REMARKS
OF

HON. WILLIAM M. TUCK

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. TUCK. Mr. Speaker, under leave granted me to extend my remarks in the Appendix of the RECORD, I include copy of statement made by Hon. W. C. "Dan" Daniel, member of the House of Delegates of Virginia, from the city of Danville, before the Senate Committee on Foreign Relations on Wednesday, February 17, 1960. Mr. Daniel is a distinguished Virginian and American and is an authority on sound constitutional government. He is serving at present as a member of the Virginia Commission on Constitutional Government and is past national commander of the American Legion. Commander Daniel's statement is as follows:

STATEMENT OF W. C. "DAN" DANIEL, MEMBER OF THE VIRGINIA COMMISSION ON CONSTITUTIONAL GOVERNMENT, BEFORE THE SENATE COMMITTEE ON FOREIGN RELATIONS, WEDNESDAY, FEBRUARY 17, 1960

The United Nations Charter provided for the establishment of an International Court of Justice of 15 judges to be employed in the settlement of international disputes. To make the United States subject to this Court, the now senior Senator from Oregon, Mr. MORSE, introduced a resolution declaring that these United States would be bound by the Court's jurisdiction in all legal disputes hereafter arising concerning (a) The interpretation of a treaty; (b) any question of international law; (c) the existence of any fact which, if established, would constitute a breach of an international obligation; (d) the nature or extent of the reparation to be made for the breach of an international obligation, provided, that such a declaration shall not apply to (a) disputes the solution of which the parties shall entrust to other tribunals by virtue of agreements already in existence or which may be concluded in the future; (b) disputes with regard to matters which are essentially within the domestic jurisdiction of the United States.

Although domestic matters were ostensibly excluded from the Court's jurisdiction, no guide or line of demarcation was established for determining which matters were international and which were domestic. This would have left it for the Court to decide its own jurisdiction. To blunt this sword pointed at the very heart of our Nation, the Connally amendment was adopted, adding six words "as determined by the United States" to section (b) of the proviso. It meant simply that we reserved the right to say whether a matter involving our Nation was one of international or domestic concern. This is such an obviously sensible limitation that argument in support or defense of it would seem superfluous were it not for the fact that a number of persons of considerable public prominence urge its repeal.

Briefly, their arguments in favor of abridging this safeguard to our national sovereignty seem to be that the nations of the world are not using this International Court as a means of settling their differences (I understand the Court has had fewer than a dozen cases since it was created) and that this situation is attributable to the fact that other nations have followed the example set by us in the Connally amendment. These exponents of "one worldism" take the position that the United States cannot be trusted to decide the question of jurisdiction fairly, but that we can trust the World Court to make the proper decision for us—that is, that we can rely with confidence upon the World Court not to infringe on our domestic concerns. Also, we are told that if we make this basic, possibly fatal, cession of sovereignty, others, including the Communist countries, will be shamed into doing the same, and then we will have a world ruled by law instead of by force.

This latter is, of course, utter nonsense. I doubt if anyone in this room really believes that a dedicated Communist can be shamed into anything, certainly not into giving up any position of strength he may occupy. A Communist has no conscience in the sense we know it; his only shame comes in failing the Communist cause of world domination. But it seems hardly necessary to argue this particular point. If the administration or the Congress had any real confidence in the effect of moral or legal suasion or of world opinion on the aggressive aims of communism, I doubt if the arguments being made in these very halls on virtually every major issue—defense, education, welfare, budget, etc.—would be so intimately and repeatedly tied into the strength of our national posture in relation to Russia and China. No, gentlemen, you know that until God puts love and charity foremost in every heart, the safety of the world is more dependent on the strength and freedom of the United States than on anything else. The difficulty seems to be that apparently some have been misled as to the extent of the risk involved in repeal of the Connally amendment.

For a court decree to have any binding or peacemaking effect, it must be accepted by the parties affected. Acceptance comes in only two ways, either voluntarily because the parties, particularly the unsuccessful ones, feel that the preservation of law and order is more important than their own selfish desires; or else, because the court has the power necessary to force acceptance. Little need be said concerning the futility of placing our hopes for world peace on the first of these. For those nations which are willing to subordinate selfish aims for the peace of society as a whole, the world does not need a court; diplomacy will suffice. For the others, well, I am sure you can imagine just how far Messrs. Khrushchev, Mao Tze-tung, or even Castro would go in voluntarily acceding to a distasteful court decree.

This brings up the matter of the establishment of an international military force of sufficient strength to enforce decrees of this Court against any party. The ultimate necessity for this is so obvious that the groundwork has already been laid within the United Nations.

Here, then, is the question: Are the Senators willing now to agree that we will either voluntarily obey—or that international troops may enter these United States to enforce—decrees of this Court concerning our labor, racial, financial, and who knows what other domestic problems? I think not. "But," say the "One Worlders," "this is an unfair question; the Court's jurisdiction extends only to international matters—domestic matters are excluded." How weak must be their perception, how short their memories.

Whether these problems would come within the jurisdiction of the Court, once the Connally amendment were repealed, would depend on nothing more than the Court's own interpretation of such words as "essentially," "domestic," "international," "any," and "obligation.". Quite obviously, the judges' respective interpretations would be colored by their background, purposes and ideology. Many things that we think of as being of strictly domestic concern might well be of international concern to a majority of the members of the Court whose political views are entirely different from ours. Indeed, would it be reasonable to expect such a Court—being the creature of the United Nations—not to give a broad interpretation to those international obligations—that is the word used in clause (c) of the World Court resolution—set forth in that biggest of all treaties, the United Nations Charter. For example, subsection (a) of article 55 makes it an obligation of member nations to promote: "higher standards of living, full employment, and conditions of economic and social progress and development."

After all, judges, like other men, have a natural tendency to aggrandize those institutions with which they are connected.

This is nothing new. For example, you will search in vain for any provision in the U.S. Constitution granting the Federal Government the right of eminent domain. Except for the fifth amendment, the only provision on this subject is found in section 8, article I, which reads in part as follows: "* * * and to exercise like Authority over all Places purchased by the Consent of the Legislature of the State in which the Same shall be, for the Erection of Forts, Magazines, Arsenals, dock-Yards, and other needful Buildings * * *."

For a number of years, the Federal Government observed this apparent limitation and the States condemned the land for it. Being federally minded, however, the Supreme Court had decided by 1875 that this was not a good limitation on the Federal Government and so simply held that any government as big as the Federal Government naturally had its own right of eminent domain. The constitutional phrase dealing with the consent of the State bothered it not at all—the court merely moved it over to modify the phrase "exercise like authority" instead of the word "purchased."

Regardless of whether we think it was right or wrong, it is common knowledge that the meaning and scope of the "general welfare," the "interstate commerce," and the "necessary and proper" clauses, among others, have been stretched beyond all possibility of recognition by those who adopted them. And you have seen matters of purely State concern at the time the 14th amendment was adopted—and so pronounced repeatedly for some 70 years by the highest courts in the land—changed overnight into matters of Federal concern. The wording of the Constitution remained the same. Later members of the Supreme Court simply decided that they did not like its initial meaning and so changed it. Indeed, the members

of our highest Court have substituted their own notions of right and wrong in place of once plain constitutional provisions to such an extent that the chief justices of the several States, in conference assembled, felt compelled to censure them in unprecedented fashion.

The point is this. If interpretations can expand and change so with judges of the same nationality and with a common legal and political heritage, how much stability and respect can we expect a polyglot international court to exhibit with regard to the scope and meaning of such words as "domestic concern" and "international concern"? And need I remind you again that the United Nations Charter was adopted as a treaty. Under article VI of our national Constitution a treaty "shall be the supreme Law of the Land, and the Judges in every State shall be bound thereby."

One of the principal reasons this great legislative body was created was to act as a special guardian for the basic rights of this country, its individual States, and the people therein, and to guard against precipitate or emotional legislative action. It is my sincere hope that you will live up to that purpose in this connection and kill any attempt to repeal the Connally amendment.

Address of Hon. Harold W. Prehn, Assistant Commissioner, Federal Housing Administration

---

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. WIDNALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of former Assistant Federal Housing Administration Commissioner Harold W. Prehn made to the members of the National Committee of Section 608 Owners at its last annual meeting in New York City.

As a member of the subcommittee on Housing of the Banking and Currency Committee of this body, I have a continuing interest in the economic soundness of the apartment houses built under section 608 of the National Housing Act during the emergency veterans' housing program.

I am pleased to note that in the Federal Housing Administration's latest annual report, FHA multifamily housing losses are about six one-hundredths of 1 percent, which is truly an excellent record. This certainly indicates that FHA is carrying out the purposes of the National Housing Act with success.

On the other hand, I am advised by Carl L. Shipley, general counsel for the National Committee of Section 608 Owners, that members of that trade association are becoming concerned about increasing competition from single family dwellings insured under section 203 of the National Housing Act, and from other FHA programs.

In the National Housing Act, Congress has sought to meet the reasonable housing needs of the Nation. I believe we are succeeding. However, the basic standard in the National Housing Act is economic soundness.

The Commissioner of FHA is not permitted under the law to insure mortgages or multifamily dwellings which are not economically sound.

In my opinion it would not be in keeping with the spirit of the law to overbuild or create destructible competition among FHA insured projects. As a Member of Congress, I cannot imagine that the American taxpayer would approve of any such program.

I believe the speech of former Assistant Commissioner Harold W. Prehn is worthy of serious study by other Members of Congress and interested persons in the industry and in other agencies of the Government. His remarks follow:

REMARKS OF HON. HAROLD W. PREHN, ASSISTANT COMMISSIONER, FEDERAL HOUSING ADMINISTRATION, BEFORE THE NATIONAL COMMITTEE OF SECTION 608 OWNERS, OCTOBER 1, 1959, AT THE HOTEL COMMODORE, NEW YORK CITY

Mr. Chairman, Mr. Shipley, distinguished guests, members of the National Committee of Section 608 Owners, I am pleased and honored to have been invited to make a few brief remarks to you today. The past 2 years I have come to know your chairman, James Blanchard, and your general counsel, Carl Shipley, very well. They are in constant touch with me and members of my staff on management of section 608 projects, as well as 207's and other multifamily housing built with mortgages insured by the FHA. While I cannot always agree with their recommendations, I can assure you they are strong advocates in behalf of the members of this trade association.

Before talking about some of the industry finance operations in the early years I want to say a word about the FHA.

You will recall that the FHA was established in 1934. It was originally financed with funds advanced by the Government. Since 1940 all FHA operating expenses have been paid from its insurance funds, and all the capital advanced by the Government to finance operations in the early years has been repaid to the U.S. Treasury. At the present time our capital and statutory reserves amount to $551.5 million, all of which has been built up from income.

As of our last annual report, the FHA had written an aggregate sum of $45 billion of insurance, of which $5.4 billion was written on multifamily housing projects with some 711,000 living units. Our losses on the total amount of all mortgage insurance have amounted to less than twelve one-hundredths of 1 percent. We think this is an extraordinary record showing the basic soundness of all of the FHA programs. As you know, under the law, the FHA will not insure a mortgage unless it is convinced of the economic soundness of the proposed project, except where FHA has no choice in the matter as in certain urban renewal areas or on military housing. (Some war housing.)

Now let me turn to the section 608 program. During the period of 1942-50, when the program expired, more than 7,000 apartment houses with over 465,000 dwelling units were built. Although most of these projects were a part of the veterans emergency housing program, they were well built with many garden-type projects and most of them were located on land which has appreciated in value over the years as building sites in urban areas have become harder to find. Not long ago I was interested to read that the inventory of rental housing is little changed in number from 1950. A census in that year showed 19.7 million rental occupied dwelling units. Reports from an updated inventory indicated rental occupancy to be a little more than 20 million. Thus, while over 9 million owner-occupied dwelling units came into the market between 1950 and 1958, the rental component of the market remained almost unchanged. Thus, the competitive position of 608's with comparatively low construction costs and low interest rate loans, is improving monthly.

Of course I know you have problems and if I didn't Jim Blanchard and Carl Shipley would soon make me aware of them. For example, some 608 projects are growing older and mortgagor-owners fear that they are confronted with a serious obsolescence problem. We are giving serious consideration to this problem. We have directed all of our field offices to broaden the base for determining the eligibility for refinancing existing section 608 and section 908 mortgages under the provisions of section 207, to restore projects to a competitive position by eliminating obsolescence or by adding new equipment and betterments. We realize only too well that the competitive position of some rental housing projects may become impaired through obsolescence of their design, functional plan, or equipment. In these circumstances, we have advised our directors that it will be prudent to give consideration to well conceived plans for capital improvements including the installation of updated equipment such as air conditioning, designed to restore a project to a more favorable position in the rental market. To be eligible for such refinancing, proposals must involve a substantial alteration or betterment of buildings or equipment calculated to restore the income potential of the property. We cannot refinance, pursuant to section 223, simply to defray the cost of a deferred maintenance program or to meet a deficiency in the reserve for replacements fund.

Another problem with which we are grappling is the handling of replacement reserves. Some mortgagees are reluctant to invest these funds, despite the fact that the mortgagee certificates provide either that the mortgagor-owner can deposit cash or bonds, which the mortgagee must accept, or that the mortgagee must invest the funds at the request of the 608 owner. Whenever this matter is brought to our attention, we try to correct it.

Some 608 and 207 owners feel that the FHA policy on withdrawals from the replacement reserve is much too restrictive. I have not reached any conclusions on this point. Obviously, the replacement reserve fund is necessary to build up a capital reserve with which to replace stoves, refrigerators, and other items which are wasting assets and become exhausted or worn out with the passage of time. On the other hand, it may be that in some instances our policy is too rigid. At the present time consideration is being given to the advisability of suspending the reserve payments where the amount on deposit is substantially equal to an accumulation of 144 monthly deposits and the fund is maintained at a prescribed minimum level.

Recently, some of you have become greatly concerned about vacancies in 608 projects which allegedly are caused by competition from FHA insured, single family dwellings. We are concerned about the vacancy rate in the Midwest and Southwest. One of our reports in June indicated that the national vacancy rate in FHA insured rental properties has increased from 3 to 5.4 percent in the past year. As you know, 608 projects were processed on the basis of 93 percent occupancy and a 6½-percent return. Therefore, the overall picture is better than we anticipated when these projects were built. However, I know there are individual vacancy problems which are very serious. These are of great concern to us. However, we do not have enough information at this time to tell whether or not these vacancies are caused by competition from other FHA projects.

I want to assure you that I have the greatest possible concern with maintaining the economic health of 608 projects. This means that we must have an effective maintenance program, and our rent ceilings must be reasonable so that a fair return can be earned by the owners. Our replacement reserve policy must be reasonable, and we certainly would not want to insure elderly housing, relocation housing, 207 apartment housing, military housing, or single family dwellings in any area where they must draw their occupants from 608 projects or other FHA-insured projects. I cannot conceive of any of our underwriters approving new housing in areas suffering a high vacancy ratio where the effect of new construction would be to create vacancies in existing FHA-insured residential property. We still have almost $3 billion of contingent liabilities in the 608 program, and all we can do is lose money if these projects suffer vacancies because we overbuild with single family dwellings or rental properties in the same market. We are looking into this problem and if any of you have any information corroborated by facts and other reliable evidence, I will certainly be happy to receive it. Even under the new housing law just passed by Congress, a $15,000 home requires at least a $600 downpayment and the monthly payments on the mortgage will amount to approximately $86. When you add in telephone, utilities, and the other monthly expenses, you can see that even this modest single family dwelling will cost $125–$150 a month. Further, you must bear in mind that many families who once occupies 608's have children, need more space, and must move into suburban areas in single family dwellings. However, we will not depart from our basic standard that every 207 project mortgage insured by the FHA must be on a property which is economically sound, and to me that means a property which fills a need in the market and does not simply transfer tenants from one FHA project to another. We do not intend to insure project mortgages if the result is to overbuild.

In closing, let me say I am glad to have the opportunity to be here with you. I think the National Committee of Section 608 Owners is making a valuable contribution as a trade association. I congratulate you, mortgagor-owners of 608 projects, for your serious and continued interest in the properties you own. We at FHA are always available to discuss any problem which has as its purpose strengthening the 608 program. Thank you.

Acts of Desecration of Synagogues and Other Places of Worship

---

EXTENSION OF REMARKS

OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 10, 1960

Mr. BRADEMAS. Mr. Speaker, I am deeply gratified that on February 2, 1960, the House of Representatives unanimously passed, by a vote of 392 to 0, a resolution expressing the profound sense of indignation and shock felt by Congress at the recent acts of desecration of synagogues and other places of worship.

I am proud to have joined with a number of my colleagues in the introduction of this resolution. On February 1, 1960, I expressed the reasons for my strong support of action by Congress to condemn these ugly acts of desecration.

We in America must demonstrate to the peoples of the world by word and deed our profound belief in religious liberty and our profound hostility to religious bigotry.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Harry Macy, Jr., of Florida.
Miss Priscilla E. Mitchell, of Indiana.
Miss Sandra A. Nelson, of New Jersey.
Donathon C. Olliff, of Alabama.
Gerald G. Oplinger, of Pennsylvania.
Miss Alison Palmer, of New York.
Frederick J. Plotrow, of New York.
Allen Van Potts, of Utah.
Anthony C. E. Quainton, of Washington.
Thomas J. Roesch, of Ohio.
David Rowe, of Maryland.
Thomas J. Scanlon, of California.
Miss Marilyn M. Shepherd, of North Carolina.
Richard W. Smith, of New York.
Roger A. Sorenson, of Utah.
Frederic N. Spotts, of Massachusetts.
Dirck Teller, of Maryland.
Richard S. Thompson, of Washington.
George R. Trolles, of Ohio.
Gary L. Vyne, of Arizona.
Raymond J. Wach, of Ohio.
John D. Whiting, of Wisconsin.
William B. Whitman, Jr., of Illinois.
Roderick M. Wright, of California.

Arthur J. Laemmerzahl, of New Jersey, for appointment as a Foreign Service officer of class 8, a vice consul of career and a secretary in the diplomatic service of the United States of America. (This nomination is submitted for the purpose of correcting an error in the nomination as submitted to the Senate on August 4, 1959, and confirmed by the Senate on August 12, 1959.)

The following-named Foreign Service Reserve officers to be consuls of the United States of America:

Martin H. Armstrong, of Washington.
Willard B. Devlin, of Pennsylvania.
John A. Noon, of Maryland.
Edward Stansbury, of Connecticut.

Richard P. Mitchell, of Pennsylvania, a Foreign Service Reserve officer, to be a consul and a secretary in the diplomatic service of the United States of America.

The following-named Foreign Service Reserve officers to be vice consuls of the United States of America:

Maurice J. Gremillion, of Texas.
Russell S. Hibbs, of Missouri.
F. Raymond Senden, of California.

The following-named Foreign Service Reserve officers to be secretaries in the Diplomatic Service of the United States of America:

Richard T. Akins, of California.
Edwin U. C. Bohlen, of Maine.
G. Stanley Brown, of Oklahoma.
James P. Burke, of Maryland.
William A. Campbell, of California.
Harold C. Champeau, of Maryland.
Thomas J. Flores, Jr., of New York.
Joseph E. Lazarsky, of Virginia.
Robert D. Murphy, of Maryland.
Oliver M. Silsby, of Maryland.

The following-named Foreign Service staff officers to be consuls of the United States of America:

Roger K. Ackley, of Maryland.
Arthur C. Bartlett, of Connecticut.
William L. Green, Jr., of North Carolina.
Preston Valien, of Tennessee.

U.S. ARMY

The following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in rank as follows:

Maj. Gen. John Albert Dabney, O16602, U.S. Army, in the rank of lieutenant general.

The following-named officers under the provisions of title 10, United States Code, section 3066, to be assigned to positions of importance and responsibility designated by the President under subsection (a) of section 3066, in rank as follows:

Lt. Gen. James Edward Moore, O15650, Army of the United States (major general, U.S. Army), in the rank of general.

Maj. Gen. Earle Gilmore Wheeler, O18715, Army of the United States (colonel, U.S. Army), in the rank of lieutenant general.

Appendix

Big Bend National Park

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Friday, February 19, 1960

Mr. JOHNSON of Texas. Mr. President, for several years the eyes of vacationing Americans have been turning toward Big Bend National Park, in southwest Texas. Now the New York Times has devoted a special feature article to this vast and intriguing land which promises to become a mecca for travelers who respond to the call of the great outdoors. I ask unanimous consent that the article, which appeared in the February 14, 1960, issue of the New York Times, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHERE THE WEST IS STILL UNTAMED—BIG BEND NATIONAL PARK ON RIO GRANDE IS FOR THE HARDY VACATIONIST

(By Henry N. Ferguson)

BROWNSVILLE, TEX.—Tucked away in a remote corner of Brewster County in southwest Texas is Big Bend National Park. This 700,000-acre wonderland of great gorges, mountain peaks and broad mesas is approximately the size of Rhode Island. Lying at the bottom of the huge pocket formed where the Rio Grande dips deep into Mexico, this region is in a more nearly primeval state than perhaps any area of similar size in the entire country.

Through its passes Comanches and Apaches used to travel on their way to raid Mexican settlements. Cattle rustlers, smugglers, fugitives from justice, early Spanish explorers, and modern treasure seekers have probed its ancient secrets.

On November 21, 1955, Douglas McKay, who was then Secretary of the Interior, spoke eloquently of this scrambled region when he dedicated it as a national park. "The Big Bend country has a record of violence dating back hundreds of millions of years," he said. "These very mountains are products of the time when the earth twisted in an agony of upheaval and volcanic explosions."

The marvelously carved straight walls of the flame-colored canyons in the Big Bend country had their beginning back in the shadowy past, when the sea that had covered the central section of western America was beginning to dry up. As the Rocky Mountains started their slow push toward the sky, a thin trickle of water emerged from the ancient ocean of mud.

For millions of years, the slender stream that would one day be known as the Rio Grande flowed toward the sea. It worked unhurriedly at its task of cutting chasms 2,000 feet deep through this area. Today Boquillas, Mariscal, and Santa Elena canyons offer some of the most superb scenery in the United States.

LAND IS FORBIDDING

This is a wild, mysterious and forbidding land. As one native caustically remarked: "It is a country that promises more and gives less than any place I ever saw. There is nothing in these mountains that does not have claws or thorns or a sting to it."

And it is true. The creamy white blooms of the flowering sotol and the gorgeous coloring of the blossoming lechuguilla are eye-catching in their beauty. But the precipitous slopes and wide mesas are also clothed with masses of prickly pear and cacti that seem to take a sadistic delight in stabbing the unwary tenderfoot.

Marathon, on U.S. 90 about midway between San Antonio and El Paso, is the eastern gateway to the park. The first thing the traveler must remember, as he turns south from Marathon on U.S. 385 toward the park, is that he is in big country. It is still 40 miles to the park boundary, 69 to the next station, 79 to his destination in the basin of the Chisos.

He enters the park at Persimmon Gap, in the Santiago Mountains. The road at this point follows the old Comanche Trail into Mexico. The visitor is already more than 1,000 feet lower than at Marathon.

At this point it is well to recall that the Chisos and other mountains in the park, while having a stark beauty all their own, are not the same type as found in Colorado and other States. This is desert country where animals and plants must literally fight for their livelihood and very existence. The traveler must seek his green forests and cold mountain streams elsewhere.

As he drives toward the Chisos, the motorist will pass a sign pointing to Dagger Flat, an area of giant yuccas several miles off the main road. Farther down the highway is the fossil bone exhibit at Tornillo Creek. The exhibit shows the fossils exactly as they were found; one of the animals was an ancestor of the horse family.

FANTASTIC FOSSILS

Harold Broderick, park naturalist, points out that Tornillo Creek, a rampaging devil in this land of flash floods, contains many fossils of fantastic size. Archeologists plan to make a thorough study of the area soon.

"It would not surprise me at all," says Mr. Broderick, "if fossils in Big Bend did not outdinosaur Dinosaur." His reference is to Dinosaur National Monument in Utah-Colorado, considered the finest example of fossils in the national park system.

At Panther Junction, at the foot of the Chisos, are park headquarters, and the traveler could hardly do better than meet the park rangers who can do an excellent job of explaining park features.

Three miles ahead is Basin Junction, where the tourist turns for his drive to the basin through Green Gulch and over Panther Pass. The last 7 miles provide a drive that has no equal in Texas, and over terrain that oldtimers said no highway could ever traverse.

Switchbacks take the motorist up to 5,800 feet at Panther Pass, then drop him 400 fee into Basin itself. A peculiar feature of the road is that the visitor gets no view of the Basin lodges until he fairly bursts upon the scene.

The mile-high basin nestles in the shadow of its guardian, 7,300-foot-high Casa Grande, whose color changes each hour of the day as the sun changes. It is not, however, the highest point in Big Bend; Emory Peak is 7,835 feet.

It is because of its attitude that the park makes such a fine summer vacationland. July-August temperatures average a minimum 60 degrees and a maximum 85. It is dry, invigorating air. The park is open all year, camping grounds are free and trailers are welcome. Lowest temperatures are in January and February with minimums of 40 and maximums of 60.

Possibly the strangest phenomenon of all in this arid wilderness of painted rocks and jagged fissures is the presence of an evergreen forest, the habitat of the white-tail deer.

It is understandable that few visitors to Big Bend ever thrill to the soft tuch of pine needles beneath their feet, or even to the distant sight of tall trees. For it is a grueling 8-mile hike up a rock-strewn path that crosses the shoulder of Emory Peak, highest point in the park.

LOAM REPLACES ROCKS

Only after crossing this soaring barrier is the cactus left behind, and one's footsteps pad on soft loam instead of rocks. Then a look toward the heavens reveals a stretch of giant Douglas-fir trees, gathered here to form a lost forest in the midst of a desert.

Good paved roads now carry the visitor to most points of interest in the park. Excellent hiking and riding trails radiate out in all directions from the basin. One of the most popular of these leads up to Lost Mine Peak. There probably has never been a hiker on this trail who did not secretly hope that he might be fortunate enough to stumble onto the lost mine. It has been sought after for the last 150 years.

The window, at one side of the basin, also provides an interesting hike or horseback ride. For those with limited time, there is one trip that is a must. It is to the south rim of the Chisos, an 8-hour round trip on foot or by horseback.

Called the Roof of Texas, the rim is 1½ miles high. Far below, the sinuous Rio Grande threads its way eastward. Beyond the river is a veritable ocean of mountain ranges in Mexico. Most spectacular is the Sierra del Carmen range; at sunset it looks like hundreds of serrated miles of blazing, golden ingots.

BATHED IN SUNLIGHT

Santa Elena Canyon, on the Rio Grande at the western side, is best visited in early morning when sunlight bathes the canyon, making an ideal setting for good color pictures. Canyon walls rise more than 1,500 feet above the river for a scene that many visitors, upon seeing it for the first time, find hard to believe is in Texas.

A side road from Santa Elena leads to Castolon, a small community that was the scene of some action during the troubles with Pancho Villa in 1916–17. While still resembling a private community, Castolon was acquired 2 years ago by the National Park Service, but will not be taken over until 1961. This area is earmarked for future development as a major tourist center.

It was at Castolon that a Houston couple left the main roads in June 1957, to seek adventure in an area where tourists are warned not to enter. After their car became mired in the sand the man died from ex-

haustion and heat; his wife was rescued a few days later from a small cave in which she had found water.

Hot Springs, down in the southeast corner of the park, was visited by the Indians long before the white man came. They knew of the curative powers of the springs and chiseled a giant bathtub out of solid rock, to make it easier to bathe in the healing water.

The thing that will make Big Bend unusually different and attractive for the future visitor is a project to get the Mexican Government to allocate about 1 million acres of equally scenic beauty bordering our park.

Tourist accommodations, operated by National Park Concessions, Inc., range from plain to fancy. The park's cabins are simple but clean, without bath, but adjacent to central shower and toilet buildings. Rates are $5 per night for two, $5.50 for three, $6 for four.

Attractive stone cottages with small patios and featuring wall-to-wall carpets, all-electric heat, and private baths are $8.50 for two, $12.50 for four, $16.50 for six.

John Llewellyn Lewis

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. SAYLOR. Mr. Speaker, once again America has honored the memory of Abraham Lincoln, an exemplary man of God, and an outstanding President. February 12 marked the 151st anniversary of his birth and, as is customary, millions of words have been written and spoken of his life, his deeds, his philosophy, and his speeches, conversations, and letters. While paying tribute to his name on this occasion, we at the same time encourage today's generations to emulate Lincoln's love of his Creator, love of his country, and love of his fellow men. Through the years I have found each February 12 a more enriching and more inspiring experience.

This years I should like to call attention to the anniversary of another great man who has made numerous lasting contributions to the Nation's social and economic welfare. He came into this world on February 12, 1880, a year of many remarkable developments. Charles Francis Brush brought arc lights to Broadway. Thomas Edison invented the incandescent lamp, and George Eastman founded a business of boundless possibilities with his invention of photographic equipment. James A. Garfield was reelected to the House of Representatives, then elected to the Senate, and finally to the White House—all in the same year.

Though the townsfolk hardly realized the significance of the event, the new son who came to the Thomas H. Lewis household in Lucas, Iowa, would someday take his place among the exclusive set of the Nation's immortal citizens. Like Lincoln, John Llewellyn Lewis had to do it the hard way.

As one of eight children, John had little opportunity for formal schooling. He went to work at the age of 12, yet his driving spirit and thirst for knowledge, blended with sound native intelligence, have made him one of the most learned men of our time. His courage, vision, determination, sincerity of purpose, and leadership elevated John L. Lewis to the presidency of the United Mine Workers within two score years of that memorable event back in Lucas, Iowa, in 1880. Then his struggles in behalf of the workers he represented were only beginning, and in the past 40 years he has carried on a relentless crusade that long ago had won for him the acclamation of management and labor alike, that distinguished him as the most remarkable and most respected individual in the history of the labor movement.

Let me read a passage from a famous address:

> Labor is prior to, and independent of, capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed. Labor is the superior of capital, and deserves much the higher consideration. Capital has its rights, which are as worthy of protection as any other rights.

No, that quotation did not come from an oration by John L. Lewis. That paragraph was the product of Abraham Lincoln in his first annual message to Congress. But the spirit of these lasting words has been exemplified in the career of Mr. Lewis.

My home is in the center of a very important mining district. From the time of my childhood I have associated with mine owners and mine workers and their families. For as long as I can remember, the workers and their wives and children spoke of John L. Lewis as they would speak of their own fathers because they had complete confidence in what he said and what he did. And well they might have, for he never made false promises nor relaxed in his life's mission.

And the other workers—I use the word advisedly, because operating a mine requires work and more work, year in and year out, if any degree of success is to be attained in this highly competitive business—those workers called capital were not always so kind and gracious when they spoke of John L. I have heard him cussed up and down, but I never heard anyone ever say, at any time, that John L. Lewis was not sincere and integrious. Get mine owners alone and you would hear Mr. Lewis praised for his brilliance, his straightforwardness, and his determination.

Then the struggle reached its crescendo, and suddenly there was peace and amity. Mine management and John L. Lewis sat down and agreed upon a principle that could and should set a pattern in the other great industries of our Nation. Both houses now sup together as one happy family, with the result that the coal industry is unified in its efforts to go forward with general industrial progress, to share mutually in the products of mechanization, and to demand revision of governmental policies that place coal at an unfair disadvantage in fields of competition.

John L. Lewis has often been called a capitalist, and there is little question that he would have been a most successful and prosperous businessman had he chosen that side of the coal industry, or of any other industry. Without his cooperative attitude toward automation of mining processes, the American mining industry could not have approached the degree of efficiency which has placed it far and above every other mining system in the world. His insistence on making mines safer has had spectacular results, and today and every day the UMWA and coal operators work together in search of continued progress in this area.

At the risk of redundancy, I cannot help but mention the oratorical genius of this outstanding American who will celebrate his 80th birthday on February 12. Demosthenes and Cicero are names synonymous with rhetorical perfection. "On the Crown," a product of the third century before Christ, has endured the test of time, as has Cicero's "I Am a Citizen of Rome," which is of almost the same vintage.

We are to presume that every century had its great speakers—some evangelists, some statesmen, some lecturers, some teachers—and in divers tongues. But the list of outstanding American orators is not extensive. And for this reason John L. Lewis has captured still another niche in the halls of famous men. His capacity, backed by a fabulous vocabulary and a powerful and persuading voice, for drama, humor, and acrimony rank him with such famous names as Patrick Henry, Henry Clay, James Gillespie Blaine, Abraham Lincoln, Robert G. Ingersoll, Henry Ward Beecher, and William Jennings Bryan.

America is proud of John L. Lewis. We wish him many more happy and fruitful years as president emeritus of the United Mine Workers of America.

University of Hartford

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Friday, February 19, 1960

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared, for the information of the Congress and other readers of the RECORD.

We in Connecticut are proud of the rapid development and growth of the University of Hartford.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF HARTFORD

The growth and development of the University of Hartford, in Connecticut, is a noteworthy example of the effectiveness of private initiative in alleviating the shortage of facilities in the field of higher education.

The University of Hartford was formed in 1957 through a combination of three well-established institutions—Hartford Art School, Hartt College of Music, and Hillyer College, including its technical institute—the Ward School of Electronics.

Over 10,000 students are now enrolled at the University of Hartford, Connecticut's largest nontax supported educational institution, advancing their education in the fields of engineering, education, business administration, liberal arts, music, fine arts, and other fields.

Classes at the university are now being held in owned or leased facilities which are widely scattered, principally in the city of Hartford. Through private initiative and private fundraising efforts, 250 acres of land have been acquired on which a modern, fully integrated university campus will be built.

In the 1960 "Report to the People of Connecticut From the Founders of the University of Hartford" there is comment that will interest the American people and point the way toward the solution of one of our most urgent problems.

Alan Tompkins, Dr. Moshe Paranov and Dr. Alan S. Wilson, the administrators of these three colleges respectively, have this to say: "In many parts of the country the great increase expected in college enrollments in the next few years is being viewed with a pessimistic alarm which is certainly not justified. In Connecticut these increasing numbers of young men and women, eager for advanced education, are welcomed joyously for the strength they represent in our State and for the challenge presented by their need for education."

I commend to the Senate the University of Hartford for its forward-looking attitude. Thanks to the leadership of men such as Alfred C. Fuller, head of the Fuller Brush Co., more than $3 million has been raised toward creating a new university campus. A general classroom building and central heating plant are now under construction and another building started by the end of the year is a possibility, according to Austin D. Barney, chairman, university building and development committees.

There are no dormitories in the building plans of the University of Hartford. All money contributed goes into classrooms, laboratory, and other instructional facilities. Students attending its classes commute. They live at home and by so doing they save about 50 percent of the cost of a college education.

In the American tradition is the fact that 70 percent of these students hold jobs in addition to their studies.

To the people of this Nation, the University of Hartford can be cited as an example of America's ability to solve its problems—in this instance the tremendous wave of college enrollments due to our population explosion. At the same time the university stands as a tribute to your young people who, by their own efforts, are determined to secure the benefits of a college education.

In this same founders report, University Chancellor Vincent Brown Coffin states that building a new campus goes hand-in-hand with the educational program. "The second is the more important," Chancellor Coffin said, "but it cannot function without the first."

The University of Hartford, as pointed out by Chancellor Coffin, has 230 founders who are men of leadership within the State. In the Chancellor's words: "They have dedicated themselves to the deep concern shared by most of our citizens that Connecticut shall become an even better place to live." As one of the founders of the university I heartily associate myself with his statement.

It should be of interest to the Members of the Senate and the House of Representatives that such a significant accomplishment has come about in the field of education through private initiative.

Perhaps it can serve as a model for the establishment of other community colleges and universities throughout the land. In this way we may alleviate the critical shortage of facilities for higher education, simultaneously preserving the historic tradition of education free from Government control.

This is America as we all like to think of it: people, young and old, joined in a voluntary effort for the common good.

More Comment on the Farm Problem

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. PELLY. Mr. Speaker, I agree with President Eisenhower when he expressed the view in his recent farm message that the present farm mess is in no way the fault of the farmers. Likewise, I agree with him when he voiced his opinion that present farm policies hurt farmers rather than help them. And especially I agree with him in believing that present farm policies hurt city dwellers, who pay a heavy share of the costs and gain no benefits.

Speaking of the costs, in 1959, as I understand, the Government expenditure for price support programs was $2,850 million and the Commodity Credit Corporation expenditure of $1,537 million should be added to this.

Even more serious than the cost, however, is the dangerous situation which substitutes Federal control over the farmer and political regulation and management for individual enterprise and freedom in the open market.

In introducing H.R. 10350 which would repeal price supports without disrupting normal marketings, I have followed the objectives, at least, as he has stated them, of the distinguished Secretary of Agriculture, Mr. Benson. He has continually asked Congress, without success, to legislate a farm program to move away from acreage and price controls. Frankly, I think I should have talked to the Secretary before my bill went in, but the President's farm message was coming up and it seemed to me timely to get my bill into the hopper. But I am sure even if my bill were amended to only cover wheat it would solve part of the farm surplus problem in an area where no one else has had the answer.

Yesterday, Mr. Speaker, I listened to an explanation by 1 of the 16 sponsors of a plan calling for direct compensatory payments to producers.

Whether such a proposal is called socialistic or a Brannan plan, I can only shake my head and say that to me this type of legislation goes completely in the wrong direction.

In this connection, I offer a view of William Calhoun Hope, of New York, which came in this morning's mail in a sheet entitled "Cotton Comments" issued by Robert Moore & Co.:

Although these identical bills, in their preamble, purport to show that the sponsors are fighting for the farmer by an excessive exhibition of patriotic but unorthodox flagwaving which is carried to an extreme, and declare that "It is the policy of Congress to promote, foster, and perpetuate the family system of agriculture against all forms of collectivization," practically the entire context that follows is built around a pattern of socialistic thinking.

Advocates of a compensatory payments plan, geared more intelligently to a domestic allotments plan for the basics only, will do well to steer clear of embracing such an approach to obtain their objectives. Certainly, if passed, such legislation would be voted by the President but it is highly unlikely that sound-thinking Democrats will allow it to pass.

Furthermore, its complicated language leads one to believe that it is permeated with "legislative sleepers." One such example is that section specifying that its implementation would cost only one-half billion dollars yearly. This cost could easily soar to billions of dollars due to the fact that supports would be mandatory for a myriad of perishables. Inasmuch as it takes 101,139 employees in the USDA to handle the work of that Department—which is primarily concerned with administering support programs on the six basics—imagine the extra number that would be necessary to handle the work that would be entailed for the implementation of this proposed "legislative monstrosity." It would defy the knowledge of the best legal brains.

Returning to the subject of my own proposal to eliminate the farm subsidy programs, I still am receiving every indication that my bill meets with strong popular approval. Here are some grassroots unsolicited comments along this line which I received from various people:

There never has been nor will be a medium to handle surplus other than supply and demand. This political horseplay is leading to a heavier bump day by day. Take it now and get it over with.

A change is needed.

I am worried about what seems to put Big Business into farming and crowd small land owners to the wall.

Did you hear ever of free enterprise? I can't see why I should pay taxes so some farmers can go to Florida in the winter and I can't even take a vacation digging in my garden.

Why not put the farmer back on his own—say where he was prior to World War II. It might be a little tough for a while, but he would eventually make it, and I don't think the banks and insurance companies who hold the mortgages would be too badly hurt. It would create competition, also supply and demand, and would tend to lower living costs, especially foods, and would give the consumer a break. When a working man buys a home to house his family, the U.S. Government doesn't subsidize his job, so why should he be taxed to carry the farmer?

Give American people back the initiative they should have.

Why should we pay twice for the groceries? Let's let the law of supply and demand take over.

An entirely new farm program is needed, one suitable to the 1960's—not the 1930's or the 1880's.

As a war measure it was necessary, but now, I believe the farmer should take his chances just the same as I or anyone else does that risks his capital and time.

It is high time that we let the farmers do the farming. Wo ever heard of paying someone for not producing.

I think all price supports should be removed from the farmers; there is no sense in paying money for surplus production that we cannot get rid of. You seldom see a farmer in the field; many moved to town and a hired man attends to the farm. You see many in California and Arizona in winter, particularly wheat farmers.

A new farm program is badly needed.

I am opposed to any form of subsidy.

Cut out soil conservation programs. Why subsidize anybody that does not take care of their property.

Take them off and let competition decide.

We understand the Representatives are responsible for this incredible farm scandal, subsidies, soil bank, farm support. Put an end to this senseless program. Wish we had more in Washintgon like you.

I've heard of your plan to reduce wheat surplus, and put this wheat farming back on a business basis. We are behind you in this effort.

Clarification of Federal Tax Liens

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, February 19, 1960

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter of transmittal and resolution adopted by the Conference on Taxation, National Tax Association, Houston, Tex., on October 28, 1959, favoring the enactment of legislation which would eliminate the uncertainties and confusion relating to Federal tax liens.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

NATIONAL TAX ASSOCIATION,
New York, N.Y., February 16, 1960.

Re Resolution covering the enactment of legislation to clear up the present confusion with respect to Federal tax liens.

Hon. JACOB K. JAVITS,
U.S. Senate, Washington, D.C.

DEAR SIR: In accordance with the directive of the 52d National Tax Conference held under the auspices of the National Tax Association in the city of Houston, Tex., on the 28th day of October, 1959, I am pleased to forward the enclosed resolution relating to the above-captioned subject matter.

Most respectfully yours,
WALTER W. WALSH,
President.

RESOLUTION, CONFERENCE ON TAXATION, NATIONAL TAX ASSOCIATION, HOUSTON, TEX., OCTOBER 28 1959

Whereas the scope of the Federal tax lien has been substantially broadened by court decisions in recent years consequent uncertainty as to the extent to which the claims of private creditors and State and local governments may be subordinated to those of the Federal Government; and

Whereas the recent situation adversely affects the revenue of States and local governments and innumerable business transactions; and

Whereas the American Bar Association has recommended to the Congress the enactment of remedial legislation; and

Whereas the National Association of Tax Administrators submitted to the Congress in 1957 proposals for achieving greater equity for State and local governments in cases where their claims were in conflict with those of the Federal Government:

Resolved, That the 52d Annual Conference, sponsored by the National Tax Association, urges the Congress to promptly enact legislation which will eliminate the uncertainties and inequities which now arise when there is conflict as to the priority of tax claims of the United States and of claims asserted by State or local governments or private citizens; and

Resolved, That the president of the National Tax Association be and he hereby is directed to transmit copies of this resolution to all Members of Congress of the United States, to the Chief of Staff of the Joint Committee on Internal Revenue Taxation, to the President of the United States and to the Secretary of the Treasury.

Dr. Jerome Kerwin's Address on Government

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent I am extending my remarks to include an address at the 11th annual convention of the Christian Family Movement by Dr. Jerome G. Kerwin, internationally renowned and beloved dean of the Department of Political Science of the University of Chicago. The address follows:

PURPOSE OF GOVERNMENT
(By Dr. Jerome G. Kerwin)

Politics is an interesting occupation. It is interesting to those of us who have devoted our lives to the study of it and who, after many years, particularly during a presidential campaign, can observe and not feel that we'll die if one or the other wins or loses. Too, it has its amusing side because we always hear the same things in different words. We hear the same warnings and the same accusations; we see the same number of threats to sue for libel—no one of these suits has ever been carried out; we see these things happening throughout the campaign and it becomes very absorbing. It's phenomenal when you realize that in a presidential campaign, millions of people, perhaps somewhere up around 3 to 5 million, are engaged in activity. They are purely amateurs and yet they are just as intense as if they were being paid a fortune for their services. Any of you who have had any contact with political headquarters during one of these campaigns, realized the very amateur nature of the performance. You are not surprised when you get three directives in 1 day telling you to be at three different places at the same time. You are not surprised when you go down to headquarters to find several people in hysterics, 3 threatening to leave, 3 already having left and 3 proclaiming victory for their particular faction.

There is no place in the world where people are called upon to act as parts of the Government enterprise more than in the United States of America. Political scientists believe we're called upon too much. They believe we have too many elections; that we could get along with fewer and perhaps more concentrated elections, with a shorter ballot, resulting in a more intelligent choice by the voter. Gradually we are coming around to that kind of reform.

We know that the Government as the agent of the larger unit, the State, has one supreme purpose and that is the promotion of the common good. That common good is not the greatest good of the greatest number; it is the good of all because there is a good that is common to all people and this the political order must promote.

One can think of the Government functions as protective; those functions protect us from outside enemies or inside disorder. One can think of the function of the Government as educative through the law and other means by which it promotes the education of the populace. One can think of the Government as a promoter of morals through maintenance of the natural law. The State is a moral unit and it has a very high purpose as a perfect society. And we can add to the functions of government that which St. Thomas calls making for progress.

So according to the outlook which we have received in our tradition, we cannot say that government is a necessary evil. We cannot agree with those who put that forward as an acceptable proposition. We cannot say otherwise than that government is a positive good for man. You may not like this particular government or that particular government, but we are talking about government in general which is necessary for all men. And as Aristole said "to live without it, one has to be either a beast or a good."

If one considers this high purpose of government as a positive good, one must remember another important fact about it. Trace your history back as far as Roman law. You will note a theory which comes down to us today; government stems from the people. The famous sign that preceded the Roman armies—Senatus Populusque Romanus, "the senate and the Roman people"—indicates the theory of the popular origin of government. From that time on down, the theory was never lost. Government stems from the people.

"I do not mean to say there is not another source as it comes to the people. It is true, as Christianity taught, that all authority comes from God. But at least on the natural level, it comes through the populace. This was understood even in the times of the most absolute monarchies. The monarch simply symbolized the people in their activities. In our own time, with the greater education of the people and the greater the possibilities of making their wills felt, more power has come into the people's hands. Thus in a very definite sense, it can be said that in the democratic order sovereignty inheres in the people. What is this Government supposed to do? Certainly in a general way it is supposed to encourage the people to do what they can by themselves; but what they cannot do for themselves, the Government must do. This means a great deal more in our time than it meant years ago. Those people who think of government functions in the terms of the 18th century are far wide of the mark. Because of our greatly complicated economic and social life, the Government has become a very active, a very large institution; no larger institution exists. This is not owing to any kind of conspiracy. This is a normal development. It is so throughout the whole world.

* * * * *

Whatever the government does—local, State, or Federal—our very lives, our very health, often depend upon this activity. The primary thing is not a manner of taxation; it's not a matter of budget. The government is a spending unit and not a money-making enterprise. We have only one thing to ask—that when money is given, we get a dollar's worth in return for the dollar that is spent. We cannot ask that service of government be deflated to the point where it simply represents the necessities of the 19th century. * * * The services that are given by the government are there by reason of demand.

Take our cities—they maintain educational institutions, social service enterprises, parks, and playgrounds. They are important social service institutions. How did our political machines grow in our cities? By being the great social service institutions that in that day didn't exist. What was the great strength of Tammany Hall? Tammany Hall took care of the poor and those in distress? It took care of the sick. It did many things for people that no one else did. The well-to-do had their means. The middle class had their means. But the vast teaming thousands of the East Side of New York did not.

You have to understand this in considering the 19th-century brand of politics, when political machines were strong. You have to consider what the situation was and that some of our ancestors were benefited by these groups. We have to remember that the poor person coming to these shores, sometimes not speaking the language, wanted a job, wanted help. The only one that could help was the ward leader. That ward leader helped and he never asked any return. He didn't have to say to a person on election day, "vote for this or that candidate." No, he depended upon ordinary human gratitude for this. But it is also true, these organizations did take and they took plentifully from the public purse. That day is gone.

This is the day of a much greater and wider citizen alertness. Political attachment is not so strong any more. In my own boyhood, with certain people in certain sections of the country, one followed his father in politics. I lived for some time in Vermont and so far as the puritan conscience knew of a mortal sin, it was a mortal sin to be a Democrat. And so in the South, in the same way it was criminal to be a Republican. But we note the breaking down of these lines, and the greater independence of the voter, which is all to the good. There is now an alertness that we have not known before. For many years, I took a fairly active part in the politics of Chicago. Maybe it's true, as one of our North Side alderman says, (he's the last of the old school) "Chicago ain't ready for reform yet." Nevertheless, he doesn't realize how the world has moved past him because I knew Chicago in the days when not only ballots, but bullets were used. I knew the day when machineguns were emptied into voting places. I've known the day when the election clerks counted and also marked the ballots. I have known the day when they used to vote all of Chinatown and not a person therein was eligible to become a citizen.

This sort of activity has become less frequently practiced. * * * There is reason for great hope in political life. While at times it seems as if we struggle futilely for this kind of reform or that, we really are getting places. I look forward to the time when it can be said that we do have one of the most enlightened electorates in the world.

We are a little bit short, as yet, in our vision of things beyond the seas. It's hard for us as electors to realize that no longer are we in the United States isolated, and that we have taken upon ourselves all the burdens of a tremendous world power. This we are not as yet fully educated for, but that, too, will come.

It is well to realize too, when one considers the extent of Government enterprise, that the U.S. Government, the central government at Washington, has fewer governmental powers than any other central-government in the world. * * * But there is no central government so limited as the U.S. Government. We sometimes bemoan the loss of power in the States, but the States are three times as powerful today as they were in 1860 because of the increasing functions of Government. We do have a limit on the central government and sometimes the ordinary American wishes, I know, that the Federal Government would do less. At the same time he would like to see the Federal Government given much more power so he wouldn't have 50 different kinds of criminal law, 50 different kinds of law dealing with any number of things. As he passes from one State to another he does not like 50 different kinds of traffic laws and traffic codes and traffic fines variously imposed. But this is a Federal system and we must take it with its inconveniences. The cantons of Switzerland nowhere approach the power of an American State. The Provinces of Canada do not have that power. The states of Australia do not have it. * * * We sometimes feel that with all our popular control, our particular desires are not enacted. The first thing we must remember is that democracy is a system of compromises. It's a compromise of the wishes of various groups. It's even a compromise in its selection of our candidates. No one always gets all that he wants. If one regrets this too deeply, and I know people who do, they may end up as pure cynics. I mean the person who says at election time, "Why, I don't find anybody who represents me or what I like." No, you never will find anyone with whom you agree 100 percent. Very often it is a matter of taking the virtues of this candidate and the virtues of that candidate and striking an average. That's what you have to do in this system of ours. We are unlike the French, who have to have a political party for every individual's wish and you see what they get. We have in this country the two-party system, which is a great unifying force. It brings together peoples of various areas and simply says: "For the sake of the party there must be compromise so here is our platform." The platform, of course, doesn't mean a great deal. But at least when it comes to the actual congressional action, well then, of course, there must be action. And it is the wise kind of give and take in legislative action that gives us such a stable society. This is the sign of political maturity. We don't run to the barricades when our desires are frustrated.

Any group in this country that does not know the process of give and take is in for a beating. This is my fear, with respect, to the medical profession. Having adopted a slogan, "socialized medicine," they may resist every suggestion for lifting the high cost of medicine from society. In the history of our country whenever opposition to needed reform has been too subborn, whole sale popular pressure brings far more extensive reform than even the most liberal person contemplated.

* * * * *

You simply cannot dam up these pressures where reform has become an absolute necessity. You cannot meet a demand for reform with a complete negative. The whole thing comes down to this: what is your suggestion? And the suggestion must be positive and constructive.

But as I say, sometimes we feel that we do not get all we want from our elected representatives. I must admit, thinking of the Congress, this is often true because the Congress is badly apportioned. Nothing can be done about the Senate, it's so fixed in the Constitution. And no State can be deprived of its equal representation in the Senate. But the House of Representatives is badly off balance. The rural areas are very greatly over-represented despite the fact that we have become a great urban country. The reason for this is that the State legislatures are also rurally controlled and they fix the congressional apportionment. It is very interesting that this situation exists and I don't know just what cure can be assigned for it except a reform of our State legislatures. And that is a very difficult proposition. The cities continue to be less represented as they grow in size. I know there are some people who would say, "After all, the great purity and morals in politics is in the rural areas. And these great Babylons, the cities, don't deserve to be represented." The Babylonian nature of the city may be in part due to the fact that they are the places where the rural people come to enjoy themselves. And also, very often, the rural areas will have their own form of political corruption, which I have seen. But having been exercised for years, it has ceased to be regarded as corruption.

* * * * *

A few years ago, a colleague of mine, Mr. Nelson Henry, and I were sent throughout the country to find out if it made any difference whether the school system was incorporated into the city government or was independent. We came back with the statement that it didn't make any difference. Always the school people would say: "Ah, but we'd get enmeshed in politics if we were tied in with the city government." I remember our experience in Los Angeles where they had an independent system. We asked the man, "You're independent?" "Yes." "How were you chosen?" "Elected," "But we always manage to get the right kind of school board." "How do you do that?" "Well, at election time we just levy on the schoolboard employees and teacher to help pay the expenses of the right kind of people for the election." * * * In the city of Denver where they boasted of their independence, the superintendent told us, "of course, we see to it that at the time of school elections there aren't quite as many voting places as during the regular election because then only the good people vote." Yet they resisted being tied into the city because they didn't want to be governed by politics.

* * * * *

Finally, I want to urge upon everyone, as perhaps it has been urged upon all of you throughout this conference, the participation that is essential. It's a great burden that rests on everyone's shoulders. No one has a right to say "what good am I? I only cast one vote." I never knew a draft board to excuse anyone because he can only carry one rifle. There is a great truth in one of Kant's principles—"so act that you could wish your action to become universal." And there are several means of activity. I believe that far too many people avoid the political organizations themselves. There are numbers of people, supposedly intelligent citizens, who couldn't tell you the name of the party Democratic or Republican leader in their area or who do not know who their representative is, either in Congress or the State legislature. These are fundamentals you should find out about. People who are elected to office will tell you that they meet many people and get many questions during a campaign, but then hear from very few until the next campaign. It is good to have some kind of hold upon your representative. If you do go into the political parties, you are entering a kind of military order. You accept the ticket that is presented. You do, however, have your opportunity for choice when the ticket is selected, unless there is an overwhelming leader who keeps things under his hat until

the last minute. But certainly here is a great career, and many honest, intelligent and fine citizens are involved in it.

Next, there are those various organizations of civic reform in which, for the past several years, Catholics have been quite absent. Working for civic reform is difficult; it's tiring work. Again and again you meet. You've been defeated for the 15th time in what you want. The question is, how great is your persistence? The women generally have much more persistence than the men in these things. It is a question of how much energy and time you are willing to devote to good causes. There's a great deal to be said for the community organization of the independent voters that watches over community affairs. Your participation in it can help both you and the civil order.

I always take my hat off to an organization like the League of Women Voters. There is nothing that quite equals it in effectiveness. Yet there is still quite an absence of Catholic women in it. There should be at every Catholic woman's college a branch of the League of Women Voters. I know that in some communities, it is difficult to organize but the community organization is very effective. I can only speak for my own community, a small unit of the fifth ward of the city of Chicago. The Fifth Ward Citizen's Organization meets primarily to put forward candidates for the job of alderman. According to law, this is not a partisan job. Aldermen are not elected on a partisan ticket although in most wards their politics are known. We interview all the aspirants for office and approve one, then we seek support for him. We also raise $6,000 to $8,000 a year for the support of the alderman's office, because we want him to have an office right in the ward where he can be available. * * * From time to time the alderman reports to us on matters before the city council. Is this thing possible in other sections? It's quite possible, but there seems to be much lethargy. There's nothing more effective than an organization of this kind and the parlor meeting that goes with it. At election time we do not have big mass meetings. The candidate goes around to various homes where he sits down and talks to a group of neighbors. This sort of action is at the very grassroots of the democratic process and I recommend it to you for consideration.

I hope you will not go away from this confernece with the idea of government as something up above us. We should not say of the government, "they are doing this" or "they are doing that." It is we who act. Most of the people engaged in government are not grafters and corrupt. The millions of people serving us in government posts today are poorly paid and yet serve well. When one considers the expansiveness of government operation, it can be said that the work is well performed. I know it can stand improvement on the local and county level particularly. Nevertheless, it is a tremendous enterprise. One very able professor of political science, the late William Bennet Munro of Harvard, made the assertion that by and large there is more efficiency of operation in government than there is in private business. This is a startling statement, but here is a man who spent 50 years as a student of government.

I hope someday we will find means of giving recognition for self-sacrificing service over the years in various administrative posts of government. For example, some kind of national award to the top civil servant of the United States, and so on down the line. We have come to the point where there are fewer out-and-out political jobs. Government has become too complex for the amateur. We now must have the trained public servant. I hope that we shall see in the future, government on all levels operated by a career service, people who come out of our universities and colleges, well-trained, adequately paid in their positions and assured of adequate arrangements for their retirement; people in whom we can place our trust because of their ability and their devotion to the service."

Dedication of New Housing Site in New York City in the Name of Helen Hanning

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, February 19, 1960

Mr. JAVITS. Mr. President, I ask unanimous consent that a resolution adopted by the Port Morris Community Council, New York, N.Y., favoring the dedication of one of the new housing sites in New York City in the name of Helen Hanning, and an article entitled "Helen Hanning, Chairman of Housing," be printed in the Appendix of the RECORD.

There being no objection the resolution and article were ordered to be printed in the RECORD, as follows:

RESOLUTION

At a regular meeting of Port Morris Community Council, held on the 16th day of April 1947, the following resolution was proposed and was unanimously passed.

Whereas Hon. Helen Hanning was a former vice president of Community Councils of the City of New York, and former chairman of the Housing Committee of Community Councils of the city of New York; and

Whereas as a resident of Harlem she devoted the greatest portion of her life to the welfare and benefit of the people of Harlem; and

Whereas the said Hon. Helen Hanning gave her time and energy toward better housing in the city of New York, the clearance of slum areas and the enactment of legislation for better rental and housing conditions in congested areas throughout the city of New York; and

Whereas the late Gov. Alfred E. Smith and the late James J. Walker, former mayor of the city of New York, in their judgment, saw fit to appoint Mrs. Hanning to the London and Rome International Housing Conferences; and

Whereas it is appropriate that perpetual recognition should be given to her name in full recognition of her worthy work in housing and slum clearance in the city of New York: It is therefore

Resolved, That the New York housing commissioner dedicated the name Helen Hanning, in full memorium, on one of the new housing sites, as a fitting memorial to her worthy name.

SYDNEY L. BLEICHER,
Chairman.
REGINA MIDDLETON,
Executive Secretary.
JAMES MIDDLETON,
Vice Chairman.

HELEN HANNING, CHAIRMAN OF HOUSING

The relation of community councils to the housing problem of our city has been one of steady endeavor, not only to alleviate present conditions, but also to find a permanent solution—starting with a mass meeting in Carnegie Hall in October 1920, at which Governor Smith spoke, and continuing to the present time.

Last year Governor Smith appointed our chairman a delegate to represent the State of New York at the International Housing Conference held in Paris in July. Mrs. Hanning afterward spent 10 weeks in England, visited all the large industrial centers and studied their slum clearance schemes.

We have been represented and have taken an active part in all legislation, sending many delegates to Albany and actively supporting the city in their efforts to improve our housing. Our chairman has served on every important committee on housing, including the advisory committee of the State housing board and the citizen's committee to study and give publicity to the New Dwelling Act. This act has passed both houses and is now before Governor Roosevelt.

Much has been accomplished by our committee in investigating and bringing to the attention of the health and tenement house departments the very bad condition existing in many of the Harlem apartments. Indeed, Mrs. Hanning is well known to most of the residents of our district.

OLD-AGE PENSION—HELEN HANNING, CHAIRMAN

Among the many activities of community councils, none is of more importance than the matter of old-age pensions and contributory old-age insurance. The community councils have appointed a committee to study and work with other agencies to bring about this all important measure.

Our chairman was appointed on the committee of 15 representing some 70 organizations to plan the introduction and passage of an Old Age Pension Act. This measure failed of enactment by a very narrow margin. It received the support of Governor Roosevelt and all of the welfare and social agencies.

Proposed Constitutional Amendments

EXTENSION OF REMARKS
OF
HON. ALLEN J. ELLENDER
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Friday, February 19, 1960

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Potpourri," published in the Times-Picayune of New Orleans, La., dated February 4, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POTPOURRI

It was a weird assortment of proposed constitutional amendments the U.S. Senate put into a package resolution, but fortunately (it seems) action can be taken by legislatures on each item individually, should the House go along with the novelty.

The only meritorious proposal is that of permitting gubernatorial appointments (interim) of U.S. Representatives to succeed those who may die, along with more than half the House membership, in some disaster. Only the Senate has appointive disaster protection, as a body, under the existing Constitution.

The only good thing to be said for tacking on poll tax abolition, or proposing abolition at all, is the recognition implied that it is a constitutional, not statutory question. If the House agrees to this amendment and it is ratified by the States in 4, 5, or 7 years, the leftwingers and so-called big State politicos, who have kept the pressure on in one way or another, will get little or nothing

for cluttering up the Constitution with another section. For there are only five States with poll taxes now, and there probably will be fewer before any amendment is ratified. The States, however, should deny these politicians even a hollow victory by rejecting the proposal. Encroachment of the prerogatives of the States (in this case, voting qualifications) should be repulsed on principle.

Unsavory altogether is the entering wedge to statehood that would be provided for the District of Columbia, to the extent of permitting it a place in the electoral college (presidential voting), and the right to elect delegates like those of a territory, to the U.S. House. The sound reasons for keeping the District of Columbia and its residents out of national politics altogether, except by way of the abstentee ballot, should be apparent to all students of and believers in the American form of government. It would become the worst kind of pressure area with respect to executive and legislative issues and actions.

Wisconsin Farmers Set Record on Soil Conservation Service Practices

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, February 19, 1960

Mr. WILEY. Mr. President, the conservation of our soil as well as forests, water and other resources is a major challenge confronting the country.

Fortunately, constructive programs are underway in Wisconsin and throughout the Nation to conserve these natural resources.

In 1959, for example, Wisconsin farmers set a new record for carrying out sound, constructive conservation programs. The accomplishments included the following:

More than 41,000 acres of contour strip cropping.

Renovation of almost 30,000 acres of pasture.

Tree plantings on 15,490 acres, with constructive measures for the woodland carried out on more than 27,000 additional acres.

Wildlife habitats were benefited by the construction of 314 farm ponds, 26,600 rods of hedgerow cover and the protection of 2,282 acres of wildlife area.

According to M. F. Schweers, State conservationist for U.S. Soil Conservation Service, the record of accomplishments was attained through the splendid cooperation of the efforts of farmers, not only with the Soil Conservation Service, but also the Agricultural Stabilization and Conservation Service, Wisconsin Conservation Department and Farmers Home Administration.

Recently, the Superior Telegram of Superior, Wis., published an article outlining progress in this field.

Reflecting constructive progress in preservation of our invaluable natural resources, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Superior (Wis.) Telegram, Feb. 12, 1960]

STATE FARMERS SET RECORD ON SCS PRACTICES

"Wisconsin farmers set a new record for the development of farm conservation plans in 1959," M. F. Schweers, Madison, State conservationist for the U.S. Soil Conservation Service, said today. "Plans were developed on 2,313 farms in 1959 as compared with 1,921 in 1958 and 1,740 in 1957. A farm conservation plan is a blueprint for a farm. It indicates the proper use of each acre, and the conservation practices which will be applied to prevent excessive soil and water loss," Schweers added.

"More than 41,800 acres of contour strip cropping were established in 1959, and almost 30,000 acres of pasture were renovated," Schweers said. "Trees were planted on 15,490 acres and farmers agreed to protect 27,147 acres of woodland."

"Wildlife habitat was benefited," Schweers said, "by the construction of 314 farm ponds, the planting of almost 26,600 rods of hedgerow cover, and the protection of 2,882 acres of wildlife area."

Other major accomplishments in 1959 include almost 629,000 acres soil surveyed, 364 miles of terraces and diversions, 289 large structures, 240 miles of grassed waterways, 813 miles of tile lines, and 242 miles of shallow field ditches and open drains.

Almost 14,000 farms were serviced by SCS personnel in connection with the agricultural conservation program. "The Soil Conservation Service receives ACP funds to carry out specified technical responsibilities of this program," Schweers continued. "Many of the permanent type practices would not have been installed were it not for the cost of sharing assistance from ACP," he pointed out.

Primary credit for these fine conservation accomplishments belongs to the people who own and operate the land," said Schweers. "It is only through their interest and desire that we are able to serve them. Soil conservation district supervisors deserve a great deal of credit for their enthusiastic leadership. Moreover, this record of accomplishment could not have been attained without the fine cooperation extended by personnel of the Agricultural Stabilization and Conservation Service, Wisconsin Conservation Department and Farmers Home Administration."

The Late Honorable Charles A. Boyle

SPEECH
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 6, 1960

Mr. MACK of Illinois. Mr. Speaker, we have suffered a great loss in the tragic death of our esteemed colleague, CHARLES A. BOYLE, of Chicago. He was an outstanding public servant, dedicated to his service in the House of Representatives. No one in recent years has served his constituents as faithfully and well. He was loved and admired by all who knew him. He had a host of friends in Illinois, not only in Chicago but downstate as well. He had many, many friends throughout the whole country.

CHARLIE BOYLE was one of the most astute politicians we have ever known in the State of Illinois. He was a very able attorney, a great legislator, and an outstanding father. He had great love for his family and lived by the laws of God. We were always proud to have CHARLIE BOYLE serve with us in the Illinois delegation. He was the type of man we like to have serve with us, and we shall all miss him greatly in the years to come.

I join with my colleagues in extending my sympathy to his gracious wife and his wonderful family. May God give them strength and guide them in the difficult years ahead.

Wisconsin Press Association's 1960 Midwinter Meeting

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, February 19, 1960

Mr. WILEY. Mr. President, the press of America continues to be one of the major forces and influences in the lives of individuals, and in the public affairs of this country.

A free press—one of our precious constitutional freedoms—carries with it, of course, a great responsibility.

Fortunately in our Republic, the industry itself—and the vast majority of highly qualified individuals serving in this fine profession—are doing a splendid job in maintaining high standards of reporting, editorializing, and generally presenting to the American people significant articles on a wide variety of topics.

In Wisconsin, we are particularly proud of the high caliber writing and publishing by our editors, writers, reporters, publishers, and many others in the field.

Recently, the Wisconsin Press Association held its annual midwinter meeting at Eau Claire, Wis.

The conference—among other objectives—aimed its efforts at resolving some of the basic problems confronting the profession, itself; in addition, it seriously considered ways and means by which it could more effectively serve the public.

The January issue of Wisconsin Press carried a thoughtful and informative article entitled "Records Set at Wisconsin Press Association's 1960 Midwinter Meeting at Eau Claire."

Reflecting a creative, constructive realistic approach by members of this outstanding profession toward better serving the American people, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RECORDS SET AT WISCONSIN PRESS ASSOCIATION'S 1960 MIDWINTER MEETING AT EAU CLAIRE

"The power of the people will be exercised whether or not its exercise is guided by complete information. It behooves all in government and all in control of the press to better inform those who make the ulti-

mate decisions. The cure for the gravest defects in democracy is not less, but more information.

"The information of the people is the foundation of our political system, and the source of power of our democratic society. When the citizen is fully informed, his political acts are his own. When he is only partly informed, his acts are the acts of those who have partly informed him."

These were the words of Wisconsin Attorney General John W. Reynolds at the evening banquet of the midwinter meeting of the Wisconsin Press Association at the Eau Claire Hotel, Eau Claire, on Friday, January 8. Mr. Reynolds spoke on "The public's right to know," and his remarks were based on the State's new "open meeting" statute.

Mr. Reynolds complimented the Wisconsin Press Association for having supported this bill and for having assisted with its ultimate passage. He expressed his department's intention to see that the terms of the law are complied with and then concluded his speech with this caution:

"You have a good antisecrecy law. But the benefits of this law will only be realized if we have a vigilant and vigorous press working with conscientious public officials who insist upon compliance with its provisions. Remember that if you are ever refused admittance to a meeting which should be public and if you fail to protest, then you are responsible for losing one of the battles in the continuous struggle for complete freedom of information."

ATTENDANCE RECORDS

The audience to which Mr. Reynolds spoke was a record one—as was every gathering of the 1960 midwinter meeting, which was held January 8 and 9. Extra tables had to be set to accommodate the 136 at the noon luncheon and the process was repeated again in the evening when 180 were seated for the banquet. Most surprising of all, however, was the turnout of 81 for the Saturday morning breakfast. As one association member observed, "at this rate, the midwinter meeting will soon be as large or larger than the spring convention."

Bolstered by a contingent of 47 persons on the Thursday "400" of the C. & N.W., the hotel was well populated with meeting delegates long before the registration dask went into operation Friday morning. From about 10 a.m. until lunch time the editors and their staff were shown new offset plates by a Minnesota Mining and Manufacturing demonstration setup; a new collator by Mechanical Development Enterprise of Viroqua, and both Fairchild cuts and the new "Dycril" plate as furnished by Crier Cut Service. On another floor of the hotel the Print-N-Etch engraving display held the interest of others.

The formal agenda of the midwinter meeting began with the noon luncheon at 12:30 Friday. Following knife and fork exercises, WPA President Lowell Larson spoke a few words of welcome and introduced the individuals seated at the speakers' table after which he called on City Manager Douglas Welford, who officially welcomed the association to Eau Claire.

Ed Kane, research director in printing of the Minnesota Mining and Manufacturing Co., was the featured luncheon speaker. "Printing in the new decade," he pointed out, would bring into use many new processes and techniques; he mentioned the experimental use of television for transmission and composition of copy. To illustrate some of today's most advanced developments in the graphic arts he showed a 10-minute colored slide presentation of exhibits shown at the recent graphic arts exposition in New York.

Following Mr. Kane's address, President Larson turned the meeting over to Robert Harvey, publisher of the Clark County Press, Neillsville, chairman of the afternoon session.

AFTERNOON PROGRAM ON SHOP

Use of the small offset press for commercial work was the first topic. On this subject the Wisconsin Press Association is fortunate in having as a member a real expert in offset printing—Don MacGregor of the Park Falls Herald. Basing his remarks on experiences before the Herald acquired large offset equipment, Mr. MacGregor gave a comprehensive discussion of the possibilities and limitations of the small offset press for commercial work. Samples of the various pieces of work referred to in his talk added much to the effectiveness of his presentation.

Small offset presses are used for commercial work by several other Wisconsin publishers and C. F. Eames of the Elkhorn Independent (who substituted for his son, Frank) and Dwayne Schoepke of the Juneau Independent added brief comments to the basic material given by Mr. MacGregor.

Engraving processes came next on the program and Max Ninman of the Reedsburg Times-Press, Bart Brown of the Oconomowoc Enterprise and Palmer Sondreal of the Amery Free Press described their methods and experiences, and gave some of their problems in producting zinc cuts for their newspapers. John Shinners of the Hartford Times-Press volunteered some comments from the floor on his shop's experience with the Klischograph engraver.

Two veteran Wisconsin weekly newspapermen were highlighted in the portion of the afternoon session given over to shortcuts and gadgets in printing. They were Clarence A. Seidl of the Barron County News-Shield and Lyle Speed of the Hawkins Chronicle. Their shop hints and shortcuts will be expanded and illustrated, where possible, in separate articles in future issues of Wisconsin Press. Among other things, Mr. Seidl described a simplified way to figure paper poundage and an easy way to center linotype lines of more than 30 ems while Mr. Speed described use of wax holding slanted lines, an antioffset gadget, and other timesavers.

For the final topic on the afternoon program President Larson described the experience of the Columbus Journal-Republican in adopting a 10½-em column width and a 9-column makeup.

An innovation of the Friday afternoon program was a special session for women attending the meeting. This had been requested because several of the ladies had stated that they had little interest in shop problems, which constituted the bulk of the afternoon discussions, but that they could profit by a strictly feminine discussion of book work, subscriptions records, gathering of local items and so on.

Mrs. John Shinners presided at the women's meeting and a profitable discussion was held. The ladies requested that the separate women's session be made a regular part of the midwinter meeting program and also of the spring convention program.

Affiliate members of the Wisconsin Press Association were hosts at the cocktail party that preceded the evening banquet.

Attorney General Reynolds delivered the principal speech at the banquet; some of his remarks were quoted at the beginning of this article and copies of the address were sent to all newspapers in Wisconsin.

INTERN PROGRAM STRESSED

Following Mr. Reynolds' address, President Larson called on Paul Creviere of the De Pere Journal-Democrat and chairman of the association's journalism internship program committee. Mr. Creviere reported that in 1958 the internship program had received excellent support and a good number of papers participated, but last year, 1959, the number had dropped to six—and three of these interns went to daily newspapers. He called for renewed support and participation in the current year.

Since the best way to sell is to demonstrate the merchandise, Prof. Les Hawkes of the University of Wisconsin School of Journalism and Prof. Don Ross of Marquette University College of Journalism, liaison representatives in the internship program, were present with two journalism students who had participated in the program.

Professor Hawkes introduced Joan Fischer, UW journalism student, who had spent the summer working as an intern at the Burlington Standard-Press. Miss Fischer said that "from the student's point of view it was wonderful. It gave me an opportunity to gain experience * * * but even more important, I gained an insight into the workings of a newspaper which cannot be learned in a classroom." She "covered everything from obituaries to town board meetings, from straight news to every kind of feature." There was no lack of interesting personal happenings in Miss Fischer's summer job, and she recounted a few of these. In concluding her comment on the internship program she told the publishers, "I feel it is definitely worthwhile. Where else can you get new approaches to the same stories that appear yearly? Where else can you get reporters who are egear to write and even more eager to learn all about newspapering?"

Professor Ross then presented a Marquette student, Bob Jozwiak, who had served as an intern with the two Radde papers, the Monroe County Democrat and the Sparta Herald, and who said, "I feel that the program can be of great benefit to you—the publishers of Wisconsin's community newspapers. I feel strongly about this program because I know, from personal experience, the benefits I received from it."

Mr. Jozwiak pointed out that one of the purposes of the internship program is to introduce—and interest—students in the community newspaper field, and in the process to debunk the myths that have formed in the minds of some. To illustrate how effectively the program has accomplished this he quoted some of his classmates who had served as interns. And from his own experience, he said, "I learned that the weekly newspaper field was no pushover. I learned that in order to survive in this field you have to become a jack-of-all-trades; reporter, photographer, proofreader, advertising salesman—and of course, there was that glorious, character building task known as 'stuffing'."

Summarizing the advantages of the program, he listed:

1. The eradication of faulty conceptions about the community newspaper business and the building up of student interest in this field.

2. The supplementation of education for journalism with practical in-the-field experience.

3. The opportunity for publishers to examine and recruit potential employees, and train them at nominal cost.

4. The securing of extra manpower to perform special projects and tasks that might otherwise be left undone.

5. The possibility of an increase in reader interest.

6. The freeing of the publisher for other pursuits, be they business or recreational interests.

EIGHTY-ONE AT BREAKFAST

Despite the extra-curricular exercises following the Friday night banquet, a record crowd of 81 persons reported at 8:30 Saturday morning for the breakfast and program. This actually turned into one of the highlights of the meeting.

Past President Palmer Sondreal was drafted as chairman for the morning program and did his usual fine job. The only difficulty encountered was that the interest in the topics presented was so great that the ses-

sion threatened to run uncomfortably close to train time.

Roy Rollins, public relations representative for the Wisconsin Motor Carriers' Association, spoke first and described the series of ads his organization is furnishing Wisconsin newspapers to be sold on a cooperative basis.

A fascinating discussion of covering local governmental meetings was given by Alvah Axtel, of the Rice Lake Chonotype; Robert Burns, of the Ladysmith News; Elliot Zander, of the Brillion News (whose paper was read by Ralph Goldsmith of the Boscobel Dial); and Douglas Larson, of the Sturgeon Bay Advocate (whose paper was read by Bill Stewart, of the Spooner Advocate).

For the uninitiated who wonder what news there can possibly be in a small community the two panelists in the following discussion demonstrated the answers. These speakers were Walter Brovald, of the Cadott Sentinel, and Dennis Losness, of the Cornell Courier.

Tips on news coverage and how to maintain a schedule to assure a full coverage were the topics of William Branen, editor of the Burlington Standard-Press, and Oliver Witte, Jr., news editor of the two Mauston newspapers. Branen illustrated the use of the card file he has set up to keep track of local organizations as well as the portrait cut file that is so handy for quick reference. Witte gave a comprehensive picture of the news-gathering system used for the two editions they publish each week and told of some of the special problems they run into and how they go about meeting these situations.

A panel on editorial writing consisted of Bill Heath of the Phillips Bee, Curtis B. Gaylord of the Balsan Lake Ledger and Don Griswold of the West Salem Journal. These three editors had assured themselves of a no conflict presentation by getting together before the meeting to compare their remarks and thus there was no overlapping. The audience was greatly interested in Mr. Heath's description of his paper's troubles with the postal department and the ensuing editorial comment. Editor Griswold offered something new in telling about his experiment at field testing editorials.

The final topic on the morning agenda was the use of pictures in small newspapers. Miss Doris Cottet, managing editor of the Green Lake County Reporter (which is printed offset), gave a detailed description of the Reporter's policies and desires in pictures and told something of the equipment used in obtaining what they want. Roy Ruehlmann, editor of the Sharon Reporter, had one eye on the clock as he told briefly of his practices in using pictures; he uses both Fairchild cuts and zinc halftones—the type determined by the time element and whether or not an enlargement or reduction of the original picture is needed.

At the close of Mr. Ruehlmann's remarks Chairman Sondreal quickly closed the meeting and the delegates hurried to grab a bite to eat and dash for the train.

Ethics Is Everybody's Business

EXTENSION OF REMARKS

OF

HON. GALE W. McGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Friday, February 19, 1960

Mr. McGEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Ethics Is Everybody's Business," written by Mr. Roland Gammon and published in Variety.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ETHICS IS EVERYBODY'S BUSINESS

(By Roland Gammon)

Even as Charles Van Doren played out his scapegoat role in the recent television quiz scandals, he wrote an article for the new literary quarterly, Leisure, in which he quoted the English poet William Wordsworth:

"The world is too much with us; late and soon,
Getting and spending, we lay waste our powers."

Unconsciously, perhaps, Van Doren wrote his own epitaph—and that of the dollar-dedicated society in which we live. The plain fact is that the sicknes of an acquisitive society has become so acute we either must redeem it or perish.

Today, as both industry and government widen their scandal inquiries, sharp censures stir the air Madison Avenue thought it owned: "an unholy mess," "this leeching industry," "vapid huckstering" "ill-gotten gains," "a diet of violence," "chromium-plated materialism." Slowly, a morally awakening America begins to suspect that television's bloated face may be its own.

Indeed, TV's tarnished image illuminates the landscape around us. The festering rottenness of much of media not only supported a fraud on the American people, but belatedly caused cries of alarm from its leaders. CBS President Frank Stanton admitted to the Harris committee, "Whoever may be to blame in this whole tawdry business, all broadcasting has been hurt."

"Clean up or give up," cried Donald S. Frost, president of the Association of National Advertisers.

"Greed is the universal denominator in all this," wrote Journal-American radio-TV critic Jack O'Brian.

"Integrity is our deepest lack today," dedeplored the Reverend Robert McCracken from his Riverside Church pulpit.

"The flannel-suited faithful have crammed our souls into a tube of toothpaste," bristled Drew Pearson's aid, Jack Anderson.

And New Jersey's Governor Robert Meyner dipped deep into U.S. history for the most damning quote of all: "It is a thing of splendid abilities, but utterly corrupt. It shines and stinks like a rotten mackerel by moonlight."

HISTORY REPLETE WITH LESSONS OF TOLL CORRUPTION MUST PAY

Of course, smile the cynics. It has all happened before and will again. Didn't Aristophanes indict a luxury-loving Greece with the charge, "Whirl is king, having driven out Zeus." Didn't Louis XV, contemplating the corruption of his court and the poverty of his peasants, accurately prophesy, "Apres-moi, le deluge." And when Swiss theologian Leonard Ragaz was asked why czarist Russia collapsed, didn't he answer, "Karl Marx came because Jesus Christ was not allowed to come."

Dare we ask, even at Christmas and Chanukah, does the Christ spirit (i.e. love, charity, unselfishness) still abide in America? Or are mechanized, manipulated Americans too busy and too grasping to care? Beyond the crowded churches and synagogues, beyond the staggering statistics in church attendance, building and organized giving, is the bedrock of honorable conduct stil there? Of deep faith, fair play, and righteousness in action? Of all things, dare we ask, can an honest man succeed on Madison Avenue?

The current convulsion along ad alley—and the idiot dream life which is its television product—only reflect a decadence disease wasting the entire country. In themselves, the television scandals are more effect than cause. They are part of a creeping corruption that stains almost every area of American life. They are the result—as is the mounting evidence of wrongdoing in business, labor, and government—of our substitution of thing worship for God worship, our debasing of moral values into money values, our surrender to the bitch-goddess success no matter what the cost. Because this crisis in character persists, we are deep in our time of trouble as a civilization.

Sordid as the recent revelations are, the tragedy of what President Eisenhower calls the "TV mess" goes far beyond the spiritual illiteracy of a few hundred producers, directors, sponsors, and contestants directly involved. It goes beyond the overcommercialism and business-as-usual callousness of certain network brass, agency nabobs, and major advertisers who only now have begun to clean house. The heart of the matter remains: the TV, deejay, and deceptive-ad scandals were spawned by a society that has overthrown its traditional values system and substituted lip service to religious principles for their practice. Replacing "In God we trust" with "What's in it for me?" has not only changed the national motto; it has hastened America's twilight of honor.

IF AMERICA EVER CEASES TO BE GOOD, AMERICA WILL CEASE TO BE GREAT

More than a century ago, the French philosopher Alexis de Tocqueville wrote of our new democracy, "America is great because she is good and, if America ever ceases to be good, America will cease to be great." Today the majority of Americans are still good. But how long can any society survive what has been called "this revolution in self-indulgence"? At the present rate, it is only a matter of time before the poison of our elaborate make-believe—the papier-mache worlds of films, frills, fashion, broadcasting, advertising, and slick publicity—destroys the glossy animal who manufactures it.

Several years ago, assigned to write a magazine article on war hero John Crown, I visited the wounded veteran in Halloran General Hospital. This young paraplegic, who had "come back from death to a world I no longer care for" and who was soon to die, spoke of his shock at our cakes-and-circus culture. "All the world's troubles originate in the common man," he told me. "The selfish and greedy ways of nations are just the ways of individual man multiplied a thousandfold. When the morals of the common man drop, so do the morals of the United States and the world. Until each of us stops demanding more wages and more profits, stops 'hogging' the road with his car, stops fighting over a seat on the bus, stops arguing over who is going to cut the grass or occupy Trieste, there will be no peace in the world."

Any observer doubting this drift need only recall the events of the last two decades. Despite the heroism, sacrifice and generosity excited by war and postwar recovery, we also produced enough corruption to shame a land built on law, liberty, and love of God. Instead, worshiping the dollar as deity, we lived fast but not deep; wallowing in a fun morality, which made liquor, television, gambling, brand loyalty, credit buying and banal entertainment tribal rites for millions. We failed to develop an ethical counterpart to our materialism. Today, too much is spoiled by overuse and enslavement to a vulgar conformity.

A FRAME OF REFERENCE FOR THE RECENT TRADE SCANDALS

The results: individual and collective tragedy. Read and heed any page in our postwar saga of scandal—the conviction of both Congressmen and businessmen for war-

time profiteering; the recurring inquiries into influence peddling from Capitol Hill to the Pentagon to the Government's regulatory bureaus; the rise and fall of "boiler room" swindlers in Wall Street; the corruption of college stars in the conspiracy to "fix" intercollegiate basketball games; the payoff bribes in New York's fire department (not to mention similar rackets in the welfare, building, police, and weights-and-measures departments) which resulted in the imprisonment of Commissioner James Moran; the gangster infiltration of big labor with such union leaders as Beck and Hoffa under indictment or investigation; the revelations about conniving executives, who in such telltale novels as "The Hucksters," "The Great Man," "The Big Wheel," "Executive Suite," and "The Hot Half Hour" foul their nests; the insurance company swindles in Texas, the gambling gyps in Nevada and Florida, the Apalachin underworld conference in New York, as well as the dope, prostitution, and numbers rackets in most major cities, and most recently the long-overdue exposure of greed and corruption in the boxing business, the "payola" deejay and disgrace, the paid radio-TV "plugs" and blatant commercials that "exaggerate, irritate, and nauseate."

Are these but isolated incidents unrelated to a spreading skein of deceit? Not at all. They are the outcroppings of a society whose values run cockeyed, whose once-rugged individualists are hollow men and whose fat-dripping prosperity in part derives from plain cheating. Silently, contagiously, sometimes inside and sometimes outside the law, the national cheating habit deepens: contract kickbacks, shady deals, political grafting, media payoffs, business embezzlement, income concealment, labor featherbedding, capital price fixing, farm overpayments, shoddy workmanship, venal journalism, academic cribbing and, perhaps worst of all, a goof-off psychology which Madison Avenue's Charles Brower, president of Batten, Barton, Durstine & Osborne, has labeled an American stampede away from responsibility * * * with laundrymen who won't iron shirts, waiters who won't serve, with carpenters who will come around some day maybe, with executives whose minds are on the golf course, with spiritual delinquents of all kinds who have been triumphantly determined to enjoy what was known until the present crisis as the new leisure.

The fuzzy minded, morally warped public relations field has been as guilty as any other. In their headlong haste to tell and sell, fake and take, plant a story, rig a "plug," or pay off a columnist or picture editor, public relations practitioners generally condone the very malpractices they have helped to create. From corporation consultants to Broadway press agents, too many publicists would rather be rich than right, safe than courageous, self-important than self-denying. Too many press agents, who can't think a straight thought or write a declarative sentence, are the not-so-hidden persuaders who believe the communications system exists only for their own manipulation. Little or no creative thinking has been done regarding the need for stricter morality in business or worthier aims for the Nation.

I speak from experience. On rare occasions during my editorial career on Life, Pageant, and See, I heard the siren song of fixers who wanted editorial space at a price (as most editors do, I refused outright); more often the blandishments took the form of free lunches, whisky, watches, lighters, leather goods, toiletries, parties, jewelry, and junkets. Today, as a freelancer who writes inspirational articles and as vice president of a public relations agency which is trying to set standards of excellence in a profession painfully lacking them. I recognize the problem persists. I recognize, too, that the price is never right when people sell themselves for a mess of pottage.

ANGLES REACHING NO RETURN; WHY NOT REVERT TO HONESTY?

Having tried everything else, let us try honesty for awhile. If we can't go back to plain living, let us at least practice high thinking, gracious speaking, just dealing. In good conscience, Madison Avenue's everyman must learn to be the gentleman he seems, must lead in correcting the professional abuses that prevail. He also must learn to say "No" to both client and cash when the proposition turns out to be something less than the best.

"No man can serve two masters * * * God and mammon," was the winged warning of Jesus to Israel. Its terrible truth applies as inexorably to us as it did to Canaan, Babylon, Egypt, Persia, Greece, Rome, medieval Europe, and a dozen other civilizations that passed from the earth because of inner decay and outer attack. In fact, more than 100 years ago, the British historian Lord Macauley warned, "Your republic will be as fearfully plundered and laid waste by barbarians in the 20th century as the Roman Empire was in the 5th, with this difference: that the Huns and vandals who ravaged the Roman Empire came from without, and that your Huns and vandals will have been engendered within your own country by your own institutions."

Only changed men can change that course. Only rededicated men, cherishing the American dream more than they do the American dollar, can build the city of God instead of the city of swine. For if our godless grasping continues, if our preoccupation with singing commercials, rock 'n' roll, the Dow-Jones ticker, and intercontinental rocketry grows apace, then our perpetual adolescent society careens blindly toward its doom.

When Gen. Robert E. Lee was an old man, a war widow came and asked him to bless her son. "Teach him he must deny himself," Lee replied. Today, in an era of moon shots and 600-mile-an-hour jets, the greatest distance we have to travel is still within. Indeed, if we media men would reestablish respect for television and advertising, help reform the excesses of much of American business, we too must learn to deny ourselves, mend our ways, live according to the moral laws which are binding on all men. Then, and only then—when, with all our getting, we get understanding—can honest men succeed on Madison Avenue and America rise to the world leadership to which she is called.

Splendid Labors of Variety Clubs International

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Friday, February 19, 1960

Mr. KUCHEL. Mr. President, in key cities around our Nation, groups of 10,000 showmen pledged unselfishly to humanitarian endeavors have recently observed Variety Clubs Week.

The event marked another heartwarming chapter in the 33-year story of "The Heart of Show Business." Taking time out of their busy lives in the theatrical and entertainment fields, members of the numerous "tents" of the Variety Clubs have assumed the obligation of striving to improve the lot of underprivileged and unfortunate children of America. Their activities thus foster one of our Nation's most treasured resources, the rising generations.

I believe it appropriate to take notice of the devoted and often unsung contributions which the Variety Clubs have made, through these activities, toward a better America. I ask unanimous consent to have printed in the Appendix of the RECORD an inspiring review of various humanitarian projects which this public-spirited organization has carried on.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

VARIETY CLUBS INTERNATIONAL RÉSUMÉ OF TENT PROJECTS

Since an unusually humble beginning in 1928, Variety Clubs International have grown in size and scope of operations until today Variety is recognized and respected as one of the world's leading charitable and humanitarian organizations.

In 1928 the founder of Variety Clubs International provided a name, a home, and an education for a deserted baby girl. Today more than 10,000 Variety members in 46 cities throughout the world, provide comfort and medical care for thousands of children each year. They build and sponsor children's hospitals, clinics, orphanages, and foundling homes. They raise money for the treatment and research of such diseases as cancer, cerebral palsy, polio, heart diseases, and rheumatic fever. From Dublin to Detroit, Variety's show business members raise more than $3 million each year to fight disease and pain in the United States, England, Ireland, Canada, and Mexico.

Every Variety chapter, or "tent," has—in addition to its general charitable projects—one main charity that it pledges to support. The rollcall of Variety tents, and their various projects, is eloquent testimony to the tireless work of Variety members and the diverse assistance they provide the handicapped and needy.

The mother tent of Variety, Tent No. 1 in Pittsburgh, has as one of its main charities the operation of Camp O'Connell, which offers to handicapped children of every race, creed, and color the privileges and joys of a summer camp and escape from dirty and hot city streets. Two years ago Tent No. 1 completed a new hospital building for the Roselia Foundling Home at a cost of approximately $1 million.

In Dayton the tent sponsors the Variety Manor for Children, a hospital for treatment of emotionally disturbed children. More than 200 children receive treatment and understanding at the Variety Manor each year.

The Variety Club of Boston's Jimmy Fund Buildings—recognized as the world's center for cancer-afflicted youngsters—were built at a cost of $4,500,000. More than 2,900 children not curable by surgery have been treated by new forms of chemical therapy under research in the Children's Cancer Research Foundation. At the present time 532 children are being cared for, under the direction of Dr. Sidney Farber. Also maintained are diagnostic laboratories and clinics from which physicians all over the world receive—free of charge—advice concerning the treatment and care of children suffering with this dread disease. The annual Jimmy Fund drive is a household word throughout the United States and particularly in the New England States. For the third consecutive year it has raised more than half a million dollars. The drive is sponsored annually by the motion picture industry; more than 600 theater collections are taken in New England movie houses, with the assistance of the Bos-

ton Red Sox and police and law-enforcement agencies.

The children's rehabilitation center sponsored by the Variety Club of Buffalo is considered one of the finest of its kind in the country. In Atlanta, Variety members maintain the cerebral palsy school and clinic. Children treated in the school clinic have been the subject of much attention in the press, as many of the youngsters have benefited in a manner bordering on the miraculous.

Variety of Las Vegas supports a day nursery and school for special education. Its school for handicapped children is modeled after the vocational training school for crippled children which was designed, built, and equipped entirely by the Variety Club of Toronto, Canada, and is known as Variety Village. Built at a cost of $400,000, the school opened in 1949 and has helped 132 crippled boys find employment after graduation.

In Houston, Variety operates a boys' club which contains recreational and educational facilities that serve 3,000 boys. The Memphis Variety Club maintains a home for convalescent children, for youngsters suffering with heart disease.

Variety's Cincinnati Tent sponsors an important and often overlooked project—industrial rehabilitation of the mentally handicapped. There are some 2,000 young people, 16 years and older, with impaired minds, in the Greater Cincinnati area. Many of them, however, are capable of being trained for jobs in industry. In many instances these young people can, with proper supervision and training, became partially self-supporting, thus taking some of the financial load from public agencies and the community. As a result, Cincinnati's Tent No. 3 organized and now operates the Variety Workshop for the Mentally Handicapped, with the assistance of Good Will Industries.

Worldwide recognition has been given to the care and training of blind children by the San Francisco Tent's blind babies foundation. This variety project offers sympathetic understanding to, and training for the parents of blind babies, in addition to its care of the children themselves. The foundation presently cares for 233 blind youngsters of preschool age and instructs their parents in how they can help in the development and training of their blind children.

The London Tent established the Heart of Variety, Ltd., to assist smaller charitable organizations, such as orphanages, hospitals, and playgrounds for children, in their work. In Washington, D.C., Variety members have contributed toward the construction of a new research building at Children's Hospital. The new building is known as the Variety Club Research Center of Children's Hospital, and it provides facilities for research in allergic diseases, antibiotics, cancer, cerebral palsy, and virus infections.

The Variety Club of Philadelphia sponsors the most modern camp for handicapped children of its kind in the world. In Chicago, Variety members sponsor La Rabida Park Sanitarium, an institution of children afflicted with rheumatic fever. The New York Variety Club supports the Cancer Control and Research Foundation, under the direction of famed Dr. Emanuel Revici.

Hospital care for 18,000 patients annually is provided handicapped children by Miami's Variety Club. In addition, much of the clinic work for doctors of the Florida Crippled Children's Commission is done at the Variety-sponsored Children's Hospital in Miami. The Variety Club of Des Moines contributes funds to the Cystic Fibrosis Association.

In Minneapolis, the Variety Club has, as its main charity, the sponsorship of the care and treatment of heart diseases. In December of 1958 the completion of the University of Minnesota Hospital was made possible by this club. The floor is devoted entirely to research in the field of heart study. Doctors from all over the United States visit the hospital each year to witness the lifesaving operations performed on the now-famous fifth floor.

The principal charity in Milwaukee is the Variety Club Epilepsy Center, where last year more than 700 cases received prompt and expert care. In Baltimore, numerous established charities for handicapped children have received contributions.

Los Angeles' Variety members are proud of their Variety Boys' Club. Here, each year, more than 3,400 boys are helped to become good citizens. This project is a favorite of at least one show business immortal: Sophie Tucker has pledged $100 a month to the boys' club for the rest of her life.

Albany, a relatively small tent with a big project, finances Camp Thacher and provides underprivileged boys of its city with a 2 weeks' vacation.

Cleveland's Variety members provide a summer camp, too. This one for diabetic children of all races, creeds, and colors. Grand Rapids gives financial aid to Youth Commonwealth, which operates three youth centers.

Mexico's tent operates the Luis R. Montes Boys' Club, which provides a wholesome environment for youngsters whose families can provide their children with only the bare necessities of life.

In Charlotte, the Variety Club erected a children's clinic as a part of the Charlotte Memorial Hospital. Two public health centers have been built and are being maintained by the Variety Club of Oklahoma City, one in Oklahoma and the other in Tulsa, one in Oklahoma City and the other in Tulsa. The St. Louis Variety Club maintains a day nursery care program. Miles apart, but with the same purpose, Dublin, Ireland, Variety Club provides care for the blind children of Ireland. For several years, New Orleans assisted United Cerebral Palsy of Greater New Orelans, Inc. Seattle's principal charity is the Children's Heart Clinic at the Orthopedic Hospital.

This almanac of tents and charities is impressive, to be sure. But it includes only a brief mention of each tent's major charitable projects. Not mentioned are the other activities of each tent, all of them designed to brighten the lives of the children in each tent city. These include the showing of movies to shut-ins in hospitals and other institutions; furnishing radios, television sets, athletic equipment and other facilities for boys' clubs, camps, and hospitals, and providing free tickets to athletic events, circuses, theaters, and other attractions. From taxi services for the blind to contributions for a large number of local charities, the showmen who make up Variety Clubs International make the time to help others.

Their reward is the health and happiness they have brought to unhappy and maladjusted youngsters, the hope they hold out each year to thousands of physically handicapped kids. Their reward—and what more could show busness people ask for—is really the light and laughter they bring to their very special audience of unfortunate children everywhere.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

President Eisenhower's Radio-TV Talk To Nation

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, February 22, 1960

Mr. WILEY. Mr. President, we know President Eisenhower today began his four-nation tour of Latin America. With him goes the love, respect, and best wishes for a successful trip of the citizens of this country.

Throughout the Western Hemisphere, too, there are high hopes that our President will accomplish the major objectives of his mission, which include: Further improve the relations with our southern neighbors; promote greater cooperation among Latin American countries; create a better understanding, not only of our programs and policies, but of our willingness to participate in future plans to strengthen the bonds of friendship—as well as undergird efforts to promote greater economic, cultural, and intellectual progress—among these nations.

During his radio-TV address last night, the President also wisely included a reaffirmation of our policies for: maintaining the security of the Americas; adhering to our faith in the rule of law; and willingness to work to further strengthen the democratic institutions of the Western Hemisphere.

Overall, the address, in addition to putting the U.S. defense program in proper perspective, clarified the realistic, constructive "climate of intention and objective" in which the President is undertaking the trip to our Latin American neighbors.

Illustrative of the kind of statesmanlike and realistic, yet humanistic, approach of Mr. Eisenhower in attempting to find ways and means for further improving U.S. relations with other countries, this time with nations of the Western Hemisphere, I ask unanimous consent to have the text of the President's address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Feb. 22, 1960]

TEXT OF PRESIDENT EISENHOWER'S RADIO-TV TALK TO NATION

My friends, early tomorrow I start a journey to several of our Latin American neighbors, with three major purposes in mind.

These are: To learn more about our friends to the south; to assure them again that the United States seeks to cooperate with them in achieving a fuller life for everyone in this hemisphere; and to make clear our desire to work closely with them in the building of a universal peace with justice.

Our interest in our sister republics is of long standing, and of deep affection. This, in itself, is reason sufficient for this journey.

But in these days of world tension, of awakening ambitions, and of problems caused by the growing interdependence of nations, it is vital for national partners to develop better undertakings and to improve common programs.

TO REAFFIRM BONDS

The bonds among our American Republics are not merely geographic; rather they are shared principles and convictions. Together we believe in God, in the dignity and rights of man, in peace with justice, and in the right of every people to determine its own destiny. In such beliefs our friendship is rooted.

Yet even among close comrades, friendships too often seem to be taken for granted. We must not give our neighbors of Latin America cause to believe this about us.

So I shall reaffirm to our sister republics that we are steadfast in our purpose to work with them hand in hand in promoting the security and well-being of all peoples of this hemisphere.

To do so, calls for a sustained effort that is, unfortunately, sometimes impeded by misunderstandings.

One such misunderstanding, at times voiced in Latin America, is that we have been so preoccupied with the menace of Communist imperialism and resulting problems of defense, that we have tended to forget our southern neighbors.

Some have implied that our attention has been so much directed to security for ourselves and to problems across the oceans to the west and east, that we neglect cooperation and progress within this hemisphere.

It is true that we have given first priority to worldwide measures for security against the possibility of military aggression. We have made many sacrifices to assure that this security is and will be maintained.

But I hope to make clear, on my journey, that our military programs at home and abroad have been designed for one purpose only—the maintenance of peace, as important to Latin America as to us.

That there is need for these programs, postwar history clearly proves.

For the first 5 years after World War II, we in the United States, hopeful of a global and durable peace, pursued a policy of virtual disarmament.

But the blockade of Berlin, the military weakness of our European friends living face to face with the Communist menace, and finally the Korean war—together with arrogant threats against other peaceful nations—belatedly made it clear to us that only under an umbrella of military strength could free nations hope to make progress toward an enduring just peace. World uneasiness rose to the point of alarm.

ARMS TO SUSTAIN PEACE

Since then our Nation has developed great arsenals of powerful weapons to sustain the peace. We have created a great deterrent strength—so powerful as to command and to justify the respect of knowledgeable and unbiased observers here at home and abroad.

Our many hundreds of Air Force bombers deployed the world over—each capable of unleashing a frightful destruction—constitute a force far superior to any other, in numbers, in quality, and in strategic location of bases.

We have, in addition, a powerful nuclear force in our aircraft carriers and in our host of widely deployed tactical aircraft. Adding constantly to these forces are advanced types of missiles steadily augmenting the armaments of all ground and other military units.

As for longer range ballistic missiles, from a standing start only 5 years ago we have literally leaped forward in accomplishments no less than remarkable.

Our Atlas missile, already amazingly accurate, became operational last year. Missiles of intermedaite range are in forward bases. The first Polaris missile submarine—an almost invulnerable weapon—will soon be at sea. New generations of long-range missiles are under urgent development.

STRESSES VARIED FORCE

Collectively, this is a force not unduly dependent upon any one weapon or any one service, not subject to elimination by sudden attack, buttressed by an industrial system unmatched on earth, and unhesitatingly supported by a vigorous people determined to remain free. Strategically, it is far better situated than any force that could be brought to bear against us.

As we have strengthened these defenses, we have helped to bolster our own and free world security by assisting in arming 42 other nations—our associates in the defense of the free world.

Our part of this indispensable effort is our mutual security program. It makes possible a forward strategy of defense for the greater security of all, including our neighbors to the south.

I am certain that our Latin American neighbors, as well as you here at home, understand the significance of all these facts.

SAYS SHIELD IS AMPLE

We have forged a trustworthy shield of peace—an indestructible force of incalculable power, ample for today and constantly developing to meet the needs of tomorrow.

Today, in the presence of continuous threat, all of us can stand resolute and unafraid—confident in America's might as an anchor of free world security.

But we all recognize that peace and freedom cannot be forever sustained by weapons alone. There must be a free world spirit and morale based upon the conviction that, for freemen, life comprehends more than mere survival and bare security. Peoples everywhere must have opportunity to better themselves spiritually, intellectually, economically.

We earnestly seek to help our neighbors in this hemisphere achieve the progress they rightly desire.

We have sought to strengthen the Organization of American States and other cooperative groups which promote hemispheric progress and solidarity.

We have invested heavily in Latin American enterprise.

New credits, both public and private, are being made available in greater volume than ever before. Last year, these approximated $1 billion. Our outstanding loans and investments in Latin America now exceed $11 billion.

LISTS OTHER STEPS

With our sister republics, we have just established the Inter-American Development Bank. With them we hope this new $1 bil-

lion institution will do much to accelerate economic growth.

Additionally, we have expanded technical cooperation programs throughout the Americas.

To improve our own knowledge of our neighbors' needs, we recently established a distinguished panel of private citizens under the chairmanship of the Secretary of State.

This national advisory committee will by continuous study of inter-American affairs, help us at home better to cooperate with our Latin-American friends. Members of the committee will accompany me on my journey.

This will be a busy trip, for our neighbors' problems are many and vexing—the lack of development capital, wide fluctuations in the prices of their export commodities, the need for common regional markets to foster efficiency and to attract new credits, the need to improve health, education, housing, and transportation.

These are certain to be subjects of discussion in each of the countries I visit.

CITES BASIC PRINCIPLES

And wherever I go, I shall state again and again the basic principles and attitudes that govern our country's relationships in this hemisphere.

For example:

Our good-partner policy is a permanent guide, encompassing nonintervention, mutual respect, and juridical equality of states.

We wish, for every American nation, a rapid economic progress, with its blessings reaching all the people.

We are always eager to cooperate in fostering sound development within the limits of practical capabilities; further, we shall continue to urge every nation to join in help to the less fortunate.

We stand firmly by our pledge to help maintain the security of the Americas under the Rio Treaty of 1947.

We declare our faith in the rule of law, our determination to abide by treaty commitments, and our insistence that other nations do likewise.

We will do all we can to foster the triumph of human liberty throughout the hemisphere.

We condemn all efforts to undermine the democratic institutions of the Americas through coercion or subversion, and we abhor the use of the lie and distortion in relations among nations.

RED "FALSEHOOD" MENTIONED

Very recently, in a faraway country that has never known freedom—one which today holds millions of humans in subjugation—impassioned language has been used to assert that the United States has held Latin America in a colonial relationship to ourselves.

That is a blatant falsehood.

In all history no nation has had a more honorable record in its dealings with other countries than has the United States.

The Philippines are independent today—by their own choice.

Alaska and Hawaii are now proud partners in our federated, democratic enterprise—by their own choice.

Puerto Rico is a commonwealth within the United States system—by its own choice.

After the two world wars and the Korean war, the United States did not annex a single additional acre, and it has sought no advantage of any kind at the expense of another.

And in all of Latin America, I repeat, we adhere honorably and persistently to the policy of nonintervention.

It is nonsense to charge that we hold—or that we desire to hold—any nation in colonial status.

These are but a few of the matters that friends in this hemisphere need to talk about. I look forward with the keenest pleasure to exchanging views with the Presidents of Brazil, Argentina, Chile, and Uruguay, and with their colleagues.

It is my profound hope that, upon my return, I shall be able to report to you that the historic friendship and trust among the nations of this hemisphere have been strenghened, and that our common cause—justice and peace in freedom—has been reaffirmed and given new life.

Good evening, and to my Latin American friends, buenas tardes (good afternoon).

The Father of Our Country

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, February 22, 1960

Mr. EVERETT. Mr. Speaker, there appeared in the States-Graphic, a weekly newspaper published at Brownsville, Tenn., on Friday, February 19, an editorial on George Washington written by Mr. Paul Sims, the editor of this paper, who is an outstanding editor not only in our congressional district and the State of Tennessee, but the Nation as well.

I think this editorial is very timely and to the point:

THE FATHER OF OUR COUNTRY

February 22 is the birthday of George Washington.

This was the man who was most influential and successful in the founding of the United States.

This was to become, and is today, the greatest nation under heaven.

George Washington was the general who led the colonies to victory over Great Britain to make them independent. He was the Nation's first President.

However, the popular observance of Washington's birthday did not come about overnight, after his death. The colonies and the States were slow to recognize the magnitude of Washington's accomplishments and the contribution he had made to the young Nation.

Not only had Washington won independence for the colonies and served as first President, he had had established the foundation principles for American government, one of them being to stay out of other nations affairs. He had also set the precedent for a two-term limit for chief executives.

After Washington's death on December 14, 1779, at Mount Vernon the Congress, then meeting in Philadelphia, proposed that February 22, 1800, be observed throughout the country with proper exercises in honor of the first President of the United States.

Thereafter the observance of Washington's birthday rapidly spread throughout the United States. It is today a national holiday, and should continue to be as long as we enjoy liberty and freedom.

Washington's high standards of conduct, morality, ethics and statesmanship were then, and are today, an example for all Americans who would offer their services in times of war and in positions of public trust.

For because Washington had all of these characteristics, and in abundant measure, it is possible for us to enjoy today liberty and peace.

Washington's birthday, then, is more than a simple national holiday, observed by workers, by banks and other public businesses. It is a day for all loyal Americans to rededicate their lives to the principles for which he fought and served.

Gen. Clark L. Ruffner Honored

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES

Monday, February 22, 1960

Mr. TALMADGE. Mr. President, on February 16, 1960, Hon. Hubert F. Lee, editor of Dixie Business Magazine, of Decatur, Ga., presented to Gen. Clark L. Ruffner, who until recently served with distinction as commanding general of the U.S. 3d Army, the magazine's distinguished service award designating him "Honorary Citizen of the South." The presentation was made upon the occasion of General Ruffner's departure to become the American representative to the NATO Military Committee. I ask unanimous consent to have the text of Mr. Lee's remarks of presentation printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS MADE BY HUBERT F. LEE IN PRESENTING DISTINGUISHED SERVICE AWARD DESIGNATING GEN. CLARK L. RUFFNER, "HONORARY CITIZEN OF THE SOUTH" AND CONFERRING HONORARY MEMBERSHIP IN THE SOUTH'S HALL OF FAME ADVISORY COUNCIL, FEBRUARY 16, 1960 AT FORT MCPHERSON, GA.

General Ruffner, as founder of the South's "Hall of Fame for the Living" honor group, I believe I speak for the leadership of the South and of the Nation in saying we are proud of you.

As commanding general of the famous 3d Army, you head the South's biggest business enterprise. In this assignment, your leadership has been notable, as it has been through all your military career.

We are proud that here you were promoted to lieutenant general and now to a four-star general. We are proud that you have been selected for U.S. representative to the NATO Military Committee where you will shortly assume your new duties for the Nation.

I think it fitting that these honors should come to you in the South where you attended Virginia Military Institute and learned the fine traditions of the greatest profession in the world—the profession of arms.

I believe your comrades in arms will agree with me when I say you exemplify the fine old ode to a soldier:

"For gold the merchant plows the main,
The farmer plows the manor,
The soldier's gold is glory
And the soldier's gain is honor."

This is a gesture of good will to you and it is a gesture of good will to the memory of another soldier who went to Virginia Military Institute, the late Gen. George C. Marshall, who was a member of the South's Hall of of Fame Advisory Council. It is likewise a tribute to two retired lieutenant generals, who are former commanders of the 3d Army and are members of the South's Hall of Fame for the Living. Gens. Alvan C. Gillem, Jr., and A. R. Bolling.

It was my privilege to have served in the old Army Air Service in the formative days of

Camp Benning; in the first B.M.T.C. in 1922 and later in the Georgia National Guard. It has also been my privilege to serve in a humble civilian capacity since March 4, 1942, at the Atlanta General Depot, Forest Park, Ga.

I was much impressed with Rudyard Kipling's description of a great American as quoted by the Honorable SAM J. ERVIN, JR., who did me the honor of making the "Man of the South for 1959" award to Mr. Norman A. Cocke at the Charlotte Country Club December 14, 1959.

I think I can say about you what Senator ERVIN said to Norman A. Cocke as a fitting description of you:

"Leal servant, loved master,
Rare comrade, sure guide."

General Ruffner, on behalf of the South's Hall of Fame for the Living honor group, and on behalf of the Editor's of Dixie Business, it is my happy privilege to present you this illuminated scroll as a gesture of good will, which brings you into the circle of unselfish leaders of the South.

"The American's Creed" Should Be Our National Creed

EXTENSION OF REMARKS
OF
HON. JOHN R. FOLEY
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, February 22, 1960

Mr. FOLEY. Mr. Speaker, it is my privilege to offer for consideration a resolution to establish "The American's Creed" by William Tyler Page as the national creed of the United States. Mr. Page was born in the city of Frederick, Md., on October 19, 1868, and lived in Montgomery County, in the Sixth District of Maryland, which I am proud to represent in the House of Representatives.

In 1916, when half the world was aflame with war, the thought occurred to many Americans that we should more seriously than ever before consider the duties and obligations of American citizenship, lest we forfeit its rights and privileges. Among those who felt these things was Henry Sterling Chapin, of New York, who conceived the idea of promoting a countrywide contest for the writing of a national creed. The creed would be the briefest possible summary of our political faith in terms of fundamental things most distinctive in American history and tradition.

In March 1917, on behalf of the city of Baltimore, Mayor James H. Preston offered an award of $1,000 for the winning creed. In addition to a committee on manuscripts and a committee on award, a number of well-known men and women agreed to act as an advisory committee. The President of the United States informally approved of the contest, and many Governors, U.S. Senators, and Congressmen were members of this advisory committee of which the U.S. Commissioner of Education was, ex officio, chairman.

Of the thousands of creeds submitted from every State in the Union, the one chosen by the committees was submitted by William Tyler Page, a lineal descendant of Carter Braxton, a signer of the Declaration of Independence. From a lifetime practice of retiring to his library for a careful study of the great documents of American history on each Fourth of July, Page was able to express the essence of American faith in a simple yet comprehensive summary.

The American's Creed was selected in March 1918. In the following month, the creed was publicly announced at a ceremony held in the Office Building of the House of Representatives. The entire proceedings, together with the official reprinting of the American's Creed appeared in the CONGRESSIONAL RECORD of April 13, 1918. A few days after receiving a check for $1,000 from the city of Baltimore, Mr. Page stood upon the Capitol steps in Washington and purchased a $1,000 bond of the third liberty loan.

All citizens of the Sixth District of Maryland are proud of William Tyler Page. In addition to having captured the very essence of American patriotism in a short and succinct statement, Page had the distinction of having served as an employee here at the U.S. Capitol for 61 years. He served under 11 Presidents from Chester Arthur to Franklin Delano Roosevelt. During this period there were 15 Speakers of the House of Representatives. His career began as a congressional page in the Clerk's Office of the House of Representatives on December 19, 1881. Page served in various capacities until he retired in 1942. He died in 1948 at the age of 80.

Today and every day the patriotic essence of his "American's Creed" should be daily practiced more intensely. For this reason I have proposed that "The American Creed" should formally be made by congressional resolution our national creed.

THE AMERICAN'S CREED
(By William Tyler Page)

I believe in the United States of America as a government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a Republic; a sovereign Nation of many sovereign States; a perfect Union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

I therefore believe it is my duty to my country to love it; to support its Constitution; to obey its laws; to respect its flag; and to defend it against all enemies.

Trade Between Hawaii and the West Coast—Favorable Action by U.S. Court of Appeals on Application of Pacific Far East Line, Inc.

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, February 22, 1960

Mr. DIRKSEN. Mr. President, on May 21, 1959, I informed the Senate that something effective should be done to end the alleged near monopoly that the Matson Navigation Co. has on trade between Hawaii and the west coast. There was considerable discussion about that matter, and a good many persons came to discuss it with me.

At the time, I wondered whether I was on bad ground; but I am happy to inform the Senate that on February 4, 1960, the United States Court of Appeals for the District of Columbia Circuit unanimously decided that the Federal Maritime Board had erred in excluding the Pacific Far East Line, Inc., from becoming the only competitor of Matson in the Pacific coast-Hawaii trade.

I am pleased that—for the first time, to my knowledge—a U.S. court has taken cognizance of Matson's apparent monopolistic position. The Department of Justice is to be commended for its strong stand, taken at my request, in arguing against this monopoly.

I am now informed that the Maritime Board—which is not an independent agency, but is a part of the executive branch, under the authority of the Department of Commerce—is considering opposing its own attorney, the Justice Department, and is seeking Supreme Court review of this historic decision which is so important to our new State of Hawaii.

In its decision the Federal court made clear that the Maritime Board had never even given consideration to the public interest in ending Matson's monopoly. I submit that the public interest involved in this matter requires that the Maritime Board submit to this decision and bow to the decision of its own attorneys, namely, the Department of Justice. For the Maritime Board to oppose the Justice Department in the Supreme Court is not only against the public interest, but also seems to me to be just a little rediculous.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article, from the New York Herald Tribune of February 4, which supports this position. I also ask unanimous consent to have printed a short excerpt from the decision of the court of appeals in this case.

There being no objection, the article and the excerpts from the decision were ordered to be printed in the RECORD, as follows:

PACIFIC LINES WINS APPEALS COURT VICTORY—MARITIME BOARD TO RECONSIDER RULING

Pacific Far East Lines won a major victory yesterday over the Federal Maritime Board and Matson Navigation Co. in a ruling handed down by the U.S. Court of Appeals in Washington.

The court ordered the Maritime Board to reconsider its order denying Pacific Far East permission to maintain a nonsubsidized service between west coast ports and Hawaii in competition with Matson. The court further ruled that the Board had "practically equated unfair competition with effective competition" in its original decision.

John R. Wagner, executive vice president of Pacific Far East, hailed the decision as clearing the way "for establishment of a broader base of transportation between the States of Washington, Oregon, California, and the new State of Hawaii."

The court fight was marked by the unusual spectacle of the Department of Justice appealing the ruling of the quasi-judicial Federal Maritime Board in the court of appeals. The Justice Department supported Pacific Far East's contention that the Maritime Board had made an erroneous ruling. As a result, it is not expected that the court of appeals' decision will be taken to the Supreme Court.

Judge John A. Danaher said in the ruling that "preservation of Matson's monopoly is not an object or policy of the [merchant marine] act."

"On the contrary, the public interest in ending this monopoly should be considered," he continued. "The act does not exempt the California-Hawaii trade from the anti-monopoly policy which Congress has often expressed.

The Maritime Board made its ruling while Hawaii was still a Territory. Since Hawaii is now a State, the question whether ship services between it and the west coast comes under the Federal Maritime Board or the Interstate Commerce Commission has still not been resolved.

EXCERPT FROM U.S. COURT OF APPEALS, DECIDED FEBRUARY 4, 1960

Intervenor Matson has operated in the Pacific coast-Hawaii trade for more than 70 years and is said to carry 98 percent of the cargo in that trade.

The Board practically equated unfair competition with effective competition. But what is bad for Matson is not necessarily bad for the country. However adequate Matson's service may be, and in whatever sense Matson may "need" to retain its monopoly of the California-Hawaii trade, we cannot accept the Board's view that Matson is "fundamentally entitled" to retain this monopoly as against a competitor that is subsidized—as Matson itself is, through its subsidiary Oceanic—in a different trade. Service and need would be important if the Board were a public utility commission passing upon an application to enter a regulated field, but have nothing to do with the question whether PFEL's competition with Matson would be "unfair."

Report of the Department of Health, Education, and Welfare Showing Receipt by the States of Surplus Real and Personal Property

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 22, 1960

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a report from the Secretary of Health, Education, and Welfare which shows that the States received surplus real and personal property valued at $88,842,822 for the period October through December 1959.

The Special Subcommittee on Donable Property, which was established by Chairman DAWSON of the Government Operations Committee and consists of myself as chairman, Congressman JOHN S. MONAGAN, and Congressman ROBERT R. BARRY, keeps a close watch on the operation of this program which has proven to be of great value to our institutions. As a matter of fact the Secretary of Health, Education, and Welfare has indicated that the donable surplus property program constitutes the greatest assistance now being given to our educational institutions. It is well known that many engineering and industrial schools throughout the Nation would have great difficulty operating without the machine tools and other pieces of equipment made available to them through the donable property program.

The report follows:

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Personal property received by State surplus property agencies for distribution to public health and educational institutions and civil defense organizations and real property disposed of to public health and educational institutions, October 1 through December 31, 1959 (acquisition cost)

[In accordance with sec. 203(o), Public Law 152, 81st Cong. as amended]

State	Personal property	Real property	Total
Total	$85,486,916	$3,355,906	$88,842,822

Putting the Missouri To Work

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, February 22, 1960

Mr. CASE of South Dakota. Mr. President, South Dakota is fortunate in having among the editors of its daily press a man who is outstanding in his knowledge of the Missouri River and its potentialities. He is Robert B. Hipple, editor and publisher of the Pierre Capital Journal.

Mr. Hipple recently looked into the future and wrote two editorials which I regard as significant in predicting the impact of Missouri development on South Dakota. One dealt with navigation; the other, with irrigation.

I ask unanimous consent that the editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Pierre (S. Dak.) Capital Journal, Jan. 28, 1960]

THE BIGGEST BENEFIT

Hydroelectric power is the smallest and least important benefit that the people of South Dakota can derive from the comprehensive program for Missouri River development.

Navigation is the largest, and the most important, benefit that South Dakotans could enjoy. Irrigation falls between power and navigation.

This is a fact; but it is a fact that is not realized or appreciated by most of the people of this State, including some of the people who are well informed on the general subject of the construction plans.

This lack of comprehension arises from the fact that hydroelectric power is such a large and important benefit that it is almost impossible for people to realize that other benefits could be larger; and from the further fact that power is not an established fact, while neither the benefits of irrigation or of navigation are now in existence.

The main benefit of hydroelectric power comes from the difference in cost to the consumer, between what he pays for power generated by falling water and power generated by burning fuel. This is less than 2 cents per kilowatt-hour; but even at that figure the South Dakota family using 500 hours monthly will save $10 per month or $120 annually.

The main benefit of navigation comes from the difference between the cost of hauling things overland and the cost of hauling them by water. The possible savings here are spectacular in the case of many commodities in daily use by most South Dakota families.

There is also the fact that there is a top limit to the amount of electricity that can be generated by the water flowing in the Missouri; but there is practically no such limit on the amount of tonnage that water can carry.

A waterway is a better carrier than a heavy duty truck highway. We ought to be getting such a carrier built into South Dakota.

[From the Pierre (S. Dak.) Capital Journal, Jan. 29, 1960]

GET WHAT WE PAY FOR

Some time between now and the first of July the Huron area office of the Bureau of Reclamation will complete a detailed study of the proposed Oahe-James irirgation project. The study will have been reviewed by people from a regional office at Billings, Mont., and from the central office in Washington.

We do not know just what conclusions will be reached. When the study is completed and approved it will be made available to the people of South Dakota for their own examination. It will then be up to the people to decide whether they want to make use of Missouri River water for irrigation purposes.

as proposed. If they do, it will be necessary for South Dakotans to take some action. Particularly they will have to make some promises to pay a share of the costs that will be involved.

Obviously nobody is going to make any such promise until it is known how much is involved. This is the information that can be expected from the report now in preparation. Our guess is that when the information is available South Dakotans generally will be surprised to learn how much of the project they will be paying for in any event, through the monthly bills they now pay for electricity. They will also be surprised to learn that in the event they do not decide to build the irrigation project their bills for electricity are apt to rise instead of decreasing.

This somewhat paradoxical situation arises from the fact that money advanced to build irrigation projects is interest-free, as far as repayment is concerned, while money advanced for construction of electrical installations carries a charge for interest.

The subject can, and undoubtedly will, be discussed at great length. However it all adds up to the ultimate conclusion that South Dakotans are going to pay for an irrigation project, whether it is built in South Dakota or not. Once this fact is thoroughly understood by South Dakotans generally we feel fairly sure they are going to insist upon having what they pay for.

The Man Behind the Bylines

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 22, 1960

Mr. GEORGE. Mr. Speaker, last month death came to one of the truly great newspaper editors of our time. C. G. "Pete" Wellington, executive director of the Kansas City Star, contributed materially to the high standard of journalism so clearly in evidence when one reads any edition, morning or evening, of that great midwestern newspaper.

Although his place will not be easily filled, because of his thoughtfulness for others, his devotion to duty and to those with whom he worked, and his constant effort to make even better newspapermen of his associates, capable men are prepared to step into his place and undertake to assume his responsibilities.

Facts, and only true and complete facts, were, to Mr. Wellington, the basis for any story. Integrity of the press was his first any most important objective and he never swerved from that ideal.

A son, Robert B. Wellington, is editor of the Ottawa Herald, Ottawa, Kans., and, with the outstanding career of his father as an example, he is pursuing a similar and fearless course. His son, his friends, and his associates on the Kansas City Star will continue to strive for perfection and will do a better job because of the exemplary life of Pete Wellington.

Because Mr. Wellington had many friends and admirers in all corners of the earth, Mr. Speaker, I ask that an editorial which appeared in the Kansas City Times—the Morning Star—and which expresses the thoughts and admiration of his coworkers be included in my remarks:

C. G. WELLINGTON

To more than a generation of newspapermen C. G. Wellington has been known as one of the great technicians of his profession. Quiet of manner, unerringly considerate of people who worked under him, he kept up a constant pressure for top performance.

His professional life was a continuous drive for perfection. Of course he knew that in the massive, fast-moving production of a metropolitan newspaper there could never be absolute perfection. Few persons outside a newspaper office could have any conception of the task. As executive editor, Pete Wellington headed a day-and-night operation in which 12 separate editions roll off the presses every day. It requires assembling and evaluating news ranging from the danger spots of the world to a human interest episode on Charlotte Street. Many stories must be rushed to the copy desk a few lines at a time as they are written. Through the many departments and features the operation covers the full range of human activity.

Pete Wellington presided over this operation with an apparent calm and a constant vigil. In this he worked through many people in Kansas City and in the bureaus at the State capitals and Washington. Far more than most staff members realized, he followed their individual work. He maintained a close association with many of the reporters for the press services and other agencies who covered the world.

To some newcomers, perhaps, his quiet and reserved manner was interpreted as aloofness, which was far from his real nature. Persons who knew him realized that Pete Wellington was deeply concerned for the welfare of all the people in the Star operation. He wanted to hear about individual problems. He recognized that in a large organization talent varies widely and he went to strenuous lengths to find the work that would bring out the best in each person.

In the production of the Star, Mr. Wellington was the man in the background. Of course he was known intimately to a very large number of personal friends. But the city as a whole seldom heard his name. He was an editor, not a writer. He was the man behind the bylines of many fine reporters and thousands of stories. He seldom made speeches and was seldom found in the spotlight. The nerve center of his world ranging news interest was at his own desk.

The Wellington reputation as a perfectionist was made as assistant city editor and city editor, jobs that put him in the closest direct contact with reporters and copy readers. He was known for the high standards of Star style that have become familiar to many newspapers. But his conception of fine writing went much deeper than anything that could be specified in a style book.

Ernest Hemingway credits him with bringing a concept of flexible narrative writing to a profession that was then tied to a cut-and-dried dogma of leads and secondary leads. From afar he could sense the drama of a big story. But in his book the fundamental was absolute integrity of facts. A sloppy piece of reporting called for an item-by-item grilling that many a seasoned newspaperman can remember even to this day.

Wellington was a newspaperman's newspaperman. Through his leadership in national professional associations he had friends in the key posts of hundreds of papers. For him a convention of editors was like old home week. And from the delightful visits with friends he brought home a wide range of ideas.

Friendships were extremely important to the exacting Pete Wellington, friendships and his closely knit family. Those of us at the Star, especially, realize that we have lost an extremely warmhearted and devoted friend. We are confident that the professional standards of excellence set by him have left an imprint on the Star that will last for many years.

The Lincoln Family in Virginia

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, February 22, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article writen by John T. Harris, Jr., of Harrisonburg in March 1887, with respect to the history of the Lincoln family in Virginia.

I feel this is of interest, particularly at this time when we have only recently observed the birthday of Abraham Lincoln.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LINCOLN FAMILY IN VIRGINIA

Adversity has its compensations. The Supreme Court decision of 1954 did more than disrupt interracial evolution in the South.

It awakened thoughtful Americans everywhere to a gradual realization that the Constitution will always be imperiled by well organized, clamorous balance-of-power minorities able to convince the political appointees on the high bench, that "the end justifies the means" even when those means violate clearly prescribed restrictions of the Nation's basic law.

Another beneficial effect of the Warren-Myrdal decision was that it revived interest in our history, and—after almost a century of bitter prejudice—reminded Southerners that Mr. Lincoln was not a malevolent fanatic, determined to free and enfranchise the largely illiterate Negro—but was concerned basically with the preservation of the Union.

Thanks to the preservation of the Union, the essentially conservative South remained as a check against the Marxist demagoguery of the North's big city "liberals" and thereby has fortified national resistance against the invasion of Soviet ideology.

The North long ago recognized the heroic stature of Robert E. Lee.

The South, I believe, will in time arrive at a less distorted image of the Civil War President born 151 years ago today.

Quite by chance I came upon a letter (in the same old Century magazine of March 1887) by John T. Harris, Jr., of Harrisonburg, delineating the prerevolutionary Virginia background of the Lincoln family.

The following excerpts from that letter may prove interesting to the historically minded:

"The early ancestors of Lincoln lived in Berks County, Pa., and moved thence to Virginia.

"The records belonging to the Lincoln family during their residence in Rockingham County, Va., were destroyed by the Federal Army during the Civil War, but fortunately there are yet in existence certain official and indisputably authenticated documents, only discovered upon a recent search, which the torch of war did not touch.

"In the year 1768 that portion of the Shenandoah Valley, Va., now contained within the county of Rockingham constituted a part of the county of Augusta, from

which county Rockingham was detached and organized in 1777.

"Prior to this date—1777—all transfers of real estate in the county now comprising Rockingham County were recorded in the clerk's office of Augusta County at Staunton, the county seat. The records of this office disclose the fact that on the 16th day of August 1768 there was recorded a deed from the heirs of Robert McKay to John Lincoln conveying a tract of 600 acres situate on Linvill's Creek in the county of Augusta, now in the county of Rockingham.

"This tract of 600 acres was a portion of a very extensive body of land patented to McKay and others as early as 1739, and was doubtless regarded then, as it unquestionably is now, as among the finest tracts of land in the fertile Shenandoah Valley.

"In view of this purchase of land in Virginia by John Lincoln, it may certainly be regarded as settled that he—the great-grandfather of the President—located in what now constitutes Rockingham County, Va., as early as 1768.

"Messrs. Nicolay and Hay intimate in the Lincoln history, and Mr. Nicolay states in his article on Lincoln in the 'Encyclopedia Britannica,' that Abraham, Isaac, Jacob, Thomas, and John, sons of John Lincoln, were born in Virginia. Unless it can be shown that John Lincoln located in Virginia a considerable time prior to the year 1768, it may be fairly assumed that his sons just named were all born in Pennsylvania and accompanied their father to Virginia upon his settlement in that State. This idea receives corroboration from certain conveyances to his sons made by John Lincoln.

"On the 11th of August 1773 only 5 years after the date of the conveyance from the McKays to John Lincoln, he with his wife, 'Rebekah R.,' transferred to their son Isaac 215 acres of the original 600-acre tract, and on the 17th day of August 1773 they also conveyed to their son Abraham—the grandfather of the President—210 acres of this same tract.

"At what time did Abraham Lincoln, the grandfather of the President, remove from Virginia to Kentucky? Messrs. Nicolay and Hay fix the date as 1780. The date of the land warrants to Abraham Lincoln, the 4th of March 1780, and the subsequent entries of the land in Kentucky thereunder certainly confirm the time of his leaving Virginia as being as early as 1780, but the statement by Messrs. Nicolay and Hay 'that he took his wife and five children with him' at this time is not borne out by record evidence in Rockingham County.

"There is still in existence the original deed from Abraham Lincoln and Bersheba, his wife, to one Michael Shanks, dated the 18th of February 1780, whereby, 'in consideration of the sum of 5,000 pounds current money of Virginia in hand paid,' they granted and conveyed to Shanks a tract of 250 acres, consisting of the 200 acres received from John Lincoln, his father, and another tract of about 40 acres obtained from one Munsey.

"There can scarcely be any reasonable doubt that this was the sale of Abraham Lincoln's real estate preparatory to his emigration to Kentucky. The deed was recorded on June 17, 1780, but without the privy examination of Bersheba, his wife, attached to the transfer. Consequently, in order to remedy this defect in the conveyance, there was issued on September 8, 1781, by the county court of Rockingham, a commission of privy examination of his wife Bersheba, she being unable to travel to our said county court of Rockingham to be privily examined apart from her husband whether she is willing to relinquish her right of dower in the land in the said deed mentioned, as the law in that case directs. This commission was executed by the commissioners named therein on September 24, 1781, returned to the county court, and recorded the same day; and the acknowledgment of Bersheba Lincoln, grandmother of Abraham Lincoln, that she had signed the said deed of her own free will, without any threats, force, or compulsion of her said husband, was complete, and with it, doubtless, passed all remaining material interest of the President's grandparents in Virginia.

"Lincoln himself states that his grandfather settled in Kentucky about 1782, and this privy examination certainly shows that his grandmother was still in Virginia as late as September 24, 1781.

"If Abraham Lincoln, the pioneer, removed to Kentucky prior to this date—September 1781—his wife did not accompany him, and it may be reasonably supposed, considering the difficulties and dangers attending travel at that time, that his wife and children did not migrate until the spring following."

JOHN T. HARRIS, Jr.

HARRISONBURG, VA., *March 1887.*

Loyalty Oath Has Proponents

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 22, 1960

Mr. HIESTAND. Mr. Speaker, several educators have proposed that the loyalty oath provisions of the National Defense Education Act should be modified, striking the clause which disclaims membership in any organization which seeks to overthrow the U.S. Government by unconstitutional means.

Today, thousands of youths who are required to sign the oath are joining an organization which supports the provision as it is now written and administered. There follows an article from the Tablet which presents a part of the story. This movement stems from the students, themselves, rather than "from the top, down":

A national student organization founded for the object of preserving the student loyalty oath and nonsubversive affidavit in the National Defense Education Act was announced here this week.

The organization's name is the National Student Committee for the Loyalty Oath. Twenty-five colleges and universities across the Nation are represented on its governing board and more are to be announced in the near future.

Chairman of the organization is Douglas Caddy, a senior at Georgetown University in Washington, D.C. Caddy is presently State chairman of the Young Republican College Federation for the District of Columbia. Executive secretary-treasurer of the student committee is David Franke, a junior at George Washington University in Washington, D.C. Franke is also at the present time the editor of the Individualist, official student publication of the Intercollegiate Society of Individualists.

COLLEGES REPRESENTED

The committee is bipartisan in political character. Its activities will be confined solely to fighting for the preservation of the loyalty oath and affidavit presently embodied in the NDEA and will not enter into the other areas of controversy currently attached to the NDEA.

Colleges represented by students on the governing board of the organization include Harvard University, Boston College, University of Connecticut, City College of New York, Manhattan College, College of New Rochelle, University of Indiana, Butler University, University of Wisconsin, Antioch, Marquette University, St. John's University (Minnesota), University of Michigan, Wittenberg College (Ohio), Iowa Central College, Kansas State University, William and Mary University, University of Houston, University of Arizona, University of New Mexico, Georgetown University, George Washington University, American University, Dunbarton College, and Trinity College.

ENDORSED BY SENATOR

The committee has been given the endorsement and blessing of Senator STYLES BRIDGES, of New Hampshire, chairman of Senate Republican Policy Committee. Senator BRIDGES, in a recent letter to the committee, wrote in part:

"The formation of your nationwide committee has come to my attention, and I offer my congratulations for the example of patriotism being expressed by our young American college and university students. It should serve to inspire our future leaders in every field of endeavor to renew their knowledge of the fundamentals upon which our Nation was founded.

"Throughout our history thousands of our young people have daily saluted the American flag and repeated the pledge of allegiance without any thought of hesitation. It has always been my belief that it was an honor to take any pledge of allegiance or subscribe to any oath of loyalty on behalf of our Nation. Why this should become unpopular in some circles is almost beyond my belief and comprehension.

"I wish the committee well and hope it receives support throughout the country. It is most certainly a worthwhile endeavor.

"STYLES BRIDGES,
"Chairman, Senate Republican Policy Committee."

DEPLORES OPPOSITION

In announcing its formation, the student committee termed "deplorable" the actions of the 19 colleges and universities who have refused to participate or have withdrawn from participation in the NDEA because of the loyalty-oath requirement. The committee raised the questions (1) whether it is proper for the officials of these colleges and universities that have refused participation to act as a superlegislature and deny qualified students the opportunity to seek the benefits under a public law designed to aid them individually, and (2) whether such officials are not by administrative fiat depriving the students of the very freedom they seek to preserve. The committee called attention to the fact that while only 19 institutions have refused participation in the NDEA, over 1,370 other institutions are participating without protest of the benefits of NDEA.

Hazards of Alaska Motoring

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Monday, February 22, 1960

Mr. BARTLETT. Mr. President, driving a car in congested city traffic, or even out on the main highways of the heavily settled sections of this country, presents constant risks, and is not in any case recommended as a sovereign remedy to

keep the nervous system free of jingles and jangles.

The Sterling Highway, in Alaska, extending from Homer to Anchorage, is less heavily traveled. Indeed, a bumper-to-bumper situation never does occur.

However, driving there has its perils too. If a fellow motorist does not "get" you, a moose—who feels he has as much right to the highway as you do—may dispute the right-of-way with you.

Twice recently this occurred on the Taylor Highway, according to a news article in the Inlet Courier, published in Homer by Marie and Jim McDowell.

How would you like to be confronted by a moose's foot coming right through the windshield at you? Yet that is just what happened recently on the Sterling Highway to Frank Wise.

I ask unanimous consent to have printed in the Appendix of the RECORD the article, published in the Inlet Courier, which tells of this unique motoring hazard to be found in Alaska.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Inlet Courier, Homer, Alaska]

TWO CARS DAMAGED BY MOOSE

Tuesday night as Frank Wise was returning from Kenai with members of the Homer High School basketball team he ran into a moose in the vicinity of Kasilo Hill. The moose's foot came through the windshield and Frank suffered a badly lacerated thumb. No one else was hurt in the car and the boys came home in it but the moose had a broken leg and had to be disposed of by the game department.

On Tuesday morning Leonard Catledge also collided with a moose and his car was badly battered but no other details are available.

The Co-op Tax Dodge

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 22, 1960

Mr. SIKES. Mr. Speaker, the question of co-ops and taxes is one which has been highly controversial in recent years. Many of us in Congress are friendly toward the principle of co-ops and we have seen definite benefits to our constituents from the cooperatives. However, there are those who believe that the cooperative plan has in some instances grown all out of proportion, and they object to the fact that the cooperatives are given a tax-free status which places privately owned business and industry at a disadvantage. Time magazine for February 15 gave a very interesting report on this situation. This indicates there is a definite need for a better understanding by both sides. I submit it for publication in the RECORD:

THE CO-OP TAX DODGE—CONGRESS SHOULD CLOSE THE LOOPHOLE

Next to the oil-depletion allowance, the hoariest unsettled tax argument in Washington involves the virtual immunity of giant cooperatives from income taxes. More than 10,000 co-ops gross more than $13 billion a year, yet pay less than 6 percent of their profits in Federal and State income taxes, compared with the 52-percent Federal corporate tax alone. This year, in his budget message, President Eisenhower asked for new taxes for co-ops, and last week the House Ways and Means Committee started hearings on the question: How much should co-ops be taxed?

Originally, the co-ops were small neighborhood associations set up to improve farmers' competitive position by pooling their marketing and purchasing power. When Congress in 1909 imposed the first peacetime corporate income tax of 1 percent, co-ops were held to be exempt as "agricultural or horticultural organizations." There were no objections, since at that time their tax advantage over other businesses was so small. Subsequently, Congress spelled it out: a co-op was totally exempt if it did half or more of its business with members and met certain other tests, such as limiting dividends on capital stock to 8 percent. If it did not meet these requirements, it was still exempt on its regular income if it was paid out to members in cash or in shares simply allocated to them on the books. Such allocations do not bind the co-ops, which can redeem them in cash when and if they want to, even lose the money without a comeback from members. Only when a member finally gets cash is the co-op income taxable—at the personal income tax rate.

Virtually excused from taxation, the co-ops expanded enormously. The Farmers Union Grain Terminal Association of St. Paul, founded in 1938 with only $30,000 in capital, today has a net worth of more than $40 million, largely finances the powerful Farmers Union, which runs the propaganda machine behind the scandalous farm-subsidy program. FUGTA pays no Federal income tax. It holds 80 percent of its members' share of the profits until they quit farming or die. FUGTA has not only expanded its own elevators and feed mills, but bought out privately owned, tax-paying businesses unable to compete. Since 1950, FUGTA's annual reports show $29 million in profits and only $9 million distributed as cash to members, the rest plowed back into the business.

Many co-ops have spread far afield of agriculture, own oil wells, tankers, insurance companies, banks, papermills, lumber yards, phone companies, hospitals, and even mortuaries. The Consumers Cooperative Association, a farm organization headquartered at Kansas City, owns three oil refineries, 1,000 or so oil wells, 935 miles of pipelines, three fertilizer plants, two feed mills, a steel-fabricating plant, a paint and grease factory, and a packinghouse, counts assets of $118 million. Grossing $154 million last year, Consumers had a net of $10.3 million. It paid only $1,237,000 in taxes, less than one-fourth the Federal tax alone that a non-co-op would have paid on the profits.

In 1951, over bitter co-op protests, Congress tried to close the co-op loophole by providing that co-op members pay personal income taxes on allocated profits even though they got no cash. But the courts ruled against this, holding that such allocations are untaxable because, being nontransferable, noninterest bearing, and payable only at the discretion of the co-op, they have no market value. To head off real tax reform, co-ops now are willing for Congress to pass a new law, forcing co-op members to pay personal income tax on allocations but keeping the organizations themselves exempt. To overcome the court objections to taxing script, the Treasury recommends that all exempt allocations be made in cash or in certificates that would pay a minimum of 4 percent interest, have a maximum maturity of 3 years. This would, in effect, make the scrip short-term notes, give it a value for personal income tax purposes. But many tax experts believe that this is not enough, since it would leave the co-op itself exempt from corporate tax. Thus other proposals before Congress would subject co-op income to both corporate and personal income tax when the profits are distributed, just as the profits of corporations are taxed.

No other country grants cooperatives such tax advantages: France allows no corporate tax exemption for profits paid to members; Belgium disallows allocations; Canada and Denmark levy regular corporate taxes on a minimum of 3 percent to 6 percent of capital invested. Even on the mild Denmark plan, U.S. co-ops would pay some $90 million to the support of the U.S. Government. To many tax experts it is high time they paid. Says former Under Secretary of the Treasury Roswell Magill: "The exemption may have been necessary in the infancy of cooperatives. Now that cooperatives have come of age, it is quite unnecessary to their continued growth and health."

Observance of National Brotherhood Week

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, February 22, 1960

Mr. WILEY. Mr. President, the 27th observance of National Brotherhood Week—February 21 to 28—is underway in about 10,000 communities throughout the country.

Sponsored by the National Conference of Christians and Jews, Brotherhood Week has as its laudable objectives:

Promoting civic cooperation among different religious groups.

Combating forces of bigotry and hate.

Training youth in responsibility of democracy.

Helping to promote good will and understanding of spiritual values among the youth of America.

Bringing the science of human relations to business, labor, civic and educational leaders.

And in other ways to attempt to make more people aware of a personal responsibility for making the ideals of brotherhood a reality.

With President Eisenhower as its honorary chairman, the splendid programs for Brotherhood Week also seek to promote:

First. Rededication of the basic ideals of respect for individuals and people.

Second. Practical steps which people can take to better understand and realize these ideals.

Third. Enlistment of contributing members in year around activities to build brotherhood everywhere.

In an era in which development in the physical sciences, including jet, atomic, missile power, is of such magnitude, the spiritual, human factors all too often become lost. The fact that these are intangible, rather than tangible, of course makes it more difficult to achieve accomplishments in this field. Nevertheless, experience has taught us that these can be a greater force than that which emanates out of physical or natural forces.

In fact, survival of humanity may well depend on whether or not the world can effectively put into action the ideals of brotherhood: Of common interest; of the need for recognition of dignity for humanity, and respect for rights and privileges of others; of a realization that by greater cooperation—rather than antagonism, conflict, war—humanity can lift itself to higher planes of not just an existence, than ever before in history.

When these principles of brotherhood become a reality—and not just a subject for armchair fireside chats without realistic efforts to put these into effect—this tremendous, potential force will contribute greatly to a better life for mankind on the globe.

Recently the National Conference of Christians and Jews published a brochure containing some basic practical steps by which individuals can make an effective contribution to making brotherhood a reality, not just for a week, but all the year round. I ask unanimous consent to have excerpts from the brochure printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

WHAT CAN YOU DO FOR BROTHERHOOD?

Remember, brotherhood means giving to others the rights and respect you want for yourself. Brotherhood—man's concern for his fellow man—has become the key to human survival. If mankind is to escape destruction, all of us must cultivate the ability to put ourselves in the other fellow's shoes, to understand his hopes and aspirations, and to recognize how close these are to our own. We must teach ourselves to become more sensitive to the pain of others and more determined than ever to relieve the suffering of our neighbors. This means we learn to practice brotherhood.

IN YOUR OWN ATTITUDES

1. Deal with people as individuals. Don't generalize about groups of people. Never be guilty of stereotyping an individual—or a group of people. Take every person at his own value.

2. Have friends in all religious, racial, and national groups. Cultivate this acquaintance—look for the good in them.

3. Don't blame others for your own faults and troubles; don't make others scapegoats for the problems of society.

WHEN YOU HEAR A BIGOT

1. Challenge prejudiced statements quietly with moral principles and facts.

2. Insist that each person be judged as an individual; do not allow generalization to go unchallenged.

3. Ask proof of prejudiced charges.

4. Point out that religious principles and democratic ideals call for fair play for every person.

IN YOUR HOME

1. Give your children good example by talking about and acting with people as individuals. Children pay more attention to action than words.

2. Give your children love and affection so they will be secure and not aggressive against others.

3. Give your children experience with children of other groups through books, stories, movies, visits, etc.

4. Give children the care for proper mental health, which is as important for their happiness as physical well-being. Parents protect their children from catching germs that spread disease—measles, scarlet fever, polio, etc. Scarcely ever do they realize that prejudice is a disease and seek to immunize their children against it.

IN YOUR SCHOOL

1. Use new and tested materials on intergroup education so that, in addition to the three R's, the children will have the benefit of knowing about the fourth R—better human relations.

2. Encourage teachers to attend workshops or institutes on intergroup relations.

3. See that all children have the best possible education and that none receive less because of race, religion, or national background.

IN YOUR CHURCH OR SYNAGOGUE

1. Have more brotherhood sermons: "Love Thy Neighbor as Thyself." Preach and teach that prejudice is sin.

2. Eliminate prejudice and promote better intergroup education in religious materials.

3. Get men's, women's, and youth organizations to meet with similar groups of other religions—not for worship, but for social periods and discussions on topics of civic concern.

IN YOUR FRATERNAL AND CIVIC CLUBS

1. See that persons are not barred from membership because of race, religion, or nationality when they are otherwise qualified for membership.

Tight Money Costs Sheboygan, Wis., Taxpayers Over $1 Million on Single Bond Issue

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 22, 1960

Mr. PROXMIRE. Mr. President, recently I spoke on the Senate floor about the heavy budren of the tight money, high-interest rate policy of the Federal Reserve on education in America. I have received a number of letters supporting and corroborating my charges against tight money. One of the most interesting came from the fine superintendent of schools in Sheboygan, Wis., Mr. Leslie Johnson.

Mr. Johnson writes me that the city of Sheboygan recently floated a $4 million bond issue, 95 percent of which is for school construction and renovation purposes. Mr. President, I have personally calculated that the cost of this money to Sheboygan is going to be $1 million more than it would have been if 1952 interest rates still prevailed, and probably considerably more than that.

I ask unanimous consent that the letter from Mr. Johnson be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered printed in the RECORD, as follows:

FEBRUARY 19, 1960.

The Honorable WILLIAM PROXMIRE
U.S. Senate,
Washington, D.C.

DEAR BILL: Thank you for sending me your statement concerning tight money policy in regard to schools. We have just floated a $4 million bond issue in the city of Sheboygan of which $3,800,000 will be used for school building construction and renovation. We were able to get this at an interest rate of 3.5 which is not too bad; but in the light of what we were paying back in 1952, it is costing our local taxpayers a considerable amount of money. I concur with you that this is a great hardship on school financing and school construction, as in this community we are charged in our budget with the retirement of the debt and with the payment of interest. This means that our school costs go up terrifically which may, in the future, endanger our operation because of the high property tax that will be required to provide for all types of services including debt service.

Very truly yours,

LESLIE W. JOHNSON,
Superintendent.

Increased Domestic Sugar-Beet Acreage Needed

EXTENSION OF REMARKS
OF
HON. CATHERINE MAY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 22, 1960

Mrs. MAY. Mr. Speaker, I have today proposed a bill to amend the Sugar Act of 1948, as amended, so as to insure that the American farmer will have priority on all growth or increased consumption of sugar beets and sugar cane, and to allow new sugar-beet growers on Federal reclamation projects to share fairly in increases in quotas.

Under my proposal, the Sugar Act would be extended for 4 years, to December 31, 1964; the President would be delegated authority to reduce the quota of a foreign nation when he finds it to be in our national interest; the U.S. sugar-beet farmers' basic quota would be increased by 150,000 tons and mainland cane quotas would be increased by 50,000 tons; 100 percent of the growth quota or increase due to U.S. population expansion would be allocated to domestic growers; new sugar-beet growers on lands served by Federal reclamation projects would receive at least 60 percent of any increase in beet quotas due to population expansion; and the methods of handling quota deficits is restated and clarified. My proposal limits the quantity of white sugar that can be marketed by foreign suppliers, and prohibits the importation of sugar "ex-quota" in the form of syrups.

As you know, under the present law which expires December 31, 1960, domestic areas receive 55 percent and foreign nations receive 45 percent of the growth quota. No provision is now made for earmarking portions of the growth quota to new growers. At present, the President does not have authority to alter quotas.

I feel very strongly that consideration should be given the American farmer and that he should have priority on all growth or annual increased consumption. The American farmer has long expressed a desire for this priority since he started needing more than the basic 1,800,000 tons on or before 1955. I feel that the farmers would have been en-

titled to these increases even if the present strained relations with Cuba had not come about.

Let me point out the effects of the Sugar Act on various producing areas, since 1955, when the ASC, a division of the Department of Agriculture, took over the job of breaking down the national sugar beet quota and alloting it out to individual farmers. Prior to this time this had been a function of the individual beet companies. At that time each grower's acreage for the years 1952, 1953, and 1954, was used to establish his history for allotments. This resulted in a serious inequity to some new reclamation projects who happened to be historically a few years late in receiving water to get their base built in these years. The Columbia Basin of the State of Washington, one of the best beet-producing areas in the United States, is one of these.

The older projects had good bases established for these years and consequently have been able to gain fairly good increases under the amendment to the Act, which has allowed domestic beet growers to participate at the rate of 22.3 percent of the increased national consumption since 1956.

On the other hand, the area of one sugar company of the Columbia Basin, whose average yield of 29 tons per acre was top in the United States in 1958, has not gained one acre of beets above its 1955 acreage. Having a very small base history because water had not been available soon enough, its participation in the increased national consumption has been negligible. At the same time growers could not move in from other States with acreage and growers could not move from the old area of this State, because this is all an area of another company. These inequities would be corrected under the provisions of the legislation I introduced today. I feel that this legislation is vital to the future economy of the several new reclamation areas of the United States, and I am hopeful that hearings on this proposal, and all other proposals dealing with sugar legislation, will be scheduled for early consideration.

The New Germany and the Jews

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 26, 1960

Mr. REUSS. Mr. Speaker, men of good will throughout the world have been shocked and disturbed by the recent outbreak of anti-Jewish expression in Germany and elsewhere. On January 23, 1960, two excellent editorials on this subject appeared in the Catholic magazine, the Ave Maria, published at Notre Dame, Ind.

In the first, Dr. Eric Waldman, director of the Institute of German Affairs at Marquette University in Milwaukee, points out that the hate campaign is in direct opposition to the efforts of the German Government and the vast majority of the German people to bring about friendship and harmony between the West Germans and the Jews.

In the second, the editors of Ave Marie discuss Catholic and anti-Semitism, and point out that hatred is a tool of Satan wherever and however it is used.

The editorials follow:

THE NEW GERMANY AND THE JEWS

(By Eric Waldman)

Germans demand that the Jews get out. These were the words smeared on the wall of the new synagogue in Cologne on Christmas Eve. From Cologne the hate campaign spread to other parts of Germany, to Austria, England, and even to the United States.

As expected, some observers see in these incidents signs of rising anti-Semitism and of a growing neonazism. Others believe that these acts of hate are the work of a few incorrigible anti-Semites, Nazis, and crackpots.

Whatever the truth, these acts of hate stand in complete opposition to the conscious German effort to bring about friendship and harmony between the West Germans and their Jewish fellow citizens. The same synagogue in Cologne which became the first target of the recent sneak sign campaign, was consecrated about 3 months earlier in the presence of Chancellor Adenauer. He pleaded then with the members of the Jewish community to include in their prayers for their own dead the many Christians who had also been murdered by the Nazis.

The Federal Minister of All-German Affairs, Dr. Ernst Lemmer, declared on September 27, 1959, at the occasion of the consecretation of the rebuilt Jewish community center in Berlin:

"We need the presence of the Jews and cooperation with them, in order really to come to grips and grow beyond our recent history. * * *. In this hour in which our memories pay tribute to the never-to-be-forgotten victims of an inhuman chapter in German history * * * I may perhaps be permitted to confirm that the German Government is filled with determination to do everything and to leave nothing undone in order to prevent our country from ever relapsing into barbarism."

These statements, reflecting the position of Germany's Christian Democratic Government and of the overwhelming majority of her population, stand quite in contrast to Hitler's fanatical policies. They stand also in contrast to the recent incidents of hate and prejudice.

In 1947, 2 years after the end of the war, 125,000 Jews of different nationalities were still in Germany, most of them waiting impatiently for an opportunity to emigrate; 90,000 succeeded in leaving, the majority of them going to Israel. The remaining Jews organized themselves in 85 congregations—the largest group, about 5,000, in West Berlin. By the end of 1959, the number of Jews in the Federal Republic had increased to about 30,000, as result of a tendency among some German Jews to return to their former homeland.

Chancellor Adenauer's Christian Democratic Government does much more than make speeches and admit Nazi crimes. A program of restitution genuinely attempts to make up at least for the material damages inflicted upon the Jews. But beyond that, all Jewish returnees to Germany are helped substantially by the Federal Government. Each returnee receives 6,000 deutsche marks ($1,500) in addition to any other compensation he might be entitled to as a result of losses suffered to real estate or other property during the Nazi rule.

The restitution payments of the Federal Government to individual Jewish returnees is but a very small fraction of the money paid to Jewish survivors living throughout the world and to the State of Israel. The cost of this program, expected to be completed in 1963, is estimated at $6 billion.

According to Dr. Nahum Goldmann, the newly elected president of the World Jewish Congress, "Israel has received more money from Germany than from all the Jews in the world put together. Hundreds of thousands have been given the opportunity to found a new life and a better existence." He also declared that "people should * * * bring to an end this nonsense about the German people as the heirs of Hitler's Germany."

And while neither the German people nor the Christian Democratic Government are Hitler's heirs, they are proving by their attitude and deeds that they really wish to live together with their Jewish fellow citizens. There are still remnants of anti-Semitism in Germany as the recent incidents demonstrated. This fact was, however, recognized in a special message Chancellor Adenauer sent to the American Jewish Committee as recently as October 1959.

Dr. Adenauer wrote that "anti-Semitic, antidemocratic phenomena" had come to the surface in Germany. But he cautioned that the impact of these events should not be overestimated. He declared that the German people "are fully aware of human rights of liberty promulgated in the German Constitution" because the "recent dictatorship on German soil gave an awful lesson in experience as to what befalls a people disregarding these rights."

This and no more is the significance of the recent sneak smear attack.

CATHOLICS AND ANTI-SEMITISM

On page 18 of this week's issue, Dr. Eric Waldman, an authority on German affairs, explains in some detail the position of the West German Government in relation to the Jews and what that government has done concretely to compensate the Jews who suffered under Hitler's dictatorship. To Dr. Waldman's excellent summary, we feel compelled to add a footnote.

That some Catholics are anti-Semitic is no secret; but that any Catholic should fall prey to the disease of anti-Semitism is a matter of scandal and concern. And it should be publicly noted, particularly at this time, that the church stands foursquare against the sin of anti-Semitism.

If anyone wished, they could easily compile a book of quotations from the Pope, the hierarchy and clergy and responsible Catholic laymen condemning racism—including anti-Semitism—in all its forms. Indeed, such a useful book has recently been revised, "The Challenge of Interracial Justice," by Msgr. Daniel M. Cantwell (Divine Word Publications, Techny, Ill.) This fine compilation of documents and statements is replete with proof that the church is a deadly enemy of prejudice in all its many forms.

But we believe there are some additional points it is necessary to ponder.

Have we forgotten, for example, the horror of Germany under Hitler, the murder of countless Jewish—and Christian—men, women and children who were innocent of any crime? Hitler did not create anti-Jewish feeling; he merely systematically cultivated it and fanned it into a white heat of hatred which allowed him to perpetrate his crime against humanity in the name of justice.

When the parlor bigots today sit around and make their anti-Semitic remarks, do they not realize their Hitlerian heritage? Do they not understand that they are the kind of people who made it possible for the

mad paperhanger to build a dictatorship? Have we learned nothing from the slaughter of the innocents within our own lifetime?

We are astounded, too, that the Catholics guilty of this sin are so naive as to be unaware that anticatholicism is the other side of the coin of anti-Semitism. Hatred is a tool of Satan and he cares not where or how he uses it: In one place it is anti-Semitism, in another anticatholicism, in another racial hatred—the list is too long to attempt. But one thing is clear: Catholics who indulge in Jew-baiting have little to complain about against those who practice the old sport of Catholic-baiting.

It would be well for Catholics to remember always the words of Pius XII: "There remains no other way to salvation than that of repudiating definitely * * * the pride of race and blood * * * and to turn resolutely toward that spirit of sincere fraternity which is founded on the worship of the Divine Father of all."

Rabid Chinese Bolsheviks in U.S.S.R. Irritate Average Ivan

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 22, 1960

Mr. WILEY. Mr. President, we recognize that the ultimate size and scope of the Communist menace to the free world security may well depend, to a large degree, upon the success of the Communist bloc in maintaining a closely knit unity.

From time to time evidence has developed pointing to the possibility of cleavages within the Communist countries. These have included not only reports from inside the Soviet Union, but also interpretations of the relationship between Peiping and Moscow, as well as other countries in the Communist orbit.

We recognize, of course, that, as of now, the Communists are ruling the Soviet Union and China, and, as well, directing the governments of the so-called satellites, with an iron hand.

Believing in the ultimate triumph of freedom, of the innate will of men to fight eternally for self-determination, I am hopeful that the repugnance of human beings to slavery—in every country within, as well as outside, of the Communists' orbit—will ultimately make a contribution toward defeating the efforts of communism to conquer and subjugate the world. Realistically, we recognize that this is not likely to happen tomorrow, or even in the immediate future. Instead, the erosion of Communist power can be expected to take a long time. However, in the East-West struggle, time, I believe, will in the long run serve the cause of freedom, not communism.

Meanwhile, we hope and pray that the establishment of a strong deterrent power in the free world will discourage the leaders of the Kremlin and Peiping from undertaking military aggression, which might ultimately result in a nuclear-missile war destroying vast areas of the free and Communist realms.

The intermittent reports coming from the Communist world of clashes of ideas, objectives, and interests within the bloc, however, are always heartening.

The Sunday edition of the Washington Post, contained an article entitled "Rabid Chinese Bolsheviks in U.S.S.R. Irritate Average Ivan," written by George Sherman.

Reflecting that Sino-Soviet relationships are not those of "just one big happy family," I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RABID CHINESE BOLSHEVIKS IN U.S.S.R. IRRITATE AVERAGE IVAN

(By George Sherman)

LONDON.—Late one night shortly before leaving Moscow I shared a taxi to the hotel with a Russian friend, a liberal from the young intelligentsia. The streets were deserted, the temperature at −20° C., the windows curtained with thick frost. Our free-ranging conversation naturally touched on China.

"The truth is that the Russians know less about what is happening in China than you in the West," Ilya ventured. Through diligence and privilege he himself had regular contact with Western ideas. "Your press is biased, but at least it prints opposite views of travelers and correspondents. Our papers give nothing but statistics and boring accounts of the great leap forward in China." Ilya ought to know; he is a journalist.

Russians like Ilya complain that the Chinese have retired into a shell just when they are leaving theirs. Personal contacts have dwindled to an absolute minimum. Thousands of Chinese students and technicians still study in the Soviet Union, but they seldom leave their groups.

An American student on exchange at Moscow University told how a Korean had made a point of emphasizing he was not Chinese; he wanted to be friendly. A Russian student in Leningrad recounted the scandal caused when one Chinese began frequenting student clubs with Russian girls; he was indicted by his collective, confessed, and went home in disgrace.

The new Chinese Embassy is a monument to this isolation. It stands like a stark white compound up on Lenin Hills. It has a hotel for visiting Chinese, a restaurant to feed them, and dormitories for students at the nearby skyscraper university. Down in the city Muscovites have one Chinese restaurant in the Hotel Peking. Flamboyant decorations and Chinese menus do not cloak the terrible parody of Chinese cuisine. Food is prepared by Russians, served by Russians. The Chinese chef and staff returned home after teaching their technique.

Russian students who do meet Chinese are troubled by their mentality. Their amazing self-discipline is alien to Russian nature. Their almost superhuman capacity for work is disturbing.

"They volunteer for the hardest work during vacations and then refuse payment," one student almost shouted over the clanking of metal in the self-service canteen of the university. "They seem to love political meetings. Nothing official like ours. Someone simply decides a subject, they all excitedly agree, and then spend days priming for it."

One of his friends joined the conversation. "Do you remember what happened when our Komsomol organized that voluntary Sunday?" He did indeed.

Times had changed, he said, since the twenties and thirties when people donated free Sundays for "socially useful" projects. "This project was rubbish clearance. Twenty out of 22 Chinese appeared. The other two were certified ill. And how many Russians came? He paused, they both laughed: "Two out of 300—the organizer and the secretary of the Komsomol."

A student in Leningrad was more scathing. He had lived in a Chinese hostel. "They do not believe in human nature," he moaned. "They are such purists about doctrine." He illustrated. Several had angrily accused the Soviet cinema of decadence.

"These Chinese were horrified by our two best recent films—'The Forty-First' and 'Fate of a Man.' In the first, a girl in the Red Army during the Civil War falls in love with a White officer. In the second, a Soviet soldier in World War II drinks vodka with his Nazi captors to save his life. 'How could this possibly happen in a revolutionary society?' they wanted to know.

The simple answer is that Soviet society is no longer revolutionary. Relaxation is as evident as the increased numbers of consumer goods heralding it. The Russians work hard, but they are beginning also to enjoy the fruits of their labor. For 40-odd years they have been publicly beating their collective chest about the glories of building socialism. Now it is built. More affluent Russians are already worrying less about the Socialist image and more about the substance of their own lives.

The Chinese offend this mood. They offend because they remind. There they are suddenly aping all the earlier Soviet antics with a vengeance. They blaze with a revolutionary fervor most Russians abandoned to lipservice long ago. They sound a clarion call from the past which many would like to ignore but cannot. China has become the revolutionary conscience, irritating because it can neither be stilled nor forgotten.

Each year in Moscow the anniversary of the Bolshevik revolution on November 7 becomes more like an unorganized carnival. In the evening the three interlocking central squares look like Piccadilly Circus and Trafalgar Square on New Year's Eve. All motor traffic is banned. Masses of gay holiday-makers dance and gossip their disorderly way through the streets. Some are drunk, some are not. Some have just left crowded restaurants, others are trying vainly to enter.

Last year a modest cinema screen was set at one end of Manezhd Square, beside the Kremlin, in front of the old Tsarist stables, which now serve as an exhibition hall. The Chinese celebration of their revolutionary holiday the month before was the feature. The organized pageantry was breathtaking. Thousands of colorful Chinese seemed to march endlessly across the screen on Technicolor parade. What striking contrast to the noisy scrum here, I thought, or even to the mixed ranks who had paraded jovially through Red Square that morning.

"We are moving Westward, aren't we?" Sergei, one of my companions, seemed to read my thoughts. After a long look around, he added with noticeable sarcasm: "Perhaps we shall even become democratic. Then those Chinese can occupy us all."

Foreign Aid Reappraisal Needed

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, February 22, 1960

Mr. TALMADGE. Mr. President, the great need for a searching reexamination of American foreign aid policies is pointed up by an excellent editorial

which appeared in the February 18, 1960, issue of the Atlanta (Ga.) Journal. It is entitled "Let's Dissect Foreign Aid." I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S DISSECT FOREIGN AID

There are many Americans who vigorously support foreign aid in principle and yet agree with Representative PASSMAN of Louisiana, when he branded the President's economic assistance budget as unrealistic and excessive.

One cannot quarrel with the President's warning that the Communist threat in Asia is growing and that the needs of our friends there are greater than ever.

But Congress and the American taxpayers are within their rights to question the continuance of a program of this magnitude without an honest, complete investigation to scrutinize, reduce or eliminate some obsolescent elements of the massive foreign aid organism.

It is highly probable that the administration of foreign aid has become a powerful vested interest, all tied up with sales and profits and job security for millions of Americans—an aspect totally unrelated to the good it accomplishes in the world.

And whatever happened to the bold plans for sharing and coordinating the foreign aid burden with our European allies?

Congress should not limit debate of this matter to the issue of expanding or reducing foreign aid. It should not shrink from a thorough, searching probe to reexamine the character and aims of foreign aid. The world has changed quite a bit since the Marshall plan was launched. It is high time that foreign aid reflected some of these changes.

Castro Has Made United States the Laughingstock of Cuba

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Monday, February 22, 1960

Mr. BUDGE. Mr. Speaker, the following article appearing in U.S. News & World Report under date of February 29, 1960, indicates that the U.S. sugar policy has made us the laughingstock of Cuba. There are a lot of us who think it has also made us the laughingstock of all of Latin America and many other parts of the globe, including the United States itself:

THE JOKER IN CASTRO'S SUGAR DEAL WITH RUSSIA—MIKOYAN'S SUGAR PACT WITH CASTRO HAS MADE THE UNITED STATES THE LAUGHINGSTOCK OF CUBA. THAT'S THE REACTION IN HAVANA. REASON: THE UNITED STATES, DENOUNCED BY CASTRO, STILL PAYS A BONUS FOR SUGAR. RUSSIA GETS SUGAR—AT BARGAIN RATES

HAVANA.—The position in which the United States finds itself at this time in dealing with Cuba's Fidel Castro is described here as "laughable if it were not so serious."

Soviet Russia's First Deputy Premier Anastas I. Mikoyan came here and agreed to purchase Cuban sugar at the going price on the world market. He signed up to take 1 million tons a year for 5 years. However, he will pay cash for only 200,000 tons of sugar a year. He will barter Russian products for the rest, with Russia to decide the price Cuba pays for these products.

To Americans who do business in Cuba, the deal with Russia may be all right if Castro wants it that way.

However, what they cannot understand is the American position.

Under a quota set by the U.S. Government, Cuba sells 3 million tons of sugar in the United States. Cuba receives for this sugar not the world price but almost double the world price. Cuba also gets a reduced tariff on sugar. In exchange for the sugar, Castro is getting hard American dollars that he can spend anywhere for anything he wants to buy.

Yet, in the face of that situation, the United States is regarded by the government here as public enemy No. 1.

Billion-dollar grab: The property of Americans in Cuba—nearly 1 billion dollars' worth of it—is being grabbed by the Castro government, with vague promises of some possible remuneration for some fraction of the spoils. The U.S. Government is pictured as doing little if anything to protect the interests of Americans who are having their property taken. Instead, Castro is being paid what amounts to an American subsidy of about 120 million American dollars each year.

It is this situation which Americans in Cuba refer to as "laughable."

Soviet Russia—a little customer for Cuba's sugar—is pictured daily as the great new benefactor to Cuba. The U.S.—the big customer—is the whipping boy and object of all variety of attacks. Castro now has warned the United States that, if it cuts down on the amount of sugar it buys or on the price it pays for Cuban sugar, he will hold the United States guilty of economic aggression. There are hints of reprisals—but of what nature—is not clear.

It is reported from the United States that President Eisenhower does not want to do anything that would harm the people of Cuba. Many Americans in Cuba who are losing everything express wonder as to whether their Government in Washington is interested in any way in the harm that U.S. citizens are suffering.

"Concern" in United States: Among these people, a feeling is beginning to develop that perhaps Washington's patience with Fidel Castro is wearing thin. It wasn't overlooked here when Secretary of State Christian A. Herter described relations between the two countries as a "deteriorating situation" which "gives us real concern."

Sugar experts also wonder about the future. The seizure of sugar lands, setting up of farm cooperatives and other activities under Castro's land reform could seriously reduce the next sugar crop. Castro may not always have so much sugar to sell. And, if Cuba becomes an uncertain supplier, the United States will have to build up other sources—thus putting a permanent crimp in Cuba's market.

As a result of his deal with Soviet Russia, Castro is opening the door to technicians and agents from Russia to build this island into a Communist beachhead. This whole situation gives the appearance of a tangle that grows steadily more mysterious.

WHEN RUSSIA AND UNITED STATES BUY CUBAN SUGAR

Russian terms, under a new agreement:

To buy 1 million tons of Cuba sugar each year for 5 years.

To pay the world price, now about 3 cents a pound, or $60 a ton. Total: About $60 million worth of sugar per year.

Of the $60 million, only $12 million will be paid in cash—U.S. dollars—and the remaining $48 million in Soviet products.

And note this: Russia will fix the prices of what it sends to Cuba. Just how much Cuba will get remains to be seen.

U.S. terms, which have been in effect for years:

To import about 3 million tons of Cuban sugar a year.

To guarantee Cuba the U.S. price, which nets the island about 5 cents a pound or $100 a ton. Total: About $300 million a year.

Thus, United States buys three times as much Cuban sugar as Russia promises to buy, and pays Cuba five times as much for sugar each year.

And: United States pays entirely in U.S. dollars, which can be spent anywhere in the world.

Tight Money Drives Up School Taxes Paid by Wisconsin Farmers and Small Businessmen

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, February 22, 1960

Mr. PROXMIRE. Mr. President, another excellent letter protesting the tight-money burden on schools came to me from Ray Glynn, the administrator of the Common School District in Frederic, Wis. Mr. Glynn's letter dramatically illustrates how cruelly and quickly the high interest rate is reflected in higher local school taxes for farm communities, which already are suffering from a punishing property tax burden at the very time when their income from milk and hogs continues to sink. Mr. Glynn declares that the Frederic School District levy for debt service alone for 1960 was over 26 percent of the district's levy for all operating costs. This would, of course, include teachers' salaries. Interest amounted to a fat 52.8 percent, or more than one-half of Frederic's principal payment on the debt.

Mr. President, I ask unanimous consent to have this letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered printed in the RECORD, as follows:

FREDERIC COMMON SCHOOL DISTRICT,
Frederic, Wis., February 18, 1960.

Senator WILLIAM PROXMIRE,
Washington, D.C.

DEAR BILL: Your speech on "tight money policy" and its effect on interest rates on school bonds. You surely hit the nail right on the head. Those of us who have been trying to finance our needed school construction in northern Wisconsin have been well aware of this for years. But few, if any, of us could have put it as well as you did. My only regret is that you didn't figure it on a 20-year basis rather than 30 since that is the maximum length of our borrowing period in Wisconsin—we are limited to 5 percent of our equalized and 20 annual payments in Wisconsin—this is a constitutional provision and is pretty hard to change.

It might be of interest to you to know that Frederic is a large (in area) rural district with practically no industry within our district and only $10,000 of equalized valuation back of each of the 800 children we are trying to educate—and house in decent

buildings. That means that when we raise a mill of tax on full equalized valuation as determined by the State tax commission not the assessed valuation determined by our several local assessors (one from each village and township in the district)—this mill of tax on full valuation raises only $10 per pupil. Is it any wonder that we are in favor of our improved State aid formula, championed by Gaylord Nelson when he was a senator and even more so as our Governor. This formula helps us greatly in our operational costs but we are strictly on our own when it comes to building costs and debt repayment.

Our experience bears you out to the letter. We sold our first bonds to build some needed elementary rooms in 1951 at 1½ percent. We made our last loan on January 1, 1960, for 4 percent. We have borrowed every dime we can borrow under Wisconsin law and are still way short of what we need to properly house our pupils. Our levy for debt service alone for 1960 was over 26 percent of our levy for all of our operating costs and our interest payment amounted to 52.8 percent of our principal payment on this debt.

We need Federal aid to education and we are mighty thankful that you, Senator HUMPHREY, and a few others are sincerely for it—please keep plugging away at it. We know that the vote on the bill the other day was a political gesture on the part of many Senators but we are confident that your vote and the feelings expressed in your speech are very genuine. More power to you.

You talked in our school some months ago and this is the first opportunity I have had (or rather taken) to thank you and tell you how favorably you were received by our student body. My teachers tell me that considerable discussion of your talk took place in our social science classes for the next day or two.

One more thing—thank the Lord you restored the cut in school milk funds.

Keep up the good work and, if you have 20 or 25 extras of that speech, will you mail them to me?

Sincerely,

R. P. GLYNN,
Administrator.

Public Opinion Supports Repeal of Present Farm Program

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 22, 1960

Mr. PELLY. Mr. Speaker, having introduced H.R. 10350, to repeal the present farm price support programs, I am hearing from citizens from various parts of the country in support of such a plan.

Of course, when it comes to a proposed solution of agriculture problems, my voice does not reach many ears. I am not a member of the House committees concerned with farm legislation, and I would be less than honest if I gave an impression of being an expert in this field.

Rather, Mr. Speaker, I hold my capability to being a listener as such. I hear the voice of the people and overwhelmingly it calls for an end of subsidized programs that have created such huge commodity surpluses and cost such vast sums of money.

So, as I say, while my voice is faint, nevertheless, where word reaches that I am proposing elimination of acreage and price controls the people respond and send encouraging messages of support.

For example, from Malaga, N. Mex., a woman writes saying my remarks on the national disgrace, the farm program, are heartening to the taxpayer. In four closely handwritten pages this woman expresses her opposition and indignation with the farm program, ending with a hope that "men of like courage will get this mess killed" and a final heartwarming, "May God bless you."

Then here is a letter from a Kansas farmer which I quote in full:

FARMERS LIBERTY LEAGUE,
Hillsboro, Kans., February 19, 1960.
Representative THOMAS M. PELLY,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE PELLY: It was mentioned on the news the other evening that you had introduced a bill to do you away with the ASC (the farm control and subsidy program). I want to express my thanks to you for introducing this bill. If I knew the number of the bill and the wording of it, I would try to get some support for it.

I have just recently moved to this community and I do not know how the farmers here feel about it, but the community from which I moved, Burns, Kans., where I still own land and farm it—was heavily against the whole ASC. As I understood the report of your bill, they would be wholeheartedly in favor of it. Would petitions be helpful to you?

The ASC activities have been extremely harmful to the most of us who are small farmers. I have a 75 acre wheat allotment and when I bought the place there weren't any controls. So when they put in the program, they knocked out the very crop I planned to pay for the farm with.

I don't see how anyone can think that the Government can subsidize agriculture successfully. The Federal Government is in far worse financial shape than are we farmers. I think it has been pretty well demonstrated that the Government does not have a money tree. Any money that the government gives to the farmer in the form of subsidies or otherwise must be taken from someone else. The someone else usually means the oil industry, the steel industry and a few others. However the money taken from these industries in the form of taxes becomes a part of the cost of operation of these industries, thereby raising the cost of the products these industries sell. Now as everyone knows we farmers are heavy users of steel and oil products so we ourselves have to pay the subsidies which we get. In addition we have to pay the cost of the vast ASC bureaucracy which benefits us not one penny. Your bill to do away with the ASC would benefit us greatly, not necessarily that it would raise farm prices, but that it could cut farm costs.

I want to encourage you to continue your efforts to free us from the ASC. While I am not a constituent of yours, I do appreciate the stand you are taking. Any man who stands for American freedom deserves the support of all of us.

Sincerely,

CARSON E. CRAWFORD.

Here are other random opinions as expressed to me which indicate that the people are fed up with farm subsidies:

Let the farmers choose their crops, work as they should; there is too much molly-coddling.

Price supports: I farmed without them some time ago. A reduction as soon as possible should be enacted.

In regard to the farmers, I think that all subsidies, price supports, soil banks, etc., should be abandoned, abolished, eliminated. Farmers already get all their own food free, i.e., they can raise it themselves and thus don't have to pay income tax or State sales tax on the money they used to buy it. Also, about one-third of U.S. farmers have other jobs besides farming, either part-time or full-time jobs, or have other ways beside farming of making money.

In our State farmers control more than one-half the votes although they don't comprise one-half the population. This is because there are so many farm counties and farm communities in our State, and also because of the way the State legislature is made up.

As long as we have such a problem on farm surpluses, why isn't some action taken to keep new or reclaimed land out of production?

As a small example, in your own State, from the Columbia River to Moses Lake and on toward Ritzville, a few years ago this area was nonproductive except for some grazing; now we have wheatfields, sugar beets, potatoes, etc., all surplus.

The farmer being paid supports sells produce cheaper to the middleman. Therefore, we are subsidizing the middleman. Can we be honest with ourselves in these vital matters?

What is wrong with the farm program? Plenty. I think all price supports should be eliminated. Then the farmers will keep their production more in line with consumption.

I do believe that by lowering price supports it might help us in lowering our surplus products and in doing this would save money in storage rates and also would make the farmer a more responsible businessman and not have him rely so heavily on the Federal Government.

The question of agriculture is a sickening and disgusting one to most taxpayers.

As I understand it, the Government asks the farmers to cut their acreage and pays them for not producing and I have heard that many of them receive more than they ever made while producing. Then they pep up the remaining acreage and raise more than ever and the Government guarantees them a good price and on top of all this the Government buys whatever they are unable to sell.

How long are we going to play Santa Claus. I think it is time that the farmers stand on their own feet.

Federal Measures in Which New Jersey State Officials Have Expressed Interest

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 22, 1960

Mr. CANFIELD. Mr. Speaker, for several years Gov. Robert B. Meyner, of New Jersey, has come to Washington to fete the New Jersey congressional delegation at a breakfast at the Congressional Hotel whereat he presents in-

formally the viewpoint of himself and his State agencies on Federal legislation. There is always an exchange of views which is helpful and wholesome.

Today I present a letter just received from Governor Meyner with a compilation of Federal measures in which heads of the State executive departments have expressed interest, this following this year's breakfast which was held on Friday morning, February 5, 1960.

STATE OF NEW JERSEY,
OFFICE OF THE GOVERNOR,
Trenton, February 15, 1960.

HON. GORDON CANFIELD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN CANFIELD: It was good to see you in Washington and to have the opportunity for an exchange of views on problems facing National and State government. It was helpful to me to hear your views, and I trust it may have been helpful to you to hear from us at the State level.

The members of my cabinet have indicated to me the areas of Federal action which are of particular interest to them. I was able to touch upon some of these at the breakfast, but time did not permit to review all of them. So that you may have full opportunity to know of the interests and views of the State departments, I enclose a compilation of the items in which they have expressed interest. All of the members of State government stand ready, as I do, to provide further information at any time upon your request.

Thank you for kindnesses to me and other members of State government while we were in Washington.

Best regards.

Sincerely,

ROBERT B. MEYNER,
Governor.

STATE OF NEW JERSEY, EXECUTIVE DEPARTMENT—COMPILATION OF FEDERAL MEASURES IN WHICH EXECUTIVE DEPARTMENTS HAVE EXPRESSED INTEREST

I. DEPARTMENT OF THE TREASURY

A. Social security:

1. Coverage:

(a) Urges amendment to authorize extension of social security coverage to those members of a retirement system who want it, rather than majority referendum system.

(b) Urges amendment to authorize extension of social security coverage to police and firemen on referendum basis.

2. Administration:

(a) Return of employer contributions: When teachers transfer from district to district the State frequently contributes on salary in excess of $4,800. Urges amendment to allow return of excess to State.

(b) Urges statute of limitations on collection of contributions by public employers. Now limited to private employers. Statute for private employers limits to 3 years, 3 months, and 15 days after close of tax year.

(c) Urges amendment to permit State to determine whether employment is public or private. Have had problem re constables, whether covered by State's agreement.

(d) Urges amendment to permit retroactive inclusion of new public entities. Now limited to calendar year in which agreement is modified.

3. Rates of contribution: Division of pensions expresses fear that ascending rates of contribution may jeopardize our pension position. State's payment of employee's share is fixed at 2¼ percent, but employer's share will rise as rates rise.

4. Income limitation: Division of pensions expresses dissatisfaction with $1,200 maximum income level for eligibility. Confines the aging to part-time work. Also thinks that income limitations should be same whether recipient is under or over age 72.

B. Taxes:

1. Telephone service tax: Urges no renewal of local service tax by Federal Government, so that States may pick it up on July 1, 1960.

2. Death tax: Extension of Federal death tax credit to cover 50 percent of total amount of Federal death taxes rather than 80 percent of taxes computed under 1926 Act as at present. Would increase New Jersey revenue by $11 million.

3. State income tax on nonresidents: Urges amendment to Federal Constitution to prohibit. Little hope because more than 30 States now tax nonresidents' income.

4. Income tax: Urges that exemption of retirement benefits be extended to exempt all benefits paid by public bodies.

C. Lamb and mutton grading: Secretary Benson recently gave notice of intention to suspend meat grading for lamb and mutton. Director Sullivan of division of purchase and property is vigorously opposed to suspension.

D. Surplus to penal institutions: Director Sullivan urges Federal legislation to permit allotment of surplus commodities to penal institutions.

II. DEPARTMENT OF EDUCATION

A. Proposed Federal aid program—teachers and construction: Raubinger notes pending bills without recommendation. Does, however, express view that aid should be general. Feels that categorical aid, other than building construction aid, is undesirable.

B. National Defense Education Act (existing program): Aid for science, math, and foreign languages. We should receive $1.4 million in 1959–60. (Received $0.6 million in 1958–59.) Eisenhower has recommended full appropriation. Urges approval, despite categorial nature.

C. Federally affected areas (existing program): Direct aid for construction and current expense to districts receiving pupils who live on Federal property. Our districts received $2.9 million for 1958–59. Eisenhower recommendation for 1960–61 is low. Urges approval of amount recommended by Office of Education in Washington.

D. School lunch—special milk (existing programs): Received $3.3 million for 1958–59. Eisenhower has recommended full appropriation. Urges approval.

E. Vocational aid (existing program): Received $1 million for 1958–59. Eisenhower has recommended full appropriation. Urges approval.

III. DEPARTMENT OF AGRICULTURE

A. Quarantine of foreign plants: Urges additional funds for quarantine enforcement system. This is critical in light of St. Lawrence Seaway and increased speed of travel.

B. Domestic plan pest control: Urges continued support of cooperative Federal-State efforts in eradication and control. Gypsy moth and white fringe beetle of particular concern in New Jersey.

C. Purchase of cranberries: Urges Federal Government to purchase $25 million worth of good cranberry stock in coming months, with section 32 funds.

D. Cranberry scare: Urges that Congress resist pressures for hasty legislation on plant chemicals. Our agriculture depends upon chemicals for high yield per acre. Also urges end to "blitzkrieg" tactics of Flemming.

E. Research and marketing funds: Urges more matching grants under Research and Marketing Act of 1946. We now get only $41,000. Need more. Federal appropriation is now $1.2 million. Should be $1.5 million at least.

F. Lamb and mutton grading: Strongly opposed to proposed suspension. Decision expected shortly. (See view of Department of the Treasury.)

G. Egg pricing: Secretary Alampi is chairman of national committee seeking alternative to egg pricing through mercantile exchange. Asks that Congressmen await committee report.

H. New product research: Urges increased efforts by U.S. Department of Agriculture to develop new products.

I. Animal disease control: Cut in brucellosis funds to $17½ million in 1959–60 hurt us badly. Eisenhower has recommended same figure for 1960–61. Urges increase to $21 million.

J. Milk marketing: Alampi notes that proposals are pending before Benson for a marketing order for eight southern New Jersey counties and Philadelphia. Favors this and urges that order be a joint Federal-State order.

K. Interstate milk certification: Secretary Alampi opposes H.R. 3840 (Johnson bill). Would impose standards below those now maintained by New Jersey.

IV. DEPARTMENT OF HEALTH

A. Hill-Burton Act: $186.2 million appropriated 1959–60. Eisenhower asks for only $126.2 million in 1960–61. Dr. Kandle thinks cut is serious. Need money for city hospitals, also for research and other facilities in proposed health building.

B. Water pollution control: Eisenhower would cut grants from $45 million in 1959–60 to $25 million in 1960–61. H.R. 3610 (BLATNIK of Minnesota) would raise appropriation to $80 (or $100) million, and would raise ceiling on grant to each community. Dr. Kandle thinks program extremely important in development of sewage disposal. Passed both Houses; went to conference committee. Also urges extension of law providing $3 million program grants to States. Existing provision expires June 30, 1961.

C. Air pollution: Urges legislation to extend and expand Federal program for air pollution control. Now $5 million per year until 1964.

D. Radiation control: Urges support of bill to amend 1954 Atomic Energy Act to cede greater responsibility to States in radiation control. (S. 1648, HILL.)

V. DEPARTMENT OF CONSERVATION AND ECONOMIC DEVELOPMENT

A. Recreation: Urges bill to create Federal Recreation Service (S. 2491 cosponsored by Senator WILLIAMS) to provide technical assistance on community recreation problems.

B. Military reservations: Fish and game council opposes military reservations bill unless amended to give States sole jurisdiction to regulate fish and game and sell licenses re military reservations. (H.R. 2565, SIKES.)

C. Housing-senior citizens: Urges support for $50 million appropriation under title II of Federal Housing Act of 1959.

D. Forestry: Urges more money for forestry programs, for forest fire control, for salaries of foresters, for tree nurseries.

E. Area redevelopment: Urges bill to create Area Redevelopment Administration to conduct loan and grant program to aid economically depressed areas.

F. Surplus property-Wildlife: Fish and game council urges support of bill to authorize transfer of surplus property to wildlife agencies. (S. 2103.)

VI. DEPARTMENT OF INSTITUTIONS AND AGENCIES

A. Hill-Burton: Urges increased appropriations. (See views of Department of Health.)

B. Urges support of Federal juvenile delinquency bill (ELLIOT of Alabama). Provides grants-in-aid to States for prevention and control programs.

C. Urges youth conservation corps bill (S. 812, now in House Education Committee) or revival of CCC on modified basis.

D. Public assistance: Urges support of anticipated program to create fifth category of assistance (general assistance), or otherwise broaden assistance.

E. Social security: Urges support of:

1. Forand bill: Free hospitalization for 60 days, surgical care, etc., for insurance beneficiaries.

2. Disability insurance: Bills to eliminate age 50 requirement (e.g., S. 2763, COOPER; H.R. 9522 (WEISS, New York)).

3. Increased survivor's benefits: Raise ceiling on payments to widow of insurance beneficiary from 75 percent to 100 percent of payments to husband.

VII. DEPARTMENT OF LABOR AND INDUSTRY

A. Unemployment compensation: Urges support for national standards for unemployment compensation benefits.

B. Minimum wage—general: Urges support of bill to raise national minimum wage and expand coverage to include large farm and hotel businesses. (S. 1046, cosponsored by Senator Williams.)

C. Migrant labor: Urges support of:

1. Minimum wage: S. 1080 (MCNAMARA and CLARK) would include agricultural workers under minimum wage law.

2. Migrant housing: H.R. 11793 (ROGERS of Florida) would amend Housing Act of 1949 to authorize loans for migrant housing. Migrant labor board endorses principle.

3. Migrant crew leaders: S. 1778 (JAVITS and KEATING) would regulate crew leaders. Prohibit holding back wages, taking workers into substandard conditions, etc.

D. Federal mediation: Bill to clarify Federal-State spheres in mediation and to insure adequate mediation service coverage.

E. Vocational rehabilitation: Urges enactment of "independent living" bill. Would extend Vocational Rehabilitation Act to persons not returning to labor market (three bills: H.R. 1119, FOGARTY, of Rhode Island; H.R. 3465, ELLIOTT, of Alabama; S. 772, HILL).

VIII. PUBLIC UTILITY COMMISSION

A. Taxes:

1. Commutation expense: Allow commutation expense as deduction for Federal income tax purposes.

2. Allow more rapid amortization of new railroad facilities for Federal tax purposes.

3. Ten percent Federal transportation tax: Urges repeal of this tax. Was originally imposed as a wartime measure to discourage use. Now unduly burdensome.

4. Local telephone service tax: Urges Federal discontinuance. (See views of Treasury.)

B. Return postal business to railroads on profitable basis.

C. Eliminate Federal practice of negotiating lower rates with railroads.

D. Transportation Act of 1958: Urges amendment to:

1. Provide for public hearings and appeal.

2. Eliminate 4-month deadline on decision.

3. Place burden of proof on railroads.

4. Require consideration of future as well as present convenience and necessity.

5. Require offset of passenger losses against freight revenues (including interstate freight revenues).

6. Repeal limitation on duration of order for continuance of service.

7. Require posting of public notice of date of hearing, as well as notice of application.

8. Confer power on ICC to initiate investigations.

9. Eliminate jurisdiction of ICC over purely intrastate service.

IX. DEPARTMENT OF BANKING AND INSURANCE

National bank branches: Urges support of bill to require FDIC approval of branch of national bank. FDIC approval now required re branch of State banks. Would provide equal treatment. (H.R. 9184, MULTER, of New York.)

X. DEPARTMENT OF LAW AND PUBLIC SAFETY

A. Transportation Act of 1958: (See Public Utility Commission).

B. Motor vehicles: Urges support of:

1. Register of rejects: Bill to establish Federal register of names of revoked and refused drivers (H.R. 5436, RHODES of Arizona), though might be better to allot to FBI rather than Department of Commerce.

2. Uniform registration: Bill to provide uniformity in auto registration. Desirable if would not affect our revenue. (H.R. 867, MULTER, of New York.)

3. Require State license: Bill to make Federal offense for person to operate auto in interstate or foreign commerce without State operator's license. (Would also establish register of rejects.) (H.R. 4946, RHODES of Arizona.)

XI. STATE HIGHWAY DEPARTMENT

A. Transportation Act of 1958:

1. See Public Utility Commission.

2. Urges liberalization of restrictions on half-million dollar fund used for guarantee of loans to railroads.

B. Railroads:

1. Urges long-term low-interest Federal loans to State and local governments for improvement of rapid transit systems.

2. Urges amendment to Highway Act of 1956 to permit States to use portions of highway trust funds for improvement of rapid transit systems.

C. Interstate compacts: Federal consent will be necessary after State action on Delaware River and Bay Authority. Federal legislation also will be necessary to amend the existing act concerning the Memorial Bridge to authorize continuation of tolls after bonds are paid. Latter step must not be taken until Delaware commits itself to compact and transfer of Memorial Bridge. Urges Congressmen to watch carefully for any Delaware move to amend existing act prematurely.

Martin B. McKneally: The Magnificent Commander of the American Legion

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, February 22, 1960

Mr. KEATING: Mr. President, as a resident of New York State, as a Legionnaire, and as an American, I am pleased to salute Martin McKneally of Newburgh, N.Y., for his magnificent work as national commander of the American Legion. Elected to this high post last August, he has already demonstrated the qualities of leadership and dedication to high ideals which those of us who know him expect of him.

His ascendancy to the highest position in the American Legion is a direct result of his selfless and untiring labors for good causes. His performance in office has won the admiration of all Americans.

Mr. President, I am proud to claim Martin McKneally as a friend and delighted to offer this brief tribute to him. I wish him continued success in carrying on with his outstanding endeavors. So that more people will have a better understanding of this dedicated patriot, I ask unanimous consent to have an article about Martin McKneally, which appeared in the American Legion magazine for November 1959, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NATIONAL COMMANDER OF THE AMERICAN LEGION—MARTIN B. MCKNEALLY, OF NEWBURGH, N.Y., WAS ELECTED TOP EXECUTIVE OF THE LEGION FOR 1959–60 AT THE 1959 NATIONAL CONVENTION

(By Robert B. Pitkin)

Martin B. McKneally, of Newburgh, N.Y.—44-year-old Pacific veteran of World War II—is the new national commander of The American Legion.

McKneally, an attorney and a judicial secretary, was named to the American Legion's highest office for 1959–60 by the 41st national convention at the twin cities of Minneapolis-St. Paul, Minn., on August 27, 1959.

The new national commander is well-built, stands 5 feet 11 inches tall and weighs 182 pounds. He has dark hair; heavy angular brows; a strikingly moulded face; a judicious, thoughtful appearance; an erect and soldierly posture.

Deliberate in speech, exact in diction, McKneally combines a reputation throughout New York State as a serious thinker in public affairs with a manner of expression that mixes precision with charm.

He was born in Newburgh, December 31, 1914, one of five children of George F. and Ellen (Leahy) McKneally. Both parents were born in Newburgh. His father's parents came from England, his mother's from Tipperary in Ireland. His father, who died in 1944 while the new Commander was in service, ran a successful building construction firm in Newburgh, the George F. McKneally Co. It is still operated by Martin's brother, George, Jr.

McKneally is unmarried, lives with his mother in the same house where he and his father were born. He has three sisters, all residing in Newburgh. They are Mrs. Joseph B. (Dorothy) Leavy; Mrs. Charles (Katherine) Curry and Mrs. William (Elizabeth) Auffredou. The McKneallys are Catholic.

Martin McKneally attended the Broadway (public) grammar school in Newburgh and the Newburgh Free Academy (public high school), graduating in 1932.

He went to Holy Cross College in Worcester, Mass., and graduated with an A.B. degree in 1936. He then went to Fordham University Law School in New York and earned and LL.B. degree in 1940.

In public school he had taken a liking to debating, public speaking and dramatics, and his success in debate helped form his youthful ambition to become an attorney.

A photo accompanying these words shows him at the age of 4 playing the part of a doughboy in a Newburgh Liberty Loan parade in World War I. In a school play he won the role of George Washington. As the reader will soon see, no part is more prized in Newburgh.

American history was also an early passion of McKneally's. He was steeped in it during a boyhood that was also well taken up with the delights that the Catskills and the Hudson Valley so well offer youngsters—scouting, fishing, hunting, hiking, swimming.

At Holy Cross College he continued his debating and dramatics activities, studied all the American history he could, and was a member of the college History Club.

Before he could set up a law practice after getting his law degree at Fordham, the Second World War intervened. McKneally was inducted into the Army on March 17, 1941, 9 months before Pearl Harbor.

On completion of basic training at Fort Bragg, N.C., he was assigned to further training in artillery. However, his captain told him to apply for officers candidate

school in compliance with a request from the Adjutant General's Office for officer candidates with legal training.

McKneally was accepted by the AGO and went to officers candidate school at Fort Washington, Md. He was commissioned a second lieutenant and sent to Grinnel College, Iowa, as an OCS instructor. He then went to the University of Minnesota where he was an assistant professor of military science and tactics until ordered overseas to the 10th Army in December, 1943.

He was sent to Hawaii, where he was detached from the 10th Army and assigned to the staff of General Robert C. Richardson, commanding general of the mid-Pacific area.

He remained on the staff of the mid-Pacific command for the balance of World War II, rose to the rank of major, and was separated from service at Fort Dix, N.J., in January, 1946, after nearly 5 years in uniform.

Thanks to the war, he started his professional career in 1946 at the late age of 31. He joined a law firm in New York City, and shortly afterward opened a law office of his own in Newburgh. After several years of practice in two cities 60 miles apart he withdrew from the New York firm and devoted full time to his general practice in Newburgh—where he had become active in civic affairs.

His thoroughness, competence, and judgment attracted the attention of Judge Samuel W. Eager, justice of the Ninth Judicial District of the New York State Supreme Court, with chambers in Middletown, N.Y. In 1952, Judge Eager invited McKneally to become his confidential secretary—a job involving research and drafting of reports for State supreme court decisions.

McKneally accepted, and combined the court secretaryship with his general law practice in Newburgh down to the moment of his election to the Legion's national commandership. He shares law offices in Newburgh with attorney Donald H. McCann.

Nearly all of McKneally's interests outside of professional hours have spilled over into civic and public affairs, on both the community and State level. This year he was named by New York Governor Nelson Rockefeller to be one of 11 gubernatorial appointees to the New York State defense council—a group which would have the heavy responsibility of assuming the government of the Nation's most populous State in the event of the destruction of the regular government in a defense emergency.

For some 6 years, McKneally was a member of the Newburgh board of education, during which time it was generally conceded that the city school plant would need new construction. During the same 6 years, his American Legion post—Judson P. Galloway Post 152 in Newburgh—repeatedly discussed the desirability of improving its handsome quarters.

In 1955–56, McKneally became simultaneously president of the board of education and commander of Post 152. He promptly projected plans for immediate action to bring about the new construction of the city school system and the Legion post, both of which very shortly became realities.

His family shares his civic and historical interests. His sister Dorothy is a trustee of George Washington's Newburgh headquarters, whose buildings and grounds are kept in excellent shape there. His brother, George, Jr., is a member of Newburgh's city council.

Commander McKneally joined his Legion post in 1946. The Legion's Americanism programs and ideals particularly appealed to him. In 1948 he became the post's Americanism chairman. He inaugurated a program, under post sponsorship, of bringing well-known national figures to Newburgh to give public talks on aspects of current national and world problems. The list of celebrated figures he brought to Newburgh included Dean Clarence Manion, William Buckley, Dr. Thomas Dooley, George Sokolsky, Roy Cohn, Irene Kuhn, and others.

McKneally also served his post as judge advocate, and—4 years ago—as post commander. In 1956 he was elected New York State American Legion Commander. At the end of his term of office in 1957 his State Legion convention endorsed him as a candidate for national commander.

He was New York State American Legion Americanism Chairman for 3 years and has served as a member of resolutions committees of New York State American Legion conventions.

He has also served the national American Legion with distinction in various capacities in the past. He was parliamentarian of the national convention at Miami in 1955, has been a member of the convention committee on Americanism at several national conventions. Since the fall of 1955 he has been a member of the National American Legion Foreign Relations Commission, and the Foreign Relations national convention committees. He has served as American Legion representative on the New York State Governor's Committee on Youth and Delinquency.

Martin McKneally has a deep concern for the future of America, and an abiding belief that American policies and actions in these tense years must avoid expediency and stand on firm principle. In common with all citizens of Newburgh he is deeply conscious of the permanent lessons of American history.

Newburgh is steeped in that history.

There George Washington kept his headquarters from the spring of 1782 until August 1783, in the old dutch farmhouse of Jonathan Hasbrouck which is still preserved.

Everyone in Newburgh is conscious that in a very real sense their city of 33,000 is the birthplace of our Republic. There, where the long ribbon of the Hudson River reflects the towering greenery of the Catskill Mountains, a junta of Revolutionary officers led by Col. Lewis Nicola offered General Washington the crown, to be King of the United States.

There, in today's Washington Park above Newburgh Bay, Washington rebuked his officers on May 27, 1782 and refused to make a kingdom of our country.

Newburgh is also the site of the first GI bill in a sense, for there Congress was petitioned to correct grievances of the Revolutionary soldiers, and there the final arrangements were made to demobilize all of Washington's troops at the end of the long struggle for American independence.

"Today, as then," says McKneally, "America faces a threat to its independenec and the freedom of its people. The resolution and determination and willingness of the people to fight and sacrifice for their freedom carried the day against the foe in the 18th century.

"The people here in this valley lived in constant expectation of the arrival of British warships in Newburgh Bay. Though few in numbers and weak in preparation they were ready for the fight. As they tended their farms and stores they kept constant vigil throughout the Revolution, to repel the enemy at whatever the cost in lives or fortunes.

"Then they were fearless with nothing. Now, with everything, should we be fearful? Today, as then, if our people are prepared to sacrifice and do what is necessary, even suffer losses, we shall see the crisis through. And today, as then, out of unity and a strengthened singless of national purpose we can release the energies for a greater America tomorrow.

"We need a nation today that is visibly ready to follow through in any crisis, whose people again leave no doubt in any mind that their will is steeled.

"If we again show our determination to be free now and forever, we will strengthen the hands of our negotiators at the conference tables. We will prevent another dictator from mistaking our spirit—as Hohenzollern, Hitler, Tojo, and Mussolini did at such cost in blood and lives in this century."

Americans have proved over and over again the sacrifices they will make when the chips are down, but in times of peace they show a conciliatory spirit which is too easily (and tragically) mistaken for softness, he says.

The American Legion can and should play a greater role in making the true American spirit more visible. Able Legionnaires, he says, should spend more time demonstrating the soundness of Legion Americanism concepts to non-Legion individuals and groups.

On this, says McKneally, the future greatness of the American Legion rests. Its destiny from the beginning was to offer America a unified image of itself as seen by men and women who had offered their lives in its defense.

The corrosion of fundamental ideas and ideals on which democracies stand, and the now-proven possibilities of brainwashing whole masses of people, make the Legion's duty to uphold American concepts even more obvious today than in 1919.

Commander McKneally has vigorously lived this concept of the Legion's mission. His rise to eminence in the Legion in his home State stems largely from his willingness to accept any and all assignments to work or speak on behalf of American ideals for the American Legion, and from the sincerity, ability and levelheadedness with which he has done it.

In carrying the Legion's message far and wide in his native State, the commander has been an able salesman for America and the Legion. His engaging manner of speaking has never failed to please, while his passion for exactness has left no room for misunderstanding of his words.

At the Legion's 41st National Convention in Minneapolis-St. Paul, last August 27, McKneally was unopposed as a candidate for National Commander.

He had spent the better part of two years traveling and speaking to State Legion conventions in support of his candidacy since his own New York State convention had endorsed him in 1957.

When New York National Executive Committeeman Louis E. Drago nominated him, every delegation was in McKneally's corner and promptly seconded Drago's nomination.

On a motion to suspend the rules and elect him by acclamation to succeed outgoing National Commander Preston J. Moore of Oklahoma, McKneally was named to the Legion's top office without the formality of a ballot.

He is the third National Commander from New York State. The others were the late Edward E. Spafford (1927-28); and Edward N. Scheiberling (1944-45).

In his acceptance speech, McKneally first acknowledged his indebtedness to his mother, his brother and sisters—who had made the "keynote of our family life" the same as the Legion's keynote—"For God and Country."

He then acknowledged a personal debt to E. Nelson Mooney, Newburgh neighbor, WWI veteran and Legionnaire who brought McKneally into his home post in 1946 and "who introduced me to The American Legion and its programs long before World War II."

At the conclusion of his acceptance, Commander McKneally charged all Legionnaires with his own creed:

"Legionnaires, be dedicated, be alive to your responsibilities, be filled with love of your country, be unabashed in your patriotism. Be not dissuaded by councils of confusion nor believe that all will somehow magically come well. The road ahead is steep, but the rewards of service are immense. Serve the American Legion and you serve men of good will all over the world."

Adlai E. Stevenson: Last Chance

EXTENSION OF REMARKS
OF

HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 22, 1960

Mr. HAGEN. Mr. Speaker, one of the least unlikely events of the Democratic Convention in Los Angeles on July 11 and the following would be an unprecedented nomination of Adlai E. Stevenson as the Democratic presidential candidate for the third time. In the light of this prospect comments on his personality and achievements are highly significant. Perhaps the best of these appeared in the February 1960 issue of the Progressive magazine authored by the Honorable RICHARD L. NEUBERGER. This article correctly reflects the stature and independence of Mr. Stevenson and I submit it for your consideration, as follows:

ADLAI E. STEVENSON: LAST CHANCE

(By RICHARD L. NEUBERGER)

In 1956, after his second defeat for the Presidency, Adlai E. Stevenson made a statement regarding the highest elective office in the free world which was both renunciatory and philosophical. He said, "I can contemplate in tranquillity the distinct possibility that I will never be President of the United States."

Because millions of his fellow Americans do not share this tranquillity, Stevenson continues to be regarded as the most likely nominee of his party for the third consecutive time. Many Stevenson enthusiasts happen to be intellectuals, civic leaders, and generous campaign contributors. They might be called the catalytic agent of the Democratic Party. They are what make the water fizz. They create public opinion. And they feel a sense of kinship with Adlai Stevenson that they seem to sense in no other presidential hopeful in either party.

Thus, in spite of all the zeal and fervor for that brace of tireless compaigning Democratic Senators, JOHN F. KENNEDY and HUBERT HUMPHREY, many adherents of these men continually make it evident that KENNEDY and HUMPHREY are their first choices only if Stevenson does not actively enter the field. At innumerable Democratic gatherings, I have heard people volunteer the information that their heart belongs to Stevenson even though they happen to be wearing somebody else's campaign button on their lapel or bosom at the moment. This was vividly demonstrated at the banquet in New York honoring Eleanor Roosevelt's 75th birthday. Most of the Democratic White House potentials were present. Stevenson received by far the most vociferous ovation. Raymond P. Brandt wrote in the St. Louis Post-Dispatch that only Stevenson and Mrs. Roosevelt herself "came away with increased popularity and respect."

Stevenson has told me that he will not spend a 4-cent postage stamp to win the Democratic nomination. He is personally fond of both HUMPHREY and KENNEDY, and he has given each of them a sort of may-the-best-man-win benediction. But if a stalemate should occur at the Los Angeles convention, it is probable that Stevenson will be available for the party's nomination—even though some of his closest friends trust this will not be the case, for they wish to see him spared the ordeal of a third nationwide campaign. "I'd die if Stevenson lost again," said the attractive wife of a wealthy and enlightened date grower near Palm Springs.

It is my judgment that most of the leaders of the Democratic Party look upon Stevenson as the Nation's intellectually best prepared man to serve in the White House. Who can rival his eloquence and basic wisdom? Yet many of these same individuals confess to some doubt that Stevenson can be elected. If it were not for this doubt, he probably would be a certainty for the nomination in 1960. But Stevenson has been beaten twice. One defeat was by a margin of 6,500,000 votes, the other by 9,500,000. These were not photofinishes. They were landslides. Over and again this is the dry comment of Palmer Hoyt of the Denver Post: "Who could have licked George Washington? That was how General Eisenhower was presented to the American people."

This is the great behind-the-scenes debate within Democratic ranks regarding Adlai Stevenson. Were 1952 and 1956 fair tests of his national vote-corraling ability? If they accurately measured his appeal, then Democratic Party delegates will shy away from him as the 1960 nominee. But if the previous two elections are written off as forlorn hopes for the Democrats, regardless of the identity of the party's candidate, Adlai Stevenson could still be the overwhelming choice of those who will assemble in Los Angeles next July to make a fateful decision. I was told by a generous and liberal-minded California contributor to Democratic coffers:

"If I could appoint a President, I'd appoint Stevenson. He has what it takes to be a truly illustrious President. But if Stevenson is unable to win at the polls, I would rather succeed with a Democrat of lesser stature than to lose again with Stevenson."

It is Hamlet's dilemma repeated, because it involves so many hypotheticals. What if the Suez crisis had not occurred on the eve of the 1956 elections? Had Republican demagoguery over the unpopular Korean war in 1952 made it impossible for a Democrat to succeed? Had the Democratic string run out after 20 years in national office? Many of Harry Truman's intimates believe that Stevenson was too indecisive, that he did not conduct fighting campaigns, that he equivocated on issues of vast potential appeal for the Democrats. But one of Stevenson's faithful has replied wryly, "Don't ever forget that Truman ran against Dewey. That's a whole lot different from running against Eisenhower."

THE LINGERING DOUBT OF WHETHER HE CAN BE ELECTED

The debate is endless, but it also narrows down to another question. How much have the two defeats by Eisenhower hurt Stevenson's political prestige, no matter how blameless he may be for what happened? One theory holds that too many voters among the present electorate cast their ballots against Stevenson for him ever to be able to reverse the verdict. Would millions of voters confess, even to themselves, that they could have been wrong twice before? Yet, arrayed against this is the fact that many political figures in America have won major offices after numerous defeats—Senators JOHN CARROLL, of Colorado; WILLIAM E. PROXMIRE, of Wisconsin, and RALPH W. YARBOROUGH, of Texas, to mention only a conspicuous few on the contemporary scene. And if the British people had permitted earlier political failures to shape their attitude perpetually, they might have been denied the gifted leadership of Winston Churchill during World War II.

I am confident that Adlai Stevenson is the private 1960 favorite of the overwhelming majority of influential Democrats. But there exists among some of these same persons the lingering doubt of whether or not he can be elected.

Why is Stevenson such a favorite? What accounts for his enduring appeal to so many thoughtful men and women? He is not so liberal as HUMPHREY. He lacks the handsome youthfulness of KENNEDY. He cannot match the political skill of LYNDON JOHNSON. He has many more overt handicaps—his divorce, for example—than SYMINGTON. He is not currently in high elective office like Govs. Robert Meyner, of New Jersey, or G. Mennen (Soapy) Williams, of Michigan. Yet mere mention of Stevenson's name can inspire and thrill many a gathering of Democrats.

I have tried to locate the secret of Stevenson's appeal to intellectual and thoughtful voters. I think one of his strengths is a trait which most orthodox politicians regard as virtually his principal weakness—what they describe as his indecisiveness—his tendency to see both sides of a difficult question, his melancholy and prolonged grappling with highly complex issues.

Of some of these things there can be no doubt. In 1952, Stevenson thrashed about like a salmon in a fish ladder, trying to make up his mind whether to run for the Presidency or for reelection as Governor of Illinois. His attitude on farm price supports has never quite satisfied those who favor a continuation of big agricultural subsidies; nor are public-power groups content that he is 100 percent committed to their side. I have heard criticisms from certain labor leaders that Stevenson has seemed to encounter difficulty making up his mind about amendments to the Taft-Hartley Act.

Yet these very qualities, so disturbing to some groups, are a factor in endearing Stevenson to the intellectuals, teachers, and writers who predominate in quite a few Democratic circles. Here is a man who does not pose as having a pat solution for every problem of these troubled times. He rarely indulges in the glib slogans which pretend to offer such easy remedies for grim maladies. He reserves his doubts about ready answers to monumental problems like farm surpluses, competing with the Soviets, or raising the necessary funds to finance Government in the 20th century. This, in the minds of many people, is a welcome contrast to President Eisenhower's bland promises of 100 percent of parity, liberation of the satellite nations, and the unleashing of Chiang Kai-shek. Also, these Democrats occasionally recall that certain prominent members of their own party have heralded, with much fanfare, the unveiling of a marvelous new farm program—a program which they have not yet produced.

STEVENSON WEAKEST WHEN HE LISTENS TO CAMPAIGN STRATEGISTS

To extreme Democratic partisans, Stevenson at times can be somewhat less than satisfying. This is probably true of any political figure who broods extensively and who often appears indecisive. Lincoln, also a melancholy brooder, was not sufficiently hard toward the South to please the Republican radicals who unsuccessfully plotted his defeat for reelection in 1864. Indeed, Judge Samuel I. Rosenman of New York, former confidant of Franklin D. Roosevelt and an intimate of President Truman, has said somewhat disparagingly of Stevenson:

"I don't think his views are those of a liberal, but more of a middle-of-the-roader. On domestic issues, there's not much difference between Stevenson's ideas and those of President Eisenhower."

This is undoubtedly an oversimplification of Stevenson's reluctance to accept felicitous answers merely because they have voter appear. Any person who has read his book, "What I Think," will know there is a gulf, vast and wide, between Stevenson's ideas and those of the war hero who has twice conquered him for the Presidency. There also have been the numerous occasions when Stevenson was ahead of his time. During the 1956 campaign he took the risk of urging a suspension of nuclear tests. Vice President NIXON called this suggestion extraordinary and appalling, catastrophic nonsense—the

height of irresponsibility. Yet today, nearly 4 years later, NIXON himself has opposed a resumption of nuclear testing. Nor can it be wholly forgotten that Judge Rosenman's beloved patron, Franklin D. Roosevelt, was quite universally looked upon as a conservative among Democrats prior to his brilliant unfurling of the New Deal.

Stevenson is not a particularly adroit politician, and he himself probably would be the first to admit it. Eric Sevareid relates how Stevenson, shortly before the Illinois elections of 1948, told him they had written off PAUL DOUGLAS as a possible winner and that if he, Stevenson, won at all, it would be by a very narrow margin. Actually, DOUGLAS was elected to the Senate overwhelmingly, and Stevenson went to the gubernatorial mansion at Springfield by one of the most colossal majorities in the history of the State.

In 1952 my wife Maurine and I were visiting Governor Stevenson in the Illinois capital. He then was being casually discussed for the Democratic presidential nomination. Maurine pleaded with him not to consider this because Eisenhower was sure to be the Republican nominee. "And nobody could beat Ike," she added.

Stevenson countered with the information that Senator Scott Lucas, of Illinois, the Democratic Senate leader, believed Taft had the GOP nomination all wrapped up. "I agree with Lucas," said Stevenson.

It is probably an irony of our era that Stevenson, poor politician though he is, suffers the most when he permits his political peers to persuade him to be out of character. This occurred in the campaign of 1956. Departing from the 1952 style which had inspired and lifted so many Americans, he allowed himself to get down to such narrow specifics as the price of hogs or the cost of kilowatts. This was supposed to be shrewd politics in certain States. Some Democratic politicians also felt, with audible relief, that it removed Stevenson from the lofty plane and high ideals which had characterized his 1952 appearances. The metamorphosis didn't work. The St. Louis Post-Dispatch has observed: "In 1956 Mr. Stevenson lost the support of some of his 1952 admirers when he followed the advice of certain campaign strategists and deviated from his 1952 policy of talking sense to the American people."

No persons is more thoroughly aware of this than Adlai Stevenson. "If I ever am foolish enough to let myself run for President again," he told me one day, "I will run exactly as my own man. I won't be met at the Iowa State line or the Oregon State line by people who will tell me the purportedly appropriate thing to say to win votes in that particular locality. I will relate to voters—everywhere—the blunt, hard facts about our position in the world and about the sacrifices required if we are going to improve it."

STEVENSON WORKS HARD ON HIS OWN SPEECHES

Kenneth S. Davis, biographer of Stevenson in the book, "A Prophet in His Own Country," has written that Stevenson's counselors in 1956 assumed he would delegate the writing of speeches to others while he was left free to concentrate on public appearances and personal "politicking." On many occasions in 1952 local bigwigs could not see the candidate because he was busy polishing his speeches until curtain time. The new division of labors in 1956 was an unhappy one for Stevenson. It helps to explain why the genuine Stevenson shone through so little of the oratory during that campaign. He later explained to Kenneth Davis that the actual preparation of speeches, "the creative thing, is what I like to do. It's the fun of my life."

This, too, may be the key to a good deal of the basic Stevenson image. Ours is an age of the synthetic—of the ghostwriter, the teleprompter, of makeup to hide the candidate's bald spots. We all know of the advertising agency which plans a promotional campaign for whiskey one day and a crusade for the Presidency the next. Neither is elevating nor meaningful. Candidates in both parties frequently have speech manuscripts thrust into their hands at the last moment. There is not even time in which to scan the ghost writer's product before it is presented to the waiting audience and to the Nation. People sense this and yearn for the days in our history when Lincoln and Jefferson wrote, under crucial stress, what they themselves felt and believed in. They remember tales of Jefferson, in rented lodgings in Philadelphia, drafting the stirring and rhythmical language of the Declaration of Independence.

In our era Stevenson, alone among leaders, seems to respond to these gleaming chapters from our past. Most topflight politicians make no secret of the synthetic authorship of their speeches. Indeed, they often boast of the task force of skilled experts in each field whom they have recruited for this task. Although Stevenson has had at his disposal some of the most gifted literary talent in the land, he has a hard time relying upon it. Davis, in "A Prophet in His Own Country," has thus described the reaction in 1952 of those who made the pilgrimage to Springfield to fortify the Stevenson cause with their pens and typewriters:

"All of them became convinced, if they were not at the outset, that Stevenson was a far better writer of Stevenson speeches than any of them ever could be. Most of them were initially perturbed by the fact that the final drafts of speeches generally bore little resemblance to the drafts they had painfully prepared, but * * * with pride and truth they could proclaim that the speeches as Stevenson finally gave them—speeches which would be gathered into a bestselling book months after the campaigning had ended—were very much Stevenson's own."

I still have my own vivid memory of Stevenson in the cramped bedroom of Portland's then only union-operated hotel in October of 1952. It was nearly midnight. He had just completed a long airplane flight. His dinner consisted of a bowl of canned vegetable soup and crackers, eaten off a lap tray. While he ate, he revised a speech on power and conservation which he expected to deliver the nxet day. His eyes were hallow and gaunt with exhaustion. It all seemed dreadfully inefficient for the candidate thus to drain his energies and strength, especially when I thought of Eisenhower's smoothly functioning campaign colossus with its troupe of writers and public relations experts. I knew the General was not polishing speeches at midnight. And yet when I came away from Stevenson's room that night with Jebbie Davidson, Assistant Secretary of the Interior, there were tears of pride in our eyes.

Just how liberal is Adlai Stevenson? This question disturbs some Democrats, as exemplified by the strictures and doubts voiced by Judge Rosenman. When former President Truman endorsed Averill Harriman for President before the 1956 Democratic Convention, he said candidly that Stevenson was not liberal enough for him. Yet, by contrast, Mrs. Eleanor Roosevelt, whose liberalism has never been diluted, constantly reiterates her admiration and affection for Adlai Stevenson. So does former Senator Herbert H. Lehman, of New York, another of unquestioned liberality. It could even be a matter of temperament. The precinct liberals have rarely cottoned to Stevenson. But the intellectual liberals consider Adlai their nonpareil. They are his shock troops. Their allegiance to him seldom wavers.

Stevenson himself is definitely not a doctrinaire liberal. Many of his early affiliations, in business and corporation law, have helped to anchor him to rather orthodox economic ideas. In the grave crisis of World War II, he was assistant to Secretary of the Navy Frank Knox, who had been the 1936 Republican running mate of Alf M. Landon. After Knox's death from a heart attack, brought on by assiduous adherence to duty, Stevenson said:

"I loved that man. He was brave and honest. And he made a very great contribution to his country in her hour of greatest need. It cost him a lot. I'm sure it shortened his life. He was no intellectual, God knows, but he was highly intelligent—which a whole lot of intellectuals aren't, you know—and he knew his fellow man from a rough and crowded life. His loyalty to President Roosevelt, his political adversary in 1936, had a defiant quality, and his admiration and respect for his chief seemed to grow as the going got tougher."

WHAT KIND OF PRESIDENT WOULD STEVENSON MAKE?

It is perhaps a clue to Stevenson's outlook that he took no cognizance of the fact that Colonel Knox was not a liberal, but only that he was not an intellectual. In his personal associations, Stevenson does not dampen litmus paper to test if each acquaintance is simon-pure on every possible public question. This may accentuate certain suspicions concerning how far left-of-center Stevenson really dwells. Yet F.D.R. kept Jesse Jones in his Cabinet and he enjoyed cruising on Vincent Astor's yacht. Nor can Harry Truman be said to savor his bourbon and branch water exclusively in the company of those who score 100 percent on ADA's voting scoresheet on Capitol Hill.

I first met Adlai E. Stevenson at the United Nations Conference in San Francisco in 1945. We journeyed together to Yosemite's granite cliffs and plumed waterfalls, and we hiked in the majestic fastnesses of Muir Woods. My impression of him was not necessarily of a fervent liberal but rather of a fascinating intellect, who knew not only world diplomacy but also the subtle differences between a Douglas-fir and a ponderosa pine.

What kind of President would Stevenson be?

I rather imagine he would be a President who tried the patience of every special-interest group in the Nation. On agricultural legislation I would guess that he might be too conservative to please the National Farmers Union and not conservative enough to satisfy the American Farm Bureau. He would be too much of a loyal Democrat to win over partisan Republicans, but might be too fair and temperate to delight the extremists in his own party. For example, this is Stevenson talking to a Democratic National Committee dinner in Chicago in 1955—slightly later than midway between his two presidential defeats:

"Let us be very clear that Republicans want a safe and sane world every bit as much as Democrats. And in this day, when our position is more perilous than it has been since Korea, let us also profit from our past mistakes, while we deplore them, and let us think of foreign policy not as partisans but as Americans. Let us, indeed, remember that he who plays politics with peace will lose at both."

Noble and stately words, these, but not the kind to make a partisan audience leap onto its chairs. They tell why Stevenson is a greater favorite with the PTA president than with the local ward chairman.

Excesses are frequently the fuel of political fires, but Stevenson cannot bring himself to light such faggots. On the eve of the 1956 campaign he was finally persuaded to endorse 90-percent price supports on so-called basics. But he did not quite let go of the lanyard. He made it evident that he was approving an expedient and not an ultimate answer:

"While firm price supports keep income up they don't keep surpluses down, and I say again, lest the dam burst and engulf us, we Democrats must press on, with Republican help, I hope, to develop the much broader national farm program which is required to restore the full parity of total farm income. At the risk of misunderstanding and misrepresentation, I will say again and again that restoring 90 percent price supports to meet the present emergency is not to say they are a solution, but only that it is a better program than sliding supports which slide only one way."

STEVENSON'S RECORD AS GOVERNOR OF ILLINOIS

And there you have it, the strength of Stevenson intellectually and the weakness of Stevenson politically. He did come out for 90 percent price supports to cope with a crisis, but he could not quite bring himself to claim for such supports any panacea status. Perhaps the statement reveals why he has never carried a State in the Nation's breadbasket. Zealous advocates of 90 percent price supports rarely appreciate such gingerly backing. But the statement also revels that Adlai Stevenson is a sincere and honest man in bigtime politics.

This honesty was established for all the Nation to see in August of 1952, when Governor Shivers, of Texas, called ostentatiously at Springfield and asked Stevenson to favor the return on the rich oil tidelands to the States. This was a major issue in the four States which stood to profit heavily from such a transfer—Texas, Florida, Louisiana, and California. Many electoral votes were potentially at stake. Stevenson could have ducked the question completely, or he could have imitated Eisenhower's ambiguous acceptance of the States rights position. Instead, Stevenson crisply endorsed the majority Supreme Court opinion that the petroleum-laden tidelands were properly within the custodianship of the Federal Government. Quite obviously, this shut off his meager campaign exchequer from benefactions by the powerful oil industry.

An issue like the tidelands was no problem for Stevenson. On some other subjects, however, it has not been so simple for him to accept the traditional position of liberal Democrats. I have heard him sharply question several of my Senate colleagues from the Northwest about high interest rates. He was definitely not in favor of increasing the cost of borrowing money, but he wondered if there were anything to the claim that this might be necessary to quench the fires of inflation. I have listened to Stevenson asking the same kind of penetrating questions on the issue of Hells Canyon Dam. He did not instantly assume the attitude that a Federal dam was, ipso facto, better than a private utility company dam. He had to be convinced, with irrefutable figures, that the private dam would leave a good deal of the potential hydroelectricity of the Snake River undeveloped. Positions which some liberals take, almost by reflex action, do not come so automatically to Adlai Stevenson. Furthermore, I would classify him as relatively prudent on the broad issue of Federal spending. Deficit financing, which is attractive to quite a few congressional liberals is not found in the Stevenson litany. For example, one of the accomplishments of which he boasts as a feature of his service in the Illinois governorship is this: "* * * Kept State expenditures on a pay-as-you-go basis by ending the use of extensive deficiency appropriations at the end of a biennium."

Some liberals find it easier to propose methods of spending governmental funds than in raising revenues to finance these undertakings. Stevenson's record as chief executive of Illinois makes it likely that he would not be in this group, which perhaps accounts for the questioning of the degree of his liberality by former President Truman, Judge Rosenman, and others. A sound measuring stick of Stevenson's philosophy might be found in some of the other features of his gubernatorial reign which excite his own pride and satisfaction. Here are a few as compiled by Stevenson's staff shortly before he closed his desk at Springfield for the last time:

"Put the State police force on a merit basis, removing it as an item of patronage.

"Eliminated nonworking political appointees with whom State payrolls had been padded.

"Restored many sales tax evaders to the rolls and insisted on equal treatment to all on tax collections.

"Improved the care and treatment of the 49,000 patients in State mental hospitals, and provided for collection by the State of the cost of such care in cases where the patient or his family are able to pay.

"Enforced the overweight truck laws to protect the deteriorating highway system, and increased highway revenues.

"Pressed for elimination of chiselers and cheaters from the public assistance rolls.

"Initiated a program for State financing of tuberculosis sanitaria.

"Avoided new general taxes so that only two States, on a per capita income basis, have lower per capita State tax collections than Illinois.

"Reformed the administration of parole laws by appointing experts free from political pressure.

"Brought Illinois from the lowest to one of the highest levels of State aid for common schools."

A DEMOCRATIC TICKET OF STEVENSON AND KENNEDY

These acts reveal a man who has a warm humanitarian heart, who possesses fiscal soundness and prudence, who administers government without fear or favor, and who is not afraid of political pressures. They do not inevitably describe an orthodox political liberal in the conventional meaning of the term. Such a person might have tried to do away with the sales tax altogether rather than bring honesty to its enforcement. I recall talking to the late Phil Jackson, publisher of the Oregon Daily Journal of Portland, after his newspaper had given a luncheon in honor of Stevenson, whom the Journal had indorsed in the 1952 campaign.

"All my fat-cat friends at the Arlington Club have been telling me what a radical this man is," said Jackson. "Why, he's no radical at all—in fact, he's barely more liberal than I am, and I'm certainly no New Dealer, I can tell you that."

Similar episodes may have occurred elsewhere in the Nation, serving to explain why some flaming liberals cool off when confronted with a third candidacy for Stevenson. Still, a thoughtful man's performance in the American Presidency never can be predicted in advance with supreme safety and confidence. Walter Lippmann might hope to expunge the column which he wrote on January 8, 1932, about the man who was subsequently to become the Democratic nominee that year: "Franklin D. Roosevelt is no crusader. He is no tribune of the people. He is no enemy of entrenched privilege. He is a pleasant man who, without any important qualifications for the office, would very much like to be President." It may just be possible that the prophecies of F.D.R.'s amanuensis, Judge Sam Rosenman, could prove equally inaccurate about Adlai Ewing Stevenson.

Stevenson, grandson of Grover Cleveland's Vice President, will be 60 years old this February. This year, 1960, is virtually the last call for him. He either will be nominated in July at Los Angeles, the city of his birth, or he never again will be considered seriously for an office which many people regard as the natural niche for his talents of intellect, originality, and temperament.

I refuse to pass upon the dilemma of whether or not Stevenson's two previous defeats at the hands of Eisenhower stamp him indelibly as doomed to failure in quest of the Presidency. Only a seventh son of a seventh son could answer this question. It lends itself no more to authentic assessment prior to the event than does the whole question of the religion of Senator JOHN F. KENNEDY and California's Governor Pat Brown. We only can hope that the bigotry which plagued Al Smith in 1928 is no more. But can this actually be determined until it is put to the test? A casual inquiry at the front door fails to duplicate the emotions of an election in which hysteria and fanaticism might run wild. Intolerance cannot be measured apart from the conditions and atmosphere which tend to create it. The Stevenson riddle may not be quite so difficult to unlock, and yet surely the impact of previous failures is a generally unknown quantity in most elections.

I personally favor a Democratic ticket of Stevenson and KENNEDY. Despite all the current flyspecking as to his record in the Senate, I look upon JACK KENNEDY as one of the superior Senators of our era. Courage is a prime requisite in politics. Certainly it required courage to tackle the inflammable issue of labor reform. Regardless of the course he followed, KENNEDY was damned if he did and damned if he didn't. This has been demonstrated by the fact that, although KENNEDY strived successfully to pull some of the sharpest fangs in the Landrum-Griffin bill, he nevertheless now is enduring bitter criticism from some politicians with close labor alliances. At 42, KENNEDY'S youthful magnetism and personality might also be a useful foil to what some look upon as Stevenson's lack of lure to the distaff vote.

Why Stevenson for President? Franklin Roosevelt once described the Presidency as preeminently a position of moral leadership. If it had not been that in Lincoln's time, would the 16th President have been able to persuade his countrymen to accept the first military conscription and the first income taxes in American history, so that the Nation might be kept united? Stevenson, to me, possesses Lincolnesque qualities of soul searching, of personal inner doubts, of a brooding awareness that the way ahead is stern and hard. If somebody were to ask what I think is the vital difference between Stevenson and all other candidates in both parties, I would answer that it was an almost indefinable ingredient which might be called "stature." Within Stevenson, I believe, are the essentials to be a great President. This is quite different from being a good President or a successful President, as a number of the other aspirants unquestionably could become.

America today desperately needs a great President.

Foreign policy is the supreme challenge. With his flourishes of worldwide travel and pilgrimaging, Eisenhower has substituted the appearance of a policy for policy itself, in the view of James Reston, of the New York Times. After the cheering is over, the enigma of a divided Berlin or Soviet space supremacy still remains. Stevenson has persisted in recognizing that good-will journeys or vague platitudes are seldom substitutes for "generosity and decency in human relationships, and equality in human opportunities."

Discussing the unrest among the teeming millions of Asia and Africa, Stevenson has said, "Underneath the recriminations of diplomats and the conflicts of nation-states, there boils up today the hopes, resentments, and aspirations not just of leaders but of great masses of people seeking for themselves and their children the rights and privileges which [Woodrow] Wilson said, 'all normal

men desire and must have if they are to be contented and within reach of happiness.'"

It is easy to be superficial about foreign policy because the guideposts are frequently so far away. The test of a farm program may be in the price of hogs, only 25 miles off at the railhead. The test of foreign policy may be in the sprouting seeds of a war which Americans a decade hence might have to fight on the opposite side of the globe. Not even 20–20 vision can discern these measurements. That is why it is so easy to promise ultimate liberation for their relatives to foreign-language voters in large American cities, or to hint that eventually the Soviets will be overthrown by revolution, and thus we do not need to worry about Russia's spectacular shot at the moon or its satellites in far orbit.

ADLAI STEVENSON IS AMERICA'S HAIRSHIRT

Stevenson has never indulged himself in these luxuries. He is the pragmatist who threatens his own political chances by reminding audiences that we cannot thumb our noses even at countries which occasionally offend our precious sensibilities. "I know some politicians tell us that we don't need allies," Stevenson has observed. "Life would certainly be much simpler if that were so, for our friends can be highly irritating. But it is not so. We need allies because we have only 6 percent of the world's population. We need them because the oversea airbases essential to our own security are on their territory. We need allies because they are the source of indispensable strategic materials. We need, above all, the moral strength that the solidarity of the world community alone can bring to our cause. Let us never underestimate the weight of moral opinion. It can be more penetrating than bullets, more durable than steel."

Stevenson is America's hairshirt. He is the man who offers blood, sweat, toil, and tears when others are hinting temptingly at tax reduction or more Federal subsidies and benefactions. Indeed, people have come to expect candor of Stevenson. One of the highest tributes which he received was when he strayed briefly from this role during the 1956 Presidential campaign. Men and women instantly complained that he was out of character, that the 1956 campaign product was definitely not the authentic Stevenson. Somehow, Adlai Stevenson has come to epitomize in many minds a political figure who tells the truth, irrespective of political consequences.

Nikita Khrushchev's doorstep has become a favorite platform for American political hopefuls. It has introduced a jarring and even frightening element into our political life. The Communist Party is unable to poll a fraction of 1 percent of the vote at American ballot boxes. Yet the world's top Communist, Khrushchev, may possess the power to shape an American election simply by rattling the nuclear sword of fluttering the dove of peace at appropriate moments. Bismarck did this as a calculated policy in Prussia to influence French politics. What if Khrushchev finds that the mailed fist or the gloved hand, on his part, can stampede American voters into favoring one party or the other as an instrument of supposed peace?

I think this is one of the truly disturbing developments of our era. That is why the visits of leading Americans with Khrushchev must be reported faithfully and realistically, and without self-serving embellishments. If public opinion in our country is to be unmoved by Soviet bombast or blandishments, then American statesmen must be entirely candid in analyzing their impressions of Khrushchev's motives and aspirations. Stevenson, as I see it, has come closer to such a goal than any other important visitor to the Soviet dictator.

For example, in interviews with the Progressive and the New York Times on Khrushchev's disarmament address at the United Nations, Stevenson exclaimed: "This is the first time I have ever felt encouraged on the subject of disarmament. His replies to my questions left me with the clear understanding that in his view an international control body should have the power and facilities to control and inspect each step of the disarmament process to the extent necessary to insure compliance with the step, such power and facilities to vary according to the needs of each phase.

"While I wish I were more sanguine that something positive might come of Mr. Khrushchev's sweeping disarmament proposal, he certainly gave me new hope that they meant business this time. And above all, we should not hastily and cynically dismiss his proposals as 'clumsy propaganda,' 'old stuff,' or 'utopian nonsense.' For thereby we only redouble the propaganda impact—if that is all it is—of Russia's posture as the peacemaker—the mighty Russia which first put a satellite in orbit and has just pinned her colors to the moon.

"We must pay attention, cautiously but carefully, to what Mr. Khrushchev says about disarmament because he has a lot to say about the life and death of all of us. And I wish we could learn that with the Communists the important thing is not always whether they are sincere but whether they are serious."

STEVENSON WOULD SHAPE A TIME OF GREATNESS

Stevenson has a nobility of spirit which is rare in politics. Lincoln said, "I shall do nothing through malice. What I deal with is too vast for malice." Alas, this counsel of restraint is frequently honored far more in the breach than in the observance. Many men in politics, flattered beyond belief and the object of constant sycophancy, whine and wail whenever matters do not suit their fancy. After a defeat at the polls, they blame everyone except themselves. I have sat beside former Governors and former Senators, listening to hours of abuse against those responsible for their political downfall.

Stevenson is a different kind of bird from the usual political breed. He was twice vanquished for the Presidency under the most trying and difficult circumstances. He brought tears to millions of eyes besides his own on the night of his defeat in 1952, when he told those who had worked in his losing cause:

"Someone asked me, as I came down the street, how I felt, and I was reminded of a story that a fellow townsman of ours in Springfield used to tell—Abraham Lincoln. They asked him how he felt once after an unsuccessful election. He said that he felt like a little boy who had stubbed his toe in the dark. He said that he was too old to cry, but it hurt too much to laugh."

I have never heard Stevenson bewail his political fortunes. I have never heard Stevenson deride his conqueror or speak poorly of those who failed to support the Stevenson campaign. His references to the President of the United States, whether spoken in public or in private, are always in terms of personal respect. This is not usual in American politics. One should listen to former Senators commenting on those who occupy their chairs.

One night at a dinner party in Washington, my wife and I heard the Dean Achesons ridiculing and denouncing Stevenson. The vilification continued for a long time and was obviously no secret. They seemed anxious to make known their utter contempt and dislike for the Democratic Party's unsuccessful nominee of 1952 and 1956. Some weeks later we mentioned this episode to Stevenson. He shook his head sadly with a wry smile. "Dean was a fine Secretary of State," he said. "I only wish he and Mrs. Acheson thought better of me." And there the topic ended.

I do not know whether Adlai Stevenson ever will become President of the United States. The path ahead of a two-time loser is pocked with perils, and 1960 is undoubtedly his last chance. Destiny often foils those who seem most prepared for destiny's climactic events. But what I do know is this—if Stevenson does not go to the White House, millions of his fellow Americans will feel they have been robbed of their opportunity to live in a time of greatness.

Public Reaction Favors Throwing Out Farm Programs

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 22, 1960

Mr. PELLY. Mr. Speaker, recently in Seattle the Secretary of Agriculture, Mr. Benson, in a press conference said that the wheat situation is "almost a national scandal."

Later in the day in a speech Mr. Benson said:

The billions we have invested in Democrat farm program failures are tragic. Were this money accomplishing the adjustment so sorely needed in agriculture, it might be worth the cost.

But we are not getting our money's worth, not while programs designed to meet the needs of a depression and revised to help win two wars are still in effect long after depression and wars have vanished. They are antiquated, outmoded and outrageous. The most glaring example is wheat.

This monster is not the Benson program. Neither is it the administration's program. Fixing the blame won't help. Correcting the situation can and will help.

The administration has the answer, which is not easy because adjustments will be difficult. The cure requires legislation. Only Congress can correct this obsolete outmoded, scandalous wheat problem.

Congress must strike out decisively for solid ground, or public reaction might well throw out all farm programs—the good along with the bad.

Of course, Mr. Speaker, I do not have any idea which programs Mr. Benson considers good. As for me, I think it is more a matter of degree and of which program is worse but there may be Government assistance plans which help the farmer and do not harm anyone else. I respect the Secretary and I only wish nonpartisanship and unselfish interests would have given him half a chance to demonstrate that by degrees he could remove farm price supports.

The Washington Post in a recent editorial expressed the view that acreage controls have proved to be an illusion, and doubted whether marketing quotas tight enough to be effective would be tolerated. This newspaper's conclusion was that in the confused picture the most hopeful form of relief seemed to lie outside the realm of general price-support subsidies.

To this, the American taxpayer will say "Amen" if comments from my constitutents are any criteria.

Here is a sampling of such views:

It seems to me from what I read in the papers and magazines that the United States of America is being "took" plenty if the articles have any truth in them. According to one article, the Government is paying over $1 million a day for storage and people were renting warehouses from the Government at a price and renting them back at a neat profit. And why with such a surplus of wheat should the loaf of bread be the price it is, and why should Government land be leased for a wheat crop which never is planted and the lessor be paid for such a crop that never grew? These are what we read about and wonder. Something should be done.

I strongly favor abolition of all farm price support—particularly wheat price supports.

The agricultural price supports, soil bank payments, have not solved anything, but have given the large landowner-corporation-farmer huge benefit payments. * * * There is no reason why any particular segment of our American citizens should receive a subsidy, such as the farmers. The whole farm subsidy program should be repealed.

I protest subsidies of any nature unless they have to do with maintaining national defense. I believe a person and a nation is stronger for having worked out its own problems without having to lean on Government to work them out for him.

I don't understand why we should need farm price supports any more than we would need industrial price supports.

I would like to see the Congress return management of the farm to the farmers.

Farmers that are blaming Mr. Benson for their troubles should be told that the Democrats passed the farm law and they are in control of Congress.

I feel strongly about farm controls. They should be taken off. Now. And no price supports of any kind. Let supply and demand be their only control. A man should be able to grow what he wants and as much as he wants—this is the American way.

I am heartily and all out for Secretary Benson's efforts to seek improvement and relief for the agricultural situation.

I think storing of grain is a sin.

Let the farmers run their business as other businessmen do.

Agriculture price support: yes, they should be entirely abolished.

Nothing Is Really Ever New

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 22, 1960

Mr. PORTER. Mr. Speaker, I was glad to learn that Labor Secretary Mitchell has found the wisdom to tell the Congress that a modest increase in the present $1-an-hour minimum wage would not adversely affect low-wage industries.

The viewpoint expressed by the Secretary is not new. There has been before the Congress for some time excellent legislation which would raise the hourly minimum to $1.25.

Under leave to extend my remarks in the RECORD, I include the following news story which appeared in the February 20, 1960, edition of the AFL–CIO News:

MITCHELL SEES MODEST HIKE IN MINIMUM

Labor Secretary James P. Mitchell has told Congress that a modest increase in the present $1-an-hour minimum wage would not adversely affect low-wage industries.

The Secretary did not spell out the amount of increase the administration is prepared to support. He is expected to give the exact figure in testimony scheduled March 2 as a House Labor Subcommittee begins hearings on wage-hour law amendments.

Mitchell in his annual report on the effects of the $1-an-hour minimum required under the Fair Labor Standards Act renewed an administration request for an extension of minimum wage coverage to several million additional workers not now protected, and said that extension of coverage was the most important action Congress could take.

He did not indicate whether the administration would support extension of coverage beyond the approximately 2.5 million workers he recommended both in 1957 and last year.

The AFL–CIO is backing the Kennedy-Morse-Roosevelt bill that would extend coverage to approximately 7.8 million workers in large interstate industries and raise the hourly minimum to $1.25. This bill is now pending in the Senate Labor Committee after subcommittee approval last year.

Mitchell's report said that the impact of the 1956 increase in the minimum wage, when the rate was lifted from 75 cents to $1, had now been substantially absorbed. Another increase now, he indicated, would not result in serious economic dislocations or loss of employment in the low-wage industries to which the minimum applies directly.

Washington Report

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 22, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my newsletter of February 20, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER)

The proposal to remove the interest rate ceiling on Government bonds and to give the Treasury Secretary flexibility in debt management is the chief fiscal issue currently confronting Congress and our Committee on Ways and Means. Every taxpaying citizen, every business and financial institution, even the free enterprise system is involved. Unfortunately, political considerations are distorting the facts, in addition to the understandable confusion surrounding the complex workings of Government financing. Two misconceptions, widely held, are stressed by Secretary Anderson, and need to be understood:

(1) "Increases in Government interest rates are necessarily inflationary." This is not so. "Interest rate" is simply the price of borrowing money, and reflects the supply and demand of money at any given time. Interest rates also act as a corective balance wheel. A cheaper rate reflects a greater supply of money and becomes an inducement to borrow. A higher rate evidences increased competitive demand for the loan money available and is also a damper on borrowing. Therefore, higher interest rates encourage saving, discourage spending, and help to resist inflationary pressures. Obviously, artificial creation of money by Government (through deficit financing) and/or artificially set interest rates can hurt our people and competitive enterprise.

(2) "Only large financial institutions—the bankers—benefit from high interest rates on Government bonds." Not so. Individuals, many of relatively modest means, benefit directly or indirectly. Even the financial institutions pass on the interest received as earnings to all the people who have invested their savings. This debt management problem is concerned only with the currently owed $291 billion of recognized debt. Our total debt, including contingent liabilities and c.o.d. commitments, today approaches $750 billion.

The House Rules Committee this week reported out the controversial civil rights bill for debate on the floor. The bare newspaper accounts of this action leave a lot unsaid, for the footwork of the committee's conservatives in handling this bill was something to behold. The odds are that the Rules group acted in just the nick of time before a discharge petition offered by the rights' bill author, EMANUEL CELLER, had gained a sufficient number of signatures to remove the bill from the committee's jurisdiction, anyway. Many leftwing liberal-backed bills, having cleared the appropriate standing committee of the House, have run into tough sledding in the Rules Committee, which determines when, if, and how a bill shall be considered on the floor. Though Democrats control 18 votes to 4, the committee chairman, HOWARD SMITH, of Virginia, and BILL COLMER, of Mississippi, often vote with the four Republicans, throwing the committee into a 6–6 deadlock, and thus preventing consideration of a great deal of popular but ill-advised legislation.

When it became apparent this week that the discharge petition would succeed, the Republicans joined several Democrats in voting to grant a rule for civil rights debate. This way, at least, the Rules group set the ground rules for debate, whereas the rule requested by Mr. CELLER would have prevailed had the committee been discharged. The lineup of Members on this petition points up once again the unbridgeable conflict in the Democratic Party. Of course, no southern Congressman, Democrat or Republican, signed the petition. But, according to one authoritative report, of those who had signed by the first of the week, 164 were Democrats and only 42 were Republicans. A breakdown of those who had refused or declined to sign may be equally significant—outside the South and border States, 110 Republicans declined and only 9 Democrats.

The annual prayer breakfast was attended by the President, numerous Members of Congress, court justices, administrators, and people from all over the United States and abroad. Those on the program stressed that America's greatest strength, and that of the free world, is spiritual and moral. Most simply stated, our problem, it seems to me, is to practice as individuals in Government what we preach and, by so doing, present a correct image of U.S. conviction to the world, thereby retaining genuine prestige and respect as the leader of the free world.

"A Conservative's Answer to the ADA Brand of Modern Liberalism" was the subject of the Georgetown University Forum—a 30-minute Sunday show in Washington. I joined Brent Bozell, youthful writer and speaker, and Frank McNamara, counsel for the Un-American Activities Committee, to present this answer. The future of this Nation today is the balance, as I see it—whether we embrace the regimented, planned economy of the welfare state or whether we keep and rebuild free, competitive enterprise and individual

freedom. All should know that the determined liberals are planning more spending, more Federal control, higher taxes, and more deficits. There's still time for people to stop this national suicide.

My television series (WFAA–TV, 10:30 a.m., Sunday) thus far has included interviews with Charlie Halleck, House minority leader; Dana Latham, Internal Revenue Commissioner; Maurice Stans, Budget Bureau Director; Wallace Janssen, Food and Drug Administrator; Frances Knight, Passport Director; and George Allen, U.S. Information Agency Director. A weekly radio report may be heard over KLIF at 6:45 p.m. Sunday. Those wanting to receive my newsletter need only to ask for it.

George Washington's Farewell Address to the People of the United States Contains Up-to-Date Advice That Should Be Considered Now

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 22, 1960

Mr. PATMAN. Mr. Speaker, George Washington's Farewell Address was written primarily to eliminate himself as a candidate for a third term. The address is in two parts. In the first, Washington definitely declines a third term, gives reasons and acknowledges a debt of gratitude for the honors conferred upon him and for the confident support of the people. In the second more important part, he presents, as a result of his experience and as a last legacy of advice, thoughts upon the Government.

The U.S. Constitution was approved by the unanimous order of the Convention, September 17, 1787, George Washington, presiding.

Exactly 9 years later, September 17, 1796, George Washington delivered this farewell address. It was never actually delivered but was dated September 17, 1796.

It was addressed, "To the People of the United States."

The manuscript which Washington gave to Claypoole, who printed it in Claypoole's "American Daily Advertiser," in Philadelphia, Pa., on September 19, 1796, was ordered to be sold after Claypoole's death, at auction on February 12, 1850.

January 24, 1850, Senator Henry Clay offered a joint resolution for its purchase by the Government, but the resolution was not signed by President Taylor before the day of sale.

The manuscript was sold to James Lennox for $2,300 and passed with his library to the New York Public Library. There is no evidence of any bid on behalf of the National Government.

This information was obtained from "The Story of the Constitution," by Sol Bloom, director general of the Sesquicentennial Commission of 1937.

GOVERNMENT OF LAW, NOT OF MEN

Many people believe that there is a trend among many public officials to ignore the law and Constitution and substitute therefor regulations and decisions of men. Washington warned against such usurpation in the following language:

If in the opinion of the people the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designates. But let there be no change by usurpation; for though this in one instance may be the instrument of good, it is the customary weapon by which free governments are destroyed.

RELIGION AND MORALITY

In this farewell address, which was more than 165 years ago, Washington gave advice which is timely and opportune in the United States today in our dealings with Russia. In other words, Washington had something to say about a nation ignoring religion. Washington in his farewell address stated:

Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports. * * * And let us with caution indulge the supposition that morality can be maintained without religion. Whatever may be conceded to the influence of refined education on minds of peculiar structure, reason and experience both forbid us to expect that national morality can prevail in exclusion of religious principle.

EDUCATION

On the question of education, Washington had something to say in his farewell address. An exact quote is as follows:

It is substantially true that virtue or morality is a necessary spring of popular government. The rule indeed extends with more or less force to every species of free government. Who that is a sincere friend to it can look with indifference upon attempts to shake the foundation of the fabric? Promote, then, as an object of primary importance, institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened.

NATIONAL DEBT

Concerning the use of public credit, Washington had some good advice. This farewell address was read today in the House of Representatives by a distinguished Representative from the great State of Missouri, Hon. CHARLES HARRISON BROWN, in such an impressive way that some points heretofore passed over lightly were emphasized and made very timely by this great orator. One of the points I refer to is about the United States obligating itself through the use of public credit to the payment of a huge debt to successfully prosecute unavoidable wars. Washington was so right when he gave us the following words of caution and advice:

As a very important source of strength and security, cherish public credit. Our method of preserving it is to use it as sparingly as possible, avoiding occasions of expense by cultivating peace, but remembering also that timely disbursements to prepare for danger frequently prevent much greater disbursements to repel it; avoiding likewise the accumulation of debt, not only by shunning occasions of expense, but by vigorous exertions in times of peace to discharge the debts which unavoidable wars have occasioned, not ungenerously throwing upon posterity the burden which we ourselves ought to bear. The execution of these maxims belongs to your representatives; but it is necessary that public opinion should cooperate.

In times of prosperity, such as we have now, Congress should not only have a balanced budget but should make a substantial payment on its national debt. At a recent public hearing before the Joint Economic Committee, a very prominent economist recommended that the President have the power to increase taxes, if necessary, to balance the budget, if Congress should adjourn without making adequate provisions for balancing the budget. This recommendation appears to me as being worthy of very serious consideration. Possibly we should not only allow the Chief Executive to raise sufficient revenue through flexible tax provisions to balance the budget, but should also allow him by the use of the same method to raise an additional amount of revenue to make a substantial payment on the national debt in times of prosperity, if Congress should adjourn without doing so.

GEORGE WASHINGTON'S RULES OF CIVILITY AND DECENT BEHAVIOR IN COMPANY AND CONVERSATION

George Washington's "Rules of Civility and Decent Behavior in Company and Conversation" are very interesting and I believe should be reprinted in the RECORD that contains an observance of his birthday. They are as follows:

GEORGE WASHINGTON'S "RULES OF CIVILITY AND DECENT BEHAVIOR IN COMPANY AND CONVERSATION"

From a paper found among the early writings of George Washington copied from the original with literal exactness and edited with notes by J. M. Toner, M. D., 1888.

The text following is an exact copy from the original manuscript, having been carefully compared with the corrected therefrom, even when errors or omissions are obvious.

This book has been knawed by mice. Rule 12 and all at bottom of any of the pages had been nearly destroyed. Every word and letter remaining has been copied and are here given:

"1. Every Action done in Company, ought to be with Some Sign of Respect, to those that are present.

"2. When in Company, put not your Hands to any Part of the Body, not usually Discovered.

"3. Shew Nothing to your Friend that may affright him.

"4. In the Presence of Others sing not to yourself with a humming Noise, nor Drum, with your Fingers or Feet.

"5. If you Cough, Sneeze, Sigh, or Yawn, do it not Loud, but Privately; and Speak not in your Yawning, but put Your handkerchief or Hand before your face and turn aside.

"6. Sleep not when others Speak, Sit not when others stand, Speak not when you Should hold your Peace, walk not on when others Stop.

"7. Put not off your Cloths in the presence of Others, nor go out your Chamber half Drest.

"8. At play and at Fire its Good manners to give Place to the last comer, and affect not to Speak Louder than ordenary.

"9. Spit not in the Fire, nor Stoop low before it neither Put your Hands into the Flames to warm them, nor Set your Feet upon the Fire especially if there be meat before it.

"10. When you Sit down, Keep your Feet firm and Even, without putting one on the other or Crossing them.

"11. Shift not your self in the Sight of others nor Gnaw your nails.

"12. Shake not the head, Feet, or Legs, rowl not the Eys, lift not one eyebrow higher

than the other, wry not the mouth, and bedew no mans face with your Spittle, by appr * * * r him * * * you Speak.

"13. Kill no Vermin as Fleas, lice ticks &c in the Sight of Others, if you See any filth or thick Spittle put your foot Dexteriously upon it, if it be upon the Cloths of your Companions. Put it off privately, and if it be upon your own Cloths return Thanks to him who puts it off.

"14. Turn not your Back to others especially in Speaking, Jog not the Table or Desk on which Another reads or writes, lean not upon any one.

"15. Keep your Nails clean and short, also your Hands and Teeth Clean, yet without Shewing any great Concern for them.

"16. Do not Puff up the Cheeks, Loll not out the tongue rub the Hands, or beard, thrust out the lips, or bite them or keep the Lips too open or too close.

"17. Be no Flatterer, neither Play with any that delights not to be Play'd Withal.

"18. Read no Letters, Books, or Papers in Company but when there is a Necessity for the doing of it you must ask leave: come not near the Books or Writings of Another so as to read them unless desired or give your opinion of them unask'd also look not nigh when another is writing a Letter.

"19. Let your Countenance be pleasant but in Serious Matters Somewhat grave.

"20. The Gestures of the Body must be Suited to the discourse you are upon.

"21. Reproach none for the Infirmities of Nature nor Delight to Put them that have in mind thereof.

"22. Shew not yourself glad at the Misfortune of another though he were your enemy.

"23. When you see a Crime punished, you may be inwardly Pleased; but always shew Pity to the Suffering Offender.

"* * * too much at any Publick.

"25. Superfluous Complements and all Affectation of Ceremonie are to be avoided yet where due they are not to be Neglected.

"26. In pulling off your Hat to Persons of Distinction, as Noblemen, Justices, Churchmen &c make a Reverence, bowing more or less according to the Custom of the Better Bred, and Quality of the Persons Amongst your equals expect not always that they Should begin with you first, but to Pull off the Hat when there is no need is Affectation, in the Manner of Saluting and resaluting in words keep to the most usual Custom.

"27. Tis ill manners to bid one more eminent than yourself be covered as well as not to do it to whom it's due Likewise he that makes to much haste to Put on his hat does not well, yet he ought to Put it on at the first, or at most the Second time of being ask'd; now what is herein Spoken, of Qualification in behaviour in Saluting, ought also to be observed in taking of Place, and Sitting down for ceremonies without Bounds is troublesome.

"28. If any one comes to Speak to you while you are Sitting Stand up tho he be your Inferiour, and when you Present Seats let it be to every one according to his Degree.

"29. When you meet with one of Greater Quality than yourself, Stop, and retire especially if it be at a Door or any Straight place to give way for him to Pass.

"30. In walking the highest Place in most Countrys Seems to be on the right hand therefore Place yourself on the left of him whom you desire to Honour; but if three walk together the middle Place is the most Honourable the wall is usually given to the most worthy if two walk together.

"31. If any one far Surpasses others, either in age, Estate, or Merit, * * * would give Place to a meaner than himself * * * the one ought not to except it, So * * * it above once or twice.

"32. To one that is your equal, or not much inferior you are to give the chief Place in your Lodging and he to who 'tis offered ought at the first to refuse it but at the Second to accept though not without acknowledging his own unworthiness.

"3. They that are in Dignity or in office have in all places Preceedency but whilst they are Young they ought to respect those that are their equals in Birth or other Qualitys, though they have no Publick charge

"34. It is good Manners to prefer them to whom we speak before ourselves especially if they be above us with whom in no Sort we ought to begin.

"35. Let your Discourse with Men of Business be Short and Comprehensive.

"36. Artificers & Persons of low Degree ought not to use many ceremonies to Lords, or Others of high Degree but Respect and highly Honour them, and those of high Degree ought to treat them with affibility & Courtesie, without Arrogancy.

"37. In Speaking to men of Quality do not lean nor Look them full in the Face, not approach too near them at lest Keep a full Pace from them.

"33. In visiting the Sick, do not Presently play the Physician if you be not Knowing therein.

"39. In writing or Speaking, give to every Person his due Title According to his Degree & the Custom of the Place.

"40. Strive not with your Superiors in argument, but always Submit your Judgment to others with Modesty.

"41. Undertake not to Teach your equal in the art himself Professes; it flavours of arrogancy.

"Courtesie be proper to the * * * Dignity of his place * * * t yr. same with a * * * Clown and a Prince.

"43. Do not express Joy before one sick or in pain for that contrary Passion will aggravate his Misery.

"44. When a man does all he can though it Succeeds not well blame not him that did it.

"45. Being to advise or reprehend any one, consider whether it ought to be in Publick or in Private; presently, or at Some other time in what terms to do it & in reproving Shew no Signs of Cholar but do it with all Sweetness and Mildness.

"46. Take all Admonitions thankfully in what Time or Place Soever given but afterwards not being culpable take a Time or Place Convenient to let him know it that gave them.

"47. Mock not nor Jest at anything of Importance break no Jest that are Sharp Biting and if you Deliver anything witty and Pleasant abstain from Laughing thereat yourself.

"48. Wherein Wherein you reprove Another be unblameable yourself; for example is more prevalent that Precepts.

"49. Use no Reproachfull Language against any one neither Curse nor Revile.

"50. Be not hasty to believe flying Reports to the Disparagement of any.

"51. Wear not your Cloths, foul, unript or Dusty but See they be Brush'd once every day at least and take heed that you approach not to any Uncleaness.

"52. In your Apparel be Modest and endeavour to accomodate Nature, rather than to procure Admiration keep to the Fashion of your equals, Such as are Civil and orderly with respect to Times and Places.

"53. Run not in the Streets, neither go too slowly nor with Mouth open go not Shaking Yr. Arms * * * not upon the toes, nor in a Dancing * * *

"54. Play not the Peacock, looking everywhere about you, to See if you be well Deck't, if your Shoes fit well if your Stockings Sit neatly, and Cloths handsomely.

"55. Eat not in the Street, nor in ye House, out of Season.

"56. Associate yourself with Men of good Quality if you Esteem your own Reputation; for 'tis better to be alone than in bad Company.

"57. In walking up and Down in a House, only with One in Company, if he be Greater than yourself, at the first give him the Right hand and Stop not till he does and be not the first that turns, and when you do turn let it be with your face towards him, if he be a Man of Great Quality, walk not with him Cheek by Jowl but Somewhat behind him; but yet in Such a Manner that he may easily Speak to you.

"58. Let your Conversation be without Malice or Envy, for 'tis a Sign of a Tractable and Commendable Nature, & in all Causes of Passion admit Reason to Govern.

"59. Never express anything unbecoming, nor Act ag'tt ye Rules of Moral before your inferiours.

"60. Be not immodest in urging your Friends to Discover a Secret.

"61. Utter not base and frivilous thing amongst grave and Learn'd Men nor very Difficult Questions or Subjects, amongst the Ignorant or things hard to be believed, Stuff not your Discourse with Sentences amongst your Betters nor Equals.

"62. Speak not of doleful Things in a Time of Mirth or at the Table; Speak not of Melancholy Things a Death and Wounds, and if others Mention them Change if you can the Discourse tell not your Dreams, but to your intimate Friend.

"63. A man ought not to value himself of his Atchievements or rare Qual * * * les Virtue or Kindred.

"64. Break not a Jest where none take pleasure in mirth Laugh not aloud, nor at all without Occasion, deride no man's Misfortune, tho' there seem to be Some cause.

"65. Speak not injurious Words neither in Jest nor Earnest Scoff at none although they give Occasion.

"66. Be not forward but friendly and Courteous; the first to Salute hear and answer & be not Pensive when It's a time to converse.

"67. Detract not from others neither be excessive in Commanding.

"68. Go not thither, where you know not, whether you Shall be Welcome or not. Give not Advice whth being Ask'd & when desired do it briefly.

"69. If two contend together take not the part of either unconstrained, and be not obstinate in your Opinion, in Things indifferent be of the Major side.

"70. Reprehend not the imperfections of others for that belongs to Parents Masters and Superiours.

"71. Gaze not on the marks or blemishes of Others and ask not how they came. What you may Speak in Secret to your Friend deliver not before others.

"72. Speak not in an unknown Tongue in Company but in your own Language and that as those of Quality do and not as ye Vulgar; Sublime matters treat Seriously.

"73. Think before you Speak pronounce not imperfectly nor bring out your Words too hastily but orderly and Distinctly.

"74. When Another Speaks be attentive your Self and disturb not the Audience if any hesitate in his Words help him not nor Prompt him without desired, Interrupt him not, nor Answer him till his Speech be ended.

"75. In the midst of Discourse ask * * * but if you Perceive any Stop because of * * * to Proceed: If a Person of Quality comes in while your Conversing its handsome to Repeat what was said before.

"76. While you are talking, Point not with your Finger at him of Whom you Discourse nor Approach too near him to whom you talk especially to his face.

"77. Treat with men at fit Times about Business & Whisper not in the Company of Others.

"78. Make no Comparisons and if any of the Company be Commended for any brave act of Virtue, commend not another for the Same.

"79. Be not apt to relate News, if you know not the truth thereof. In Discoursing of things you Have heard Name not your Author always A Secret Discover not.

"80. Be not Tedius in Discourse or in reading unless you find the Company pleased therewith.

"81. Be not Curious to Know the Affairs of Others neither approach to those that Speak in Private.

"82. Undertake not what you cannot Perform but be Careful to keep your Promise.

"83. When you deliver a matter do it without Passion & with Discretion, however mean ye Person be you do it too.

"84. When your Superiors talk to any Body hearken not neither Speak nor Laugh.

"85. In Company of these Higher Quality than yourself Speak not till you are ask'd a Question then Stand upright put of your Hat & Answer in few words.

"86. In Disputes, be not so Desirous to Overcome as not to give Liberty to each one to deliver his Opinion and Submit to ye Judgment of ye Major Part especially if they are Judges of the Dispute.

"87. * * * as becomes a Man Grave * * * Settled and attentive * * * dict not at every turn what others Say.

"88. Be not tedius in Discourse, make not many Digressions, nor repeat often the Same manner of Discourse.

"89. Speak not Evil of the absent for it is unjust.

"90. Being Set at meat Scratch not neither Spit Cough or blow your Nose except there's a Necessity for it.

"91. Make no Shew of taking great Delight in your your Victuals, Feed not With Greediness; cut your Bread with a Knife, lean not on the Table neither find fault with what you Eat.

"92. Take no Salt or cut Bread with your Knife Greasy.

"93. Entertaining any one at table it is decent to present him wt meat. Undertake not to help others undesired by ye Master.

"94. If you Soak bread in the Sauce let it be no more than what you put in your Mouth at a time and blow not your broth at Table but Stay till Cools of it Self.

"95. Put not your meat to your Mouth with your Knife in your hand neither Spit forth the Stones of any fruit Pye upon a Dish nor cast anything under the table.

"96. It's unbecoming to Stoop much to ones Meat Keep your Fingers clean & when foul wipe them on a Corner of your Table Napkin.

"97. Put not another bit into your Mouth til the former be Swallowed let not your Morsels be too big for the jowls.

"98. Drink not nor talk with your mouth full neither Gaze about you while you are a Drinking.

"99. Drink not too leisurely nor yet too hastily. Before and after Drinking wipe your Lips breath not then or Ever with too Great a Noise, for its uncivil.

"100. Cleanse not your teeth with the Table Cloth Napkin Fork or Knife but if Others do it let it be done wt a Pick Tooth.

"101. Rince not your Mouth in the Presence of Others

"102. It is out of use to call upon the Company often to Eat nor need you Drink to others every Time you Drink.

"103. In Company of your Betters be not * * * than they are lay not your Arm but ar.

"104. It belongs to ye Chiefest in Company to unfold his Napkin and fall to Meat first. But he ought then to Begin in time and to Dispatch with Dexterity that ye Slowest may have time allowed him.

"105. Be not Angry at Table whatever happens & if you have reason to be so, Shew it not but on a Chearfull Countenance especially if there be Strangers for good Humour make one Dish of Meat a Feast.

"106. Set not yourself at ye upper * * * of ye Table but if it be your Due or that ye Master of ye house will have it so, Contend not lest you Should Trouble ye company.

"107. If others talk at Table be attentive but talk not with Meat in your Mouth.

"108. When you Speak of God or his Attributes, let it be Seriously & * * * Reverence, Honour & obey your Natural Parents altho they be Poor.

"109. Let your Recreations be Manfull not Sinfull.

"110. Labour to keep alive in your Breast that Little Spark of Celestial fire called Conscience."

The U.S. Navy Band Goes to South America

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 22, 1960

Mr. PORTER. Mr. Speaker, today on George Washington's birthday, the U.S. Navy Band gives the first of a series of concerts in South America in Buenos Aires, Argentina.

I am told that the band, its chorus—the Sea Chanters—and its Navy Band combo will play for several days in the Buenos Aires area. On subsequent days the band will be heard in Rio de Janeiro, Brazil, and in Montevideo, Uruguay.

The opportunity to introduce the Navy Band to our friends in Latin America came without much warning. It was the best of surprises because band members have wanted to make the trip for a long time. A lack of money for such purposes made it impossible.

Then early this year the Navy authorized that a cruiser, the U.S.S. *Macon*, make a series of official state visits to certain coastal ports along the eastern shore of South America. The U.S. Navy Band which is trained in protocol was the logical choice to accompany the officer making the visit. The next step was to make the necessary arrangements.

This meant making sure engagements for the band here were not canceled without proper replacements. It entailed, I learned, the finest sort of cooperation among the armed services. It was done quietly and efficiently.

Early this month arrangements were completed. Now final scheduling for the traveling group is in process.

FLY TO CARIBBEAN

On February 6 the band and chorus flew to the Caribbean where they boarded the *Macon*. On or around March 10 they will return to this country.

The actual story of how this came about really includes as a major hero the element of chance. The opportunity to go came unexpectedly. Arrangements to go could be made. The band went.

It is a simple story. One which I feel will do much to improve relations with our friends in South America. Friendship, of course, always can be improved. The moment it is taken for granted it deteriorates.

I have tried for some time, since July 1, 1958, to see if funds for the Navy Band's visit to Latin America might not be made available through the Department of State. It seemed to me that this type of musical people-to-people contact is diplomacy at the best level. The language of music dissolves the barrier of language. Musicians themselves generally are excellent ambassadors of good will.

On July 1, 1958, I wrote to the late Secretary of State, the Honorable John Foster Dulles, as follows:

JULY 1, 1958.

Hon. JOHN FOSTER DULLES,
Secretary of State,
Washington, D.C.

DEAR MR. SECRETARY: Recently I had the privilege of listening to the Navy Band and its chorus, the Sea Chanters, make a recording of the Oregon State song. If you have heard them or about them, then I don't need to tell you what a superb group of performers they are.

It occurred to me that they would be good-will ambassadors of a high order wherever they went, representing as they do not only the spirit of the Navy, but of the America we all cherish.

With their discipline, dash and virtuosity they could do us a lot of good in Latin America. My suggestion is that such a tour be arranged and announced at an early date. I should like very much to have your reactions to this suggestion and would be glad to discuss it further with you or your representative.

With best wishes.

Sincerely,

CHARLES O. PORTER,
Member of Congress.

MANY BRIDGES TO CROSS

There were many bridges to cross. On July 20, 1959, Rear Adm. C. C. Kirkpatrick, U.S. Navy Chief of Information, at my request provided me with details concerning the cost of sending the U.S. Navy Band to South America. A copy of his letter follows:

DEPARTMENT OF THE NAVY,
OFFICE OF INFORMATION,
Washington, D.C., July 20, 1959.

Hon. CHARLES O. PORTER,
House of Representatives,
Washington, D.C.

MY DEAR MR. PORTER: In response to your verbal request for information pertaining to the proposal that the U.S. Navy Band make a tour of Latin American countries, the following is submitted in answer to your specific questions:

Question. What is the background on previous action taken, particularly the results of discussions with other governmental agencies on the matter of financing the tour?

Answer. In 1957, proposals for such a tour were made separately by both Representative CARROLL D. KEARNS of Pennsylvania, and the commandant of the Potomac River Naval Command. The idea was thoroughly explored and was supported in principle by the Chief of Naval Personnel, the Chief of Information, and the Chief of Naval Operations, but funds to effect its implementation could not be found within the Navy Department. At that point the Vice Chief of Naval Operations personally investigated the possibilities of assistance from such other Government agencies as the Department of State, the U.S. Information Agency and the International Cooperation Administration. Each agency endorsed the proposal as a fine idea, but none was in a position to provide the necessary funds. The proposal was also endorsed by the Department of Defense provided funds could be found to cover the expense. Despite all efforts, no funds could be found and the project was dropped for the time being.

Your letter of July 1, 1958, to the Secretary of State revived the Navy's interest in the idea and again the matter of funds was thoroughly explored both by the Navy's Cold War Advisory Panel and the Special Assistant for Public Affairs to the Secretary of the Navy. This action took place shortly after the Vice President's trip to South America

and the proposal was subsequently brought to his attention. He endorsed the idea and offered his support.

During the 1958 attempt, the possibility of setting up the tour under the President's fund was explored. The President's fund, administered by the Department of State, is used for the purpose of transporting individuals throughout the world on what is basically a cultural mission. Although representatives of the State Department were in favor of the Navy Band making the tour, they did not wish to designate moneys from the President's fund because (a) it would mean canceling some other (civilian) program from the schedule, and (b) no other Armed Forces unit had ever used moneys from the fund and they did not wish to establish a precedent. The project was again shelved due to lack of funds.

Question. What are the costs involved?

Answer. Costs have been estimated on the basis of the attached proposed itinerary for a 35-day tour. The band would consist of 70 enlisted musicians and 2 officers. In round numbers, the per diem for the band would amount to approximately $38,000. Transportation requirements include space for 7,300 pounds (654 cubic feet) of equipment as well as 72 individuals and their personal baggage.

Approximate figures have been worked out as follows:

(1) MATS special air mission: Two MATS C–118/R–6D-type aircraft, if available, could perform the airlift. Total cost including crew per diem, aircraft operating costs, and minimum daily charge while the aircraft are in an inoperative status, would be approximately $110,000. Thirty days leadtime is generally required for such airlifts.

(2) Navy air: Three U.S. Navy R–5D-type aircraft would be required for the tour, however the availability of these transports cannot be ascertained until the date of the tour is known. If the aircraft are available, at least 6 weeks, leadtime would be required for planning.

The total cost, including crew per diem and aircraft operations, would be approximately $27,854.

(3) Commercial air: Scheduled commercial air (Pan American) is available to most of the cities as shown on the attached itinerary. The cost, for band members only, figured at the 30-day excursion rate, would be approximately $43,315.

Band equipment and other cargo would have to be airlifted by an extra aircraft. Commercial air costs for this are not available but can be expected to be high. Pan American would have no objections if the cargo aircraft were provided by the Navy. Navy crew and aircraft costs would be approximately $9,000 for one aircraft.

Question. How much leadtime is required?

Answer. To insure a well-planned tour, it is believed that at least 9 months, and preferably a year of leadtime would be required. It would be essential to have an officer assigned full time as an advance man to visit all countries concerned several months prior to the commencement of the tour to insure that adequate facilities are available and that the band would be well taken care of and well received.

Question. Would sponsorship by an organization such as the Ford Foundation or the Rockefeller Foundation be appropriate?

Answer. Sponsorship by a nonprofit, noncommercial organization would be acceptable and might have certain political advantages, since possible charges of military motive could not be made. Preliminary investigation regarding financing of the tour by industry was not encouraging.

* * * * *

The proposed tour of Latin America would be an expensive operation, but it is believed it would be extremely worth while as a people-to-people effort. If the money for such a tour can be found, you may be sure the Navy would enter into the project with the greatest enthusiasm.

Your continued personal interest in sending the U.S. Navy Band to Latin America is deeply appreciated. Please do not hesitate to call upon me if you desire additional information.

Sincerely yours,

C. C. KIRKPATRICK,
Rear Admiral, U.S. Navy,
Chief of Information.

CONGRESSMEN INTERESTED

Other Members of Congress have expressed interest in the proposed southern visit. The Honorable CARROLL D. KEARNS, Republican of Pennsylvania, probably this House's stanchest and best friend of music, told me he thought the visit would be a good idea. In 1957 he proposed such a trip.

The Honorable CHESTER BOWLES, Democrat of Connecticut, wrote me December 23, 1959, as follows:

I agree that the idea of sending the Navy Band to South America is a good one but frankly I can't see any likelihood that one of the major private foundations could see its way clear to subsidize it. I do hope that some way can be found to send the Navy Band to South America. I hope there will be official reconsideration by the Government.

Reconsideration in this particular case would not have to be made, but similar financial need may arise again and again. I hope that more funds may somehow be apportioned for this sort of work.

I know that the Navy Band will be warmly welcomed in South America, as have other groups such as the National Symphony Orchestra.

The U.S. Navy Band will have one of the most important assignments of its historic career when it plays at the American Embassy in Buenos Aires for the reception honoring the President of the United States. The assignment was not prearranged, I am told. It was a happy coincidence, a most opportune crossing of schedules for the President, the citizens of Argentina and the U.S. Navy Band members. It is a day of special honor for able Comdr. Charles Brendler and the other Navy men taking part in the tour.

Under leave to extend my remarks in the RECORD, I include my recent letter to Secretary of State Herter suggesting earlier that there might be funds within the department for a visit and the reply for the Department by Assistant Secretary William B. Macomber, Jr.:

JANUARY 4, 1960.

Hon. CHRISTIAN A. HERTER,
Secretary of State,
Washington, D.C.

DEAR MR. SECRETARY: It is not a new idea to have an American band tour Latin America in the interest of improved relations. A recent tour by the National Symphony was, as you no doubt know, a great success. Not long ago the Air Force Band, as I recall, had great successes also in Latin America.

Enclosed is a thermofax of a letter I received July 21 from Rear Admiral Kirkpatrick. The Navy would like to send its band to South America but they need about $53,000 for a 30-day tour and apparently this money cannot be located.

I am referring this matter to you in the hopes that there may be funds within the State Department or available to it which could be used for this very worthy purpose.

Sincerely yours,

CHARLES O. PORTER,
Member of Congress.

DEPARTMENT OF STATE,
Washington, D.C., January 13, 1960.

The Honorable CHARLES O. PORTER,
House of Representatives.

DEAR MR. PORTER: Your letter of January 4, 1960, inquiring about the availability of State Department funds to finance a tour of the Navy Band has been received.

There is no question that the appearances abroad of bands, orchestras, and other musical groups drawn from our military services have enjoyed great success in appearances before civilian audiences abroad. Tours by units from the Army, Marines, and Air Force have handsomely supplemented our efforts in many areas where our financial resources were inadequate to have as extensive a program as we would have liked.

The Department has worked actively with the service units involved in laying out itineraries and other details to insure the success of these appearances. Among many others, the appearances of the Air Force Symphony in the Far East, the Seventh Army Symphony in Europe, and the Marine Band unit at Edinburgh perhaps deserve special mention. These tours were all undertaken at no cost to the cultural presentations program of the Department of State.

The Department would be delighted to see the Navy Band join the ranks of these groups appearing abroad. It regrets, however, that it is unable to offer financial assistance to this end. With limited resources at its disposal, the Department feels that it should emphasize the artistic and creative achievements of this country under a free enterprise system. This has meant emphasis on the presentation of groups which have developed and flourish in America without Government support or subsidy. Since the funds to portray this kind of development are inadequate to do the job that our Foreign Service posts believe needs to be done, we see no way we can support the requests of the military services to assist them on goodwill tours.

Should the Navy find the resources which are apparently available to other service units for tours of music groups, we would be happy to work with them in developing a tour itinerary and assist any other way possible. We offer them the strongest encouragement to contribute to a truer complete picture of American musical and cultural life.

Sincerely yours,

WILLIAM B. MACOMBER, Jr.,
Assistant Secretary
(For the Secretary of State).

Constituents Are Indignant at Congressional Failure To Repeal Farm Price Supports

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, February 22, 1960

Mr. PELLY. Mr. Speaker, I have a feeling that before too long a bill such as was recently introduced by 16 House Democrats will be reported by the House Committee on Agriculture. In this connection, it would seem to me that the provisions of that particular bill are so wide of the guidelines laid down in President Eisenhower's farm message that there can be no meeting ground or agree-

ment between this legislation and the views of the administration.

In other words, Mr. Speaker, I see in this bill the basis of a partisan debate, a veto, and finally of an election issue, but the consumer, the farmer, and the taxpayer, I predict, will continue to suffer under the present price support program which everyone must agree was aptly described by the President when he said: "It defies commonsense."

As the author of H.R. 10350 to repeal farm supports and in doing so to use the Government-held surplus food products in a way so as not to disrupt domestic or world marketings, I have strong reason to believe that the public will not accept failure of Congress to enact a new program in a kindly light.

The people accepted a program to prevent wartime scarcity when there was a war. But continuing it year after year in peacetime with ever-increasing surpluses through its stimulating effect is no longer accepted.

Also the people looked favorably on its objective of easing the plight of small farmers, but with the large percentage of the subsidy going to big operators, there is strong and widespread objection to the way the legislation has worked out.

My mail is heavy with expressions of constituents who are indignant about the failure of Congress to do anything about the problem.

My barometer of grassroots opinions is significant. It registers that if Congress fails to enact, and promptly, a measure which does away with an outmoded law the voters will surely visit their wrath on both city as well as rural representatives who neglect to end this fiasco.

This is a sample of what my people at home say:

I consider our handling of the farm surplus to be disgraceful.

I am not in favor of subsidizing large corporations in agriculture.

We feel farming has evolved to the point it is a form of mass produced, big business. It, therefore, should stand on its own competitive feet as any industry does today.

Stop handing out money to farmers.

The Colfax, Wash, grain growers, a co-op recently built, are operating a bowling alley. If they have excess capital give it back to the farmers.

Mr. PELLY, I want to congratulate you on your agricultural bill. I feel it is a step in the right direction.

In regard to the farm program, it definitely should be cut. Even the cost of storing surplus grain is a staggering sum of money each year.

I have no sympathy for price support and soil bank when its purpose is defeated by devious tactics like increasing the yield and holding worthless land out of cultivation. The latter should call for severe censure if not prosecution. It is a fraud.

The farm problem is really serious now and I do not presume to know the right answers, only I know the big farmers have grown richer while the smaller family sized farms are disappearing.

I feel Secretary Benson is sincerely trying to do right by both farmers and the Nation at large.

No businessman or wage earner gets a guarantee of an income by the Federal Government. Why farmers? Farm subsidies and price support is unfair to 95 percent of the people and bad for the other 5 percent.

Agriculture price supports should be dropped, period.

There should be none.

Stop making millionaires out of the big farmers.

Never thought I would live to see such a crazy deal as we have now and I used to be a stock rancher. Better to sell the grain cheaper for feed than storing it.

Income taxes should be drastically reduced and Federal expenditures should be curtailed correspondingly by dropping price supports.

I think the Government should not meddle with the farmers' affairs too much.

Don't you think we taxpayers are getting sick and tired of the ridiculous farm support program?

I feel the farm subsidy should be discontinued entirely.

Stanford Radar Signal Bounced Off Sun

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 22, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, I am very happy to call your attention to a recent article in the Hayward, Calif., Daily Review dealing with a breakthrough by a group of Stanford University scientists who have succeeded in bouncing radar signals off the sun.

I commend the article to the reading of my colleagues.

STANFORD RADAR SIGNAL BOUNCED OFF SUN—ROUND TRIP IN 17 MINUTES

PALO ALTO.—For the first time, man has made direct contact with the sun.

A radar signal was sent with the speed of light from the Standard University campus to the center of the solar system, from which it bounced back to a waiting receiver 17 minutes later.

This epochal achievement was reported by scientists of the university's Radioscience Laboratory (formerly the Radio Propagation Laboratory).

The sun, an object of worship since primitive times, continues to be regarded with great interest and respect by modern scientists. They considered it one of the most difficult bodies in our solar system to reach by radar, not only because of its stupendous distance, but especially because of the thunderous radio noise arising from its turbulent surface.

The Stanford achievement was disclosed by Prof. Von R. Eshleman, Lt. Col. Robert C. Barthle, and Dr. Philip B. Gallagher.

CODIRECTORS

Drs. Eshleman and Gallagher are codirectors of the project. Colonel Barthle is an Army Signal Corps officer now studying for a doctoral degree at Stanford. Their work was supported primarily by the Air Force Cambridge Research Center.

These initial contacts open the way for intensive solar explorations by radar, using improved techniques and more powerful transmitters.

Stanford and other radio science centers, probably including some in Russia, are readying such equipment.

Scientists hope, among other things, to learn more about solar flares and similar violent eruptions that hurl streams of particles into space.

These particles, trapped in the earth's magnetic field, from the radiation belts which pose a serious threat to space travel.

Their release from the sun is usually followed on earth by vivid displays of Northern Lights, by magnetic storms, and by complete blackout of long-distance radio communications. They are believed to affect weather, too.

Scientists also are anxious to study disturbances in the sun's outer corona. It probably is not possible to foresee the most valuable information to be gained, they suggest.

The Stanford achievement climaxes radar space explorations that began in 1946 when a Signal Corps group bounced a signal off the moon. The sun, at 93 million miles, is 400 times farther away. It is equal to more than 7,000 times the distance around the world.

Radar contact with the planet Venus, 8 million miles away, was announced last year by MIT's Lincoln Laboratory. The Venus signal took about five minutes for the round trip.

The Stanford solar contacts were recorded on magnetic tape at daybreak of April 7, 10, and 12, 1959. To the human ear these tapes reveal nothing but unintelligible crashing sounds.

GIVEN MEANING

Translated into decibels and wave patterns, the sounds commence to have meaning. In this form they also can be analyzed by electronic computers.

The Stanford group spent months examining the material. Tens of millions of computations were required to separate the signal echoes hidden in the background noise, which was 50,000 times stronger. The final tabulation shows a 99.999 percent certainty of their results.

Professor Eshleman said the echo did not come from the sun's visible surface, but from its outer corona. He estimates that the reflection occurred approximately 500,000 miles out.

The group emphasized that their equipment was not especially designed for the solar radar try. Most of it is used in ionospheric research. Rather they attributed their success to the combining of equipment used in various radio science research projects, plus the enthusiastic cooperation of other scientists at Stanford and elsewhere.

In particular they singled out for credit Prof. O. G. Vilyard, Jr., director of the Radioscience Laboratory; Prof. Allan M. Peterson; Dr. Philip Newman and the late Dr. Joseph Casey, Jr., both of the Air Force Cambridge Research Center; research assistant T. V. Huang; and graduate students William A. Long, Richard D. Egan, and David S. Pratt.

FORTY THOUSAND WATTS

The groups' transmitter is a standard model, about the same as those in major commercial short-wave radio stations. Its average output is 40,000 watts.

The antenna is a four-unit rhombic array used for both sending and receiving. It consists of wires strung out on 22 power poles over 14 acres of campus meadow.

The signal frequency was low for radar—25.6 megacycles. It was chosen to minimize signal absorption by the sun's corona.

The transmitter was turned on and off in 30-second pulses for 15 minutes, then kept silent while awaiting the echo.

Radar is a fresh addition to science's growing kit of tools for exploring the heavens.

Its use is designated "radar astronomy" to differentiate it from that other, slightly older technique, radio astronomy.

The latter depends on radio signals that originate in the cosmos, but radar astronomy generates its own man-made signal. Study of the signal's transmission time and power loss tells something of the unknowns its encounters out in space.

Scientists expect to be able to use radar to explore the entire solar system. Beyond the planets, radio noise becomes too intense and distances too great. And one would have to wait more than 8 years for a radar echo from the nearest star outside our solar system.

Nathaniel Plumer Fetterman Outstanding Western Pennsylvania Lawyer

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 22, 1960

Mr. FULTON. Mr. Speaker, I am inserting in the RECORD, as a matter of western Pennsylvania history, the biography of Nathaniel Plumer Fetterman, one of the outstanding Pennsylvania lawyers of the 19th century which is outlined in the Biographical Encyclopaedia of Pennsylvania of the 19th century. This encyclopedia was published by the Galaxy Publishing Co., in Philadelphia, Pa., in 1874:

NATHANIEL PLUMER FETTERMAN

N. P. Fetterman, lawyer, was born in the northwestern part of the State of Pennsylvania, February 4, 1804. While in his infancy, his mother and father re-moved to this country, where he resided and acquired his preliminary education until ready to commence the study of law. His course of legal studies he pursued in the office of his elder brother, Washington W. Fetterman, for many years an influential and leading member of the bar of western Pennsylvania; and, upon attaining his majority, was admitted to practice August 14, 1825. Subsequently he re-moved to Bedford in this State, where, after a residence of several years, he represented Bedford County in the lower branch of the legislature for 3 successive years, about the year 1828. To him may be credited the origin of the present common-school system; while through his ability and perseverence, the first law inaugurating it in this State was passed through the legislature. At the expiration of his third term, he was urged to become a candidate for Congress from the Bedford district; declining the proffered honor, however, he devoted his time and attention almost exclusively to the fulfillment of his professional duties. In 1830, he re-moved to Beaver, Pa.; resided there until 1949, and finally returned to Pittsburgh. He was the leading member of the bar in the region comprising the counties of Beaver, Butler, Mercer, and Lawrence; his principal competitors at that time being the Honorable Daniel Agnew, now chief justice of this State, and the Honorable John J. Pearson, now judge of the Harrisburg district court. To these three eminent practitioners was chiefly allotted the task of settling the many complicated questions of title resulting from the peculiar system under which the lands west and north of the Allegheny River were held; and in the numerous and highly important actions of ejectment continually arising, he constantly took an active and able part, his opponents invariably being one of the two above-named judges. In all such cases he evinced unusual attainments and valuable abilities. In 1849, he returned to Pittsburgh and entered into partnership with his nephew, Gilbert L. B. Fetterman, under the firm name of N. P. and G. L. B. Fetterman, this association continuing for several years. Subsequently, he was a leading member of the Pittsburgh bar, and attended also the courts of the neighboring counties, participating in almost every case of importance, both civil and criminal. In the celebrated case of the *Commonwealth* v. *Montgomery et al.*, for the murder of Dinsmore, in Washington County; and also in the case of the *Commonwealth* v. *Streets*, for murder in Beaver County, he was retained by the Commonwealth, and distinguished himself by his learning, patient research, and shrewdness. Until the outbreak of the war, he was a prominent member of the Democratic Party, and one of its leading orators in western Pennsylvania. During the Presidency of James Buchanan, he was repeatedly solicited to accept various positions of trust and honor, but invariably declined both public office and emolument. While the conflict was raging, he warmly advocated the Union cause; acted as a War Democrat, and finally joined the Republican Party, of which he afterward became an active and influential ally. He gave two sons to the U.S. Army, as members of the 101st Pennsylvania Volunteers, and was bereft of a son-in-law, who was mortally wounded before Atlanta, Ga. He was also actively engaged in assisting the enlistment, and aided more than one company in the purchase of its necessary equipment. He served as chairman of the examining committee of Pittsburgh, to pass judgment upon all applications for admission to practice; and, in this responsible position, acted with admirable judgment and impartial discretion. He was constantly consulted by attorneys from all parts of the State, for his opinion on points of law; and, upon such occasions, his decisions ever evidenced close research and the most thorough knowledge concerning the various complicated points at issue. He was married December 28, 1828, to Anna M. Dillon, daughter of Humphrey Dillon, a well-known citizen of Bedford, Pa. He has left eight children surviving him, among whom is S. C. Fetterman, a prominent member of the bar, and of the select council of Pittsburgh, Pa.

In Commemoration of the Heroic Dead of the Battleship "Maine"

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include the following letters from Ambassador Carlos P. Romulo and Minister Plenipotentiary Mauro Calingo of the Philippines and the Minister and Chargé d'Affairs Enrique Patterson of the Republic of Cuba:

FEBRUARY 16, 1960.

Hon. BARRATT O'HARA,
U.S. House of Representatives,
Washington, D.C.

MY DEAR CONGRESSMAN O'HARA: I have been informed by Minister Mauro Calingo of the eloquent and inspiring address that you made today on the floor of the House of Representatives on the occasion of the 62d anniversary of the destruction of the battleship *Maine*. It was the destruction of the *Maine* which, by a chain of events, led to the Spanish-American War, which in turn brought the United States to the Philippines.

Our association for about 50 years has been most cordial and friendly and, indeed, of mutual benefit to our two peoples. As we look back over the years, we arrive at a common point of origin of our historic association, and that is the destruction of the *Maine* on February 15, 1898.

May I take this opportunity to congratulate you on the remarkable work you have done and are doing almost singlehandedly in reminding the American people of the proper significance of the destruction of the *Maine*.

Sincerely yours,

CARLOS P. ROMULO.

EMBASSY OF THE PHILIPPINES.

MY DEAR CONGRESSMAN O'HARA: I wish to thank you for inviting me to be present when you addressed the House of Representatives today on the occasion of the 62d anniversary of the destruction of the battleship *Maine*. It was a stirring and eloquent speech and it reminded me of the previous commemoration of this historic event at the Department of Commerce Auditorium during which I had the honor of sharing the stage with you.

The destruction of the *Maine* is memorable not only for the peoples of the United States, Cuba, and Puerto Rico, but also for the people of the Philippines because it was this event which started the historic association between our two countries. The warm and friendly understanding which has marked that association has not diminished, but has grown with the years. I have no doubt but that the problems now facing our two countries can be solved to our mutual satisfaction if we but allow the spirit of 1898 which led the United States to liberate Cuba to permeate the negotiations between our two Governments.

Permit me to congratulate you, sir, on your inspired and stirring address today and to salute you on this occasion which, more than anyone, you have done so much to project before the American people.

Sincerely yours,

MAURO CALINGO,
Minister Plenipotentiary.

The people of Cuba during the 19th century had been fighting for their freedom from Spain. The final chapter of her struggle was initiated on February 24, 1895, under the leadership of Jose Marti, the apostle of her independence. The sinking of the *Maine* on February 15, 1898, in the harbor of Havana, marked an episode of great significance because it brought as a consequence, the Cuban-Spanish-American War, and the emergence of Cuba as an independent State.

Today, with dignity and pride, Cuba shows a will and determination to preserve her freedom and democratic way of life. She extends her friendship to all the peoples of the world and particularly to the people of the United States with whom she has strong bonds of respect and affection.

It is highly commendable to praise the persons and organizations that throughout the years have helped to maintain in the mind of the people a historical event of such importance.

ENRIQUE PATTERSON,
Minister and Chargé d'Affairs.

Mr. Speaker, I ask unanimous consent that the above letters be inserted in the permanent RECORD immediately following my remarks on February 16, 1960, in commemoration of the anniversary of the sinking of the battleship *Maine*.

Appendix

The Modern District Attorney

EXTENSION OF REMARKS
OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 23, 1960

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very learned address by the junior Senator from Utah [Mr. Moss] delivered in the city of New Orleans on February 19, 1960, entitled "The Modern D.A."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"THE MODERN D.A."

(Address of Senator FRANK E. MOSS, Democrat, of Utah, before the Third Annual Attorney General's Conference, New Orleans, La.)

When Jack Gremillion asked me to address the Third Annual Attorney General's Conference of Louisiana, I was pleased to accept. I always enjoy coming to Louisiana. And in my first year in the Senate I have been grateful for the counsel and help of your two distinguished Senators, RUSSELL LONG and ALLEN ELLENDER. They are capable men of good will who represent the State of Louisiana and the United States in a fine and honorable fashion. I know you are rightfully proud of them.

Being a lawyer and having been a judge and a prosecutor, I thought I could talk rather informally to my fellow members of the bar who are working in the field of criminal law enforcement. It was after I accepted the invitation that I learned that there would be included in the audience not only the district attorneys, but their strong right arm—the sheriffs of the 64 parishes of Louisiana and also your coroners who I understand to be professional doctors.

It was with some trepidation that it dawned upon me that I just couldn't while away some time with my friends at the bar, but instead would be addressing a formidable group of dedicated public servants including the ancient and honorable institution of the sheriff and the respected and professionally competent office of the Louisiana coroner.

The challenge seemed a rather confusing one, but after reflecting on my own experience I concluded that I have a good background in dealing with confusing problems. In my own State, we have a rather unique situation in that we have both a county attorney and a district attorney who have a divided jurisdiction in criminal matters. The county attorney has the responsibility for issuing the complaint and proceeding with a criminal case through the initial stage of a preliminary hearing. If the preliminary hearing results in a "bind-over" the county attorney then loses all jurisdiction and it becomes the responsibility of the district attorney to proceed with the trial. The county attorney has both civil and criminal jurisdiction, but the district attorney has only criminal powers, except he handles reciprocal support cases.

I submit that having been a judge for 10 years and a county attorney for 8 years under such an arrangement makes me an authority on confusing situations.

In a more serious vein, however, all of you have the same objective—and that is the diligent and just administration of the criminal law. This is a most important and sober public business—and particularly so in view of the international climate of the 20th century.

Underlying the structure and fabric of our law is a Bill of Rights designed to protect the life of every citizen, his liberty and his property. At the time they framed this charter of liberties, the lawyers who in an earlier day set the fires of the Revolution were mentally smarting from the personal abuses heaped upon them by king and government and the violation of personal and property rights that had been secured to freemen by the Magna Carta. Officers of the king had broken into shops and homes of friends and neighbors, searched and seized anything and everything at pleasure. Respected and honored citizens had not been free of arrest upon a hint or a sly suggestion of a petty official. Often they were imprisoned on suspicion with no opportunity to be heard and without a fair trial.

Out of their bitter memories they wrote into the Constitution basic and fundamental principles to restrain any excesses of government and check any arbitrary power that might invade the rights of personal liberty and private property.

Today the principles of freedom and fair play are being challenged and opposed around the world by totalitarian ideology that denies the existence of God and subjects the individual to arbitrary naked power of the state.

The greater threat to the rule of law in any of the nations of our free world is the danger that the people will become dissatisfied with the functioning of their system of justice and do irreparable injury to it, without realizing that by so doing they are destroying the very foundation of the rule of law in their society.

It is our professional responsibility to keep the pulse of life beating strongly in the law. We cannot do this by treating our fundamental freedoms as abstract theoretical concepts of a legal system. The people of the free world must learn to believe those freedoms to be what we believe them to be, the practical dynamic concepts for living, unalienable in every human being.

In earlier days the status of law in other nations was not a vital concern to us. But we are living in an era where it is no longer possible to ignore the attitudes of other peoples. This state of society is the result of two factors. Under the impact of science and technology our world is shrinking. And old empires are dissolving into new nations, filled with aspiration not unlike our own.

The tremendous success of scientists and technicians has left a gap between our scientific discoveries and their beneficial and peaceful utilization within the framework of the institutions devised to insure freedom and rights of the individual. The bridging of this gap may well prove to be the legal framework of free societies in the making.

If we reflect on the issues at stake in the cold war, if we analyze its deepest meaning, we come to the inevitable conclusion that among the most essential values at stake are legal ones: the relation between citizen and state, the liberty and liberties of individuals.

Obviously, our system is under attack and tremendous pressure from without. Our national survival will depend upon our internal social strength. We cannot be strong in a democracy unless we can effectively enforce the criminal laws and at the same time safeguard the sacred right of the individual.

You are the agents of your State who from day to day must work and live with the criminal law, its ramifications and complexities. The strength of our Nation and the reputation it enjoys in the world are in your hands. Only if the criminal law is fairly and properly administered can this Nation survive in its present democratic form.

Keeping in mind the necessity of effectively enforcing the criminal law and at the same time safeguarding the rights of individuals it is somewhat disconcerting to look at the results.

J. Edgar Hoover in the February 1960 issue of the FBI Law Enforcement Bulletin made this rather dramatic statement:

"America today is threatened by a sinister, unholy alliance which saps the strength of our Nation and besmirches our country's dignity.

"To the profession of law enforcement, this dark force is known as organized crime—a lawless legion of extortionists, strong-arm hoodlums, and professional racketeers whose greed reaches into every community of our land. Their lust for power and profit costs American citizens an astounding $22 billion a year. No longer are their victims necessarily rich individuals of position who were the targets of the so-called 'syndicates' of the 1920's and 1930's. Professional hoodlums have turned to looting every class. Their prey is the small businessman; the legitimate industry; and the unwary community which leaves its door open to supposedly minor vices.

"Organized crime exists by exploiting weaknesses throughout our society whether they be city ordinances, county codes, State statutes, or Federal laws. The lawless legion infiltrates through every loophole, its booty flowing into underworld coffers whether it be nickels and dimes from a jukebox in a bar in the smallest town or from a multimillion-dollar stranglehold on large metropolitan centers obtained through the domination of a few dishonest labor officials. The depredations are an endless shame to the countless honest, law-abiding labor leaders and businessmen across the Nation."

The latest available figures dealing with criminal activity in the United States are published in the 1958 Uniform Crime Reports. The figures are astonishing. For the 1958 calendar year the following criminal offenses were reported:

Murder and nonnegligent manslaughter, 3,870 for an increase of 3.2 percent over 1957; forcible rape, 7,622 for an increase of 13 percent over 1957; robbery, 56,207 for an increase of 13.7 percent over 1957; aggravated assault, 72,460 for an increase of 3.5 percent over 1957; burglary, 427,457 for an increase of 11.8 percent over 1957; larceny ($50 and over), 272,805 for an increase of 10.3 percent over 1957; auto theft, 196,784 for an increase of 1.9 percent over 1957.

It should be of interest to us that during the calendar year 1957 45 police officers were killed in the performance of their duties.

It is apparent that organized crime is growing. Starting with the days of prohibition, we saw the advent in America of organized crime on a large scale. There were different mobs operating in well-defined territories in the handling of liquor and these mobs often warred with each other. Their organization was loose and their methods were crude compared with the type of organized crime which I perceive to exist at the present time.

Since the 1930's crime has become better organized and criminals often operate with the best legal and accounting advice. They have adopted corporate methods in the handling of vast enterprises.

There is no lack of money in these criminal enterprises. It is estimated that narcotics peddlers take between 180 and 300 million dollars a year from a gullible public. In the field of labor racketeering the take could amount to $100 million very easily. It is estimated that between 14 and 16 billion dollars are involved in gambling enterprises of one sort or another in this country. Of this amount, over $2 billion goes into the pockets of the gamblers and the syndicates. I shall not try to estimate the millions of dollars which are involved in the distilling and sale of illegal alcohol, or in the other areas of criminal activity.

Needless to say, most of this money is not reported on income tax returns—it is "hot money." As such, it goes into the channels of illicit trade such as narcotics, vice, and other enterprises. Some of it, I believe, goes into bank accounts in Switzerland identified only by a number and kept in great secrecy by bank officials, and is siphoned off abroad where it can be invested without fear of discovery.

It is no wonder then that these organized criminals recognize the necessity of setting up as a control an invisible government whose edicts are carried out by unknown enforcers and nameless assassins and who, themselves, are not prohibited from employing the most modern devices to perpetrate their crimes and to conceal them. It is not beyond conception that they will attempt to buy protection from those who enforce the law.

I do not wish to belabor the point and I do not wish to appear as an alarmist, but it is important to recognize the threat posed by the modern criminal—he is a modern man, with modern tools at his disposal and the know-how to use them. He is represented by modern attorneys. He deals in and with the modern corporate institutions. He circles the globe in modern airplanes and he has readily available to him modern means of communications that can put him, within minutes, in touch with almost any place in the world.

We cannot cope with a jet-age criminal with a horse and buggy prosecutor. We need a modern district attorney, with modern tools and the legal right to use them. The right to wire tap, with proper safeguards, is essential.

The prosecutor needs to become a specialist and as such should have some specialized training. There was a time when the only training a prosecutor received was on the battlefield. As a specialized profession, however, the situation is changing, and for the better. The prosecutor now has some inservice training schools which are doing a great deal toward professionalizing the office. The good that is accomplished through conferences such as this is immeasurable. There is the short course for prosecutors at Northwestern University. There are the PLI, the University of California, and some others. I submit that it is in the public interest that attendance by prosecutors should be at public expense since the public reaps the benefits in better service.

The professional prosecutor needs a professional library and the public needs to be educated as to the wisdom of paying for one. In many States the bar association can be persuaded to cooperate in the development of a good library for the prosecutor.

I am proud of the small part I have played in the National Association of County and Prosecuting Attorneys—now the National District Attorneys' Association. Through this association of prosecutors there is a continual exchange of information and ideas. And through this exchange, members not only become more competent in their duties, but they discover that many situations arise where they can be helpful to each other and thereby discharge their duties better. This cooperation of district attorneys can be and is fruitful.

Of course, the prosecutor can do a great deal to improve the effectiveness of his office by helping to train the personnel of the other offices with which he works. Classes and lectures for the police officers and sheriff's force can pay untold dividends in cooperation and in giving direction to the efficient performance of their duties.

Fortunately the prosecutor is beginning to learn the value of new and modern tools in meeting the challenge—and fortunately new and better tools are becoming available—the wire tap—the FBI lab—the medical examiner and other scientific laboratories. Also the regular exchange of information about criminals and their activities has been greatly facilitated. The best tool which we have, however, is the well-trained, competent and imaginative professional prosecutor.

In the complex society of a democracy the modern district attorney must be a man of dedication, strength and honor beyond reproach. This is by far the most important quality.

When the district attorney obtains a guilty verdict from the jury in a criminal case, people usually crowd around offering him congratulations for his victory. I suppose that everyone has witnessed this kind of scene. But what I often wonder is whether these congratulations are offered because of a job done with diligence and skill or whether the congratulations are offered simply because the district attorney has won his case. When the district attorney gets a conviction and particularly when the case has notoriety and widespread attention, there are crowds of people who push forward and exult. On the other hand, when the prosecuting attorney dismisses an indictment or dismisses a case after it has come to trial or when he for reasons of his own refuses to seek a complaint or an indictment, how many are there to congratulate him then? I submit that the usual reaction in the latter case is for people to raise their eyebrows or to suggest darkly that the prosecutor has been bought off by money or political pressure or by some other nefarious action.

A district attorney who has wrestled with the facts and the motives and the people involved in a human situation and who has perhaps spent sleepless nights thinking about his case may well be exhibiting more courage and may well be better executing his office when he dismisses and fails to prosecute than when he takes the defendant before a jury.

In saying this I do not wish to convey the impression that there are vast numbers of people improperly accused of crime because I recognize that usually when a person is accused by a police officer or other law enforcement personnel there is substantial basis for the accusation and the ordinary procedure is for the prosecutor to go ahead with his presentation in court. But there are situations occurring in every prosecutor's office where the honorable and human thing to do is to dismiss, even though such action usually will be unpopular with law enforcement agencies and with the press.

And on the other hand, the prosecutor must be ever watchful not to usurp the legitimate function of the court. This is a constant challenge to the prosecutor's attitude, courage, intellectual honesty and motives in the exercise of his office.

Another of the important aspects of the prosecutor's job is to deal with the public. In some cases the police department creates a friendly and cooperative relationship with people, but more often than not, a rather hostile relationship ensues. The court is remote from the people and few citizens have an opportunity to deal with the court unless they are involved in a trial, and then of course, the relationship must be very formal and somewhat impersonal. But the prosecutor has to deal daily and on a close personal basis with the people in his jurisdiction. His office should be a place where people can come with their problems and can receive a sympathetic hearing. One admonition that I would give to every prosecutor is to remember that whenever a citizen comes in with a problem, it is to that citizen a problem of great importance and seriousness. The event may seem routine to one experienced in the law. There may be a dozen or more of these incidents brought into the office every day, but to the individual who brings his problem, this event is the most important thing in the world at that time. A prosecutor who properly discharges his duty will treat people in his office so that each feels that he has a sympathetic hearing and that he is understood. And of course the people who come daily include victims of crime, worried parents, evicted tenants, deserted children, and some who might be classed as crackpots. Even in the case of the crackpot, it is desirable to take enough time to let him feel that he has been heard and then to dismiss him without harshness or abruptness.

Many people who come to the office of the prosecutor will be seeking legal advice in personal civil maters. The ordinary citizen who is unlearned in the functions of the prosecutor's office feels that the elected prosecutor is his public lawyer and he will present questions of nonsupport, rental evictions, unpaid debts, and all manner of problems. If the prosecutor undertakes to advise fully all of these people, he not only will spend his full time so doing, but he will run afoul of the bar association which will resent the diversion of civil business from the practicing lawyers in the area, and rightly so. But in explaining the necessity of seeking legal counsel from a private practitioner, the prosecutor can be human and helpful. Many people can be helped with just a word or two of counsel, whereas others will have long and complicated problems. Each case must be dealt with as it arises, but the prosecutor should be careful not to brush off or refuse to see citizens who come in with private legal problems. He should be helpful where he can and he should direct the person to seek private legal counsel with a full explanation of the necessity for so doing.

Still another area where a prosecutor finds many of his problems is in dealing with juveniles. Most States have statutes which provide that a juvenile cannot commit a crime but that if he performs the acts which would constitute a crime if they were performed by an adult, then the juvenile is considered a delinquent child. There usually is an additional provision that under certain circumstances and in certain age groups a juvenile may be prosecuted as an adult. In principle, however, a juvenile is considered in a different manner from the adult and the prosecutor must be fully cognizant of this difference. He must be prepared to work with the juvenile authorities in a situation which is completely dif-

ferent from his court appearances in ordinary criminal cases.

Another problem which confronts every conscientious prosecutor is the relationship which he maintains with the police force or the sheriff's office in his jurisdiction. No prosecutor can function properly without the help and cooperation of the police department or sheriff who is charged with the apprehension of criminals and is responsible for the gathering, preservation and presentation of evidence before the court. Ordinarily the police officials expect the prosecutor to vigorously prosecute and surely convict every person who is arrested and charged with a crime. To be popular with the police department, it would seem that a prosecutor would try every person accused, regardless. And it is true that in cases where in his judgment it is not legally feasible to prosecute and he dismisses or for some other reason the case is dropped, there is often a feeling of resentment and hostility from the police department. To avert such resentment and conflict, it is my recommendation that the prosecutor take the police department into his full confidence in the consideration of every case. It is my belief that he will be better respected for standing his ground and refusing to prosecute when he has a sound reason for taking this action, provided that he clearly states this reason to the police. Some prosecutors tend to be patronizing or even a little disdainful of the police. Of course this attitude brings the expected reciprocation from the officers. It is also sometimes a problem when the prosecutor maintains an investigative force of his own. Unless the closest of liaison between the prosecutor's investigators and the police force is maintained, they will often be at cross purposes and the police will be suspicious and resentful of the activity of the investigators. If proper liaison is maintained, the investigator from the prosecutor's office can serve a very useful purpose and, of course, be a safeguard against corruption within the police force.

A very important part of the prosecutor's relationship to the police department is with reference to the public image created by the relationship. I suspect that there is nothing that will cause the public to lose its confidence and trust in both the prosecutor and the sheriff faster than the image of bickering and lack of cooperation between these two offices. And the effectiveness of both offices can be seriously jeopardized by such a public image. But neither should the public feel that the prosecutor always followed the police, that he was in their pocket.

The relation of the prosecutor with the judge or judges before whom he appears is of great importance. It must be remembered that the prosecutor occupies a sensitive position in his community and that figuratively all eyes are upon him. If the prosecutor maintains an extremely close personal relationship with the court, it is then suspected that the judge is influenced to do exactly what the prosecutor wishes, or that "things are worked out in advance." If this impression grows in the minds of the people, then their confidence in the administration of justice is undermined. It is apparent, however, that the prosecutor should maintain a friendly, although respectful, relationship with the court, because he must work constantly with the judge and he can better discharge his obligation if they are working in harmony. But again the local situation must be evaluated. Each prosecutor must decide for himself to what extent he can develop a close social relationship without impairing his effectiveness in the community. Judges are human, too, and cannot be totally ignored socially, but without a doubt some degree of restraint must be exercised.

The relationship of the prosecutor with the local press is of great importance. Of course the cynic will say that it is of importance for the prosecutor to get a laudatory press so that he can be reelected or can use his office as a steppingstone to higher political endeavor. But I mean that the relationship is of great importance in getting the job done with which the prosecutor is currently charged. In the first instance, the inhabitants of the jurisdiction must have confidence in the prosecutor. Unless the press reports his activities in a reasonable and straightforward manner, he can be greatly misunderstood and can be hampered in the execution of his office. The press, of course, is anxious to print news and vie for a scoop in running a story. Oftentimes the press will uncover bits of evidence unknown to the prosecutor or to the police. In those instances the press can be of great value if their cooperation has been obtained. Sometimes the press comes into possession of information which should be kept confidential for a period of time and the question arises then whether the press can be persuaded to exercise restraint on publishing the information. If the prosecutor has built the right kind of relationship with the press over a period of time, his request ordinarily will be respected. It is recommended that the prosecutor habitually take the press into his confidence and reveal whatever information he has with the request that matters which could be damaging to his investigation or prosecution be withheld for a reasonable length of time. If the prosecutor is reasonable in his request for restraint and if he is scrupulous in keeping his word with the press, he can ordinarily have complete cooperation. The matter is, of course, a two-way street, and whenever the prosecutor is in possession of information which is newsworthy and which can be published without damage, then he should go out of his way to reveal it to members of the press who are charged with gathering such information. The conscientious and fairminded prosecutor most certainly will refrain from trying his case in the newspapers. Restraint is indicated because of the temptation to use the press before trial.

Perhaps one of the greatest problems facing today's prosecutor is that of his salary. He is generally a well-trained, competent and professional attorney. His responsibilities are large and complex, and the demands on his time are excessive. This is the age-old problem of salaries for public officers, but here it is magnified since the public at large fails to realize the responsibilities involved and the value of professional legal competence. To hold any public office generally involves personal sacrifice but in the case of attorneys, the sacrifice is usually larger.

Because of this simple fact new problems are created. The prosecutor usually needs and looks for additional sources of income. He practices law on the side, either solo or in partnership and then the delicate problem of conflict of interest raises its head to haunt the prosecutor and constantly to subject him to criticism, either warranted or unwarranted, of the press and the profession. The result is, of course, a loss of confidence by the public. I needn't tell you what this leads to.

In the same general area the prosecutor is always subject to the pressures and influence of groups who want favors and the temptation is strong to dispense such favors in the hopes of winning votes. It is interesting to note that such favor seekers consist of not only the criminal element, but also the chamber of commerce, labor groups, racial groups, churches, in fact, almost everyone—this seems to be the American way of life. The prosecutor who succumbs, however, is surely undermining his own effectiveness and will eventually pay the price.

It is necessary because of these problems for the prosecutor to have the finest sense of discretion—to be absolutely honest and of unquestioned integrity. This seems to me to be the only answer and it is a standard which the great majority of prosecutors meets.

I have spent considerable time talking about the problems of prosecutors—these are the problems you live with daily—the problems each prosecutor must resolve for himself. But, the trust and the challenge of the prosecutor are greater than any one of these problems—in fact, greater than all of them put together.

The Supreme Court of New Jersey has said:

"In his county, as we have seen the prosecutor is the foremost representative of the executive branch of the government in the enforcement of the criminal law. (*State* v. *Winne*, 96 A. 2d 63.)"

And in Kansas, the supreme court held:

"He is the officer upon whom the State relies for the prosecution of all criminal offenses within his jurisdiction. If he fails or refuses to act, the law is voiceless and powerless. It is paralyzed. (*Johnston* v. *Foster*, 32 Kans. 14 3P. 534.)"

You must keep in mind that you are the chief law enforcement officers of America. By way of contrast, the courts are too remote and too formal—the public cannot speak with, deal with, or negotiate with the courts. On the other hand, the police department often is regarded by the public as being hostile, antagonistic, severe, and unapproachable. Thus, it is the prosecutor who must deal with the public on a day-to-day basis—on whom the public relies—who must shoulder the responsibility and the honor of maintaining peace and order.

The public must feel that the DA is alert, incorruptible, and understanding. He must be a man of courage—but he must also be a man with a heart and wisdom.

It would be well for you to stop and realize that in this context, the office which you hold is as important as any other office in Government. Justice is the cornerstone of our democracy, and the framers of our Constitution and the drafters of our statutes have entrusted this cornerstone in your keeping.

The Supreme Court of the United States identified this trust in the case of *Berger* v. *U.S.* when it said:

"The * * * (prosecuting) attorney is the representative not of an ordinary party to a controversy, but of a sovereignty whose obligation to govern impartially is as compelling as its obligation to govern at all; and whose interest, therefore, in a criminal prosecution is not that it shall win a case, but that justice shall be done. As such, he is in a peculiar and very definite sense the servant of the law, the two-fold aim of which is that guilt shall not escape or innocence suffer. He may prosecute with earnestness and vigor—indeed, he should do so. But while he may strike hard blows, he is not at liberty to strike foul ones. It is as much his duty to refrain from improper methods calculated to produce a wrongful conviction as it is to use every legitimate means to bring about a just one."

The prosecutor has a trust unsurpassed by any other officer in our great democracy. The challenges are many and are complex.

The most important assets a prosecutor must have to enable him to successfully meet the challenge are dedicated and efficient sheriff's force and professionally competent scientists, such as your coroners. If you will reflect upon this for a moment, I think you will agree that a prosecutor can be no more effective than his sheriff or his experts. Without your sheriffs and your coroners you would be helpless—you might as well lock up the office and go home for all

the good that you can do. And so, while I have talked largely of the prosecutor, I want it known that I use this term to include your sheriffs and your coroners. They are an essential part of the prosecutor's office and what I have said about prosecutors applies equally to them.

In my experience, the district attorneys of America have been people who are devoted to the public welfare and are concerned with the effective execution of the office which they hold. Many of our finest DA's have turned down the opportunity to sit on the bench or to hold other public office because they were devoted to the position of prosecutor. Many others who have chosen to move on to other fields have nevertheless given their best efforts while holding the office of prosecutor. In any field of public endeavor where many are involved, there will always be a few misfits and downright rascals. Fortunate it is that we have had so few in America in the past 50 years. The office of the modern prosecutor is one of great power and a fine tradition. He who takes the oath and embarks upon this service should be prepared to devote his heart and mind and his personal life to the service of his people.

An Analysis of Our National Defense Posture

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include an excellent weekly news analysis, recently given by Howard K. Smith, of the CBS news division. Mr. Smith gave a very objective analysis of the present situation in relation to our national defense posture.

The analysis follows:

CBS NEWS, WEEKLY ANALYSIS, FEBRUARY 7, 1960, WASHINGTON, D.C.

(By Howard K. Smith)

In France this week General de Gaulle won his historic battle against the insurgent settlers and colonials of Algeria. Uncontested power is restored to the civilian government from the army, and to Paris from Algiers; and the first conditions are created for settling the long bloody war in Algeria. The general has proceeded to consolidate victory and prepare settlement by assuming special near-dictatorial powers for a year, and undertaking a purge of government and army.

In Cuba this week, the boiling pot of Castro's revolution boiled over in the streets. While the government welcomed Chief Communist Salesman Mikoyan with great warmth and affection, students protested against the event and gunfire broke out.

Despite these stirring and portentous events abroad, nothing has dislodged from first place in the interests of the Nation's Capital a lively debate on the adequacy of our national defenses. The questions are—are we strong enough, and are we doing the right things to be strong enough in the future against rising Russian military power?

The debate, launched by congressional opponents of the administration, has been suspect in that some commentators have argued that the main force behind it was the need to find a political issue in a presidential year in which the administration is in a favorable position on most issues. The new feature of the debate this past week has been the expression of doubts about the adequacy of defenses by an unusual array of professional military men. The week's events have caused many to believe that the real force behind the quarrel is genuine concern, not politics.

Before going to the elements of the argument, it may be well to remember why the dispute is important.

The concern most often expressed is the most dramatic one: The Russians know where every single base from which we could hit them by plane or missile is located. If their lead in missiles became substantial, they might risk a nuclear missile Pearl Harbor and drop hydrogen bomb warheads on every one of those approximately 100 bases. We have no warning system against so swift an attack. In 30 minutes with a mere 300 missiles U.S. power could be eliminated, Russia would have no further opposition in the world. The vision Karl Marx described in "Das Kapital" exactly 100 years ago would be a matter of simply collecting the spoils.

This terrible prospect is still a little too dramatic for most minds. There is a less dramatic but more immediate and more likely danger from our lagging behind Russia in defenses:

The year 1960 is going to be an unusually active year of diplomacy. In the condition of sharp controversy we find ourselves in with Russia, diplomacy consists mostly of exerting mutual pressures and threats of pressure to induce one another to agree to opposing settlements of outstanding questions. The ultimate pressure diplomats must have in mind is military power to be used if a showdown is forced. The immediate danger we face in 1960 is that our diplomacy will not be confident, but will be diffident, inclined toward concessions if we feel we are inferior, or are getting inferior to Russia in military power. The Russians on the other hand are likely to be aggressive and pushing in their diplomacy, to be unaccommodating and willing to take risks of conflict if there is reason to believe they are growing militarily superior to us. That is the immediate and important basis for the current defense debate.

Since sputnik aroused all kinds of military implications in people's minds everywhere, this trend in diplomacy has already been marked. The West has seemed to many to grow timid in its diplomacy; and Khrushchev has begun to take daring risks.

Khrushchev's provocation of the Berlin crisis last year was an example of his daring to take risks. An example of our apparent timidity was the abrupt abandonment of the tough policy of John Foster Dulles last year and our offering at the Geneva Foreign Ministers' Conference of unilateral concessions to Russia in Berlin; we offered to put an end to anti-Communist propaganda and reduce our troops in Berlin, and the Russians promptly displayed their newborn cockiness by rejecting even those concessions. That is how diplomacy is affected by nations' defense postures.

It is true that Khrushchev called off his Berlin threat on his visit to the United States. The evidence is, however, that his accommodation was limited and temporary. It was to give him a chance to exploit to the most a concession he had long sought—for the President's invitation to him to come here was distinctly a concession aimed to induce him to call off the threat to Berlin.

Now, there is evidence the period of suspension is over. The threats are being revived. The basic attitude of cockiness of the Russians is revealed, Marguerite Higgins commented in the New York Herald Tribune this week, by a minor incident that happened here in Washington recently. It is usual for an ambassador who wants to talk with a chief of state to tender his request some days or weeks before he expects to receive the audience. Recently, Soviet Ambassador Menshikov asked to see the President the same day as he made the request. The President was hauled out of a Cabinet meeting for the talk which turned out to involve a minor matter that could easily have been dealt with by subordinates.

More recently, the Russians in their diplomatic moves have indicated the same cocky, pushing attitude in more important matters, and these events are tokens of what we can expect in the diplomatic pressuring of 1960 if there is doubt about our capacity to deliver power in a showdown.

In the Far East, the Russians have issued an ultimatum to the Japanese. The Russians have said they will hold onto two Russian-occupied Japanese islands unless Japan scraps here security treaty with the United States. The Russians had promised to return the islands on signature of a peace treaty but have not done so. Their ultimatum was blunt in threatening Japan with, I quote, a "tragic fate" in nuclear war that might result.

On the other side of the Eurasian land mass Russia dominates and would like to possess, it was revealed in West Germany that Khrushchev has sent Chancellor Konrad Adenauer the kind of insulting note usually sent only as a prelude to hostilities. The note called Adenauer a duplicate of Hitler and hinted he was provoking war by his attitudes of resistance to Soviet policies.

Meanwhile, in Moscow, Russia held what has been called a Red summit meeting. All chiefs of Warsaw Pact governments—that is the Soviet satellites in Europe—met with Khrushchev and signed a communique. The communique contained all the elements we are obviously going to have to contend with, this diplomatic year. It boasted flagrantly about Russia's missile performances and power. It made its old very thinly veiled threats of war unless we yield to Russia on Berlin.

The likely quality of the Russian propaganda assault to come was shown by one assertion among several. The communique accused NATO countries of, I quote, "not only maintaining inflated armies but actually increasing their numerical strength." The facts are the United States has a mere 14 divisions to Russia's 175 divisions. All NATO has but 31 divisions—several of them under strength—to Russia's 175 divisions. The technique of repeating a lie so often and so brazenly that the uninformed will accept it as a truth is obviously being intensified.

And with this rise of Russian cockiness there have been hints that there may be a return of Western diffidence. The New York Times reported both from Germany and from the State Department here this week that our officials are prepared to let the East Germans examine the credentials of our military convoys to West Berlin—though that is a flagrant infringement of agreement and a moral concession that may gravely diminish the West Germans' faith that they can count on us to stay firm under pressure.

These are the reasons why the defense debate now raging here is of vital importance. The debate this week intensified, but it did not improve in clarity. General Power of our strategic bomber command repeated his thesis that 300 Russian missiles could eliminate U.S. power from the earth, and Russia will before long have 300 missiles while we will have only a third as many. General Power would like to get money to keep most of our strategic bombers always in the air so we would risk no such Pearl Harbor.

Defense Secretary Gates admitted Russia will have what he called a moderate superiority to us in missiles, but he called Power's estimates unrealistic and said our overall

strength—that is bombers included—is such that Russia will not risk hitting us before we get a new type of missile into mass production and start to catch up.

Power stuck by his stand. The President entered the debate to maintain we are adequately defended and spoke angrily of "too many generals" talking too much. However, the generals went right on talking. Former Army Chief of Staff Maxwell Taylor delivered an especially strong attack, calling our missile force "limited in size, uncertain in reliability, and immobile on exposed bases."

Taylor's successor, the present Army Chief of Staff, General Lemnitzer, disagreed, saying our overall capacity is enough to meet any assault. However in dealing with his own branch of the services, the Army, Lemnitzer turned out to be in complete agreement with Taylor. Our Army is of marginal strength against Russia's much bigger and much better equipped army. Since the Army has had to do most of our confronting of Communists in actual engagements, and since if Berlin is whipped into a new crisis as seems to be happening, the Army will once again be decisive, this was a serious matter.

In the same week, General Medaris, late of the Army missile business, said it made no sense to keep our civilian and military space efforts separate. And Spaceman Wernher von Braun testified that even with increased appropriations it is not possible to catch up with Russia in space in the near future.

The sum impression of a nonpartisan reporter in this week of intensifying debate is of a growing army of doubt in regard to our defense situation. It is deepened by some noteworthy journalistic comments. In the Reporter magazine, out this week, retired Gen. Thomas Phillips wrote, "U.S. forces are not suited to our needs and the United States in the past 6 years has fumbled until Khrushchev (in his recent speech) could say confidently, 'Now it is clear that the United States of America is not the world's most powerful military power'."

Possibly of greater moment, the Luce publications, generally devoted supporters of administration programs, have come out this week with highly critical comments about defense. Time expressed frankly, to quote its words "doubts about the adequacy of the administration's defense program." And Life summed up the defense debate so far with these words, "We must ask the question, Are we strong enough? The answer is, We are not."

The uninstructed layman finds it hard to thread his way to a conclusion through all this conflicting, and highly expert testimony. It is natural that the politicians who question the experts are striving to bring out points that will aid them in the political campaign. It is true that each general is bound to be wedded particularly to the special interests of his particular service.

But when all this has been taken into account, doubts remain. The public in the end may be compelled to a broad conclusion. If there are serious doubts by serious and well informed experts, the question may be asked, why not play safe and improve our defense program. The world's richest Nation can afford to spend more in order to be sure of being first in a race in which no prize is given for second.

Some commentators have pointed out that the diplomatic struggle to begin this year is largely a psychological thing. Even the mere willingness to do more can be a factor of increased weight in the pressures and arguments to come.

Lincoln Day Address by Eugene J. Lyons at Cumberland, Md.

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Tuesday, February 23, 1960

Mr. BEALL. Mr. President, on February 17, 1960, Mr. Eugene J. Lyons, special assistant to President Eisenhower, made a Lincoln Day address in the city of Cumberland, Md. Seven years ago, Eugene Lyons was aked to join the crusade to restore to the Government the dignity and principles which made our country great. Upon the culmination of that crusade in victory, Eugene Lyons was asked to become a part of the White House team; on the team he has served with distinction. His official position is Special Assistant to the President for Personnel Management.

The Lincoln Day address which Mr. Lyons delivered in Cumberland contains many excellent passages related to the basic principles of our Government. I think that it would be a good thing for the Members of this body to read the text of Mr. Lyons' splendid address.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of Mr. Eugene Lyons' Lincoln Day address in Cumberland, Md., on February 17, 1960.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LINCOLN DAY ADDRESS BY EUGENE J. LYONS, SPECIAL ASSISTANT TO THE PRESIDENT FOR PERSONNEL MANAGEMENT, CUMBERLAND, MD., FEBRUARY 17, 1960

Ever since coming to Washington 7 years ago, I have looked forward to a visit to western Maryland because I heard so much about the beauty of this section of our great State. I say our great State because, while I am a native of Colorado and came to Washington 7 years ago from New Jersey, I am now a legal resident of Montgomery County, Md.

My information about this area comes from your one-man chamber of commerce in Washington—Senator GLENN BEALL. He not only boasts at every opportunity about your scenery, but he never fails to mention the advantages of Cumberland as a fine industrial community. He has told me about Kelly-Springfield tires, the Celanese Corp., Allegany- Ballistics, and Pittsburgh Plate Glass.

He must mean what he says because he is constantly trying to persuade the Congress that if the Members are going to spend more of the taxpayers' money, they should invest it in the Cumberland area. The Savage River Dam and the model Cumberland flood control project are evidence that his energetic championship of your interests has brought results.

But you did not invite me to Cumberland to gossip about your community. You have asked me to say something about Abraham Lincoln, the Republican Party, and what is going on in Washington.

My experience in politics is limited. Certainly, I lay no claim to meeting the qualification which a distinguished visitor to Washington described as being most essential for a successful politician. Winston Churchill said that qualification is to foretell what will happen tomorrow, next week, and next year—and then to explain why it did not happen. Most of my life has been devoted to private industry. You ask then—Why am I here? Seven years ago, I was asked to join a crusade to restore to National Government the dignity and basic principles that have made our country great—principles vitally necessary to the maintenance of national safety and peace in a troubled world. I have remained in Washington because I support with all my heart the sound growth of our country under a philosophy of government that can provide the greatest opportunity for all the people.

What is this philosophy? Ladies and gentlemen, it is the philosophy of the Republican Party. I think it can be simply stated.

The Republican Party stands for a government that discharges every legitimate obligation to its citizens and does so within the framework of a sound fiscal policy.

It is a party that recognizes our competitive enterprise system as the very wellspring of America's growth and opportunity. It is the party that encourages rather than shackles private industry, and thus provides productive jobs instead of relief programs.

The Republican Party stands for a government determined to place the best interests of all its citizens above the special interests of any selfish group.

In short, it is the party that has inherited a sacred trust—the custody of the ideals and principles of Abraham Lincoln. This warm and direct connection with the martyred President who belongs to the ages imposes a tremendous challenge.

For Lincoln's principles were not abstract ideals. They form a basic code by which we can direct our actions so that "government of the people, by the people, and for the people shall not perish from the earth."

What Lincoln said in his own time is true today:

"The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion. As our case is new, so must we think and act anew."

There is a curious parallel and inspiration for the Republican Party in the events of a century ago. Lincoln had just been badly defeated in the off-year election of 1858. He had done his best to win the support of a majority of voters, but had failed—as we Republicans failed to win majority support 100 years later in the 1958 election.

This 1858 defeat which Lincoln sustained was only the latest in a long series of setbacks he had suffered, and by 1859 it would have been understandable if he had given up. But he refused to bow to adversity.

Instead, Lincoln and the Republican Party spent 1859 spreading the message of the party, addressing their fellow citizens, developing party organization, and seeking to win support from previously hostile or politically inactive citizens.

The next year, 1860, Lincoln and his party were ready for the election. They won a victory which was vital not only to the party, but to the very preservation of the Union.

On the centennial of that 1860 election, we, the current members of Lincoln's party, must be as ready as were the Republicans of that earlier time. We can and we must be ready, if progress is to continue in the dynamic and bountiful America we have known since 1953 under a progressive and courageous na-

tional administration. Such an administration is essential to deal with the problems of these times. It is vital in fighting inflation and in grappling with our tremendous problems of taxation.

For, make no mistake, we are at grips with deadly inflationary forces. We are under the gun of onerous taxation—taxation that can effectively prevent the accumulation of private capital and the incentive for productive expansion. We are facing a grim and deadly competitor for economic supremacy—world communism and the slavery for which it stands.

So the Republican administration is not fighting the battle of the budget just for the sake of balancing some figures. In our deadly serious fight against inflation, one fact today stands out very clearly:

If public spending soars far beyond the revenues of government, inflation will infuse itself more deeply and dangerously throughout the economy.

Unrestrained spending can only result in deficit financing, higher taxes, and cheaper dollars. And in such event, who must bear these burdens? You—you and your family—and every other citizen of our country.

Inflation feeds on the income and the savings of every individual, every enterprise, in America.

It eats away the savings we cherish for our family's security. It robs us of the real value of the dollars we earn. A quick glance at the family food basket can make that point painfully clear.

In 1939, a dollar would fill the basket with potatoes, bread, coffee, cabbage, milk, and eggs. Today's dollar will buy only the cabbage, milk, and eggs.

Twenty years ago, you could buy a pound of round steak, a pound of bacon, a pound of pork chops, and a pound of sugar for what it costs you today to buy just the pound of steak alone.

And so it goes with everything we buy.

Every American, therefore, has compelling reason to be concerned over the gigantic spending schemes that already have been voiced by one House or the other of the present Congress. Together, just to date, these schemes represent several billion dollars of needless, unjustifiable spending. And more of the same is in the offing.

All are the creations of political pressures of special groups.

But if they become law, it will be every American whose dollar is cheapened—every American whose paycheck must yield steeper taxes—and every American whose children must bear the future debt.

I am sure you are aware that the Communist challenge is many-sided.

It is military, political, spiritual, and economic.

We and our allies have steadily rebuffed the military and political threats. Wherever the Communists have probed, they have found us standing firm. At Lebanon, in the China Sea, in the unity of our NATO Alliance—and in the Berlin issue—we have met the challenge with unmistakable evidence of the strength of our purpose.

We shall continue to keep our military power equal to any test.

Our overall might in planes, missiles, ships, and other equipment, must always be capable of deterring—and if ever necessary—defeating any attack upon us.

We shall continue to meet the Soviet political challenge.

We shall lead the way in exploring every avenue of reasonable hope for justly solving the issues that divide the world.

In the battle of spiritual values, we cannot lose so long as we preserve the freedom and moral strength on which our way of life is built.

The Soviets know all this very well.

Why, then, are they confident of ultimate victory?

Because they are concentrating on all-out economic war—and they believe they can defeat us in such a war without risking their own total destruction.

They intend to become the world's one first-class economic power, forcing us into second-class status. And for us, such an outcome would be just as tragic as nuclear devastation.

Today we are well in front. But they believe we have not the system or the will to maintain our economic strength and growth.

They expect inflation to explode our economy while theirs continues to grow.

My friends, let me emphasize that we dare not look lightly on their great expectations. For here we do, indeed, stand at the crossroads of decision. The soundness of our economy is threatened by forces that have wrecked other nations in the past. They are the forces of inflation and onerous taxation—and we are not yet united as a people to overcome them.

Our friends of the majority party in Congress have strayed a long, long way from the sound philosophy of government that guided the great Americans of the past. I understand that even in Cumberland there are some who have strayed from the fold and support the opposition party. I wonder if they recall these words, spoken 150 years ago:

"I place economy among the first and most important virtues, and public debt as the greatest of dangers to be feared. To preserve our independence we must not let our rulers load us with perpetual debt. We must make our choice between economy and liberty, or profusion and servitude. If we run into such debts, we must be taxed in our meat and drink, in our necessities and our comforts, in our labors and in our amusements. If we can prevent the Government from wasting the labors of the people, under the pretense of caring for them, they will be happy."

Those, my friends, are the words of Thomas Jefferson, of Virginia, third President of the United States.

What party stands for those principles today?

If there are Jeffersonian Democrats in Maryland, I invite you to come home. Come home to the party which today stands for the principles in which you really believe. Join the Republicans.

Under a Republican national administration you have seen a tremendous national industrial development—an industrial development that has meant more jobs and better wages and greater opportunities for most citizens. At the same time you have seen the great northern industrial State of Michigan go bankrupt, unable to meet State payrolls, under the reckless spending programs of a gentleman known as Gov. "Soapy" Williams. This same gentleman has kindly volunteered his services as a presidental candidate—not, thanks be, as a Republican candidate.

For reasons best known to themselves, the majority party members in Congress have become extremely sensitive to criticism of late—so sensitive that one of their number, a Senator from Oregon, destroyed the usefulness as Ambassador to Brazil of a very able woman with a fine record of public service, all because 10 years ago she made some uncomplimentary remarks about his adopted political leaders. I refer to that gracious lady, Clare Luce.

So perhaps I had best be very subtle in criticism of what's going on in the Congress.

I can't refrain from pointing out, however, that it was not a Republican Congressman who rented his front porch to the Government, and it is not Republican Congressmen who are advocating reckless spending of Government funds to appease the insatiable appetite of special interest groups.

Perhaps it is time that we looked at the record of the Eisenhower-Nixon administration—the record on which any Republican candidate should be proud to stand.

Seven years ago we were in the grip of a merciless inflation that already had added nearly 50 percent to our living costs.

Today we have achieved relative stability in prices—the increase in living costs has been held to less than 10 percent for the 7 years of the Republican administration as compared to 48 percent for the 7 years prior to 1953. But even 10 percent in 7 years is too much; we must do better.

Seven years ago we were far behind the Communist empire in missile development. Today we have 41 types of war rockets in operational status or in the advanced stages of development—the most powerful defense mechanism in all our history. And yet we must listen to the carping of amateur experts who have the effrontery to pit their judgment on defense matters against that of the greatest soldier of our time—Dwight D. Eisenhower.

You know, if he were not a Republican President, these same gentlemen would be begging for his advice.

The appetite of the military for money is insatiable. And, of course, the opposition can always find some frustrated generals or admirals who disagree with their boss.

To continue with the record, need I remind you that 7 years ago a tax decrease appeared impossible? Yet, in 1954 the Republican administration did reduce taxes—saving the average family $100 a year. True, we need further tax reform, but at least we have taken the first step.

Seven years ago, employment and a shaky prosperity were based on the needs of a shooting war. Today, in a time of peace, the statistics released for the month of December reveal that 65,700,000 Americans had jobs—the largest number for any December in all our history—in peace or war. And their average salaries were the highest in our history, too.

Seven years ago we were in a shooting war with no end in sight to the casualty lists that saddened American homes.

Today, we are at peace—true, an uneasy peace, but an honorable one.

But you are familiar with these facts. You know, too, that President Eisenhower prevented wild public spending from wrecking the economy when frantic pressure developed during the recent business slowdown. We have recovered fast and solidly from that recession without panic-stricken spending of Federal funds, thanks to the sound fiscal policies of a Republican administration.

So where do we go from here?

Well, how deep is your belief in this land of ours?

Is it deep enough to forget petty differences in political philosophy?

Is it deep enough to cease the clamor for special privileges based on self-interest?

Is it deep enough to give of your substance, your time, and your genius to preserve the principles that have made our Republic great?

Today our country desperately needs just one kind of Republicans—American Republicans.

A hard and fateful struggle is being waged. Your voice and your efforts are more than important—they are vital.

They are vital on specific current issues. They are vital on long-range issues. They are needed at political campaign time, and between campaigns. Sound political leadership must have the active support of those who want sound government.

Sometimes, even as you, those of us in Washington become tired, discouraged, frustrated. Our plans go wrong and caustic criticism rings in our ears from Congress, the public, and employees alike. We wonder if it is all worth while.

And then we remember. We remember that we live and work in a country blessed above all others. We remember that we serve the greatest Nation on earth—a nation that is the world symbol of peace, progress, and freedom.

We remember the giants among men who made us free and preserved our Union.

We hear the measured tread of the sentry who paces before the marble tomb in Arlington where rests in honored glory an American soldier known but to God.

We see the clean, towering spire of the Washington Monument and the majestic lines of the temple where the memory of Abraham Lincoln is enshrined forever.

And we are humbly grateful that we are citizens of the United States.

A great challenge confronts us this year. The time to start is now.

I am sure the enthusiasm shown here tonight is not superficial.

It is deep rooted.

It is devoutly felt.

And I know you will meet the political campaign of 1960 with renewed vigor—a rededicated to the great traditions of the Republican Party.

Right To Know Versus Survival

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. MONAGAN. Mr. Speaker, in view of the current discussion of the right to know in connection with information concerning the status of our military defenses, I was pleased to read the following editorial which appeared in the New Haven Register on February 16, 1960, and pointed out the salient fact that the state of our defenses is a matter of public concern and that the suppression of legitimate information must not be carried too far or the Nation will suffer:

RIGHT TO KNOW VERSUS SURVIVAL

We agree in principle with Senator PRESCOTT BUSH's contention that national survival must take precedence over our treasured freedom of the press and the people's right to know.

But—

Great care must be taken in any efforts to attain any such heightened security objectives.

It would be fatal indeed to democracy were we to gain tightened security regulations and better protection for our military secrets at the price of a diminution of our democratic freedoms—or a complete loss of such freedoms.

The American people, we are sure, want no part of a dictatorship, be it invoked in whole or in part under the guise of military necessity and national survival.

The American people have had, and are having, experiences with governmental bureaucracy which they do not like.

Some of these experiences are of a nature that not long will be tolerated.

We want none of the canned bureaucratic handout, the press release which tells the people exactly what the heads of Government want the people to know—and nothing more.

Senator BUSH shows a recognition of this.

He emphasizes that ours is a democracy and that it is important that our people be as fully informed as possible on all major issues of public policy.

He is swift to admit that the state of our defenses is a matter of public policy.

But he then contends that there is a point beyond which we disclose information at our peril.

He thinks that this is done through the contrived leak to favored sources and by those who talk out of turn on defense issues merely to make political capital for themselves, or their party.

We join the Senator in deploring these things and desiring their elimination—insofar as that be possible.

But again we must warn against any possible corrective steps that would make the cure worse than the sickness.

It may be all very commendable to keep classified information behind closed doors.

But great care must be taken not to extend classified information to ridiculous lengths.

The officeholder, at Federal, State, and local levels, must be kept responsible to the people, not permitted to hide his foolish, or even illegal, acts behind a classified label.

We do not, of course, wish to give our enemies any vital secrets if we can avoid doing so.

But we must not endeavor to protect ourselves by surrendering democratic methods for those of the police state.

The Crimes of Chessman

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 23, 1960

Mr. BYRD of Virginia. Mr. President, I wish to record my disapproval of interference by the U.S. State Department in the case of Caryl Chessman in the State of California.

It would appear that he has had every legal and judicial consideration. Certainly the Governor of California has the responsibility to grant reprieve if he finds such action to be proper.

My criticism is of Federal meddling and pressure in State affairs, and especially State affairs concerned with the meting of justice.

Too much of this is going on in both the judicial and executive branches of the Federal Government. It should and must be stopped.

I ask unanimous consent that the long list of the crimes committed by Chessman be printed in the Appendix of the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

THE CRIMES OF CHESSMAN

NINETEEN HUNDRED AND THIRTY-SEVEN

Arrested in Los Angeles at age 16 for auto theft and burglary. Sent to reform school.

NINETEEN HUNDRED AND THIRTY-EIGHT

Arrested again, after release from 1937 sentence, and sent back to reform school.

NINETEEN HUNDRED AND FORTY-ONE

Sent to prison on five counts of robbery, one of assault with deadly weapon.

NINETEEN HUNDRED AND FORTY-THREE

Escaped from prison.

NINETEEN HUNDRED AND FORTY-FOUR

Returned to prison with additional count of first-degree robbery. Released December 8, 1947.

NINETEEN HUNDRED AND FORTY-EIGHT

Sent back to prison after conviction for these 17 crimes, committed in a 20-day period:

1. Robbery of shoestore, January 3.
2. Theft of auto on January 13.
3. Robbery of man driving along highway on January 18.
4. Robbery of man parked in isolated area with woman companion on January 18.
5. Robbery of man parked in isolated area with woman companion on January 19, and
6. Robbery of the woman, and
7. Kidnaping of the woman, and
8. Sex perversion against the woman.
9. Attempted robbery of a man and girl, parked in isolated place, on January 20.
10. Attempted robbery of man parked in isolated place on January 22, and
11. Kidnaping of the girl, and
12. Attempted rape of the girl, and
13. Sex perversion against the girl (now in a mental institution).
14. Robbery of owner of clothing store, on January 23, and
15. Robbery of a clerk, and
16. Kidnaping of the store owner with bodily harm, and
17. Kidnaping of the store clerk.

It was the two kidnap cases, on January 19 and 22, that produced the original death sentence for Chessman.

Presentation of the Annual Gold Medal of the Downtown Brooklyn Association to Joe Weinstein, Chairman of Board, J. W. Mays, Inc.

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. Andrew S. Roscoe, president of the Downtown Brooklyn Association, at the Towers Hotel, on February 11, 1960, on the occasion of the presentation of the annual gold medal of the Downtown Brocklyn Associated to Joe Weinstein, chairman of the board of the J. W. Mays, Inc. Mr. Roscoe is also president of the Equitable Savings and Loan Association and adjunct professor of the Polytechnic Institute of Brooklyn. I should also like to include Mr. Weinstein's response:

It is our privilege today to welcome to Brooklyn's Legion of Honor a new member, the 30th. The qualifications for membership in this distinguished group are many and exacting. But, its most rigid demand is service to the community, service to neighbors—selfless service—and absolute integrity. Fortunate is the group that finds such members. The Downtown Brooklyn Association takes great pride in naming as

the recipient of this year's annual gold medal, Joe Weinstein, chairman of the board of J. W. Mays Department Stores.

We rightfully honor Mr. Weinstein as an outstanding retail merchant. And speaking of merchants, there is no bolder or braver group in our whole business fabric. They venture their own capital and, taking in stride normal business risks without guarantee and subsidy, they truly justify the term "enterprise."

I know that I am voicing the sentiments of all present here when I say that Joe Weinstein exemplifies the foremost concept of that good, old-fashioned, rugged, American private enterprise.

We honor Mr. Weinstein as a highly esteemed businessman who understands the ethical basis for the privilege of that precious franchise that we call "freedom of enterprise." It is simply wonderful that our huge department stores, of which the one headed by our merchant prince, Joe Weinstein, is one of the greatest, continually strive to enhance the standard of living of that low-income citizen by providing him with the necessities, the amenities, and some of the luxuries of life at a low cost, stretching his wage dollar, and compensating to a large degree for the evils and scars of inflationary forces.

We would cite Mr. Weinstein as a great leader of vision and courage, who provided strong and effective support to the progress of Fulton Street during the darkest days of its history by acquiring the old Loesser building and developing it without government aid into a very attractive unit contributing a lion's share to the gigantic task of preserving the finest shopping center in America.

His recent, beautiful improvement on Livingston Street is an added milestone in his historic accomplishments for which we honor him today.

However, we salute Mr. Weinstein for still greater attainments. During the past decades it was the privilege of many of us to call on him for advice, guidance, and assistance, both moral and substantial. Whether the community project involved the construction of the Red Cross building, of a hospital, support of education, the academy of music, one of our boys' clubs, the PAL, or a multitude of community efforts, I do not know a single instance when Mr. Weinstein had not espoused and enthusiastically supported a worthy objective. We have always found an understanding reception, filled with love and effection for the people of Brooklyn—never a question of quid pro quo or expediency.

Providence endows men with wisdom, capacity, and courage and a few thus blessed acquire great material wealth. The question of the ethical side is, what is the moral basis for their wealth, their power, their influence, and their authority? The fundamentals of economic and social morality lie in the recognition of the general welfare, in the recognition of the need of rendering utmost service to provide the greatest good for the greatest number.

Mr. Weinstein, we know that all of your functions are always guided by the highest ideals, by that summum bonum—the maximum good—and that you have always aimed to pattern your life along a great moral code; along traditions that you and I hold exceedingly high; traditions that have been deep graven and enshrined in the emeralds of time.

Joe Weinstein, we are proud to recognize the enormous amount of work that you have done and we extend to you today, with warm friendship and deep sincerity, this expression of our high regard and esteem, as well as our everlasting gratitude for your devotion to the well-being of your neighbors and your community. Proudly we present to you this gold medal of the Downtown Brooklyn Association for "most distinguished service for Brooklyn."

REMARKS BY JOE WEINSTEIN, CHAIRMAN OF THE BOARD OF MAYS DEPARTMENT STORES, AT DOWNTOWN BROOKLYN ASSOCIATION LUNCHEON, HOTEL TOWERS, FEBRUARY 11, 1960

Mr. Roscoe, distinguished guests, and friends, first, I want to thank you, Andy, for the very warm and kind introduction that you gave me.

While it sounded indeed very flowery, it was beautiful, and I deeply appreciate the kind remarks you have made.

Now, as for the beautiful token that I received today, I do want to express, in my humble way, my deepest appreciation.

A few weeks ago, on my way to Europe, I was told that I was going to be the recipient of this beautiful award, and to make sure that I would return in time to receive it.

While I mention Europe, I would like to have you know that they are enjoying the greatest prosperity ever. And, that is due to the great leadership which brings me to our own Brooklyn, and, Andy Roscoe, who in a very short span of time heading the Brooklyn Downtown Association, we have been able to see the new face-lifting job that has been in our downtown area. Yes, it is leaders like you, Andrew Roscoe, John Cashmore, Joe Sharkey, John R. Crews, and many others that make our Borough of 3 million people, the great borough that it is today.

Of course, we have not even scratched the surface yet, and with these strong leaders we will get stronger and stronger every day.

Again, my thanks to the officers and directors of the association, for this award. May God be with us.

Thank you.

Cuban-Soviet Past Assailed

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, February 23, 1960

Mr. WILEY. Mr. President, as we face the future, a major challenge in the East-West struggle will be to prevent the Communists from gaining a real foothold in the Western Hemisphere.

We realize, of course, that the Commies are attempting by every way and means possible—through trade, cultural delegations acting as fronts, and other tactics—to penetrate the Americas.

As a matter of policy, we are not, of course, in a position to interfere with the negotiations of other countries, with the Soviet Union or other Communist nations.

However, the Communist tactics, of themselves, may prove to be a weakness.

Following the recent sugar agreements between the Cubans and the Soviet Union, for example, there has now elapsed sufficient time to appraise these negotiations.

Recently, a conservative Cuban newspaper pointed out that Cuba would lose $64 million in foreign exchange in the next 5 years by its new trade pact with the Soviet Union.

According to experts, the U.S.S.R. well might have bought an equal or similar amount of sugar in the coming years. Instead, the Soviet Union has now found an important market for its products—through attaching strings to the agreements. At the same time, the newspaper points out Cuba in exchange for a product so vital as sugar will receive machinery and equipment about whose necessity, convenience and quality much remains to be written.

As more and more of the real factors come to light in the Cuba-Soviet agreements, I would hope that the experience of Cuba would serve as an illustration to more of our Latin American neighbors—who might be tempted by carrot-type trade offers—to tread cautiously, so to avoid becoming a victim of Communist opportunistic—but often deceptive—policy.

The Washington Sunday Star carried an informative article relating to the recent agreements called Cuban-Soviet Pact Assailed. Reflecting an enlightening aftermath on the real factors in dealing with the clever Soviet "horse traders"—or perhaps I should say "sugar traders," handing out their own kind of lumps. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CUBAN-SOVIET PACT ASSAILED

HAVANA, FEBRUARY 20.—The conservative newspaper Diario de la Marina said today Cuba will lose $64 million in foreign exchange in the next 5 years by its new trade pact with the Soviet Union.

The newspaper reported the Soviet Union has bought nearly 2 million tons of Cuban sugar since 1955 without a formal agreement and paid $139 million in cash for it.

Under the new agreement, the Soviet Union will buy a million tons a year for the next 5 years but will pay dollars for only one-fifth of the sugar. The rest will be paid for in goods. Diario estimated the Soviet Union will pay $75 million in cash in the 5 years.

"You must come to the conclusion," the newspaper said, "that the brand-new pact means Cuba loses * * * $64 million in foreign exchange with the aggravating factor that, according to experts, the U.S.S.R. would have bought an equal or similar quantity of sugar in the coming years.

"In the final analysis, we find the Soviet Union has found an important market for its product which it did not have before. And Cuba, in exchange for a product so vital as sugar, will receive * * * machinery and equipment about whose necessity, convenience and quality much remains to be written."

Diario called fallacious the Cuban Government's argument that the United States paid a premium of about 2 cents a pound on Cuban sugar only to protect U.S. sugar producers.

The newspaper said the United States could pay the premium to its own producers and buy from Cuba at the cheaper world price if it were concerned only with helping its own people.

Diario said that if the United States abandons the system of paying a higher price for Cuban sugar, misery and hunger will come to Cuba.

Women's Duties and Responsibilities as Citizens

EXTENSION OF REMARKS
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. BURKE of Massachusetts. Mr. Speaker, included in the February and March issue of the magazine Topics is an article written by my distinguished colleague the Honorable EDITH NOURSE ROGERS U.S. Representative in Congress from the Fifth Massachusetts District, entitled "Women's Duties and Responsibilities as Citizens."

I know I echo the sentiments of the entire Massachusetts congressional delegation when I say—the gentlewoman from Massachusetts is truly one of God's great noblewomen.

I ask unanimous consent to have the article included in the Appendix of the RECORD:

WOMEN'S DUTIES AND RESPONSIBILITIES AS CITIZENS

Privilege is only one side of the coin of citizenship. The other is clearly labeled "Responsibility." In government, one without the other is valueless. Privilege without the restraints of responsibility becomes dangerous. On the other hand, responsibility without the freedom of a democracy becomes meaningless.

The continued responsible exercise of our democratic rights by all our citizens—women as well as men—will be the determining factor in the future destiny of our country.

In a broader sense, it seems almost a rule of life that every privilege carries with it a corresponding duty. In the field of government, the full privileges of citizenship, which women of America have been granted, carry with them certain responsibilities. It was only 39 years ago that American women were given the constitutional right to vote. In the history of our Nation that is not a very long time, but what our women have accomplished in this short period since their enfranchisement has encouraged other countries to give women a voice in their governments.

It is interesting to me that our Constitution and the amendments to it are mainly concerned with granting our people certain rights. Perhaps our patriots and statesmen who had given so much to obtain these precious freedoms believed that it would be unnecessary to remind us of our responsibility to use them.

Ideas, rights and hard-won benefits become rusty through disuse just as our more tangible possessions. And so it is with the American woman's rights and duties of good citizenship. Certainly, it has been my conviction that the women of America have, just as have the men, made a substantial contribution to the wise operation of this Republic. In the executive, legislative, and judicial branches, women have proven that wisdom, judgment and ability are possessed in equal degree by both men and women.

And so I would urge every American woman, whatever her role in life, to take full advantage of her privileges as an American citizen. For those who are inclined, this may mean running for public office or serving in some appointive position. For others, it may mean helping with the numerous tasks of a political party. At the very minimum, it will mean becoming thoroughly informed on the great issues and current problems and voting on each election day and encouraging others to do so.

In these important ways, American women will be fulfilling their duty and making certain that the coin of our democracy is spent wisely and well.

EDITH NOURSE ROGERS,
U.S. Representative, Fifth Massachusetts Congressional District.

Major General Toftoy Retiring—Not Mad at Anybody

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, February 23, 1960

Mr. BEALL. Mr. President, in this morning's issue of the Baltimore Sun, there appeared an interesting news article on the retirement of Maj. Gen. H. N. Toftoy, commanding general of Aberdeen Proving Ground in Maryland. The article appears under the heading, "Missile Expert Is Not Mad at Anybody as He Retires."

I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD the news article, as it appeared in the Baltimore Sun of February 23, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MISSILE EXPERT IS NOT MAD AT ANYBODY AS HE RETIRES

ABERDEEN, MD., February 22.—"I'm not mad at anybody."

Coming after a wave of protests against national defense policy by retiring high-ranking military men, that statement in itself is news when it comes from a general who has been in the midst of Army missile work since World War II.

But that is the way Maj. Gen. H. N. Toftoy, commanding general of Aberdeen Proving Ground, feels in the last week of his military career.

The general, called "Mr. Missile" by many experts in and out of the Army, will retire next Monday after 33 years as an officer.

TO DEPART FROM COURSE

He made it clear today that he would depart from the controversial course taken on retirement by such others close to the missile program as Lt. Gen. James M. Gavin and Gen. Maxwell D. Taylor.

On the specific subject of missile development, General Toftoy could buttress any arguments he cared to make on more solid experience than perhaps any officer in the Service.

SET UP LABORATORIES

It was he who cut War Department red-tape to import Germany's rocket experts to this country, then headed the rocket branch, research and development division, Office of the Chief of Ordnance, for 7 years, from 1947 to 1952.

He set up the rocket "laboratories" at White Sands, N. Mex., and Huntsville, Ala., then took over the ordnance missile program at Huntsville (Redstone Arsenal), laying the foundation for nearly all American missile work that has followed.

Under his command, key research on the Jupiter, Redstone, Pershing, Sergeant, Corporal, LaCrosse, Honest John and Little John rockets was carried out.

Working with him were Col. John R. Hamill, now director of the ballistic research laboratories at Aberdeen, and the German rocket genius, Wernher von Braun.

Since August 1958, he has been commanding general at Aberdeen dealing with every other kind of Army ordnance.

MEDICAL REASONS

Now, he is being retired for medical reasons—ulcers, to be specific, and it should be no secret why he has them.

Despite his involvement in the most frantically debated weapons developments of the decade, he insists:

"I am not going to lambaste anybody. I'm not going to write any books. I'm not mad at anybody."

That is the negative side of his retirement plans.

On the positive side is retirement in Florida. He will start driving toward that happy fishing ground immediately after retirement ceremonies Monday morning.

Resolution Urging Repeal of the Oath Requirement of the National Defense Education Act

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mrs. GRIFFITHS. Mr. Speaker, the University of Michigan Senate, composed of faculty members with professorial rank, adopted a resolution on April 27, 1959, urging repeal of the oath requirement of the National Defense Education Act.

The text of this resolution is as follows:

The faculty of the University of Michigan believes that the oath requirement of the National Defense Education Act (sec. 1001f) should be repealed and urges Congress to do so immediately.

The requirement of an oath to obtain a loan under the act is inconsistent with sound educational policy. The right to a Federal loan for education should not be treated differently from the right to use tax supported or tax exempt educational facilities generally—regardless of membership even in the Communist Party. Our best hope to demonstrate the fallacies in such doctrines to college-age persons is to permit them to be exposed to academic training and to associate with their peers in an atmosphere of free inquiry. The psychological effect of such an oath on non-Communist students surely is not beneficial and possibly is damaging because it may cast a shadow, however slight, upon the atmosphere of fearless pursuit of truth so essential to an academic community of students and scholars. In any event, the oath seems very unlikely to have any practical effect on Communists.

The faculty believes even more strongly that no justification can be found for that part of the oath requiring a statement of nonbelief in overthrow of the U.S. Government by force. It is one thing to make actions, such as membership in an organization, a criterion for qualifying for a loan, unwise as we think this is. It is quite another to require a statement of beliefs unaccompanied by any overt act. In the first place, the definition of such belief is most difficult. If the language is taken literally probably most of us would be unable

to sign the oath because we would believe in forceful overthrow of the U.S. Government if it should be changed sufficiently from its present form, even if the change were achieved by proper legal procedures. Secondly, and more importantly, we do not believe that beliefs alone—without action—should be made a test for receipt of a benefit any more than it is for imposition of punishment. This smacks too much of the heresy trial and the star chamber technique.

Our belief in the superiority of democracy is communicated best by a free exchange of ideas. By requiring a questionable, even dangerous and possibly unconstitutional oath we weaken our position.

Adopted April 27, 1959, by the University of Michigan Senate.

The World Around Us

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 23, 1960

Mr. MONRONEY. Mr. President, recently the Record, a weekly paper published by Dr. John R. Steelman in Silver Spring, Md., carried an article by John C. Metcalfe urging more self-examination and less name calling regarding recent anti-Jewish outbreaks in various parts of the world. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Silver Spring (Md.) Record, Feb. 4, 1960]

THE WORLD AROUND US—THE NEO-NAZI HOAX

(By John C. Metcalfe)

WASHINGTON.—The emotional outbursts by individuals and the press in charging a resurgence of neonaziism in West Germany are clearly based far more on prejudice and unfounded fear than on fact. Moreover, we have now the farflung consequences of colosal blundering in playing up a scattering of anti-Jewish incidents instigated by Communist agents to discredit the Bonn government and the democratic German public.

This writer raises his voice in protest at this injustice to the German people against his own long background and widely recognized understanding of naziism which goes back to investigations and study of this type of activity predating the rise of Hitler to power in January of 1933.

WRITER'S RECORD

This record includes investigations in those early years at the request of the FBI on activities of Nazi, Fascist, and Japanese agents in the United States; leading the investigation of the Chicago Times in 1937, in disguise as a Nazi storm trooper of the German-American bund, which broke the back of that movement and created the House Committee on Un-American Activities; being the first agent hired by the committee and placed in charge of its Nazi-Fascist probe; having testified for that committee perhaps oftener than any other person in its history; being officially qualified by the Department of Justice as an "expert" in this field and retained by the Criminal Division as the Federal Government's key witness in prosecutions which resulted in the internment and deportation of several hundred Nazi leaders; having testified for the Senate committee which developed the present Foreign Agents Registration Act that successfully prosecuted leading Communists; and having testified as an "expert" in loyalty probes.

This, then, is in part the authority with which we comment.

INTEREST CONTINUED

This writer has continued his interest in Germany across the postwar period by having visited that country year after year to witness its rise from ashes to become the most powerful economic unit of all Europe; by having come to know personally many of her government figures, political leaders, distinguished editors, and prominent citizens.

Therefore, this writer comments not only with longstanding authority but also an intimate understanding of present day Germany.

Here are some things which should be pointed out to clarify the situation and bring the truth to light.

The sordid anti-Jewish incidents which broke out in Germany recently have been thoroughly investigated by the Federal police. It has taken time to run down the facts. They reveal some of these incidents were inspired and instigated by Communist agents to damage the position of the Federal Republic of Germany in light of the approaching summit meeting which will take up the question of the Berlin crisis and German reunification.

NO ORGANIZED NAZISM

Only a handful of extremists, hatists, and mainly misguided youths participated in these lunatic acts. There is no evidence of any organization backing resurgence of nazism.

Not long before these incidents broke out in Germany we were plagued with the same thing here. In fact, those in the United States were on the whole of an even more violent nature, such as the bombing of synagogues by crackpots.

Many of our prewar native Fascist crackpots are still around. Investigations by such agencies as the Anti-Defamation League and the American Jewish Committee over the postwar years reveal far more anti-Jewish activity in the United States than in Germany.

It is to the high credit of the Bonn government that so very few persons in Germany have engaged in these foul activities when not too long ago there were millions of followers of Hitler in that country.

BOTH PARTIES TOLERANT

The Christian Democratic Union, led by Chancellor Adenauer and in power, is 60 percent Catholic, 40 percent Protestant. The Social Democratic Party, the major opposition force, is 40 percent Catholic and 60 percent Protestant. Both parties are bitterly opposed to racial and religious hatred and a number of their key figures suffered in Nazi concentration camps.

We had a very big hand in writing the German Constitution and it explicity forbids these antidemocratic activities.

There are some former Nazis in the German Government. It would have been impossible to set up an efficient government without having called on some of them, when nearly every one had belonged to that party in the earlier years. Very few of them hold key positions and none has given any evidence of pronazism. Not even the severest non-German critics can point to any Nazi act by them.

BRITISH ARE BIASED

The British have been particularly boisterous in their denunciations of the Germans over these incidents. It is no secret, however, the British have become increasingly disturbed over Germany's growing economic power, which surpassed them not long ago. They have also openly criticized Chancellor Adenauer for his determined stand in refusing to appease Premier Khrushchev on the defense of Berlin and reunification of Germany. It is only natural, therefore, that suspicion exists the British denunciations reflect an interested point of view. This is not allayed by the fact that the British are taking the softest line with Premier Khrushchev and that they do not themselves have exactly a clear slate at home in racial prejudice.

The colossal blunder in this whole affair was committed by those who exaggerated these incidents all out of proportion to their importance and played smack in the hands of the Soviet propaganda machine.

UNLEASED THE LUNATICS

Thus, it created a chain reaction around the world. It unleashed a whole string of lunatics. They don't expect to see their names in the press. They get enough satisfaction and excitement by just reading about their dirty handiwork or hearing about it on television and radio. In other words, the play these incidents received simply fanned the flames of hatred.

If the story of the first incident had been played down or killed and followed with swift investigations and tough prosecutions, the whole affair would have fizzled out promptly.

This is the most effective way of dealing with the problem.

A few years ago there was a wave of phone calls to airlines reporting bombs on planes. As long as the press continued to play up these reports all the crackpots got into the act. When the reports were finally ignored by the press, they died down. The best proof is that the current big stories of insurance bombings of planes have revived the bomb scare reports. In one day a couple of weeks ago there were ten false reports of this character.

PRAISE DUE, NOT CARPING

If those who are continuing these emotional and exaggerated outbursts against Germany are really sincere and intelligent, they will stop their rantings and take a positive approach by praising the German people for what they have accomplished toward a democratic way of life and by supporting them in their efforts to maintain freedom, justice and peace in their land.

These critics might also devote a little more attention to the same problem on the domestic scene. When the problem at home has been diminished, they will be in a more justifiable position to criticize their friends and allies abroad.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mrs. KEE. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and include copy of my newsletter Keenotes which was released Monday morning, February 22, 1960:

KEENOTES

(By Representative ELIZABETH KEE)

Two messages received by Congress this week will touch off lively debate.

1. A request for slightly more than $4 billion to carry on the foreign aid and mutual security program during the next

fiscal year received a chilly response from many Members, both Democratic and Republican. Not only were objections raised to the size of the proposed program—$1 billion more than voted by Congress last year—but many Members were sorely disappointed that it did not reveal that a portion of the burden has been shifted to other nations which are in a position to share a part of the load. Congress is likely to insist on a sharing of this burden.

2. The President's request for an additional 1-cent increase in first-class and airmail postage rates was also coldly received. Many Members will not vote to increase mail rates on these two types of mail. First-class and airmail rates at present are high enough to pay their own way and increased rates should not be asked. After all, increased postal rates on the type of mail used by the vast majority of the people would constitute a tax increase. I seriously doubt that Congress will be willing to increase these postal rates again in the foreseeable future.

COAL RESEARCH BILL PASSES

The House has passed a coal research bill. There was little opposition to this proposal to create a Coal Research Office in the U.S. Department of Interior to strengthen this great industry. Inasmuch as the bill was amended to meet objections voiced last year by the President in a veto message, there is an excellent chance the bill will now become law. Those of us from coal-producing States strongly supported the measure.

RETIREMENT BENEFITS FOR SELF-EMPLOYED PROPOSED

The House has passed a bill which will help about 10 million self-employed persons—small businessmen, lawyers, doctors, accountants, engineers and others—to build up a retirement fund.

The House-approved bill allows a self-employed person to deduct up to 10 percent of his annual net earnings or $2,500 (whichever is less), provided it is put into an approved retirement program.

When the self-employed person starts drawing benefits under his retirement program, the accumulated earnings would be subject to ordinary income and taxable as such.

The cost to the Government would be relatively small. But it would give the small businessman a concession similar to that enjoyed now by about 18 million persons under corporate pension plans. It is good legislation and I hope the Senate will follow the lead of the House in approving it.

Retirement Plans for the Self-Employed

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 23, 1960

Mr. BARTLETT. Mr. President, this month the Alaska State Medical Association met in convention at Anchorage. Judging from newspaper reports and communications I have received, the convention was fruitful and constructive.

Dr. George Hale, president of the association, has made available to me certain resolutions adopted by the convention. As a cosponsor of S. 1009, Mr. President, I am naturally pleased that the Alaska State Medical Association has expressed support of legislation to amend the Internal Revenue Code of 1954 in order to encourage voluntary retirement plans for the self-employed.

I ask unanimous consent that the resolution of the Alaska State Medical Association relating to retirement plans for the self-employed be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the Keogh-Jenkins bill provides for needed tax relief for self-employed professional men who are not eligible for social security: Now, therefore, be it

Resolved, That the Alaska State Medical Association recommend passage of the bill.

A Million Voteless Citizens

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. SCHWENGEL. Mr. Speaker, the recent action in the Senate indicates that we are moving closer to a long-cherished dream for the people who live in the District of Columbia—the right to vote. It is hoped that the House will also act favorably on Senate Joint Resolution 39 with the amendment calling for the right to vote, on the part of the residents of the District, for President and Vice President.

In this connection, under unanimous consent, I call attention to an editorial which appeared in the Des Moines (Iowa) Register on February 5, expressing the same hope that I share about favorable action on this measure.

The editorial follows:

A MILLION VOTELESS CITIZENS

Wednesday was a great day for several hundred thousand voteless residents of the District of Columbia. The Senate took the first step on the way to making them "first class" citizens.

One of the three proposed constitutional amendments approved by that body grants residents of the Nation's Capital the right to vote in the election of a President and Vice President. It authorizes them to name three presidential electors. And it grants them a delegate to Congress who will have a seat but no vote in the House of Representatives.

The proposed amendment must be approved by the Senate and be ratified by two-thirds of the State legislatures to become effective. Nevertheless, the action of the House marks the first real progress that has rewarded years of effort by residents of the District.

The recent admission of Alaska and Hawaii to statehood can be credited with removing much of the objection to granting residents of the District of Columbia voting rights. Although most fairminded persons felt that Washington residents were being discriminated against, many Members of Congress had contended that they could not grant privileges to residents of the Capital that were denied to residents of Alaska and Hawaii while they were territories.

During the early formative years of the Nation, there were other reasons advanced for keeping the District of Columbia residents voteless. It was felt, whether justified or not, that political appointees holding jobs in the Capital might be able to exercise undue influence on Congress and the affairs of government if they were permitted to vote. The writers of the Constitution set up safeguards against that possibility.

The District of Columbia was created as a nonpolitical unit, governed exclusively by Congress. Government employees were expected to have only temporary residence in the District. They were permitted and expected to retain their legal and voting residence in the States from which they came.

Through the years, many changes have come about. Civil service has made most Government employees permanent residents of the District. The population has grown to nearly a million, larger than that of 12 of the smaller States. A large portion of the residents are not Government employees. Washington is their permanent residence. They bear all the obligations of a citizen of the United States but are denied the privilege of voting and representation.

No longer is there any reason or excuse, if there ever was, for denying residents of the District of Columbia the right to vote in the election of a President.

We are confident Iowans will place no obstacle in the way of granting them this right if and when the proposed amendment comes before the State legislature for ratification.

Top 10 Ratings Will Be Junked

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 23, 1960

Mr. MONRONEY. Mr. President, we have been busy in the Communications Subcommittee with TV channel allocations. We may not be able to get to further study of TV ratings for some time. Meanwhile there has been a new development. Trendex, Inc., one of the prominent rating services, has abandoned the top 10. It was sloughed off the pocketbook. Beginning this month, it offers instead DTAR, the "Dimensionalized Television Audience Report."

Is this the slight ray of light which could mean a new dawn?

Coupled with the independence of ratings suggested by recent announcements of varied TV public service programs scheduled in prime time by the networks, I suggest that we may be seeing a break in the clouds of rating-dominated TV.

I was encouraged especially by the quoted statement of a Trendex vice president that with the new system, they "hope to introduce sanity to the business of evaluating the TV audience."

It has been my contention for some time that the ratings we have known in the past didn't make sense. We shall see if the new ones have a sane contribution to make.

I ask unanimous consent to have printed in the Appendix of the RECORD a description of the new rating, DTAR, written by Miss Marie Torre, syndicated TV columnist.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Daily Oklahoman, of Jan. 15, 1960]

TOP 10 RATINGS WILL BE JUNKED

(By Marie Torre)

The first significant development in the TV rating chaos is a major project that will convert Trendex, Inc., effective February 1, from a diffident nose-counter to an aid to better television.

No more will there be a Trendex top 10.

No more will clients receive the monthly Trendex pocketbook, which meant sudden death for a faltering show.

Attempting to step in tune with the times and answer the cry for quality programs, Trendex is overhauling its entire operation to de-emphasize audience numbers (the scourge of good television) and emphasize a qualitative yardstick.

"This isn't the result of impulsive thinking," said Eugene L. Reilly, Trendex vice president. "We have listened to and digested what Dr. Frank Stanton has said on the need for new measures to improve programing. We believe him. We believe the serious intentions of some advertisers with respect to better programing. With our new system, we hope to introduce sanity to the business of evaluating the TV audience."

The outgrowth of this thinking is a new service bearing the unwieldy title of "The Dimensionalized Television Audience Report." This will be issued to clients (networks, agencies, and advertisers) on a bimonthly basis, replacing discarded elements of the Trendex service (the top 10, the monthly pocketbook, etc.).

Considerably more than the number of viewers watching a given show is contained in the DTAR report. It includes such categories of information as "type of viewing home," "audience composition," "program selectivity," "audience composition of unanimous," "frequency of viewing," "reaction to program," "opinion as to future viewing of this program," "percent of respondents," "sponsor identification," and "uses or owns sponsor's product."

"This," Reilly notes, "will offer a truer evaluation of what people like and don't like. When a person watches a TV show it doesn't necessarily mean he favors it above the competitor's. So many factors enter into what a man or woman watches on TV.

"When children, for example, insist on watching a western what chance have the parents got of selecting their favorite program?

"What it all boils down," he added, "is that the events of the past months have underscored the fact that the television audience can no longer be measured sensibly in one dimension, that a better measure must be found to offer qualitative perspectives where previously there have been only quantitative ones."

In line with the expansion, Trendex is extending its survey wires to the west coast. Heretofore limited to 25 cities east of Denver, the research company has added 5 western cities to its list—Los Angeles, San Francisco-Oakland, Portland, Oreg., Seattle-Tacoma, and Spokane. It will still employ the telephone method of measurement, meaning 1,000 calls per half hour of TV.

For Trendex officials, the task at hand is to present its new prospectus to clients. "So far," says Reilly, "reaction has been good. Should we find strong resistence in the coming weeks, we may have to alter our plans, but I don't think this will happen. If the TV scandal did anything for the industry, it stressed the need for a greater knowledge of its audience."

Secretary Ezra Benson's Concern Is What Is Best for Agriculture

EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. ALLEN. Mr. Speaker, anyone who knows Ezra Benson knows him to be a gentleman endowed with great integrity. In my opinion and I am joined by millions of Americans he will properly be recorded in history as the greatest of our Secretaries of Agriculture; a credit to himself and a credit to the millions of American farmers whom he honestly and soundly represents.

Under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD an editorial taken from the Rockford Morning Star, Rockford, Ill., under date of February 21, 1960, entitled, "Based on Need."

The editorial follows:

BASED ON NEED

New farm legislation offered to Congress by Secretary of Agriculture Benson reflects his persistent refusal to permit political considerations to cloud his judgment. His concern is not for votes in this election year but what is best for agriculture. With the support of President Eisenhower, Benson is striving to reduce the surplus burden and restore the independence of the farmer.

The wheat bill he has submitted would greatly reduce price supports and eliminate production controls. It is a realistic measure that would work toward eventual elimination of the surplus glut that is making the farm problem increasingly critical.

The administration bill would gear price supports to market prices rather than the old parity formula. The measure would support grower prices of 1961, 1962, and 1963 wheat crops at 75 percent of the previous 3-year average market price. Under present law, supports cannot be less than 75 percent of parity.

After 1963, the bill provides, wheat support would be 90 percent of a 3-year average market price. The latter rate would be expected to work out at about the same level as the 1961–63 supports, because during this 3-year period market prices would be moving downward.

The administration feels that in order to cut back the wheat pileup effectively, it will be necessary to extend the soil-bank program 3 years and expand it from the present 28 to 60 million acres. The soil bank is good in principle, but it has not worked well in practice.

Benson's statesmanship is shown in his renewed request for higher interest rates on loans to the Rural Electrification Administration. For several years, Congress has turned a deaf ear to administration pleas that something be done about interest rates under the present loan-making operations of REA, which currently obtains money from the Federal Treasury to make long-term loans to co-ops.

The taxpayers have suffered because the Treasury has been making loan funds available to REA at an interest rate of 2 percent, while the Government has had to pay for its money at a considerably higher rate. Thus the Government is providing a subsidy for REA, which now is competing with private utilities in industrial and urban areas.

Secretary Benson stands out as a man of integrity who has far greater concern for the interest of the farmers and the national economy than the Democratic-controlled Congress, which is intent on playing politics with the farm problem.

The Case for the Wilderness Areas

EXTENSION OF REMARKS

OF

HON. GALE W. McGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, February 23, 1960

Mr. McGEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter entitled "The Case for the Wilderness Areas," written by Burton W. Marston, and published in the Laramie Daily Boomerang on February 6, 1960.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LETTERS TO THE EDITOR—THE CASE FOR THE WILDERNESS AREAS

(By Burton W. Marston)

The debate over proposals to set up a national policy affecting our wilderness area is now going into its fifth year in Congress and throughout our land. It is doubtful if any subject of legislation, particularly affecting the western regions of our country, has been of greater interest to the public in recent years. The battle over the wilderness proposals goes on through the local press, in conventions, board, committee, and commission meetings, through resolutions passed, in congressional committee meeting, and elsewhere. It has been a hot issue in the past terms of Congress and will undoubtedly be one of much concern in the present one.

As one who has spent a lifetime as a resident of Wyoming, the writer has visited most of the presently designated wilderness areas in the national forests of our State and, as a result, has a deep-seated appreciation and pride in them as part of our great public heritage. Being thus a believer in the idea of wilderness preservation and having given the matter some thought, the writer would like to review here the present proposed legislation in Congress and tell why he believes a bill incorporating the desirable features of such legislation should be passed.

The wilderness bill, as it is called, first appeared in 1957 in the form of measures introduced by Senator HUMPHREY and others. It was the basis of a series of public hearings held in four different locations in the West. Later that year a hearing was held in Salt Lake City, during which several thousand persons representing various shades of opinion for and against the legislation gave testimony.

As a result of these hearings and various proposed amendments, a new bill, known as S. 1123, was introduced in the Senate on February 9, 1959, by Senator HUMPHREY (for himself and 17 other Senators from States extending from coast to coast). It was referred to the Senate Committee on Interior

and Insular Affairs, of which Senator JAMES E. MURRAY of Montana is the chairman; our Wyoming Senator JOSEPH O'MAHONEY is a member.

The present bill has been in the hands of this committee since February of last year. It was to have been introduced in the Senate last summer, but, at the request of Senator O'MAHONEY, who was ill at the time and had not been able to to attend the meetings, its introduction was deferred until the second term of this Congress. At that time Senator MURRAY promised that the bill would be taken up as the first order of business with the committee at the beginning of the present term. It has not yet come up for consideration in the House.

As to the present form and status of this bill and because of the many changes that have been considered, it has been difficult for the layman to follow. The present bill has undergone a long list of amendments, some of which are of undoubted merit while others are probably designed to weaken the bill. We understand the committee is now considering what is termed as "Committee Print No. 2," the last in a long series of versions developed by proponents to meet criticisms and objections. Here in Wyoming lately we have been reading news dispatches from Senator O'MAHONEY's office in which he has raised objections to certain features of the bill, and of progress which he believes that he and others have made in clarifying the bill, making it more generally acceptable and more in keeping with congressional precepts. This, of course, is undoubtedly all to the good.

The bill as it now written (and also in its original form) states a positive national policy for wilderness preservation: "For the health, welfare, knowledge, and happiness of its citizens of present and future generations, particularly for those uses of such areas that facilitate recreation and the preservation and restoration of health." Under the policy thus stated in the bill the Congress "gives sanction to the continued preservation as wilderness of those areas federally owned or controlled that are within national parks, national forests, national wildlife refuges, or (certain) other public lands and that have so far retained under their Federal administration the principal attributes of their primeval character." It gives Congress the opportunity to review all existing areas before their formal inclusion in the wilderness system and to review additions to or eliminations from the system in the future.

To make clear what is meant by the term "wilderness," the bill gives a definition of the word: "A wilderness, in contrast with those areas where man and his own works dominate the landscape, is hereby recognized as an area where the earth and its community of life are untrammeled by man, where man himself is a visitor who does not remain."

Separate sections of the bill deal with the designation of wilderness areas in the national forests, the national parks and monuments, the national wildlife refuges, and other areas except the Indian reservations (this section in the original bill has been deleted.)

Insofar as the national forests are concerned, the bill indicates that the present areas within the forests classified as wilderness, wild, primitive, or roadless shall be used as the basis for study of proposed designated areas, and that the final designated areas must be of predominantly wilderness character.

In one of the section of the bill it is declared to be the policy of Congress to administer the national forests with the general objectives of multiple use and sustained yield, and "the Secretary of Agriculture is directed to administer the national forests on a multiple-use basis so that all the resources thereof, including recreational and wildlife habitat resources, will be used and developed to produce a sustained yield of products and services, for the benefit of all people of this and future generations."

In the procedures outlined in the bill for bringing national forest lands, national-park-system lands, national-wildlife-refuge lands, and Federal lands of other classes, public notice and public hearings are provided for. Deadlines are prescribed. Apparently final decisions in cases of protest would be made by the heads of agencies, reviewable by the courts only under extraordinary circumstances.

Also provided are procedures to accomplish later adjustments such as area additions and eliminations. Each of these, so far as new authority granted in the bill is concerned, would become effective only after a waiting period, during which Congress might adopt an opposing concurrent resolution.

Existing commercial uses (notably grazing) will still be permitted in these areas. In none, however, at the present time is lumbering permitted.

Contrary to statements that have been made by many stockmen and livestock associations, the measure specifically permits grazing of livestock on these areas; but it does prohibit use by commercial enterprises conflicting with wilderness purposes. Of special interest to miners is a provision that would allow prospecting and mining in a particular national forest wilderness area, along with water and related road projects, only if the President determines that such use will serve the public interest. Language aimed at preserving the existing State water rights in these areas has been clearly written into the bill.

The provision to establish a National Wilderness Preservation Council, which was the last section of the original bill, has been deleted. This was done because of the concern of the Departments of Interior and of Agriculture and of opponents that this would set up another agency which might create conflict of interests. In its present form the bill apparently meets with no objections from the Department of Interior or the Department of Agriculture. However, each of these departments has had long experience in the administration of wild and wilderness areas and probably feels that the traditional methods they have been following are satisfactory so far as they are concerned.

Wilderness areas already set up in our national forests in the United States now number 81—classified into wilderness, wild, primitive, and roadless—with a total area of about 13,860,000 acres. These occur on 73 national forests in 12 States, all of which are in the West except Minnesota and North Carolina. The areas comprise 8 percent of the total national-forest acreage. In Wyoming there are three wilderness areas comprising 1,429,600 and five primitive areas totaling 871,000 acres, all within the national forests. These comprise about 2 percent of the total land area of the State outside the Yellowstone and Teton National Parks and the Wind River Mountains Indian area. These wilderness areas are adjoining or contiguous to the national parks, along the Wind River range and one is in the suggested high Big Horn Mountains.

Everybody or Nobody

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. CANNON. Mr. Speaker, there has been considerable effort to explain the long and continuous drop on the stock market. Every effort has been made to halt the steady decline and stage a rally but in vain.

Below I am including a front page article from today's Wall Street Journal which explains it and with it the increase in unemployment and the general decline in business economy throughout the country:

RURAL RETRENCHING—FARMERS CUT PURCHASES OF EQUIPMENT AS DROP IN INCOME DEEPENS—DEALERS TRIM PRICES OF NEW AND USED EQUIPMENT, FEEL A PINCH ON THEIR PROFITS—A CURB ON AUTOS, APPLIANCES?

(By John F. Lawrence)

ESMOND, ILL.—Red-Cheeked Auctioneer Donald Whitman raps a fist against the side of an aluminum grain wagon and pleads hoarsely with the 50 farmers gathered at the Scott farm, some 80 miles west of Chicago.

"Come on, boys. Somebody start it. That wagon was bought new last summer for $120."

There was a shuffling of feet. No one makes a bid. The auctioneer asks twice more. Finally, a farmer offers $35 and the wagon eventually is knocked down for $72.

"Last winter that wagon would have brought at least $100," Mr. Whitman says. "Now it's tough even to get an offer. Farmers go up $1 at a time where a year ago the bids jumped $5."

The difficulty Mr. Whitman experienced in selling Scott's wagon points up a sharp downtrend in demand for tractors, implements, and other types of farm equipment. Not only are prices of used equipment off, but retail sales of new machinery are down sharply from a year ago. The slide has accelerated in recent weeks.

SIGNIFICANCE IS BROAD

Significance of this slowdown extends far beyond the farm machinery industry. Farm equipment is usually a reliable guide to rural spending generally, and farmers normally are big buyers of autos, appliances, and a host of other items. Over 20 million people live on farms. Rural buying is one of the weakest spots in the Nation's generally prosperous economy.

Factory sales of tractors, cornpickers, plows and other types of farm equipment climbed about 15 percent last year to over $1.8 billion, just short of the $1.9 billion record high reached in 1951 during the Korean war boom. But over two-thirds of the nearly two score farm machinery dealers, checked by the Wall Street Journal say sales thus far in 1960 are below the year before. The declines average around 50 percent but range as high as 80 percent. Five of seven major manufacturers polled said their own dealers' sales now are running below a year ago.

The decline in rural income which began early in 1959 is mainly responsible, farm equipment men say. Farm income hit an annual rate of $13.2 billion in the fourth

quarter of 1958, slipped to $12.5 billion in the initial 3 months of last year and, at last count, was down to a level of $9.5 billion in the quarter ended September 30. Farmers maintained their equipment buying at a high rate through the harvest period last year. But, as it has become increasingly apparent an upturn in income is not immediately in prospect, they have curtailed machinery purchases.

THE DEALER SALES TREND

The slide in farm machinery sales shows up most vividly at the dealer level.

"This is the worst start I've had in 19 years as a dealer," says Edward McGirr, a Massey-Ferguson, Ltd., farm machinery dealer in nearby De Kalb, Ill. "I've done only $5,000 in farm equipment business so far this year, under half what I'd done by this time a year ago." The De Kalb area is a top corn and hog producing and cattle fattening region.

"We didn't sell a single tractor last month and we've sold only one in February," reports Louis Freese, partner in a Monticello, Iowa, Ford farm equipment dealership. At this time last year the firm had sold five new tractors. Monticello is in the northeast corner of the State, also a heavy corn and hog raising region.

"We've sold only $22,000 worth of equipment in January—$8,000 less than a year ago," says Alfred Risinger, Allis-Chalmers Manufacturing Co. dealer located near Kansas City, in wheat raising country.

A Salinas, Calif., Deere & Co. outlet, in the lettuce raising region near the coast south of San Francisco, reports it sold only five tractors last month, down from seven in January a year ago.

MANUFACTURERS REPORT DECLINE

Most manufacturers keep close tabs on retail sales of International Harvester Co., Chicago; Deere & Co., Moline, Ill.; Minneapolis-Moline Co., Hopkins, Minn.; Oliver Corp., Chicago; and Ford Motor Co.'s tractor and implement division, Birmingham, Mich. All report their dealer volume since harvest time has lagged behind a year ago.

The sales picture at the factory level is mixed. Harvester is showing substantial gains in factory farm machinery sales compared with a year ago, but at that time volume was at a low ebb because a United Auto Workers strike halted output for 67 days in November, December, and January. Output of other firms was curtailed last fall because of shortages resulting from the steel strike. But the retail slowdown has started to show up in factory sales of some producers.

"Sales have been very slow," reports Merritt D. Hill, vice president and general manager of Ford's tractor and implement division. Latest figures show the fourth quarter about 20 percent below a year ago, he says. Dealers have about 15 percent more unsold tractors in their showrooms now than in 1959, he adds. So they'll probably order less in the weeks ahead.

January sales of Deere & Co. trailed far enough behind last year to erase a 7-percent increase in volume registered in November and December, the first 2 months of the company's fiscal year, says Ed W. Ukkelberg, sales manager.

Farm equipment retailers have been taking double punishment. Not only are sales down, but profits on this smaller volume are slimmer.

"Deals sure are harder to make," complains Paul Lewis, Humbolt, Nebr., Oliver dealer. "We've always tried to keep a 13-percent profit margin. So far this year we've barely averaged 10 percent."

"I don't think there's an item in our line on which we haven't cut the price," says a Deere dealer located near Waterloo, Iowa. He's selling a four-row cultivator, used to prepare the ground for planting, for $675. It's supposed to bring $750. "A year ago I seldom made a deal on which I didn't get the $750," he continues. In contrast to lower prices at retail, manufacturers' prices are about 2 percent higher.

"We're allowing about 7 percent more on trade-ins compared with last year; we've got to do it or we lose volume," says R. M. Kennon, Tifton, Ga., dealer, whose sales so far have held about even with last year's pace.

Auction sales, like the one here in Esmond, reflect farmers' hesitancy toward buying. During the winter months many auctions are held in the barnyards of farmers who've decided to quit and get rid of their machinery. L. F. Wessel, Ft. Dodge, Iowa, auctioneer, calculates tractors 10 to 15 years old now bring as little as $850 and no more than $1,100. As recently as December they sold in a range of $1,000 to $1,250, about equal to a year ago, he reports.

At Yoder & Frey, an Archbold, Ohio, firm that holds big auctions of farm equipment every month, bidding has become so slow many machines simply aren't being sold. Of 350 tractors on the block at a recent auction, 4 of 10 were unsold, reports Timothy Yoder, vice president. At January and February sales last year there were half that many left behind when folks headed home. Both dealers and individual farmers patronize the Yoder & Frey auction.

LESS MONEY TO SPEND

Most dealers figure farmers just have less money to spend than they did a few months ago—or fear they will have less money soon.

"The farmer plans what he spends this year largely on the basis of what he made last year," contends E. A. Mohr, Allerton, Ill., John Deere dealer.

"Lower prices for corn, beans, wheat and livestock are cutting my sales," says G. H. Andrews, Macon, Mo., Allis-Chalmers dealer. "The price situation has scared the heck out of farmers who have money and just made matters worse for those that don't."

Comments George P. Hinds, who sells Minneapolis-Moline equipment in Greenfield, Ind.: "With incomes cut, many farmers around here can't pay equipment repair bills from last year, let alone buy new equipment."

Many dealers report an increase in the number of missed payments on equipment bought previously on installment plans. "About 50 of our customers have come in this winter and asked for extra time on payments coming due," says Martin H. Veatch, International Harvester dealer in Crawfordsville, Ind. "Last year nearly every payment was made on time."

"We have about a dozen back bills now against almost none a year ago," reports Maynard Meyer, J. I. Case dealer in Ridgeville Corners, Ohio, at the eastern edge of the Corn Belt. "Farmers with back bills are dead prospects for sales," he asserts.

Reports Oliver Corp.'s sales vice president, D. W. Koegle: "We began to see a slowing down in dealers' payments to us in early fall. Our receivables currently are about $50 million, up 8 percent from a year ago. We made a study 10 days ago and found the reason is farmers aren't paying the dealers."

The decline in farm income has been sharpest in the Corn Belt. This major cattle-fattening and hog-raising country has suffered from the big drop in livestock prices. Compounding the situation has been unusually damp weather. This has left some corn harvested last fall so moist it would spoil if placed in closed storage. The Federal Government won't give support loans on the high-moisture corn until the grain dries. So many farmers are long on corn and short on cash.

Tight money and higher interest rates are also hurting equipment sales. With thinner pocketbooks and bills to pay, farmers are likely to seek a loan at the local bank to tide them over. "The banks definitely are being a lot more particular than they were early last year," says Auctioneer Wessel, at Fort Dodge.

Mr. Speaker, summing up the situation, this is only one of many instances in which the efforts of the rest of the country to live at the expense of the farmer has proven futile.

The farmer works longer hours and is feeding the country—both in variety and quality—better than ever before, and in return for that service is receiving less than any other worker in America.

Mr. Speaker, the American farmer cannot subsidize the rest of the country by feeding it at less than the cost of production—indefinitely.

Either include the farmer in the Nation's prosperity or take the consequences.

International Development Association

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Tuesday, February 23, 1960

Mr. GORE. Mr. President, since World Bank directors on February 1 agreed upon a charter for the International Development Association and sent it to member governments for approval, there has been a great deal of favorable comment on the new lending organization, which the Senate, in passing a resolution by Senator MONRONEY, first urged the administration to study in 1958.

Last week President Eisenhower sent to the Congress the articles of agreement for the establishment of the International Development Association, and recommended legislation authorizing U.S. membership in the Association and providing for payment of the subscription articles prescribed in the articles of agreement, prepared by directors of the World Bank. Although IDA's supporters had hoped for a larger capital investment, available more quickly, I hope the Congress will quickly approve the legislation which was offered last week by the chairman of the Foreign Relations Committee.

The establishment of this "poor man's world bank" has won wide support from the press. I have seen only one critical editorial. In general, the reaction has been favorable, whether from interested citizens eager to find a better way to meet some of the world's unmet development needs, or from intellectuals who have spent years studying the situation.

I ask unanimous consent to have printed in the Appendix of the RECORD a few of the editorials.

An editorial from the Tulsa (Okla.) Tribune of February 4, 1960.

A news story by David Corbett in the same newspaper on February 1, 1960.

An editorial from the Washington Post, February 2, 1960.

An editorial from the New York Times, February 3, 1960.

An editorial from the Washington Evening Star, February 7, 1960.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the Tulsa (Okla.) Tribune, Feb. 4, 1960]

OKLAHOMA HORSESENSE

WASHINGTON.—Here, sitting on a hill, are 537 men, some ordinary and some extraordinary, grappling daily with a range of problems that would make an oracle gasp.

Every day they are assailed by the ifs and buts of intellectual nicety, the equations of erudite confusion and the abstractions of experts. It is a miracle that anything is achieved.

And yet, from this hill come decisions which more often than not make sense. For when you get through the maze the experts make you invariably find, as Oklahoma Senator MIKE MONRONEY sagely remarked this week, that two and two still makes four.

This is not a remarkable thought, but it is a remarkable fact. Senator MONRONEY could tell you.

For the past 2 years he has been embroiled in a theory—his own theory—of international finance so complex that it would make most ordinary men despair. But he had an unswerving conviction which enabled him to win for it, this week, the endorsement of the World Bank and the support of economists, diplomats, bankers, statisticians, and sundry other experts around the world.

His brainchild is the International Development Association, which the World Bank chartered this week.

At first the experts were supspicious. They examined IDA microscopically; they worried out every flaw and followed through every ramification. But IDA survived, because it had what in Oklahoma is called horsesense.

The horsesense of it was this:

For years Uncle Sam has been doling out foreign aid money to needy nations to lift them out of poverty and keep them from falling into Communist clutches. Too often, the gifts have yielded neither gratitude nor good will, for no nation enjoys being a charity case. It offends the sense of national pride.

But, reasoned the Senator, give the needy nations a self-respecting business deal and they will love us for it. Loan them money at interest rates they can afford and they will manage for themselves better than we can manage for them. And as much less cost to the American taxpayer.

That was MONRONEY'S idea. But where would the cheap money come from?

He hit on the notion of putting to use the "soft" currency which the United States and other hard-currency nations have received from needy nations in return for such assistance as surplus crop shipments. This money is not easy for a hard-currency nation such as the United States to put to use.

The experts loved this Oklahoma-born brainwaive. They saw in it a way of spreading Uncle Sam's foreign aid burden among such newly-rich nations as Germany and Japan. The New York Times this week called IDA "an oasis in a desert of new ideas."

Of course, Senator MONRONEY is no plowboy in international fields. He studied economics at the University of Oklahoma and he has served on the banking and currency committees of Congress for years.

But we like to think that the thing which carried this idea through was plain old Oklahoma horsesense. That, and the persistence of an ordinary man who kept demanding of the experts: "Tell me why it won't work."

That's the stuff of democracy.

[From the Tulsa Tribune, Feb. 1, 1960]

ONE BILLION DOLLARS IN LOANS NEARER—MIKE'S PLAN FOR NEEDY NATIONS RELIEF BOOSTED

(By David Corbett)

WASHINGTON, February 1.—Oklahoma Senator A. S. MIKE MONRONEY'S dream of helping needy nations to help themselves, rather than perpetually subsidizing them with gifts of American money, reached the threshold of reality today. It happened with the announcement by the World Bank of a $1 billion charter for the International Development Association, which he first envisioned and propounded in 1958.

The IDA's purpose is to provide money—$1 billion initially—for low-interest loans to needy countries, on the theory that what both they and the U.S. taxpayer prefer is a self-respecting business deal, rather than a handout.

The key to the plan is that many of the loans can be in the form of so-called soft currencies, which the United States in particular has accumulated from poorer nations in payment for the U.S. surplus crop shipments.

These are currencies which it is sometimes difficult for a hard currency area such as the United States to put to use.

Under the charter, IDA can open for business September 15, but only if at least 45 of the 68 World Bank member nations approve.

The initial $1 billion kitty is made up as follows: United States, $320 million; Great Britain, $131 million; France and Germany, $53 million each; India, $40 million; Canada, $37 million; Japan, $33 million.

One of the major advantages of IDA is that it helps spread the foreign-aid burden which America has been bearing virtually alone. Germany and Japan, arisen from the ashes of defeat to a new-found prosperity, now are in a position to help other nations.

The need for a loan rather than a gift program was first brought home to Senator MONRONEY in 1956 on a visit to Thailand. There he saw two major projects under construction.

The first, of which the Thai were tremendously proud, was an irrigation dam built with an $18 million loan from the World Bank. It has increased rice production enormously and the Thai displayed it with great glee to foreign visitors.

The second project, about which the Thais were somewhat politically embarrassed, was a 148-kilometer section of the northeast highway. It was made with American equipment and American money. Twenty-one million dollars of the cost was borne by the American taxpayer and only $1 million by the Thais themselves.

The outright gift seemed to offend their sense of pride when compared with the irrigation achievement.

From that incident the IDA took shape in the Oklahoma Senator's mind. As an economic student at the University of Oklahoma, he had had some basic acquaintance with the theories of finance. But his real education on the subject was during his 12 years with the Banking and Currency Committee of the House of Representatives and 4 years on the same committee of the Senate.

He helped floor manage the bill creating the International Monetary Fund and World Bank and was on the Herter committee that worked out the details of the Marshall plan.

The Marshall plan was a great device for helping postwar Europe back onto its feet, but it didn't fit the needs of poverty-stricken Asia. Europe had the business know-how and much of the equipment; Asia had neither plant nor know-how.

It was the problem of what he describes as "fitting the size 12 Marshall plan shoe onto the size 6 Asian foot" that led him into the present plan.

The day he introduced his IDA bill in Congress in February 1958 it seemed, he recalls, "as if every embassy in Washington wanted an appointment."

They were enthused at the prospects and its implications.

Since then the Oklahoma Senator has been deeply involved in the problems of international finance. He concedes that sometimes he has felt lost in the maze he has gotten himself into; but invariably, he says, he has found that commonsense still makes "two and two add up to four."

Today Senator MONRONEY expressed gratification that the plan, which President Eisenhower's administration has borne along to success, has been acted upon so speedily by the Directors of the World Bank.

"I am greatly encouraged that the Directors were able to resolve conflicting points of view among various countries without compromising any of the basic purposes which led me to advocate creation of IDA," he said.

[From the Washington Post, Feb. 2, 1960]

A BEGINNING

Member nations of the World Bank ought to lose no time in approving the charter of the Bank's new soft-loan subsidiary, the International Development Association. The intial capitalization of $1 billion, with about four-fifths of it in hard currencies, will support a lending program of only some $160 million a year to underdeveloped nations. Obviously this will need to be expanded before IDA can take on a truly significant share of the economic development task.

India alone, for example, will require several times as much assistance annually if it is to break the tightening grip of poverty. Thus the industrial countries cannot view their IDA subscriptions as alternatives to continuing national programs, at least until the IDA's sights are materially lifted. Nor should there be any illusion that the subscription of soft currencies by countries which have acquired large amounts will significantly lessen the need for hard capital in the early stages.

With the experience and integrity of the World Bank behind it, IDA ought in time to attract a growing proportion of the industrial nations' foreign economic assistance funds. Through such a multilateral approach, the broadest possible participation would be assured, while the political and other inhibitions that often attach to strictly bilateral aid programs could be avoided. Ultimately, this new "window" at the Bank could become the focal point for a mighty free-world effort to bridge the gap between the "haves" and the "have nots," to which the latter could in time make their own growing contribution.

[From the New York Times, Feb. 3, 1960]

THE IDA

The World Bank has just completed the articles of agreement for the proposed International Development Association. This plan, it will be recalled, originated in the United States and follows lines first proposed by Senator A. S. MIKE MONRONEY of Oklahoma. The plan was approved here last fall by representatives of the 68 nations that are members of the World Bank (International Bank for Reconstruction and Development).

In keeping with the spirit of the World Bank, all member countries will be asked to contribute to the initial capital of $1

billion. However, since this new adjunct to the World Bank would emphasize assistance to the underdeveloped nations, which have limited access to hard currencies, most of the hard currency of just under $800 million will be provided by 17 of the industrial member nations. The United States, as one of them, will contribute $320 million of this.

The absolute dollar total of the contribution in immediate sight for the proposed new institution is a good deal less than staggering. Not only is the amount of capital called for of moderate proportions, but subscriptions will be spread out over a period of 5 years. This means that lendable funds available the first year will be only $160 million. The association is designed to provide "soft loans," which means loans issued on terms that could not be granted to ordinary borrowers from the International Bank, since the latter raises most of the funds by selling its own securities in the world capital markets.

Perhaps the chief significance of the proposed new institution is that it recognized so far as it goes, the need for a reorientation of the pattern of international aid to conditions of 1960, rather than those of the fifties, when, in a world that had not fully recovered from World War II, the United States carried a greatly disproportionate share of the burden. Not the least important aspect of the association is the virtual certainly that the funds it dispenses will achieve the maximum results. This is insured, it seems to us, by the fact that they will be administered by President Eugene R. Black and his colleagues on the Board of the World Bank.

[From the Washington Evening Star, Feb. 7, 1960]

PROMISING VENTURE

The World Bank, whose more formal title is the International Bank for Reconstruction and Development, now has cleared the way for a new lending institution well designed to speed up economic progress in needy nations throughout the globe.

As explained by the Bank, the projected agency—once it becomes an operating reality—will make it easier for all such nations to borrow the money they must have to undertake a wide variety of building programs that cannot now be readily financed. Thus the agency, which is to be known as the International Development Association, is designed to begin its operations with a fund of $1 billion (in both hard and soft currencies) that will be made available for long-term loans on the most relaxed sort of terms.

Such loans, for example, even when made in dollars or other hard currencies, will not have to be repaid in kind. Soft currency will suffice, and the repayment itself will be postponable indefinitely in certain instances. Moreover, some of these loans will carry no interest charges, and they will be available for projects like housing, sanitation, and water-supply development—projects which produce no revenue or which are not self-liquidating, and which the World Bank, whose lending operations are strictly confined to undertakings that pay for themselves, is not allowed to finance.

To make this new institution a going concern, the United States, given congressional approval, will contribute $320 million over a 5-year period. Britain's contribution will be a bit more than $131 million, and West Germany and France will each put up close to $53 million. The balance of the $1 billion basic fund will come from the World Bank's other members, including the underdeveloped countries, whose investment in the enterprise will be made up largely of their own soft currencies, though they will also put in a small percentage of their gold or convertible money.

Secretary of the Treasury Anderson and Democratic Senator MONRONEY, who first proposed the idea, have both hailed this prospective setup as a highly promising venture, and with good reason. For there can be little doubt that it will be of real help to the underdeveloped nations if it is put to work with vigor and imagination.

Pamphlet Called Awful Offense

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mrs. GRIFFITHS. Mr. Speaker, I would like to insert for the RECORD the following article which appeared in the Washington Post on February 20, 1960. The article is entitled "Manual of Shame" and was written by Roscoe Drummond:

PAMPHLET CALLED AWFUL OFFENSE

The U.S. Air Force has committed an awful offense against the United States. It did so by allowing one of its training manuals for reserves to be used to try to smear the Protestant churches with undocumented, unproved, false charges that the clergy are knee-deep with Communists and fellow travelers.

It seems to me that the National Council of Churches is absolutely right in rejecting as inadequate any pro forma Defense Department action which does not go way beyond just saying, in effect: "Oops, too bad. We'll throw them away and promise not to do it again."

This is an evil, pernicious, dangerous thing which some officers in the Air Force contrived to get into an Air Force manual. The churchmen not only have a right but a duty to insist that how it happened be investigated to the bottom and that the Pentagon demonstrate that it is taking measures equal to the offense and equal to guaranteeing that it won't be repeated.

Secretary of Defense Thomas Gates and Air Force Secretary Dudley Sharp have, of course, instantly repudiated the poisonous, pernicious accusations and innuendoes contained in the military manual. They could hardly do less. It is only fair to say that if they had been consulted the stuff would never have appeared.

What Secretaries Gates and Sharp repudiated was:

The charge that "Communists and Communist fellow travelers have successfully infiltrated our churches."

The accusation that pastors of certain (unnamed) churches "are card-carrying Communists."

The bland observation that any idea that "Americans have a right to know what is going on" is "foolish."

The suggestion that the Air Force Reserves should "keep an eye on anybody" who disagrees seriously with "Air Force policies."

The innuendo that the National Council of Churches must be Communist ridden because some of its leaders helped to bring out the "Revised Version of the Holy Bible."

All this is sickeningly reminiscent of the notorious charges against the Protestant clergy which J. B. Matthews made in the American Mercury magazine in July 1953, when he was serving as research director for the McCarthy committee. On that occasion Mr. Matthews let go with a blast which charged that the "largest single group supporting the Communist apparatus in the United States is composed of Protestant clergymen." He tossed out 7,000 as a nice round number. Senator McCarthy fired him.

To make blanket, meat ax, guilt by association accusations against any group is a mean and evil thing. To let some people, whoever they are, infiltrate a Government military manual with such charges is meaner and more evil.

The charges are false.

The House Committee on Un-American Activities, which has never been one to understate the Communist problem, issued this finding after investigation:

"A minute number of case-hardened Communists and Communist sympathizers have actually infiltrated themselves into the ranks of the loyal clergy. * * * Only a very small number of clergymen in the United States have been fellow travelers. * * * The members of the clergy who have associated with Communist causes is a minute percentage of the hundreds of thousands of loyal, patriotic men of the cloth."

I think we can count on Secretaries Gates and Sharp to go the full distance to deal with this egregious misuse of an Air Force manual. The admission of an awful mistake is the beginning, not the end, of reform.

What is needed is to find out who wrote this stuff, who had anything to do with clearing it at every level, where it was distributed and assurance it won't happen again.

The National Council of Churches ought not to let go of this thing until it is thoroughly aired and cleaned up.

If the Pentagon can't do it—and fast—we can be sure that Congress will. And should.

Admiral Nimitz Calls Joint Chiefs of Staff Workable

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include an article from the Washington Post of Sunday, February 21, 1960, entitled "Nimitz, 75, Calls JCS Workable." I solicit the careful consideration by all of the Members of the sage views of our greatest admiral.

Incidentally, Seaman Fred Hagner of San Antonio, Tex., the bluejacket who made the sundial that keeps time to the minute, is my old and good friend and he still lives in San Antonio. From a bluejacket, he went on to become the greatest inventor of navigational instruments our country has produced. His inventions have revolutionized the science of navigation.

The article follows:

NIMITZ, 75, CALLS JCS WORKABLE

(By Robert Eunson)

BERKELEY, CALIF.—The Joint Chiefs of Staff setup "has not proved effective," Admiral of the Fleet Chester W. Nimitz feels, "because various Secretaries of Defense have not functioned in the manner contemplated by the National Defense Act."

However, the silvery haired sea dog who commanded the most powerful naval force

in the world's history doesn't believe that the Joint Chiefs should be scrapped and the services merged.

"You would have the problem of the man on the horse," Nimitz says, "an all-powerful fellow with a budget of $40 billion a year. I don't say it would happen here, but it could. A man on horseback can always become a dictator."

In a prebirthday interview at his home in the Berkeley hills, Nimitz, who will be 75 Wednesday, sailed full steam ahead into the most controversial topics of the day.

He firmly believes that Defense Secretary Thomas Gates can and will make the Joint Chiefs function properly.

"The principal criticism of the JCS," Nimitz said, "has been that service jealousies prevent the Joint Chiefs from making a decision. The Security Act set up a Secretary of Defense who would be the source of decisions when the Joint Chiefs couldn't agree.

"Their not being able to agree is not an unhealthy state of affairs, because it employs the various points of view from responsible people. The National Security Act foresaw these situations and set up the Secretary of Defense to make decisions.

"Up to date," he said, "it has not proved effective because various Secretaries of Defense have not functioned in the manner contemplated by the act. Now Gates has proposed a new scheme for carrying out his responsibilities which I think is very sound and workable.

"That is, when important matters arise, the Secretary of Defense will join the JCS and decide small points as they arise, so the members can't reach a position from which they cannot retreat."

Question. Such as Taylor?

Answer. Yes.

(Gen. Maxwell B. Taylor resigned last year as Army Chief of Staff. He contends that the Joint Chiefs setup has failed and should be scrapped.)

"I don't agree with Taylor in scrapping the JCS," Nimitz said, "because the resulting organization would be so large it would be impossible to find a man properly qualified to handle it. It takes each Secretary (of Defense) years to know precisely what is going on."

Nimitz was wearing a green jacket, green tie, and gray flannels. We were sitting in a small office off his living room.

The walls were covered with photographs, most prominent of which was a picture of Nimitz accepting the Japanese surrender aboard the battleship *Missouri* in Tokyo Bay. On a stand nearby was a bust of John Paul Jones.

Nimitz has quit smoking, but he still drinks Navy coffee. It would be better to call it "Nimitz" coffee, because he buys the beans and grinds them himself—one-third Italian and two-thirds American.

There was a "pot brewing" he said, so, "let's go out in the kitchen."

Mrs. Nimitz was sitting on a stool at the sink, preparing string beans. The Treasure Island Naval Base loomed from the fog on San Francisco Bay below us.

"These are nice green beans," she said, "but they're almost too thin to slice."

He handed me a cup with five stars and his name painted on the side. "A bluejacket made that for me," he said as we sat down in the breakfast nook. The coffee curled my toes, but I managed to squeak another question:

"Do you feel that this is the most dangerous period in our history?"

"Any country that reaches the top of the heap in world power and wealth is always the target for less powerful nations," he replied. "That was true in the past and will be true in the future."

"Threats come from different directions. The present threat appears to be about as serious as any we ever had. To that extent, I'll agree with General Taylor."

What of the Navy's future in the missile age?

"The Navy has played an important part in this country from the beginning. In fact, it was seapower from a navy, not the Continental Navy, but that of France, which forced the surrender of Cornwallis at Yorktown and brought the Revolution to a successful end."

The conversation turned to the finger missing from the admiral's left hand.

"I built the biggest diesel engine in the Navy in 1916," Nimitz explained. "It was for the oil tanker *Maumee* at New York Navy Yard. I had a canvas glove on and the glove got caught some way and the machine smashed my finger up to the last knuckle. My Annapolis class ring saved that much of my finger."

Another accident in Nimitz' career resulted in a court-martial, a story which has been kicked around a good deal in Navy clubs from Norfolk to Pearl.

"When I was Chief of Naval Operations and Mr. (the late James Vincent) Forrestal was Secretary of the Navy, we had a court-martial and a captain was reduced in numbers," Nimitz said. "The press was pretty indignant and at a news conference demanded to know if any officer who had been convicted by a court-martial ever rose to flag rank.

"'I don't know,' Forrestal said. 'How about you, Chet? You know of any?'

"'You're looking at one,' I said. 'Me.'"

Nimitz chuckled and took another belt of coffee.

"In 1907 I was an ensign in command of a destroyer, the U.S.S. *Decatur*. On a dark night I ran it onto a mud bank in Manila Bay.

"It was dark. I didn't know we were in the mud. Anyway, there was a court-martial and the committee decided on a reprimand."

At 75, Nimitz still rises early, about 6:30 a.m., and makes the coffee. He likes to walk and pitch horseshoes. He and Mrs. Nimitz are busy raising money right now to help the financially ailing San Francisco Symphony. They go to a movie occasionally and often enjoy their evening meal at the Faculty Club of the nearby University of California.

When it was time to go, we walked out into the yard.

"If the sun were shining," he said, leading the way to a marble stand, "I'd show you a sun dial that keeps time to the minute. A bluejacket made it for me."

Did he remember the name?

"Why, yes. He was Seaman Fred Hagner, of San Antonio, Tex. We shipped together the first time I went to sea. That was in 1905, right down here in San Francisco Bay."

A National Lottery

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. FINO. Mr. Speaker, there was a time when horseracing was considered the sport of kings because it provided for their amusement and helped to breed better horses.

But, that was a long time ago. As horseracing grew in popularity, betting became more and more general among people. Today, horseracing is no longer the sport of kings for amusement but the sport of Governors for revenue—it is no longer used to breed better horses but to improve State treasuries.

In other words, Mr. Speaker, because horseracing today is a lucrative business, many of our States are taking full advantage of and capitalizing on the natural gambling urge of the American people. Throughout this Nation, State racing commissions have been lengthening their racing seasons and enlarging their daily racing cards not for the amusement of the public but because it brings more and more money into the State coffers.

Mr. Speaker, New Jersey is the latest State to become concerned over the track tax competition from neighboring States. The Governor of New Jersey admits that the revenue is essential to balancing his State budget and has proposed "suitable action to protect its racing revenue against the possibility of a decline."

Mr. Speaker, all of this competition for more horseracing time means not only a recognition of the fact that the urge to gamble is deeply ingrained in human beings but that a tax on this gambling activity produces a great revenue.

Yet, in spite of this competitive movement among the States, we, in Congress, continue to keep our eyes closed and ignore the obvious, we refuse to accept the glaring fact that the desire to gamble is not confined to racetracks only.

Mr. Speaker, if this Congress would only remove the blinders, it would discover that a national lottery could easily satisfy the natural gambling spirit of the American people and, at the same time, pump into the U.S. Treasury $10 billion a year in additional income. This added revenue would mean a tax cut for the hard-press wage earners and a reduction in our growing national debt.

Let us get smart and also compete for this gambling revenue which the States now enjoy alone.

He Helped Washington

EXTENSION OF REMARKS

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in tribute to the renowned Revolutionary War hero, Gen. Thaddeus Kosciusko, I include in the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Evening Herald, of Shenandoah, Pa., on February 10 as follows:

HE HELPED WASHINGTON

A valiant defender of liberty's cause and one of our renowned Revolutionary War heroes was Gen. Thaddeus Kosciusko. For

a time he served as General Washington's aide-de-camp and also as adjutant. As a topflight engineer, his contributions in the service of the Continental Army were of major proportions.

General Kosciusko was responsible for the fortifications of the Delaware River, those at Saratoga and also at West Point. He was among the first of the Continentals to enter Charleston, S.C., after its evacuation by the British. His brigadier's commission from the Continental Congress dates from October 13, 1783.

After the American independence was won, this talented soldier returned to Poland and sought without success to reestablish that country's freedom. He died in exile in Switzerland in 1817.

Both Poles and Lithuanians claim Kosciusko and, as a point of information, both are technically correct. His own will made in Paris, June 28, 1806, starts out thusly:

"Know all men by these presents that I, Thaedo Kosciusko, formerly an officer of the United States of America in their Revolutionary War against Great Britain, and a native of Lithuania in Poland * * *." The explanation is that the grand duchy of Lithuania was, at the time of his birth, embraced in the Kingdom of Poland.

February 12 marks the 214th anniversary of the birthday of General Kosciusko. Like Abraham Lincoln, whose birth date he shares, he was opposed to slavery.

All Americans can be proud of this great patriot; we remain in his debt.

Lippmann's Utopia

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. MUMMA. Mr. Speaker, in the current controversy being waged on who is right when it come to matters of running the Federal Government, national security and the like, we hear many comments being made by many people on what we ought to do.

The Chicago Daily Tribune of February 19, 1960, editorialized on "Lippmann's Utopia" as they put it, where he expressed himself as an expert on all these things being discussed.

You know, for myself, I am willing to take the President's word. In my mind, he knows as much about these things as the top minds in the country, if not more. Above all, he has a direct pipeline to the people who are supposed to know and he does not need to get his information secondhand.

Mr. Speaker, the editorial referred to is as follows:

LIPPMANN'S UTOPIA

Walter Lippmann, 70, has come to the conclusion that President Dwight Eisenhower, 69, is talking like a tired old man who has lost touch with the springs of our national vitality. The corollary apparently would be that Lippmann is a Ponce de Leon who has discovered the fountain of youth. And guess where he has located it? In your wallet.

This canned brain, in his most pretentious manner, discusses the President's observations at his news conference of February 3. Mr. Eisenhower was then asked whether, in the face of Soviet boasts to superiority in space, rate of economic growth, development of engineers, etc., there was not a risk that Americans might develop a dangerous frame of mind which would reconcile them to being second best.

The President replied that there was no defeatism in his soul. He said that dictatorships, such as Hitler's, can put up an appearance of efficiency. But he pointed to the loss of values which are inevitably sacrificed when a people are regimented and put under forced draft to reach designated goals.

Certainly, said Mr. Eisenhower, we could go into a garrison state, too, and get all steamed up, as if we were actually at war. But would that be consonant with our free system, dedicated to individual freedoms and rights? The President thought not. He also thought that this system in the long run produces more happiness, more satisfaction, more pride in ourselves, and more goods and more wealth.

For all these reasons, Mr. Eisenhower felt, we should treasure our own system and have greater faith in it. The President also expressed impatience with those with a parochial viewpoint who are always bellyaching. We should imagine that Lippmann, though not numbered among the generals Mr. Eisenhower was specifically discussing, might fall into this category.

Now, our reading of Mr. Eisenhower's remarks would lead us to conclude that, far from being tired and a defeatist, they more nearly correspond to a ringing affirmation of faith in his country, its ideals, and its enduring liberty.

But this does not suit Mr. Lippmann. He has a fixed idea: no matter how much Government spends and does, it should spend and do more. He regards it as a personal affront that people are living reasonably well and that they manage to keep something from the tax collector. He fumes at the President:

"It is he who is saying that with a $500 billion economy the American Nation will lose its freedom if it devotes to public purposes a somewhat larger share than it does today."

We have seen it said that when all taxes—Federal, State, and local—are counted, they are taking 41 percent of national earnings, and that, to meet the Federal spending bill of almost $80 billion, every American worker gives 2 hours and 16 minutes of each 8 hour day to State and Federal laws. How much more does Lippmann think ought to be squeezed out?

"In that struggle (with communism)," he says, "we shall surely lose if we tell the world that, though we have the richest economy in all history, our liberal system is such that we cannot afford a sure defense and adequate provision for the civil needs of our people."

So the prescription is more taxes and more spending—for missiles, for space rockets, for schools, for public housing, for all the gadgets of the welfare state. Mr. Lippmann has a touching faith in the ability of Government to wave the wand and make everything come out exactly right. He is tart with those who do not regard the Government as "an indispensable good" rather than as "a necessary evil."

Just take a swig of old Doc Lippmann's Ponce de Leon water and everything will be OK, even if in the end you find yourself floating in his copyrighted fountain of youth clothed in a barrel, the indispensably good burocracy having relieved you, with his assistance, of everything else.

American Bar Association Tax Recommendations

EXTENSION OF REMARKS
OF
HON. WILBUR D. MILLS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. MILLS. Mr. Speaker, at the request of the American Bar Association I have today joined with my distinguished committee colleague from Illinois [Mr. MASON] in cosponsoring legislation embodying the recommendations of the American Bar Association with respect to amendments to the Internal Revenue Code. These bills are H.R. 10591 and H.R. 10592 and have been introduced by us as chairman and ranking minority member of the House Committee on Ways and Means.

Our purpose in introducing these bills is to make them publicly available to interested persons, including the many thousands of lawyers, accountants, and other citizens throughout the country who have particular occasion to study our internal revenue laws.

As many Members are no doubt aware, the section on taxation of the American Bar Association has spent a great deal of time and effort in studying the existing internal revenue laws. That group is to be commended on the work it has done in drafting these legislative recommendations for study by the Congress and the public. It should be understood, of course, that in introducing these bills neither Mr. MASON nor myself has had opportunity to give consideration to these recommendations at this time. The introduction of these bills now is undertaken merely to facilitate public study of them.

In addition to the preparation of the legislation, the American Bar Association has prepared a comprehensive analysis and explanation of each section and provision contained in this bill. So that this document may also be made available to the interested public, I include it in the RECORD following my remarks. I have received an estimate from the Public Printer of $1,255.50 for the cost of printing the estimated 15½ pages which will be required. It is worth the cost, however, to make this explanatory document widely available to all of the many interested individuals, groups, and organizations throughout the Nation.

The recommendations follow:

EXPLANATION OF H.R. 10591 AND H.R. 10592

CONTENTS

Sec. 1. Amendment of 1954 code; effective date.
Sec. 2. Alimony and separate maintenance payments.
Sec. 3. Computation of employees' contributions for retirement benefits.
Sec. 4. Transfers of life insurance contracts for valuable consideration.
Sec. 5. Deduction of employee contributions under disability benefit plans.
Sec. 6. Losses on securities in affiliated corporations.
Sec. 7. Demolition loss.

Sec. 8. Carryovers of excess charitable contributions.
Sec. 9. Net operating loss deduction.
Sec. 10. Expenses concerning legislation.
Sec. 11. Deduction for certain title expenditures.
Sec. 12. Expenses of estate planning.
Sec. 13. Elimination of limitation on deductions for dividends received by corporations.
Sec. 14. Amortization of organization, reorganization and stock issuance expenditures of corporations.
Sec. 15. Transactions between related taxpayers.
Sec. 16. Attribution rules for disallowances in transactions between related taxpayers.
Sec. 17. Distributions of property by corporations.
Sec. 18. Corporate obligations held by shareholders.
Sec. 19. Constructive ownership of stock.
Sec. 20. Involuntary conversions in section 337 liquidations.
Sec. 21. Liquidation trusts or agencies in section 337 liquidations.
Sec. 22. Successive liquidations of controlled corporations in section 337 liquidations.
Sec. 23. Exclusion from dividend carryover in complete liquidations of subsidiaries.
Sec. 24. Retroactive amendment of stock bonus, pension, or profit-sharing plans.
Sec. 25. Treatment of distributions under stock bonus, pension, or profit-sharing plans made from accumulations during periods of qualification.
Sec. 26. Employer contributions under unqualified deferred compensation plans.
Sec. 27. Organizations engaged in more than one exempt activity.
Sec. 28. Denial of exemption to otherwise exempt organizations.
Sec. 29. Taxation of unrelated business income of certain religious organizations.
Sec. 30. Burden of proof rule in accumulated earnings tax proceedings.
Sec. 31. Amounts distributed or credited by estates and trusts to charitable beneficiaries.
Sec. 32. Capital gains and losses of estates and trusts allocated to corpus.
Sec. 33. Charges allocable to corpus of estate or trust.
Sec. 34. Effect of local probate law on income tax of estates.
Sec. 35. Guaranteed payments from partnership to partner.
Sec. 36. Deduction of organizational expenses of partnership.
Sec. 37 Closing of taxable year of partnership on death of partner.
Sec. 38. Termination of partnership.
Sec. 39. Character of gain or loss on disposition by a partner of distributed property.
Sec. 40. Payments to a retiring partner or to a deceased partner's successor in interest.
Sec. 41. Income with respect to a deceased partner.
Sec. 42. Sales or exchange of interest in partnership.
Sec. 43. Treatment of partnership distributions as sales or exchanges.
Sec. 44. Definition of unrealized receivables.
Sec. 45. Partnership inventory items.
Sec. 46. Limitation on partner's distributive share of losses.
Sec. 47. Exclusion of certain unincorporated organizations from partnership provisions.
Sec. 48. Western Hemisphere trade corporations.
Sec. 49. Basis of joint tenancies in community property States.
Sec. 50. Basis of property acquired from a decedent prior to his death.
Sec. 51. Limitation on gain on repossession of property.
Sec. 52. Gains and losses on purchase money obligations.
Sec. 53. Uncompleted employment rendered for 36 months or more.
Sec. 54. Exclusion of domestic corporations engaged primarily in foreign trade from consolidated return.
Sec. 55. Extending period of limitations on credit for State death taxes.
Sec. 56. Credit for gift tax against estate tax.
Sec. 57. Valuation of unlisted stock and securities for estate tax purposes.
Sec. 58. Deduction from gross estate for divorce settlement.
Sec. 59. Renounced or disclaimed interests.
Sec. 60. Application of marital deduction to allowance or award to surviving spouse.
Sec. 61. Exclusion for gifts of certain future interests.
Sec. 62. Prohibition of adjustment of amount of taxable gifts made in prior years.
Sec. 63. Definition of employer under Federal Unemployment Tax Act.
Sec. 64. Definition of price for manufacturers excise tax purposes.
Sec. 65. Stamp taxes payable by regulated investment companies.
Sec. 66. Elimination of stamp tax on certain transfers of stock or certificates of indebtedness in corporate mergers and consolidations.
Sec. 67. Elimination of requirement for returns as to formation or reorganization of foreign corporations.
Sec. 68. Jurisdiction of Tax Court over manufacturers excise taxes.
Sec. 69. Elimination of conditions on credit or refund of manufacturers excise tax.
Sec. 70. Limitation on assessment and collection when false return filed.
Sec. 71. Relief of fiduciary from personal liability for fraud committed by decedent.
Sec. 72. Limitations on credit or refund.
Sec. 73. Release of funds from jeopardy assessments.
Sec. 74. Jeopardy assessments.
Sec. 75. Effect to be given by Tax Court to court of appeals decision.
Sec. 76. Use of registered and certified mail.
Sec. 77. Costs awarded to prevailing party in refund suit.

SECTION 1. AMENDMENT OF 1954 CODE; EFFECTIVE DATE

Amendment of 1954 code

Subsection (a) provides that except as otherwise provided, amendments are to a provision of the Internal Revenue Code of 1954.

Except in two instances, an amendment is to a provision of the 1954 code. The bill provides for two amendments to title 28 of the United States Code (the Judicial Code). Subsection (e) of section 74 of the bill amends section 2201, and section 77 of the bill amends section 2412(b), of title 28 of the United States Code.

Effective date

Subsection (b) provides in general that amendments made by the bill shall apply to taxable years ending after the date of enactment. Some provisions of the bill by their nature call for a different effective date. There are few retroactive amendments.

SECTION 2. ALIMONY AND SEPARATE MAINTENANCE PAYMENTS

Section 71 of the 1954 code added a new provision including in the income of the wife periodic payments made under written separation agreemtns executed after the date of the enactment of the 1954 code. Such payments are deductible by the husband. The provision was not made applicable to separation agreements entered into prior to the date of enactment of the code in order to prevent the possibility of upsetting arrangements which had therefore been worked out with the understanding that the wife would not include the payments in her income. Consonant therewith, this amendment would make section 71 applicable to preexisting agreements if both parties to the agreement elected to bring themselves within the new provisions.

SECTION 3. COMPUTATION OF EMPLOYEEES' CONTRIBUTIONS FOR RETIREMENT BENEFITS

Pension for employees with foreign service

Present law is ambiguous as to how retirement benefits are taxed to an employee with a period of foreign residence. Section 72 of the code now seems to tax employees differently depending on whether their benefits were funded before or after 1951. Section 72(f) reads in terms as if, in computing the employees' contribution toward his retirement benefits, the consideration paid by him will be deemed to include contributions of the employer attributable to a period of foreign service of the employee only if the employee qualified under section 911 at the time the employee's contributions were made. Under many retirement plans the employee's pension benefits are not only not fully funded year by year as the service is rendered, but are not even fully funded at the time of retirement, and there is no specific allocation of funds to or accounting for funds attributable on behalf of a particular employee. Unless the single sum cost required to provide an employee's pension benefits (appropriately reduced to reflect trust earnings, etc.) may be used in applying section 72(f), the procedures outlined in section 72 cannot be applied, at least without penalizing the employee.

Subsection (a) is intended to correct this situation and to provide that the consideration paid by the employee shall be deemed to include contributions of the employer attributable to a period of foreign service of the employee qualifying under the rules of section 911.

Income taxable to trustee

Subsection (b) corrects what is believed to be an unintended change made by the 1954 code, in that income of a trust not qualifying under section 401(a) is at present taxable to an employee when distributed even though the income has been previously taxed to the trustee. Under the 1939 code such income was distributable to the employee free of tax.

Tax-exempt income

Subsection (b) also provides that income excludible from the gross income of the trustee of an unqualified trust shall not be taxable to the employee when distributed, since such income would not have been taxed if received by the employee directly.

SECTION 4. TRANSFERS OF LIFE INSURANCE CONTRACTS FOR VALUABLE CONSIDERATION

The 1954 code provides two exceptions to the general rule that in the case of a transfer for a valuable consideration amounts paid by reason of the death of the insured under a life insurance contract are excludible from gross income only to the extent of the consideration and premiums paid by the transferee. The first exception restates prior law. The second of these exceptions was new in the 1954 code and is applicable when the transferee is the insured, a partner of the insured, a partnership in which the insured is a partner, and a corporation in which the insured is a shareholder or officer. If any of these persons is a transferee all amounts

paid to such person by reason of the death of the insured are excludible from gross income.

This amendment would extend the second exception to apply to certain persons in addition to those now enumerated in the code. These persons include a spouse, former spouse, parent, lineal descendant or adopted child of the insured. If the transfer is to a person who is a shareholder of a corporation in which the insured is also a shareholder and is for the purpose of funding, in whole or in part, a buy and sell agreement relating to stock of the corporation, the second exception will also be applicable.

Those who are included in the amendment could initially buy a policy on the life of the insured without adverse income tax consequences. Therefore, it does not seem desirable to exclude any of these persons from the general exempting provisions of the 1954 code.

SECTION 5. DEDUCTION OF EMPLOYEE CONTRIBUTIONS UNDER DISABILITY BENEFIT PLANS

The laws of some States, in providing for disability benefit programs, permit a choice between participation in a State plan or participation in a private plan. The contribution of an employee is deductible only if paid as a tax. Such contribution might constitute a tax under a State plan, but never under a private plan.

Under this amendments employees contributing under a private plan are allowed a deduction to the same extent as if they had contributed under a State plan.

SECTION 6. LOSSES ON SECURITIES IN AFFILIATED CORPORATIONS

The 1954 code changed from 95 percent to 80 percent the percentage of stock of a subsidiary which the parent company must own for inclusion of the subsidiary in a consolidated return. However, the percentage of stock of the subsidiary which must be owned by the taxpayer, in order to take an ordinary loss under section 165(g)(3) on the stock or securities of the subsidiary if they become worthless, was left at 95 percent. At the time the predecessor of section 165(g)(3) was inserted in the 1939 code, in 1942, it was indicated that this provision should be correlated with the consolidated return provisions (S. Rept. No. 1631, 77th Cong., 2d sess.). This amendment effects such correlation.

SECTION 7. DEMOLITION LOSS

Present law imposes a heavy burden of proof of intent whenever the taxpayer voluntarily demolishes or removes existing structures. A claimed loss on demolition may be disallowed on the ground that the taxpayer acquired the property with intent to demolish. This may necessitate going back many years to establish intent at the date of acquisition. See *N. W. Ayer & Son, Inc.*, 17 T.C. 631 (1951), turning upon intent at date of acquisition 13 years before demolition occurred and 26 years before the issue arose upon the sale of the property. Furthermore, while the Commissioner has taken the position that the intent at the time of acquisition is determinative, the court decisions are not in agreement on this point.

This amendment provides that demolition or removal expenditure incurred more than 3 years after the property was acquired shall not be disallowed as a business loss or other deduction solely because the taxpayer acquired the property with intent to demolish and remove existing structures. The amendment eliminates the necessity of proof of intent at the date of the acquisition provided the demolition or removal occurs more than 3 years after the property was acquired.

SECTION 8. CARRYOVERS OF EXCESS CHARITABLE CONTRIBUTIONS

These amendments to section 170 will extend to individuals the right to carry over excess charitable contributions as deductions to the two next succeeding taxable years, similar to the right now possessed by corporations.

SECTION 9. NET OPERATING LOSS DEDUCTION

Libson Shops, Inc. v. *Koehler*, 353 U.S. 382 (1957), announced the principle that under the 1939 code a surviving corporation in a merger may not carry over or deduct a premerger net operating loss one business against postmerger income of another business which was operated and taxed separately before the merger. Rev. Rul. 58-603, 1958-2 Cum. Bull. 147, states that this principle will not be relied upon by the Internal Revenue Service under the 1954 code as to a merger or other transaction described in section 381(a) of the 1954 code.

In *Mill Ridge Coal Co.* v. *Patterson*, 58-1 USTC par. 9489, 1 AFTR 2d 1627 (N.D. Ala. 1958), aff'd 264 F. 2d 713 (5th Cir. 1959), cert. denied, — U.S. — (1959), it was held that a corporation could not carry forward a loss from operations from the production and sale of coal to offset the earnings from a new business of selling and distributing bunker oil. The decision of the district court, with which the court of appeals agreed, was based on the language in the Libson Shops case that a corporation is not entitled to a carryover where the income against which the offset is claimed "was not produced by substantially the same business which incurred the loss."

Mill Ridge Coal involved a change in the ownership of all the corporation's stock and hence under the 1954 code section 382(a) would apply. However, there is no indication in the opinion in Mill Ridge Coal that the decision would have been different had there been no change in stock ownership. Where the current earnings and the earlier loss are those of the same corporation, and there has been no or only a minor change in stock ownership, section 381 does not apply and section 382 would allow the net operating loss deduction only by inference.

The amendment would clarify the law by providing that unless other provisions in the 1954 code called for disallowance of a net operating loss deduction, it shall not be disallowed because the loss occurred in a business which is different from the business from which the profits were derived.

This amendment takes effect as if it had been reflected in the 1954 code at the time of the enactment of such code.

SECTION 10. EXPENSES CONCERNING LEGISLATION

This amendment adds to the 1954 code a new section 180 providing that certain expenses otherwise deductible shall not be disallowed because they relate to the legislative process.

The legislative process today is conducted in such fashion that taxpayers may incur certain expenses, such as those in connection with appearances before congressional committees, which, although technically lobbying expenses, are nevertheless ordinary and necessary business expenses. Under this amendment reasonable expenses (including traveling expenses, the cost of preparing testimony and the like) incurred by a taxpayer in connection with appearances before or submission of statements to the committees of Congress or of any other legislative body will be deductible from gross income.

The amendment does not cover expenses in connection with referendums.

SECTION 11. DEDUCTION FOR CERTAIN TITLE EXPENDITURES

This section adds a new section 181 to the 1954 code, to provide for the deductibility of attorneys' fees and other expenditures incurred to conduct litigation or other controversy even though title to business property, income-producing property or cash is involved. The amendment is designed to insure that expenditures otherwise governed by section 162 (relating to business expenses) or section 212 (relating to nonbusiness deductions) shall not be made nondeductible by the fact that they are incurred in litigation or controversy involving title to property. At present the law is uncertain.

Section 181(a) authorizes the deduction of expenses even though incurred in a controversy involving title to business property or to income-producing property, or to money. The inclusion of money as a third classification of property is due to two circumstances unique to money: first, money cannot have a basis different from its face value, and hence the capitalization of an expenditure to recover or retain money is tantamount to denying the deduction altogether; second, money cannot be classified as exclusively business property, property held to produce income, or property devoted only to personal use, because its owner can devote it to any of these uses.

Section 181(b) recognizes the fact that litigation expenses are often paid in a single year in such a large total as to exceed the income of a single year.

Section 181(c) contains three exceptions to the general rule. The first is to prevent current deduction of expenditures incurred in the quiet title and similar actions customarily employed to establish title to recently acquired property in States where title insurance is not used. It is felt that such expenditures are essentially substitutes for title insurance and should be treated as such. The second exception specifically limits the interpretation of "and other expenditures" in section 181(a) so that it is clear no deduction may be claimed for amounts paid out to satisfy judgments. The treatment of such amounts will continue to be covered by sections 162, 212, and 263 and other relevant provisions of existing law.

The amendments made by this section apply to title expenditures incurred on or after the date of enactment.

SECTION 12. EXPENSES OF ESTATE PLANNING

Under section 212 of the 1954 code the Treasury Department will presumably allow a deduction of the expenses incurred in connection with the creation of a revocable trust of income-producing property, but will probably deny a deduction for such expenses incurred in connection with the creation of an irrevocable trust or the drafting of a will.

Proper planning for the management of property during life and its disposition after death are interrelated. Since there has been an increasing tendency to approach taxation from the standpoint of the burden that a family unit should bear, it appears appropriate to permit as an additional deduction to an individual, as this amendment will do, all the expenses incurred in arranging for the disposition of his property during his life and after his death.

SECTION 13. ELIMINATION OF LIMITATION ON DEDUCTIONS FOR DIVIDENDS RECEIVED BY CORPORATIONS

This section amends sections 246(b)(1) and 172(d)(6) of the 1954 code to eliminate an inequity.

Section 243(a) permits a corporation to deduct 85 percent of the dividends received from a domestic corporation, limited by section 246(b)(1) to 85 percent of the taxable income computed without regard to the net operating loss deduction allowed by section 172. Section 246(b)(2), however, provides that section 246(b)(1) shall not apply where there is a net operating loss as determined under section 172. Section 172(d)(6) provides that the deduction allowed by section 243(a) shall be computed without regard to section 246(b).

The result is that the limitation under section 246(b)(1) is not applicable where the income computed by including 100 percent of dividends received from domestic

corporations is less than 85 percent of such dividends.

The inequity which this amendment corrects is illustrated in the following example:

	A	B	C
Dividends received	$1,000,000	$1,000,000	$1,000,000
Current operating loss	0	150,000	150,001
Taxable income computed without the dividends received deduction	1,000,000	850,000	849,999
Dividends received deduction computed under sec. 172(d)(6)	850,000	850,000	850,000
Net operating loss	0	0	1
Dividends received deduction under sec. 246(b)(1) and (2)	850,000	722,500	850,000
Taxable income	150,000	127,500	0

In A, the corporation received the full benefit of the dividends received deduction. In B, where there is a current operating loss of $150,000 the corporation's dividends received deduction is reduced under section 246(b)(1). In C, however, where the corporation has a net operating loss deduction of $1 under section 172(d)(6), the section 246(b)(1) limitation does not apply, and the corporation is entitled to the full dividends received deduction. This amendment will eliminate this unequal treatment.

The amendments made by this section apply with respect to taxable years beginning after December 31, 1953, and ending after August 16, 1954.

SECTION 14. AMORTIZATION OF ORGANIZATION, REORGANIZATIONS AND STOCK ISSUANCE EXPENDITURES OF CORPORATIONS

Section 248 of the 1954 code presently allows the amortization, over a 60-month period, of corporate organizational expenditures. It does not apply to any expenses in connection with the reorganization or recapitalization of a corporation, nor does it in terms apply to stock issuance expenses. The principles which allow the amortization of organization expenses should permit the amortization of reorganizational (including recapitalization) and stock issuance expenses.

Section 248 now provides that the amortization shall be over a period of not less than 60 months, beginning with the month in which the corporation begins business. This is obviously inappropriate for reorganizational and stock issuance expenses incurred at a later date. Also, organizational expenses may be paid prior to the incorporation, before the charter is filed or the corporation is legally in existence. A bill may be rendered before organization of the new corporation is completed and may be paid by a parent corporation or others, with subsequent reimbursement from the new corporation. The amendment therefore provides that amortization shall begin with the month in which the expenses are paid or accrued, or in which the corporation begins business, whichever is later.

SECTION 15. TRANSACTIONS BETWEEN RELATED TAXPAYERS

Prior to the enactment of the 1954 code the revenue laws prohibited the deduction of losses sustained upon sales or exchanges between certain related taxpayers but did not preserve the basis of the seller or permit the offsetting of similar gains (sec. 24(b) of the 1939 code). Section 267(d) of the 1954 code cured the first defect by providing for the preservation of the seller's basis. The second defect remains.

These amendments to section 267 will permit the offsetting of such gains occurring in the taxable year whether the losses arise in transactions with the same or a different related taxpayer. The adoption of the offset principle requires a change in the preservation of the basis provision so that the basis is preserved only in respect of that portion of the loss which is not allowed as a deduction.

SECTION 16. ATTRIBUTION RULES FOR DISALLOWANCES IN TRANSACTIONS BETWEEN RELATED TAXPAYERS

Subsection (a) of section 267 disallows losses on sales or exchange of property between related persons and, within certain limitations, expenses or interest paid to the related party. The relationships which bring section 267(a) into play are prescribed in section 267(b) and rules for determining the ownership of stock in a corporation for purposes of subsection (b) are contained in subsection (c).

This amendment makes certain changes in the list of related persons in section 267(b) to broaden the relationships. The stock ownership attribution rules of section 267(c) are made unform with those of section 318.

There are conforming amendments to section 1235(d), defining related persons for purposes of the income tax effects of the sale or exchange of patents.

SECTION 17. DISTRIBUTIONS OF PROPERTY BY CORPORATIONS

This section amends sections 301(b)(1) and 301(d) of the 1954 code.

Present law permits a domestic corporate shareholder to take property distributed with respect to the stock of a foreign corporation into income at the lower of fair market value or adjusted basis to the distributing foreign corporation. Present law also permits a foreign corporate shareholder to take property distributed with respect to the stock of a domestic corporation into income at the lower of fair market value or adjusted basis to the distributing domestic corporation.

The underlying policy of the 1954 code seems to require that the fair market value of property distributed to a corporation be fully taxable as a dividend in cases where no dividends-received deduction is allowable to the recipient corporate shareholder. The amendment provides that the amount of the dividend will be the fair market value of the property distributed in kind if received (i) by a domestic corporate shareholder from a foreign corporation, to the extent such dividend so received is not entitled to a dividends-received deduction in the hands of the domestic corporate shareholder, and (ii) by a foreign corporate shareholder, not entitled to such deduction, from a domestic corporation.

The amendments made by this section apply to distributions received, or in the case of an accrual basis taxpayer, accrued by the distributee after the date of enactment.

SECTION 18. CORPORATE OBLIGATIONS HELD BY SHAREHOLDERS

This section amends section 317 to provide, through the addition to the 1954 code of certain nonexclusive rules, an area of certainty as to the income tax treatment of debt obligations of a corporation held by such corporation's shareholders. For many years the courts have considered questions of whether the interest held by a corporate shareholder, as evidenced by a particular security, should be regarded as a creditor's claim or an equity interest in the corporation.

For the most part such of the decided cases as have reached the result that what purports to be debt is in substance an equity interest have reached this result on grounds that the provisions of the security more nearly resemble a shareholder's interest than a creditor's claim. Thus, where the obligation to pay is not unconditional; where there is no fixed maturity date; where inadequate consideration is given for the obligation; where the obligation is subordinated to the claims of creditors generally; where payment for the use of the principal is not unconditionally due at or before maturity; or where the amount of payment for the use of the principal is dependent on earnings, the courts in numerous cases have held that the interest created was an equity interest for tax purposes. In most cases, facts showing such obligations to be held pro rata by shareholders, or that a high ratio of debt to equity capital existed, have been relied on as additional evidence of intent to create an equity interest because the obligation failed to conform with the normal characteristics of true debt in other respects. However, instruments conforming in all respects with true debt obligations have been treated as stock by the courts where the debt-equity ratios were high.

Under this amendment no corporate earnings escape tax which they would otherwise bear. The effect taxwise is simply to provide a mechanism whereby the investor in a corporate enterprise may recover a substantial part of his basis or stake before he is called upon to pay personal taxes on the income from his investment. When and as he reduces such income to his possession the tax will be collected.

The amendment establishes a nonexclusive set of conditions, which if observed in the issuance of corporate debt obligations, guarantees the investor that the obligations will be treated as debt for all purposes under the income tax laws. The conditions proposed are those which generally characterize true debt as distinguished from the mixed debt-equity interests which have occupied so much attention of the courts.

It is specifically provided that corporate debt obligations are not to be limited to those which conform with the prescribed conditions and also that even the failure to meet some of the prescribed conditions will not disqualify the obligation if such failure is due to business requirements of the corporation. For example, to obtain outside financial assistance a lender may require the stockholders also to loan some money to the corporation on a subordinated basis. Establishment of such a requirement would permit the shareholder's debt to qualify, even though it failed to meet the condition that such obligations be not subordinated to the claims of trade creditors generally.

In prescribing a ratio test, the comparison is between the principal of the obligations held by shareholders and the fair value of their stock rather than the basis of such stock. Fair value has been used because in cases where assets appreciated in value have been exchanged for stock in a tax-free incorporation, the basis of the assets and hence the stock might be so low as compared with fair value as to exceed the 10-to-1 ratio at the outset. The principal purpose of the amendment would be defeated in such cases. Since any obligation to qualify under the amendment must be based upon adequate consideration, abuse through inflation of values is prevented. Further, since the basis of the obligations received in such tax-free incorporations would be the same as the basis of the assets exchanged for them, a tax would result on repayment or sale of the obligation.

SECTION 19. CONSTRUCTIVE OWNERSHIP OF STOCK

General

This section makes extensive amendments to section 318 of the 1954 code.

Although the general principle underlying section 318, dealing with the constructive ownership of stock, may be sound, experience has shown that the section as presently drafted is confusing in many respects and is badly in need of clarification and modification. The Mills advisory group on subchapter C has made recommendations for amendments directed toward this end, and

the language of the amendments proposed by that group has for the most part been adopted in the revision of section 318 and certain related sections as herewith proposed.

Attribution in the case of spouses separated by interlocutory divorce decree

Section 318(a)(1) of the present law provides that there shall be no attribution of stock between spouses legally separated under a decree of divorce. The suggested amendment to section 318(a)(1)(A)(i) provides specifically that there will be no attribution between spouses separated under an interlocutory decree of divorce.

Attribution from and to partnerships, estates, trusts, and corporations

Under section 318 as presently drafted, extremely difficult and confusing problems have arisen because of the requirement that stock be reattributed into and out of partnerships, trusts, estates, and corporations. Because of this reattribution it is possible, theoretically at least, that ownership of stock could be attributed to a person who had no knowledge of nor economic connection with the actual owner of the stock. In the proposed revision this reattribution is eliminated—see section 318(a)(5)(C).

Attribution from partnerships, estates, trusts, and corporations

Under present section 318, stock owned by a partnership, estate, trust, or corporation is considered as owned proportionately by the partners, beneficiaries, and shareholders, except that stock owned by a corporation is attributed to a shareholder only if that shareholder owns 50 percent or more in value of the stock of the corporation. In the proposed revision of section 318 a 5 percent limitation is provided for in all cases, so that persons having small interests in corporations, partnerships, trusts, and estates will not have to bother with the attribution rules. Specific rules are also provided with respect to preferred stock and methods of determining proportionate interests.

Attribution to partnerships, estates, trusts, and corporations

Present law provides for attribution to a partnership of stock owned by partners, attribution to an estate of stock owned by beneficiaries, attribution to a trust of stock owned by beneficiaries except where the beneficiary has only a remote contingent interest in the trust, and attribution to a corporation of stock owned by a shareholder who owns 50 percent or more in value of the stock of the corporation. In section 318(a)(3) as proposed, stock owned by a partner or a beneficiary of an estate or trust will only be attributed to the partnership, estate, or trust where the owner has an interest of 5 percent or more in the entity, computed on the same basis as the 5 percent interest is computed for purposes of attribution from partnerships, estates, or trusts. Also, under the proposed section 318(a)(3), stock which is limited and preferred as to dividends is excluded in determining 50 percent ownership in the attribution from a shareholder to a corporation.

In the case of attribution to a partnership of stock owned by a partner, the 5 percent minimum will not serve to eliminate inequity involved in according dividend treatment to some partners on a redemption of stock owned by the partnership merely because one of their partners, having a partnership interest greater than 5 percent, owns stock in the redeeming corporation. To provide adequately for this situation section 302 is amended by inserting a new section 302(b)(2)(D) requiring that the disproportionality test be applied separately for each partner, as though the stock owned by the partnership had been distributed to the partners immediately prior to the redemption and the stock redeemed had been redeemed in the hands of each partner.

Application of constructive ownership rules of section 318(a) to section 302(b)(1)

The amendments proposed would specifically provide in sections 302(b)(5) and 302(c)(1) that the constructive ownership rules of section 318(a) shall not apply in determining whether the redemption is not essentially equivalent to a dividend within the meaning of section 302(b)(1), but that for the purpose of that determination the relationships described in section 318(a) may be taken into account along with all other facts and circumstances.

Incidental amendments

Other amendments modify provisions in sections 304(b)(1), 304(c) and 382(a)(3) which in present law provide in certain special cases for attribution of stock from a shareholder to a corporation whether or not he owns 50 percent or more of the stock of the corporation. Under the amendments there would be a 5 percent minimum stock ownership required for such attribution in those special cases.

Comparison with recommendations of Mills advisory group on subchapter C

The principal change from the recommendations made by the Mills advisory group on subchapter C relates to the matter of attribution to grandchildren of stock owned by grandparents. In the present recommendation the statute would remain in its present form in this regard, and stock owned by grandparents would not be attributed to their grandchildren.

SECTION 20. INVOLUNTARY CONVERSIONS IN SECTION 337 LIQUIDATIONS

The Internal Revenue Service has ruled (*Rev. Rul. 56–372*, 1956–2 Cum. Bull. 187) that the receipt of fire insurance proceeds from the complete destruction of a building by fire, resulting in an involuntary conversion, does not constitute a "sale" for the purpose of obtaining nonrecognition of gain or loss where there is a liquidation of corporate assets pursuant to section 337. The fact that section 1033 characterizes destruction of property and indemnification for its loss as an involuntary conversion, it is held, does not establish that the events constitute a sale or exchange; nor are the provisions of section 1231(a) effective to characterize the events as a sale or exchange.

The amendment extends the non-recognition treatment provided by section 337(a) to all compulsory or involuntary conversions if the plan of complete liquidation was adopted prior to the conversion or within 60 days thereafter. Moreover, it relaxes the strict distribution requirements of the section with respect to such conversions, provided the proceeds of conversion are distributed promptly after receipt. Under the amendment, the distribution requirements of section 337 are considered met if the proceeds of the conversion are distributed within the prescribed 12-month period or within 60 days after the receipt thereof by the corporation, whichever is later.

The revised report of the Mills advisory group on subchapter C has adopted the amendment proposed herein.

SECTION 21. LIQUIDATION TRUSTS OR AGENCIES IN SECTION 337 LIQUIDATIONS

Sometimes a liquidating corporation has assets such as mortgages and claims in litigation that are not susceptible of prompt distribution to shareholders. In such cases, it may be difficult for the corporation to effect a complete liquidating distribution within the 12-month period prescribed by section 337. The purpose of this amendment is to make specific statutory provision regarding the transfer of such assets to a liquidating trust or agency as a means of completing the liquidation of the corporation.

The amendment specifically states that the transaction will be treated as a transfer of assets by the shareholders to the trust or agency, thus making it clear that the basis of the assets in the hands of the trust or agency will be the same as it would have been in the hands of the shareholders had the assets been distributed directly to them. Moreover, in order to provide specifically for treatment of any income on the assets received by the trust or agency, and in order to make clear that the trust or agency may not be created or operated in such manner as to be an associattion taxable as a corporation, it is required that the income of the trust or agency be currently taxable to the shareholders.

The revised report of the Mills advisory group on subchapter C has adopted the amendment proposed herein.

SECTION 22. SUCCESSIVE LIQUIDATIONS OF CONTROLLED CORPORATIONS IN SECTION 337 LIQUIDATIONS

Section 337(c)(2) makes section 337 inapplicable where the liquidation is one to which section 332 applies, if the parent corporation takes over the subsidiary's property basis. This rule—an entirely sound one when the liquidation of a subsidiary alone is involved—raises problems of procedure, i.e., order of sales and liquidations, where parent and subsidiary both contemplate the sale of assets and complete liquidation. Under the present law, if a subsidiary adopts a plan of complete liquidation under section 332 which is completed within the 12-month period gain or loss is recognized upon the sale of assets by it during the period, even though the parent corporation within the same period completely liquidates outside section 332. However, if the subsidiary were first completely liquidated into the parent under section 332 and the parent, following the adoption of its own plan of complete liquidation, sold the assets received from the subsidiary, no gain or loss would be recognized on the sale of the assets formerly owned by the subsidiary. Similar problems arise where intermediate holding corporations are involved. There appears to be no policy reason why section 337 should not apply where the parent corporation completely liquidates outside section 332. The amendment would make section 337 applicable in that situation.

An amendment in substantially identical terms has been recommended by the Mills advisory group on subchapter C.

SECTION 23. EXCLUSION FROM DIVIDEND CARRYOVER IN COMPLETE LIQUIDATIONS OF SUBSIDIARIES

Section 562(b) provides that in the case of amounts distributed in liquidation the part of such distribution which is properly chargeable to earnings and profits accumulated after February 28, 1913 (and, in the case of certain complete liquidations, any distribution to the extent of the current earnings in the year of distribution), shall be treated as a dividend for purposes of computing the dividends paid deduction used in determining personal holding company tax. Section 564 provides, in general, that the excess of the dividends paid in a particular year over the taxable income of that year is a carryover for purpose of computing the dividends paid deduction in the 2 succeeding years.

Regulation section 1.562–1(b) confirms that the liquidations referred to in section 562(b) include a tax-free complete liquidation (or statutory merger) of a subsidiary into its parent under section 332. Under section 381(c)(14) the dividend carryover of the subsidiary in a section 332 liquidation is available to its parent in computing the parent's own dividends paid deduction for personal holding tax purposes.

Thus, under existing law it appears that for 2 years following a tax-free liquidation of a subsidiary under section 332 the parent

will have available to it as a dividends paid deduction the excess of the entire post-1913 accumulated earnings of the subsidiary over the subsidiary's taxable income in the year of liquidation, even though the liquidating distribution in no way increases the parent's taxable income or personal holding company income.

It is considered that such a result is not justified. It is proposed that it be corrected by eliminating from the carryover to the parent the dividends paid deduction generated for the subsidiary by the tax-free liquidating distribution made by it to the parent. There would be retained the carryover to the parent of excess distributions by the subsidiary which were taxable, such as earlier ordinary dividends or partial liquidations. It is considered that any required limitation of the carryover with respect to distributions in consolidated return periods, referred to in section 562(d), can best be handled in the consolidated return regulations.

The revised report of the Mills advisory group on subchapter C has adopted the amendment proposed herein.

The American Bar Association has adopted a number of resolutions which, while not proposing precise statutory language, contain recommendations to the Congress with respect to provisions of the revised report of the Mills advisory group on subchapter C, nearly all reflected in H.R. 4459 introduced by Representative MILLS on February 12, 1959. These resolutions of the American Bar Association are either by way of approval of or opposition to a proposal of the advisory group, and recommend to the Congress either that it enact or not enact legislation embodying the principles of such proposal of the advisory group. Summaries and explanations of these resolutions appear below:

Opposition to Recommendation of Advisory Group on Subchapter C Relating to Dividends Payable in Stock on Certain Shares and in Cash on Other Shares

The American Bar Association recommends to the Congress that it not enact legislation embodying the principle of the proposal of the Mills advisory group on subchapter C (see sec. 6 of H.R. 4459, 86th Cong., 1st sess.) to amend section 305 so as to include as taxable dividends distributions made to holders of common stock which are payable in additional shares of stock with respect to part of the outstanding common stock and are payable in cash or other property with respect to the balance of such stock.

This proposal provided an additional exception to be made by statute to the general rule of nontaxability of stock dividends in those instances in which distributions made with respect to one or more classes of common stock are payable in stock with respect to part of such shares and cash or property with respect to the remainder of such shares. The proposed statutory amendment would apply where a corporation has issued two classes of common stock, one paying cash dividends and the other paying an equivalent amount in stock whether or not the latter class is convertible into the former class. It is considered that the advisory group proposal extends to situations in which no tax is justified, and should not be enacted.

Unless each class of common stock carries rights either identical with, proportionate to, or dependent upon, the rights of another class of common, both as to dividends and as to distributions in liquidation, there would appear to be no justification for taxing the holders of one class of stock on a stock dividend merely because simultaneously the holders of the other class of stock receive a dividend in cash or property. Unless the issuance of a stock dividend on one class of common stock, or to one group of common stockholders, effects a change in their equitable interest in the assets of the corporation vis-a-vis the other stockholders in the corporation, there would, in fact, appear to be a serious question as to whether there is any income subject to tax under the 16th amendment.

There is nothing objectionable in a corporate capitalization which enables one class of stockholders to receive its share of earnings in cash and the other class of stockholders to have its share of earnings reinvested in the company. Legitimate business reasons (aside from tax considerations) frequently exist for such a form of corporate capitalization. Under existing legislative policy, the holder of common stock is not subject to tax on the receipt of a stock dividend merely because the corporation also has outstanding a class of preferred stock in which cash dividends, limited in amount, are paid. There would appear to be no justification for different treatment of a stock dividend merely because the holders of the other class of stock who receive cash dividends are not limited as to the amount of dividends they may receive. If there is a deliberate accumulation of earnings beyond the reasonable means of the business through the issuance of stock dividends in lieu of cash dividends, other provisions of law are adequate to take care of such situations.

Opposition to Recommendation of Advisory Group on Subchapter C Relating to Charitable Contributions of Section 306 Stock

The American Bar Association recommends to the Congress that it not enact legislation embodying the principle of the proposal of the Mills advisory group on subchapter C to amend section 170 (revised report of advisory group, sec. 7) so as to reduce the amount of the deduction for a charitable contribution of section 306 stock by the amount of gain which would have been realized as ordinary income by the donor if he had sold the stock.

Section 306 of the Internal Revenue Code of 1954 provides, in general, that if a shareholder receives preferred stock as a tax-free dividend on common stock and sells the preferred stock to third parties, the proceeds of sale will be treated as ordinary income. The Internal Revenue Service has ruled that if the shareholder, instead of selling the stock, donates the stock to a charity, he realizes no income on the transfer but may deduct the value of the stock as a charitable contribution. The Mills advisory group on subchapter C has recommended to Congress that in such case the amount of the charitable contribution deduction be reduced by the amount which would have been taxed to the shareholder as ordinary income if he had sold the stock rather than contributing it to charity. It is considered that there is no valid distinction between section 306 stock and other stock or property insofar as the allowance of the charitable contribution deduction is concerned.

Adoption of Recommendation of Advisory Group on Subchapter C Relating to Basis-Over-Basis Principle in Recognizing Gain to Shareholders in Corporate Liquidation

The American Bar Association recommends to the Congress that it enact legislation embodying the principle of the proposal of the advisory group on subchapter C (sec. 12 of H.R. 4459, 86th Cong., 1st sess.) to limit recognition of gain in corporate liquidations to the excess of the corporation's basis of the assets distributed over the shareholder's basis of his shares exchanged.

Under existing law a shareholder is, in general, taxable on the excess of the fair market value of property distributed in a corporate liquidation over the basis of his shares. This results in taxation without change in beneficial ownership but may also permit a conversion of ordinary income into capital gain through the consequent stepup in basis. Under the advisory group proposal (the so-called basis-over-basis rule) the gain realized on a corporate liquidation (excess of the value of the distribution over the basis of the shares, as under existing law) would be recognized (and taxed) only to the extent of the excess, if any, of the corporation's basis of the assets distributed over the shareholder's basis of his shares exchanged. Any loss realized would be fully recognized under the provisions of existing law. The basis of the distributed assets in the hands of the shareholder would be appropriately adjusted. Because the basis-over-basis principle permits greater consistency with the treatment of related transactions and greater simplicity and certainty in administration, its adoption is recommended.

Adoption of Recommendation of Advisory Group on Subchapter C Regarding Revision and Simplification of Rules relating to Collapsible Corporations

The American Bar Association recommends to the Congress that it enact legislation embodying the principles of the proposals of the advisory group on subchapter C (sec. 16 of H.R. 4459, 86th Cong., 1st sess.), to amend the provisions of the Internal Revenue Code of 1954 relating to collapsible corporations so as to simplify the present rules, to substitute objective tests for the present subjective test in defining a collapsible corporation, and to make such rules more equitable by taxing to the shareholders at ordinary rates only the gain attributable to property which if sold by the corporation would have produced ordinary income.

Section 341 of existing law, which is intended to prevent the use of a corporation to convert ordinary income into capital gain, defines a so-called collapsible corporation in terms dependent upon subjective intent. If the section applies, the entire gain realized by a shareholder is taxed as ordinary income. Section 341(e), which was added to provide additional objective tests, is extremely complicated.

The proposal of the advisory group would substitute objective tests for the previous tests depending upon the intention of the shareholders. It would provide for fragmentation of the gain, so that only so much of the shareholder's gain as is equal to his ratable share of the unrealized appreciation on specified assets will result in ordinary income. The proposal would avoid the possibility present under existing law that items which would otherwise produce capital gain will be converted into ordinary income through the use of a corporation. Generally the section would tax as ordinary income to shareholders only items that would have produced ordinary income had no corporation been used.

Opposition to Recommendation of Advisory Group on Subchapter C Imposing a Net Worth Limitation With Respect to Corporate Separations

The American Bar Association recommends to the Congress that it not enact legislation embodying the principle of the proposal of the advisory group on subchapter C (sec. 20 of H.R. 4459, 86th Cong., 1st sess.) to amend section 355 of the Internal Revenue Code so as to impose a requirement that the business distributed or retained have a value of not less than 20 percent of the net worth of the distributing corporation immediately before the distribution.

The advisory group has proposed, as part of a general recommendation that section 355 be coordinated more fully with section 346 (relating to partial liquidations), to limit the application of section 355 to cases where the fair market value of the stock or securities distributed is not less than 20 percent nor more than 80 percent of the excess of the fair market value of the assets over the

liabilities of the distributing corporation immediately before the distribution. It is believed that whatever justification the similar 20 percent requirement has under proposed section 346(c), a 20 percent limitation under section 355 is both unnecessary and unsound; also, that because of the necessity under such a limitation of determining the relative value of the assets distributed or retained, it would be difficult, if not impossible, to secure advance rulings on legitimate corporate separations due to the Internal Revenue Service's policy of not making such determinations in valuation matters.

Adoption of Certain Principles of Recommendations of Advisory Group on Subchapter C Relating to "Boot" Distributions

The American Bar Association recommends to the Congress that it enact legislation embodying the principles of the proposal of the advisory group on subchapter C (sec. 21 of H.R. 4459, 86th Cong., 1st sess.) to amend section 356 of the Internal Revenue Code so that the provisions with respect to the taxation of "boot" under the section apply only to transactions that, independently of its provisions, qualify as reorganizations or as divisions under section 355 of the Internal Revenue Code, and so that, in the case of a "boot" distribution which has the effect of a dividend, the tax applies to the full distribution whether or not the stockholder has a gain.

The advisory group on subchapter C has proposed that, among other amendments of a technical or coordinating nature to section 356, that section be amended so that its provisions shall apply only to distributions of taxable property in connection with reorganization exchanges or in connection with transactions qualifying under section 355. The amendment to limit the application of section 356 to reorganization and divisive transactions is advisable for the sake of certainty in view of the language of *Howard* v. *Commissioner*, 238 F. 2d 943 (7th Cir. 1956), which implied the contrary, despite the generally held view that the rule established by this proposed amendment was already applicable.

Adoption of Principles of Recommendations of Advisory Group on Subchapter C Relating to Definitions of Corporate Reorganizations

The American Bar Association recommends to the Congress that it enact legislation embodying those principles of the proposal of the advisory group on subchapter C (sec. 26 of H.R. 4459, 86th Cong., 1st sess.) involving amendment of the definitions of reorganizations in section 368 of the Internal Revenue Code so that the definitions of (A), (B), and (C) reorganizations will all be subject to the same rules as to what consideration must be received, and so that two-thirds of such consideration must consist of stock which may be either common or preferred, voting or nonvoting.

The proposal to modify the definitions of reorganizations so as to apply uniform rules to (A), (B) and (C) reorganizations will introduce more uniformity of tax effect into substantively and economically similar transactions and will reduce the possibility of making slight changes in a transaction to produce subatantially different tax results. In codifying the continuity of interest rule as a two-thirds stock interest requirement, the proposal makes more certain the somewhat indefinite continuity of interest requirement already recognized by the courts in (A) reorganizations. The elimination of the voting stock requirement in (B) and (C) reorganizations to coincide with the existing rule in (A) reorganizations is advisable; it eliminates the "solely for voting stock" requirement which had little logic. It should be noted, however, that the allowance of greater latitude in meeting the requirements for (B) and (C) reorganizations is coupled with the taxation of "boot" as a dividend regardless of gain. Hence, the overall effect of the proposals should not lead to large boot distributions.

Opposition to recommendations of advisory group on subchapter C relating to special limitations on net operating loss carryovers

The American Bar Association recommends to the Congress that it not enact legislation embodying the principle of the proposal of the advisory group on subchapter C (sec. 29 of H.R. 4459, 86th Cong., 1st sess.) to amend section 382 of the Internal Revenue Code so as to limit the net operating loss carryover of a corporation, upon a change in ownership of 50 percent or more of the stock of the corporation (whether by purchase, reorganization or change in outstanding shares), to 50 percent of the amount of the fair market value of the business.

The advisory group has proposed that net operating loss carryovers be limited to 50 percent of the fair market value of the corporation, as determined by the terms of the acquisition, where there is a 50 percent change in stock ownership of a corporation in a period of 2 taxable years. In the case of reorganizations, the degree of change of ownership would be tested on the continuing stock interest in the continuing corporation. The proposal, while eliminating some undesirable complexities of current law, would impose a rule of thumb for the purpose of eliminating the more flagrant cases of dealing in loss corporations. Such a rule of thumb is inadequate to deal with tax avoidance problems in this area. Moreover, the rule would impose undesired hardships on stockholders in loss corporations involved in transactions having no tax avoidance aspect.

SECTION 24. RETROACTIVE AMENDMENT OF STOCK BONUS, PENSION, OR PROFIT-SHARING PLANS

Section 401(b) of the 1954 code, purporting to deal with retroactive changes in stock bonus, pension or profit-sharing plans, does not now specifically provide that if a plan is amended in such a manner that the plan continues to qualify, the plan, as amended, shall be considered to qualify from the time the amendment is put into effect. The Internal Revenue Service has so administered section 401(b). However, in view of the lack of statutory authority, it is deemed advisable to give taxpayers assurance that a plan so amended will not be disqualified during the period after the amendment and prior to the time the Internal Revenue Service, after reasonably prompt request by a taxpayer, issues a favorable letter.

SECTION 25. TREATMENT OF DISTRIBUTIONS UNDER STOCK BONUS, PENSION, OR PROFIT-SHARING PLANS MADE FROM ACCUMULATIONS DURING PERIODS OF QUALIFICATION

This section amends sections 402(a)(2), 403(a)(2), 2039(c) and 2517(a) of the 1954 code.

Under present law the tax status to an employee of a distribution received by him under a pension, stock bonus or profit-sharing plan depends on whether or not the plan qualifies in the year of distribution. Disqualification of a plan for any year is generally due to some act of the employer or of a trustee beyond the employee's control and for which he is not responsible. The present treatment to the employee of a distribution made in a year in which the plan has ceased to qualify defeats the employee's reasonable expectation.

Under the amendments made by this section, the amount of a distribution attributable to employers' contributions made, and income of a trust realized, during a period in which the plan was exempt, and all net unrealized appreciations therein, and amounts attributable to premiums paid under an annuity contract during a period in which it met the requirements of section 401(a), will be taxed to the employee in the same manner as if the plan qualified during the year of distribution, for income, estate and gift tax purposes.

The amendments to section 2517(a) apply to the exercise or nonexercise by an employee of an election or option described in that section, occurring after the date of enactment.

SECTION 26. EMPLOYER CONTRIBUTIONS UNDER UNQUALIFIED DEFERRED COMPENSATION PLANS

This section amends section 404(a)(5) of the 1954 code.

Under present law the employer's contributions under an unqualified plan are deductible when made if the employee's rights are at that time nonforfeitable. Under the regulations (sec. 404(a)-12) an employer's contributions are not deductible at any time—i.e., even when rights become nonforfeitable—if the employee's rights are forfeitable at the time the employer's contributions are made.

Employers can now enter into unfunded or uninsured deferred compensation arrangements with employees whereby the employer gets a deduction when the deferred compensation is paid to the employees. From the employer's standpoint sound business reasons may dictate that the payment to the employee of the deferred compensation be secured, but subject to the performance of services or compliance with other conditions. The present law places at a disadvantage in attracting and keeping needed personnel those employers who are not as good a credit risk as other employers. It is felt that an employer should not be penalized because, to "secure" his contingent obligation, he funds the deferred compensation arrangement.

This amendment allows the employer a deduction when an amount is paid or made available to the employee under an unqualified plan, whether or not it is funded and whether or not the employee's interest is forfeitable or nonforfeitable. If payments are made from a trust, the trust income must have been included in the employer's gross income for tax purposes, and if made under an insurance contract the amount paid to the employee in excess of premiums paid must have been included in the employer's gross income.

SECTION 27. ORGANIZATIONS ENGAGED IN MORE THAN ONE EXEMPT ACTIVITY

This section amends section 501(a) of the 1954 code.

Many of the definitions of exempt organizations include a condition that the organization be engaged exclusively in certain activities. The amendment would prevent loss of exemption to a charity engaged in more than one exempt activity so long as it does not engage in activities which taken separately would result in tax. See *Algemeiner Arbeiter Verein* v. *Commissioner*, 237 F. 2d 604 (3d Cir. 1956); *Allied Trades Club, Inc.* v. *Commissioner*, 228 F. 2d 906 (3d Cir. 1955).

SECTION 28. DENIAL OF EXEMPTION TO OTHERWISE EXEMPT ORGANIZATIONS

Section 504(a) denies exemption to certain organizations otherwise exempt under section 501(c)(3) or section 401(a) if the accumulated income is unreasonable in amount, is used for purposes other than those constituting the basis for exemption, or is invested in a questionable manner.

While the exemption is denied only for a taxable year in which paragraphs (1), (2), or (3) of section 504(a) are found applicable, a determination by the Commissioner of such applicability will normally take place in some later year. The present section 504 has retroactive application in that the exemption may be denied for a number of years

even though the management of the organization had no intention of proceeding in an unauthorized manner and upon notification thereof would have been prepared to make changes satisfactory to the Commissioner.

Section 504(a) is amended to deny exemption only for taxable years after the organization has been notified by the Commissioner that it has been operating in derogation of such section, so that the procedures complained of by the Commissioner can be eliminated and the exemption retained.

SECTION 29. TAXATION OF UNRELATED BUSINESS INCOME OF CERTAIN RELIGIOUS ORGANIZATIONS

This section adds a new section 516 to the 1954 code, amends section 512(a) and contains a conforming amendment to section 511(a)(2)(A).

The amendment would prevent abuses now prevalent, through the loan of income tax exemption, by taxing the income from rented property and from the active conduct of a business to the extent that the rented property or the business was acquired by a church, etc., through the use of borrowed funds. Taxes now imposed under such circumstances upon hospitals, schools, and other exempt organizations have effectively prevented these organizations from "lending their exemption" to third parties. Churches (like other exempt organizations) will continue to receive, tax-free, income from rented properties and (unlike other exempt organizations) from the active conduct of a business to the extent purchased with their own funds or with donated funds or property.

The amendment is prospective not only with respect to the taxable years affected but also in the sense that it affects only properties or businesses acquired after the effective date of the amendment.

SECTION 30. BURDEN OF PROOF RULE IN ACCUMULATED EARNINGS TAX PROCEEDINGS

This section amends section 534 of the 1954 code.

The amendments are designed (1) to make the burden of proof rule of section 534 applicable to refund as well as deficiency proceedings; (2) to provide that in any case where the taxpayer files a statement referred to in section 534(c), the burden of proof as to unreasonableness of the accumulation of earnings shall be on the Commissioner, irrespective of any pleading he may file with respect to such statement; and (3) to eliminate the requirement of a statement of facts in a section 534(c) statement.

Burden of proof rule in refund proceedings

It has been a traditional concept of tax procedure that the taxpayer should be allowed to select the forum that is most convenient to him. Accordingly, if the burden of proof can be shifted to the Commissioner in deficiency proceedings, it should be possible to shift it to the Commissioner in refund proceedings. Section 534 of the Code is therefore amended to apply the burden of proof rule to refund as well as deficiency proceedings.

Burden of proof as to unreasonable accumulation

Section 534 now shifts the burden of proof to the Commissioner in an accumulated earnings tax case if the taxpayer files "a statement of the grounds (together with facts sufficient to show the basis thereof) on which the taxpayer relies to establish that all or any of the earnings" have not been unreasonably accumulated.

In the cases which have arisen to date involving section 534(c) statements, the Commissioner has, in his answer to the taxpayer's petition to the Tax Court, consistently denied the sufficiency of the grounds and adequacy of the facts set forth in the section 534(c) statement. The Commissioner has also consistently pleaded an affirmative answer. In those cases where the taxpayer has presented a motion requesting the Tax Court to rule on the issue of burden of proof, the court has uniformly denied such motion.

It is therefore felt that legislative changes are desired to implement the operation of section 534. These changes involving elimination of the present subparagraphs (1) and (2) of section 534(a) and the insertion of new matter providing that the burden of proof shall be on the Commissioners in all cases where the taxpayer files a section 534(c) statement, notwithstanding any pleading by the Commissioner to the contrary. Section 534(c) is amended to eliminate the requirement of stating facts in support of the grounds in a section 534(c) statement.

Under the proposed amendment, the section 534(c) statement will constitute prima facie evidence that all of the earnings have been permitted to accumulate within the reasonable needs of the business. The prima facie evidence created by submission of the section 534(c) statement is intended to place on the Commissioner the burden of proof of going forward with respect to whether all or any part of the earnings have been permitted to accumulate beyond the reasonable needs of the business.

These amendments apply to proceedings trial of which on the merits commences after the date of enactment.

SECTION 31. AMOUNTS DISTRIBUTED OR CREDITED BY ESTATES AND TRUSTS TO CHARITABLE BENEFICIARIES

This section eliminates as such the special deduction now allowed to an estate or trust for amounts of gross income paid, permanently set aside or to be used for charitable purposes and, generally speaking, provides that a distribution to a charitable beneficiary shall be treated in the same manner as a distribution to a noncharitable beneficiary. The basic amendment is to section 642(c) of the 1954 code. The change calls for numerous amendments, including conforming amendments, to other sections of the code.

The present treatment in subchapter J of chapter 1 of charitable contributions made by an estate or trust departs from the general statutory pattern of basing the includibility of distributions upon the distributable net income of the estate or trust. The present section 642(c) requires that the charitable contribution be traced to gross income. Implicit in the tracing requirements are difficult problems of correlation with distributions to noncharitable beneficiaries where tracing is rendered unnecessary by the distributable net income formula. Moreover, the present provisions on charitable contributions operate unfairly as between beneficiaries entitled to income required to be distributed currently and other beneficiaries.

Under the amendments made by this section a distribution to charity would, in general, be treated as a distribution to any other beneficiary. The beneficiary's status, with respect to whether the beneficiary is subject to or exempt from tax, becomes immaterial.

There is one major exception to the general premise that distributions to charity shall be treated in the same manner as distributions to any other beneficiary. This is to treat an amount of gross income of the current year which is permanently set aside by the fiduciary for a charitable beneficiary as an amount currently credited to such beneficiary. If the amount so set aside consists of capital gains allocable to corpus, the fiduciary will receive a distribution deduction for such capital gains. Where an amount which has been permanently set aside is distributed to a charitable beneficiary in a subsequent taxable year a double deduction is denied under section 663(a)(3). To this limited extent tracing the source of charitable contributions to gross income is still required.

The amendments made by this section apply to taxable years beginning after December 31, 1959.

Amendments to achieve the same general purpose have been recommended by the Mills advisory group on subchapter J.

SECTION 32. CAPITAL GAINS AND LOSSES OF ESTATES AND TRUSTS ALLOCATED TO CORPUS

This section amends section 643(a)(3) of the 1954 code.

Under present law, even though capital gains are allocable to corpus, they are includible in distributable net income if the gains are paid, credited or required to be distributed to the beneficiary during the taxable year. Inclusion of the gains in distributable net income shifts taxability from the fiduciary to the beneficiary.

The statute now leaves uncertain whether a distribution of principal will be deemed to include capital gains realized during the same taxable year. A question of this importance should be clarified in the statute and not left to regulations.

Under the amendment capital gain will not be deemed paid, credited or required to be distributed to a beneficiary unless (1) the governing instrument so provides, or (2) the gains are realized in the year of termination of the estate or trust.

The amendment made by this section applies to taxable years beginning after December 31, 1959.

The final report of the Mills advisory group on subchapter J does not adopt this amendment.

SECTION 33. CHARGES ALLOCABLE TO CORPUS OF ESTATE OR TRUST

This section adds a new paragraph at the end of section 643(a) of the 1954 code.

Under present law deductions which are properly allocable to the principal account rather than to the income account nevertheless reduce distributable net income. The benefit of the deductions is thus derived by the income beneficiaries rather than the remaindermen. It has been indicated that probate law may require the fiduciary to make necessary adjustments between income and principal accounts in order to reimburse the remaindermen for the tax benefit of which they are now deprived.

According to the legislative history, the present provision was adopted to prevent the wastage of deductions which might otherwise occur where all the income was currently distributable. The statute, however, goes beyond the declared objective. The benefit of corpus deductions is shifted to income beneficiaries even where there remains gross income taxable to the fiduciary, such as capital gain.

The amendment would not shift the benefit of corpus deductions to the income beneficiary where sufficient gross income remains taxable to the beneficiary to absorb them. This is accomplished by taking corpus deductions into account in computing distributable net income only to the extent that they exceed items of gross income allocable to corpus and excluded from distributable net income. Gross income allocable to corpus must first be reduced by the capital gains and personal exemption deductions. The benefit of corpus deductions is not passed through to the income beneficiaries where capital gains allocable to corpus, reduced by these deductions, exceed the corpus deductions, even though the alternative method for computing tax on capital gains is employed.

The amendment made by this section applies to taxable years beginning after December 31, 1959.

An amendment to achieve the same general purpose has been recommended by the Mills advisory group on subchapter J.

SECTION 34. EFFECT OF LOCAL PROBATE LAW ON INCOME TAX OF ESTATES

In general this section amends section 663 of the 1954 Code (1) to exclude from the distributee's gross income distributions, other than those which can be paid or credited only from income, by estates of certain gifts or bequests of specific sums of money or of specific property, whether or not consecutive, if properly paid or credited in not more than 3 years; (2) to provide that for a period of 36 months plus the balance of the taxable year in which the 36-month period expires, amounts properly paid from and charged to corpus as bequests or as a statutory award or allowance to a spouse shall be excluded from gross income; and (3) to make applicable to estates the separate share rule now applicable to trusts.

The general effect is that for a period which cannot exceed 48 months estates are treated in the same manner for income tax purposes as they are treated for probate purposes under local law.

The amendments made by this section apply to taxable years ending after the date of enactment, except that they are retroactive to any prior taxable year to which the 1954 Code applied if the beneficiary whose tax is affected so elects.

Amendments to achieve the same purposes have been recommended by the Mills advisory group on subchapter J.

SECTION 35. GUARANTEED PAYMENTS FROM PARTNERSHIP TO PARTNER

Section 35 of the bill amends section 702(c) of the 1954 Code.

Section 702(c) provides that where it is necessary to determine the gross income of a partner, such amount shall include his distributive share of the gross income of the partnership. Section 707(c) excludes certain guaranteed payments to a partner from partnership gross income, but only for purposes of section 61(a) and 162(a).

This amendment will preclude the possibility of such guaranteed payments being included in a partner's gross income twice, first as part of his distributive share of the gross income of the partnership under section 702 and again as payments made to one considered not a partner under section 61(a) by reason of section 707(c).

The revised report of the Mills advisory group on subchapter K has adopted this amendment.

SECTION 36. DEDUCTION OF ORGANIZATIONAL EXPENSES OF PARTNERSHIP

Section 36 of the bill adds a new subsection to section 703 of the 1954 Code.

Under present law a corporation may deduct its organizational expenses over a period of 60 months, but a partnership must capitalize its organizational expenses.

The amendment permits legal fees and other organizational expenses of a partnership to be amortized over a period of 60 months, beginning with the month in which such expenses are paid or accrued. The term "organizational expenses" is broadly defined so as to include the cost of preparing a partnership agreement for an existing partnership or of revising or amending the partnership agreement.

Any organizational expenses not previously deducted are deductible by the partnership in the year of its termination.

The revised report of the Mills advisory group on subchapter K has adopted this amendment.

SECTION 37. CLOSING OF TAXABLE YEAR ON DEATH OF PARTNER

Sectnon 37 of the bill adds a new paragraph to section 706(c) of the 1954 Code.

Section 706(c) provides as a general rule that the taxable year of a partnership shall not close as a result of the death of a partner. This avoids a bunching of income in the year of a partner's death.

On the other hand a deceased partner may have deductions and exemptions which could be offset against his share of partnership income if the taxable year of the partnership were closed with respect to such partner on the date of his death. Then both his share of the income and his offsetting deductions and exemptions could be reported together in his final return. The regulations (sec. 1.706–1(c)(3)(iv)) permit this treatment only if there is an agreement for the sale or exchange of his interest as of the date of his death.

This amendment will establish the general rule of closing the partnership year for such partner as of the date of his death, but will allow the executor or other successor in interest to elect to continue the taxable year for such deceased partner.

With such an election three alternative dates can apply for closing the partnership year with respect to such deceased partner:

1. The normal close of the partnership year when there has been no prior sale, exchange, or liquidation of the partnership interest;

2. The date of such a sale, exchange, or liquidation as may be negotiated by the successor in interest; or

3. The day after the decedent's death even though a sale, exchange, or liquidation may be effective on the date of decedent's death.

The revised report of the Mills advisory group on subchapter K has adopted the substance of this amendment.

SECTION 38. TERMINATION OF PARTNERSHIP

Section 38 of the bill contains two amendments to section 708(b) of the 1954 Code relating to the termination of a partnership.

Termination on sale of 50-percent interest

Section 708(b)(1)(B) now provides that a partnership shall be considered terminated if there is a sale or exchange of 50 percent of the total interest in the partnership within a 12-month period. This section will remove from such rule sales or exchanges among partners. To prevent misuse of this modification in the rule, it is provided that such sales or exchanges must be to partners who have been members of the firm for at least 1 year.

Under this amendment either a liquidation of a partner's interest or a contribution of capital by a partner is considered a sale or exchange of a partnership interest.

Section 708(b)(1)(B) now speaks of a "sale or exchange." Under the amendment the partnership will be terminated if within a 12-month period at least 50 percent of the total interest in capital and profits of the partnership passes into the hands of persons who do not meet the previous-partner requirement, whether in one or more sales or exchanges.

The revised report of the Mills advisory group on subchapter K has adopted this amendment.

Termination of two-man partnership on death or retirement of one partner

Section 708(b)(1)(A) now provides that a partnership shall be considered as terminated if no part of any business, financial operation or venture is carried on by any of its partners "in a partnership." This creates a problem in the case of a two-man partnership where one partner retires or dies and the business is thereafter conducted by the survivor in a proprietorship form. The regulations attempt to solve the problem by providing (sec. 1.736–1(a)(6)) that if payments are made to a retiring or deceased partner which qualify under section 736, the partnership is considered as continuing so long as such payments are made. This amendment will give the regulation statutory force.

The revised report of the Mills advisory group on subchapter K has not adopted this amendment.

SECTION 39. CHARACTER OF GAIN OR LOSS ON DISPOSITION BY A PARTNER OF DISTRIBUTED PROPERTY

Section 39 of the bill amends section 735(a) of the 1954 code.

Section 735 provides in effect that if a partnership distributes unrealized receivables or inventory items to a partner, the gain or loss realized by that distributee partner upon a subsequent sale or exchange of such unrealized receivables or inventory items will be ordinary income to the distributee partner. The section by its express language applies only to the gain or loss on the disposition of property "by a distributee partner." If section 735 is literally applied, a distributee partner could make a gift of the unrealized receivables or inventory items received by him as a distribution from a partnership, and the donee would escape application of the ordinary income consequences prescribed by the present statutes in the event of sale by a distributee partner.

The amendment extends the ordinary income characterization of section 735 to sales or exchanges of unrealized receivables or inventory items by a taxpayer who acquired them from a distributee partner and whose basis for such property is determined by reference to the distributee's basis.

The revised report of the Mills Advisory Group on subchapter K has adopted the present amendment.

SECTION 40. PAYMENTS TO A RETIRING PARTNER

Section 40 of the bill amends section 736(a) of the 1954 code.

Section 736 provides that amounts paid to a retiring partner or to a deceased partner's successor in interest are subject to ordinary partnership distribution rules to the extent they are paid in exchange for the partner's share of partnership property. If the amount paid is in excess of the fair market value of the partner's share of the property, section 736(a) provides that the excess will be treated either as a distributive share of partnership income or as a guaranteed payment.

Section 1.736–1(a)(2) of the regulations as originally proposed provided that payments qualifying under section 736(a) must be made in money and that such payments must be made in more than 1 taxable year of the partnership. The final regulations contain no such requirement, presumably because of the lack of statutory authority. The amendment adds requirements to section 736(a) similar to those in the proposed regulations in order to prevent unexpected and undesirable tax consequences.

For example, the A–B–C partnership agreement provides for payment of $50,000 for the interest of a deceased partner in the partnership. Payment is to be made in cash within 90 days after death. Liability for the payment is funded with life insurance. The partnership agreement makes no reference to a payment for a deceased partner's interest in goodwill. Partner C dies and the continuing partnership of A and B makes the $50,000 payment to C's executor in full retirement of C's interest in the partnership. If it is later determined that the fair market value of C's interest in partnership property (exclusive of good-

will) was $30,000. C's estate would have ordinary income of $20,000, representing a payment under section 736(a). The taxable income of A and B would be reduced by $20,000, a fact that might influence their ideas with respect to the valuation of C's interest in the partnership property.

If there is a lump sum payment for the interest of a retiring partner or deceased partner, or if the interest is retired by a distribution of property other than money, it is probably the usual intention of the parties that the transaction be considered a capital transaction rather than an income distribution. Accordingly, the amendment adds a new paragraph (2) to section 736(a) dealing with limitations on the treatment of a payment as a distribution of income or a guaranteed payment.

Under the first limitation, the payment must be made in money and payments must be made in more than one taxable year of the partnership. However, if the parties clearly intend a lump sum payment or a distribution of property other than money to be a distribution of income, and assuming it otherwise qualifies, there is no apparent policy reason why such payment or distribution should not be treated as a section 736(a) payment. Accordingly, in paragraph (2) there is an alternative limitation that would recognize a lump sum payment or a distribution of property as a section 736(a) payment if the parties so agree, and if the payment or distribution otherwise falls within section 736(a). The regulations can specify the requirements as to such an agreement.

The revised report of the Mills advisory group on subchapter K has adopted this amendment.

SECTION 41. INCOME WITH RESPECT TO A DECEASED PARTNER

Section 41 of the bill amends sections 743(b), 753 and 1014(c) of the 1954 Code.

Section 743(b) provides that a partnership may elect under section 754 to adjust the basis of partnership properties for transferee partners in the event of a sale or exchange or upon the death of a partner. It is very possible that the present statutory provisions could be interpreted so that a successor in interest of a deceased partner is entitled to an adjustment to basis of unrealized receivables of the partnership under section 743(b), assuming a proper election is made under section 754. There is nothing in section 743(b) that specifically denies the right to adjust basis of unrealized receivables in the case of a transmission of a partnership interest upon death of a partner. The fact that section 753 is restricted to payments qualifying under section 736(a) tends to indicate the absence of any limitation on the adjustment to basis of unrealized receivables of a partnership.

Assume that the A-B-C partnership has unrealized receivables of $30,000 at the time of A's death. If the partnership makes payments to A's successor in interest for his interest in the partnership, section 736(b)(2)(A) requires that the payments for A's $10,000 interest in unrealized receivables shall be treated as payments under section 736(a). Section 753 defines such payments as "income in respect of a decedent." The payments in retirement of A's interest in the unrealized receivables are ordinary income to A's successor in interest and reduce the partnership income taxable to B and C. If, however, the partnership should file an election under section 754 to adjust basis of partnership property, pursuant to section 743(b), to reflect the transmission of the partnership interest to A's heirs, then A's successor in interest could claim that under section 743(b) there should be a $10,000 adjustment to basis of unrealized receivables. This adjustment would be confined in its effect to A's successor in interest. Thus, by continuing the partnership and filing the election under section 754, A's successor in interest completely avoids the realization of taxable income with respect to A's interest in unrealized receivables as of the date of his death. B and C would be willing to go along because they are taxed on $20,000 of ordinary income in any event.

If the adjustment to basis under section 743(b) can be made to unrealized receivables of the partnership, A's successor in interest could also avoid the realization of income with respect to A's share of unrealized receivables through a sale or exchange of A's partnership interest. Section 751(a) would still be applicable, but there would be no taxable gain attributable to the sale of A's interest in the unrealized receivables.

The amendment to section 743(b) provides specifically that no adjustment may be made to the basis of unrealized receivables upon the death of a partner. The amendment also extends the application of section 753 so that such unrealized receivables fall within the definition of income in respect of a decedent. Finally, the amendment clarifies section 1014(c) so that there can be no question but that the amount which is considered income in respect of a decedent under sections 753 and 691 is not included in the basis of the partnership interest of a deceased partner.

The revised report of the Mills advisory group on subchapter K has adopted the substance of these amendments.

SECTION 42. SALE OR EXCHANGE OF INTEREST IN PARTNERSHIP

Section 42 of the bill amends section 751(a) of the 1954 code in several particulars.

Section 751 governs sales and exchanges of partnership interests and certain partnership distributions which effect exchanges of partnership interests in unrealized receivables of the partnership or in partnership inventory items which have substantially appreciated in value. Section 751(a) provides in effect that an allocation shall be made of a portion of the sales price of a partnership interest to unrealized receivables or substantially appreciated inventory. The regulations (sec. 1.751–1(a)(2)) require that basis of the interest sold in the section 751 property shall be determined as though such property had been distributed to the transferor partner immediately prior to the sale or exchange of his interest in a pro rata distribution. This formula for determining gain or loss on sale of a partnership interest allocable to unrealized receivables or appreciated inventory items is extremely complicated in practical application.

The new section 751(a)(4) adds a definition of the term "section 751 property." The term is defined as meaning unrealized receivables and substantial appreciated inventory items. This is the definition found in the regulations (sec. 751–1(a)(1)).

The amendment also provides that the gain or loss of the selling partner attributable to the sale or exchange of his interest in section 751 property shall be determined as though the partnership had sold such section 751 property at market value. It is contemplated that the actual sales price of the partnership interest will be used in determining the sales price at market value. This modification is designed to prevent the use of a theoretical market value of the section 751 property that does not take into account the valuation used by the parties in fixing the sales price of the partnership interest. The amendment is also designed to cover the situation where a partner sells less than his entire interest in the partnership.

The present section 751(a) does not adequately cover the case of a sale or exchange of an interest in a partnership having section 751 property where the transferor partner acquired his interest by a transfer within 2 years prior to the date of such sale or exchange but the election under section 754 is not in effect. The regulations at section 1.751–1(2) attempt to cover this situation by providing that the transferor partner's basis of the section 751 property "shall be an amount equal to the basis such property would have had under section 732 (including subsection (d) thereof) if the selling partner had received his share of such property in a current distribution made immediately before the sale." By bringing into account the section 732(d) adjustment, the regulations do achieve the effect of the adjustment to basis of partnership property under section 743(b) which would have been made had the election under section 754 been in effect. The new section 751(a)(3) incorporates a provision having an effect which corresponds to the relief afforded by section 732(d).

The original report of the Mills advisory group on subchapter K adopted the approach proposed herein. The advisory group's revised report retains the same general concept but considerably alters the form and method of both its earlier proposals and of this amendment.

SECTION 43. TREATMENT OF PARTNERSHIP DISTRIBUTIONS AS SALES OR EXCHANGES

Section 43 of the bill adds a new subparagraph to section 751(b)(2) of the 1954 code.

In allocating a portion of the sales price of a partnership interest to unrealized receivables or to substantially appreciated inventory, the purpose of section 751 is to deal with the problem of the "collapsible partnership." If a partnership has section 751 property (i.e., unrealized receivables or substantially appreciated inventory), part of the gain realized upon sale of a partnership interest is attributed to the section 751 property and is taxed as ordinary income. If the partnership distributes property to the partners, and if the result of the distribution is to change the interests of the partners in the section 751 property, section 751(b) provides for recognition of gain or loss to the partners on the theory that there has been an exchange of an interest in the section 751 property for an increased interest in other partnership assets. The application of section 751(b) to a distribution that does not completely liquidate the interest of a partner creates complexities and possible traps for the unwary, especially in the case of a current distribution of cash or property. Other provisions of the statute adequately protect the revenues where there is a distribution that does not completely liquidate a partner's interest. The amendment is therefore designed to confine the application of section 751(b) to those distributions which are made in complete liquidation of a partner's interest.

The revised report of the Mills advisory group on subchapter K has adopted a different approach. Instead of clarifying and limiting the application of section 751(b), the advisory group's proposal is to delete section 751(b) in its entirety even though the advisory group recognized that the deletion of section 751(b) makes it possible to shift ordinary income between partners. The advisory group then attempts to prevent conversion of this shifted income into capital gains by amendments to sections 735(a) and 755. It is believed that although the advisory group's approach to the problem greatly simplifies the statute, its solutions will result in unexpected and inadvisable tax benefits which the amendment made by section 43 of the bill would prevent.

SECTION 44. DEFINITION OF UNREALIZED RECEIVABLES

Section 44 of the bill amends section 751 (c) of the 1954 code.

Section 751(c) defines "unrealized receivables" as including the right to payment for services to be rendered or for goods to be delivered in the future. The concept of "unrealized receivables" is significant in determining the income tax consequences of a sale of a partnership interest (sec. 751(a)) or upon certain distributions by a partnership (sec. 751(b)).

The present definition of "unrealized receivables" is broad enough to include the value of rights to payment under uncompleted long-term contracts which are generally considered to be part of the goodwill of the business. For example, a partnership, whose business is servicing television sets, might be required to treat the value of its right to compensation for services to be rendered 2 years in the future under a long-term contract as an unrealized receivable. Furthermore, "unrealized receivables" as defined by section 751(c) might be considered to include orders for future delivery of inventory items which have not yet been acquired by the partnership even though such orders represent part of the partnership's going concern value and should not be treated as an unrealized receivable.

The amendment limits the concept of unrealized receivables in two respects: It excludes from the definition of unrealized receivables both rights to payments for services to be rendered in the future and rights to payment for the delivery of goods not then owned by the partnership.

The revised report of the Mills advisory group on subchapter K seeks to accomplish the same purpose as the amendment made by this section by eliminating the detailed definition and, instead, by providing that the character of the income of the transferor partner will be determined by the rules which would apply if the transferor partner sold the property directly instead of selling or exchanging an interest in the partnership. For the purpose of making this determination the business of the partnership is attributed to the transferor partner; and it is further assumed that, at the time of the transferor partner's sale or exchange of his interest, all partnership property had been sold or exchanged in a single transaction.

SECTION 45. PARTNERSHIP INVENTORY ITEMS

Section 45 of the bill amends section 751 (d) of the 1954 code.

Definition of substantial appreciation

Subsection (a) deals with the problem of redefining the concept of substantial appreciation of partnership inventory items. Section 751(d)(1) now provides that there is substantial appreciation of partnership inventory items if the value of such items exceeds 120 percent of the partnership's adjusted basis of such property and 10 percent of the fair market value of all partnership property other than money. It is possible to avoid the 120-percent test by planned action, such as causing the partnership to purchase additional inventory having a market value no greater than cost. It is also possible to avoid the 10-percent test by causing the partnership to use its cash to purchase securities, or to borrow money to purchase securities, or otherwise to juggle assets and liabilities.

To make the test of substantial appreciation more meaningful and less vulnerable to planned tax avoidance, it is proposed that substantially appreciated inventory be determined by a comparison between the appreciation in value of the partnership's inventory and the total appreciation in value of all of the partnership's property whose fair market value exceeds adjusted basis. In order to illustrate the operation of section 751(d)(1), assume that a partnership had inventory with a fair market value of $35,000 and an adjusted basis to the partnership of $20,000, that the excess of fair market value over basis is $15,000, and that the partnership also had properties X and Y with basis and fair market values as follows:

	Adjusted basis	Fair market value
Property X	$50,000	$140,000
Property Y	80,000	30,000
Total	130,000	170,000

The excess of fair market value of items X and Y over adjusted basis is $40,000. However, the excess of fair market value over adjusted basis with respect to property X is $90,000. Under the amendment of subsection (a) property X would be considered in the measure of whether the inventory was substantially appreciated and property Y would be omitted from consideration. The computation would be as follows:

	Market value	Adjusted basis	Excess of market value over adjusted basis
Inventory	$35,000	$20,000	$15,000
Property X	140,000	50,000	90,000
Property Y	30,000	80,000	
Total			105,000
Ratio of excess market value of inventory to total excess market value			14

The excess of market value over adjusted basis of inventory is less than 20 percent of the total appreciation (i.e., excess of market value over adjusted basis of partnership property) of those partnership properties that reflect an appreciation in value. Consequently, the inventory, in the example, would not be considered as substantially appreciated in value.

In addition to being substantially appreciated under the foregoing test, the inventory also must have a market value that exceeds 120 percent of the excess of the market value of all partnership property over the partnership liabilities. This is to avoid the problems of fragmentation where the appreciation in value of partnership property is insignificant in comparison with the total net worth, at market value, of the partnership. The measure is made the excess of market value of partnership property over partnership liabilities, rather than merely the market value of partnership property as in the present law, so as to eliminate obvious opportunities of increasing the partnership's property through borrowings.

Definition of inventory items

Subsection (b) of section 45 of the bill restates and restricts the definition of the term "inventory items" now contained in section 751(d)(2). Section 751(d)(2)(B) now includes in the definition of inventory items any other property which on sale or exchange by the partnership "would be considered property other than a capital asset and other than property described in section 1231." This definition is broader than necessary and has applications not expected when the section was enacted. Among the items which are not capital assets and are not property described in section 1231 (and consequently would be inventory items) are—

1. Real property or depreciable property used in the trade or business but which has been held for a period of six months or less (sec. 1221(2)), and

2. Accounts or notes receivable acquired in the ordinary course of trade or business for services rendered or from the sale of inventory (sec. 1221(4)). This would include accounts receivable of an accrual basis partnership even though the amount realized on sale of goods or for services rendered has been included in the partnership's taxable income.

The inclusion of these items in inventory gives a distorted result which may work to the detriment of either the Treasury Department or the taxpayer.

The amendment specifically excludes from classification as inventory items accounts or notes receivable acquired in the ordinary course of trade or business, section 1231 property, and real property or depreciable property used in the trade or business of the partnership but which has been held for a period of 6 months or less.

The amendment refers to property "with respect to which the amount realized on a sale or exchange by the partnership would be considered as an amount realized from the sale or exchange of property other than a capital asset" to prevent the contribution to a partnership of section 306 stock or of stock in a collapsible corporation (sec. 341). Under the present section 751(d)(2)(B) it is possible to argue that such stock is not inventory as defined in section 751(d)(2)(B). The amendment includes section 306 stock or stock of a collapsible corporation in the definition of inventory.

Under the present section 751(d)(2)(C) inventory items also include property which may not be held as inventory or for sale in the ordinary course of the partnership business but which would be so held if owned by the selling partner or the distributee partner. Presumably this provision was intended to prevent the avoidance by dealers in real estate of ordinary income consequences by participating in partnerships which hold real property for investment purposes. However, in the case of a distribution of partnership property to which section 751(b) applies, section 751(d)(2)(C) may have unexpected and unfair consequences to some partners. For example, the A-B-C partnership holds real property which is a capital asset of the partnership. The partnership has no property other than the real estate and cash. If the real estate is distributed to A, who is not a dealer in real estate, it would not be an inventory item of the partnership and consequently section 751(b) would not be applicable. However, if the real estate is distributed to C, who is a dealer in real estate, it would be an inventory item under section 751(d)(2)(C). If the real estate had substantially appreciated in value, A and B would realize ordinary income under section 751(b), to the extent of their shares of the appreciation, as a result of the distribution of the property to C.

The amendment reclassifies property as inventory, by reference to its status if held by the distributee partner, only as to property owned by the partnership after the distribution. If property is distributed, the distributee partner, in effect, has reduced his interest and hence sold or exchanged his interest in the property remaining in the partnership. He realizes ordinary gain or loss if such property, in which he has relinquished or reduced his interest, would be inventory if held by him. On the other hand, if the property in question were distributed to such partner, so that the remaining partners are in effect selling or exchanging their interest in such property, the continuing partners only realize capital gain or loss if the property is otherwise a capital asset to them.

The revised report of the Mills advisory group on subchapter K has approached the problem of section 751(d)(1) as it did the problem of unrealized receivables under section 751(c); that is, by recommending a simple test of whether the sale of the assets

by the partnership would have created ordinary income or capital gain for the partnership. The advisory group, therefore, combined its suggested amendments in respect of "unrealized receivables" and "inventory items" into one section, to permit the elimination of any distinction between inventory items and unrealized receivables.

The advisory group has also made its new test inapplicable unless the gain attributable to the present 751(c) and 751(d) assets exceeds $1,000. Then the advisory group's proposal would be effective only if the combined value of unrealized receivables and appreciation in inventory items exceeds 15 percent of the amount realized in the sale or exchange of the partner's interest.

Aside from these changes in method the advisory group's recommendations are designed to achieve substantially the same results as the present amendments.

SECTION 46. LIMITATION ON PARTNER'S DISTRIBUTIVE SHARE OF LOSSES

Section 46 of the bill amends section 752 of the 1954 code.

Section 752, relating to the allowance of a partner's losses, is amended to allow a partner his share of partnership losses in excess of the adjusted basis of his partnership interest, if the partner is unconditionally obligated to the partnership for his share of the partnership losses.

Section 704(d) provides that the excess of a partner's share of losses over the adjusted basis of his partnership interest is deductible only in the year in which such excess is repaid to the partnership. In determining his adjusted basis, any increase in his share of liabilities to third parties is taken into account, so that the partner may deduct his share of a partnership loss to the extent he becomes liable to partnership creditors. However, no logical distinction can be drawn between a liability of a partner to the partnership and a share of liabilities of the partnership to third parties.

The amendment would permit a partner to deduct in the year of the loss his full share of partnership losses, although in excess of the basis of his partnership interest, if he is obligated to repay his share of such losses. Although the partner's liability to repay his share of losses is referred to as a liability to the partnership, it is intended that the same result shall obtain where the liability to repay is to the other partners or to some of them, rather than directly to the partnership. The interests of the revenue are amply protected against the subsequent forgiveness of a partner's obligations to the partnership or to partners by other provisions of the code which tax the amount of such forgiveness as income.

The amendment does not allow losses to a partner in excess of the basis of his partnership interest where he is obligated to repay such losses on a conditional basis only (e.g., out of future profits), since in these circumstances the amount of the partner's loss, if any, has not been finally fixed.

The revised report of the Mills advisory group on subchapter K has made substantially the same recommendations.

SECTION 47. EXCLUSION OF CERTAIN UNINCORPORATED ORGANIZATIONS FROM PARTNERSHIP PROVISIONS

Section 47 of the bill amends section 761(a) of the 1954 code.

For income tax purposes section 761 now excludes an unincorporated organization from the concept of a partnership, but only if all the members elect to be excluded. Experience has indicated the impracticability of elections by all the members.

The amendment eliminates the requirement that all the members must elect to be excluded. At the same time the amendment permits an unincorporated organization (as distinguished from its members) to elect to be taxed as a partnership.

The revised report of the Mills advisory group on subchapter K has adopted the substance of the changes made by this amendment.

The American Bar Association has adopted a number of resolutions which, while not proposing precise statutory language, contain recommendations to the Congress with respect to provisions of the revised report of the Mills advisory group on subchapter K, reflected in H.R. 4460 introduced by Representative MILLS on February 12, 1959. These resolutions of the American Bar Association are either by way of approval of or opposition to a proposal of the advisory group, and recommend to the Congress either that it enact or that it not enact legislation embodying the principles of such proposal of the advisory group. Summaries and explanations of these resolutions appear below:

Adoption of Recommendation of Advisory Group on Subchapter K Relating to Rearrangement and Simplification of Subchapter K

The American Bar Association recommends to the Congress that it enact legislation embodying the principle of the proposal of the Mills advisory group on subchapter K (sec. 2 of H.R. 4460, 86th Cong., 1st sess.) that the provisions of the Internal Revenue Code of 1954 relating to the taxation of partners and partnerships be rearranged in the interest of simplification by grouping together at the beginning of subchapter K the provisions generally applicable to small partnerships.

The most commonly voiced criticism of subchapter K is that it is excessively complicated for the small partnership. While it is recognized that many of the so-called complications are essentially relief provisions or are designed to curb abuses not usually found in small businesses, an effort should be made to simplify the statutory provisions. After considerable study, it appears that it is not practical to provide two sets of partnership rules, one for small partnerships and the other for more complex business arrangements in partnership form. Such an attempt would result in increased complexity.

Under the advisory group proposal the basic rules, applicable to typical partnership situations, would constitute part I of subchapter K. More complicated provisions, such as the collapsible partnership provisions, would be placed in separate parts. The various elections which treat the partnership as an aggregate of individuals instead of as a business entity would also be placed in a separate part. Finally, definitions and effective date provisions would be placed at the end of the subchapter.

The rearrangement would require relatively few changes in section numbers. The basic provisions would in the main follow the existing section numbers. Provisions relegated to the second or third parts of the subchapter would be given new section numbers. Appropriate cross reference would be provided between the basic provisions and the special rules.

As part of the simplification of subchapter K under the advisory group recommendations, the alternative method prescribed in section 705(b) for computing the basis of a partner's interest in a partnership would be made the general rule. The detailed or historical method would be applicable only if the taxpayer or the Commissioner demonstrated that the simplified method was substantially inaccurate.

The proposal for simplification and rearrangement of the partnership rules would be of material assistance to smaller partnerships not affected by complicated tax rules in subchapter K. It would generally facilitate a better understanding of the partnership provisions.

Opposition to Recommendation of Advisory Group on Subchapter K Relating to Clarification of the Rules for Determining the Character of Partnership Income

The American Bar Association recommends to the Congress that it not enact legislation embodying the principle of the proposal of the Mills advisory group on subchapter K (sec. 702 of subch. K contained in sec. 2 of H.R. 4460, 86th Cong., 1st sess.) that the character of partnership items be determined at the partner level.

This resolution contemplates that the character of gain or loss on the disposition of property owned by a partnership shall be determined by reference to the activities of the partnership and not, as the advisory group suggests, by reference to the individual activities of the different members of the partnership. The recommendation of the advisory group for amending section 702(b) appears technically defective and unnecessary. The advisory group proposal to add a new section 702(d) providing that any limitations with respect to exclusions or deductions shall be applied solely at the partner level is premature and should be deferred until additional experience has been gained with the present regulations.

The advisory group has apparently adopted the view that, in a case of the sale of property owned by a partnership, the character of the gain or loss should not be determined at the partnership level but at the level of the individual partners. Under this approach a sale of property by a partnership may result in ordinary income to a partner who is a real estate dealer and capital gain to other partners.

It is believed that the advisory group has adopted an erronerous view of existing law and that the statute should be clarified to provide expressly that the character of gain or loss on property held by the partnership shall be determined on the basis of the operations and activities of the partnership.

Where a dealer and investors participate jointly in the development or sale of property, the determination as to whether such property is held for sale to customers in the ordinary course of business should be made by analyzing all the activities of the partnership, including any actions by the dealers on behalf of the partnership. If the partnership is a dealer, by virtue of activities of one or more persons on its behalf, then the gain will be ordinary income to each of the participants. On the other hand, if the partnership is determined, after analyzing all facts relevant to its operations, to be holding the property for investment, then the capital gains characteristics should apply to each of the partners. Under this view the character of partnership gain or loss would be the same for all participants in the venture.

It is recognized that in some cases the business purpose of the partnership can only be determined from an analysis of the actions of one or more members of the partnership acting on behalf of the partnership. However, the purpose of such inquiry is to ascertain the business of the partnership and not to disregard the partnership as a factor in the determination.

The resolution contemplates determination of the character of gain on the sale of property by the partnership by reference to the activities of the partnership itself. The same treatment could also be applied with respect to sales of a partnership interest by a partner in lieu of the present provisions of section 751(d)(2)(C). This rule has merit not only as a matter of realistic treatment of partnership-owned property but also in that it avoids the difficulty of making a hypothetical determination as to what the character of the property would be if, instead of being owned by the partnership, it were owned by the individual partners.

The resolution is not intended to countenance tax avoidance. If any member of the partnership is a dealer and he in effect acts as an agent for the partnership, the partnership itself would be regarded as a dealer and ordinary income consequences would attach to the sale, as they properly should. On the other hand, it will be clear that if the partnership is holding the property for investment, the dealer partner will participate in capital gains treatment upon a sale. This does not involve tax avoidance since the dealer could have held the property individually for investment.

The advisory group amendment with respect to section 702(b) provides that the conduit rules shall apply to general partnership profit or less as determined under section 702(a)(9) as well as under the other provisions of section 702(a). This amendment appears to be unnecessary since the regulations expressly provide that there shall be segregated from general partnership profit or loss any item of partnership income, gain, loss, deduction, or credit which would produce a different tax result in the returns of the individual partners. Moreover, the amendment would fail, as a technical matter, to accomplish the purpose for which it was intended, namely, that of requiring that the character of gain or loss be determined at the partner level and not at the partnership level.

The advisory group amendment relating to the proposed new section 702(d) would provide that wherever a limitation is imposed upon an exclusion or deduction in terms of a fixed amount or percentage of income, the limitation is to apply solely at the partner level and the partnership is to be disregarded. The present regulations under section 702(a) apply such a rule with respect to the limitation on the deduction for exploration expenses. It is questionable whether a blanket rule should be adopted requiring that all limitations be applied at the individual partner level. It is believed that additional experience should be obtained under the existing provisions of the regulations before adopting a legislative provision.

Adoption of Recommendation of Advisory Group on Subchapter K for Conforming Rules on Sale of Property to Controlled Partnership to Rules on Sales to Controlled Corporations

The American Bar Association recommends to the Congress that it enact legislation embodying the principles of the proposal of the Mills Advisory Group on Subchapter K (sec. 765 of subch. K contained in sec. 2 of H.R. 4460, 86th Cong., 1st sess.) that the provisions of the Internal Revenue Code of 1954 relating to sales to a controlled partnership be revised generally to accord with the rules relating to sales at a gain or loss to a controlled corporation.

The proposal to bring partnership rules relating to sales at a gain or loss into line with those involving sales between other related entities would tend to simplify the tax provisions and provide a greater measure of uniformity in tax treatment. In the case of sales at a gain, it is believed that no greater burden should be imposed on sales to a controlled partnership than on sales to a controlled corporation. The present provisions are discriminatory against partnerships and create serious inequities.

The present section 707(b) prescribes the treatment applicable in the case of sales or exchanges between a partner and a partnership in which he has a controlling interest, and between partnerships owned by the same person. Under section 707(b)(1) a loss is disallowed on a sale between a partner and a partnership in which he has an interest of more than 50 percent in the capital or profits, and between partnerships in which the same persons have more than a 50 percent interest in the capital or profits.

It is contemplated that the provisions on sale of property at a loss between a partner and a partnership should conform more closely to the rules of section 267 pertaining to sales of property at a loss between related persons. Several minor technical differences between the two provisions should be eliminated and the exclusive rule governing the tax consequences of such sales should be contained in section 707(b)(1).

Where there is a gain on a sale between a partner and a partnership in which the partner owns an interest of more than 80 percent in the capital or profits, or between partnerships in which the same persons have more than an 80-percent interest in the capital or profits, section 707(b)(2) requires that the gain be treated as ordinary income if the property is not a capital asset in the hands of the transferee. This provision is considerably broader than section 1239, which relates to sales or exchanges between a stockholder and a controlled corporation. For example, the partnership provision covers property other than depreciable property. It may result in an ordinary income tax on sales of land to a partnership to be used for the construction of rental property, or the sale of timber, which would normally produce capital gain. There is no explanation for the inconsistency in treatment.

Since there seems to be no reason for the application of different and more stringent rules to gains involving controlled partnerships than to gains involving controlled corporations, it is recommended the provisions of section 707(b)(2) be amended, as suggested by the advisory group, to conform with section 1239. If the Congress should desire to expand the scope of section 1239, comparable action could then be taken with respect to section 707(b)(2).

Adoption of Recommendation of Advisory Group on Subchapter K Relating to Liberalization of the Election To Adjust the Basis of Partnership Property for a Transferee

The American Bar Association recommends to the Congress that it enact legislation embodying the principles of the proposals of the Mills advisory group on subchapter K (sec. 780 of subch. K contained in sec. 2 of H.R. 4460, 86th Cong., 1st sess.) that the provisions of the Internal Revenue Code of 1954 relating to the election to adjust the basis of partnership property be amended so that the partnership shall be permitted to make separate elections with respect to distributions of partnership property and transfers of partnership interests.

The advisory group proposal would allow two separate elections, in lieu of the present single election, with respect to adjustment of the basis of the partnership assets. Tying the two elections together as under the present law imposes an excessive burden upon the partnership operations.

The advisory group recommendation would allow the partnership separate elections to adjust the basis of partnership assets (1) in the case of distributions and (2) in the case of transfers of partnership interests. Under present law there is a single election to adjust the basis of partnership assets both for distributions and transfers. As the advisory group explains, different considerations may be applicable to adjustments of the basis of property (1) with respect to distributios and (2) with respect to transfers of partnership interests. A single election imposes such heavy burdens upon the partnership that it may be reluctant to exercise the election even though it is obviously desirable with respect to a particular transfer of a partnership interest.

The advisory group considered but did not adopt a proposal to allow the transferee partner individually to make the election with respect to his share of the basis of partnership assets. It was of the opinion that the decision as to whether or not to make the election should be within the control of the partnership, and the partnership should be responsible for computing the amount of the adjustment. The advisory group felt the transferee partner was adequately protected under the separate election proposal.

In many cases the individual partner will not have direct access to the data concerning the basis of partnership assets which would be necessary for him to make the computations and will have to obtain such information from the partnership. The election would probably be used much more extensively if made available to the individual partner.

Adoption of Recommendation of Advisory Group on Subchapter K Relating to Simplification of the Collapsible Partnership Rules

The American Bar Association recommends to the Congress that it enact legislation embodying the principles of the proposals of the Mills advisory group on subchapter K (pt. II of subch. K contained in sec. 2 of H.R. 4460, 86th Cong., 1st sess.) involving the provisions of the Internal Revenue Code of 1954 relating to collapsible partnerships so that the collapsible partnership rules shall not apply to distributions of property.

The advisory group proposal to eliminate the collapsible partnership rules applicable to distributions of partnership property is recognized as a substantial simplification of the present law.

The advisory group has recommended the complete elimination of section 751(b), both as it pertains to current distributions and distributions in complete liquidation of a partner's interest. The advisory group proposal was based on the complexities involved in determining whether or not a distribution is pro rata, and in computing the amount of gain not only to the distributing partner but to the other members of the partnership. The advisory group made certain technical changes in sections 735(a) and 755 which it felt would minimize tax avoidance. It is believed that the advisory group recommendation has merit as a simplification of the statute.

SECTION 48. WESTERN HEMISPHERE TRADE CORPORATIONS

Section 48 of the bill amends section 921 of the 1954 code.

The Western Hemisphere trade corporation provisions contained in sections 921 and 922 were enacted to encourage U.S. capital to invest in the Western Hemisphere outside the United States, and to make the Western Hemisphere operations of U.S. investors competitive with those financed by foreign capital. The competitive equality was to be achieved by allowing a domestic corporation qualifying as a Western Hemisphere trade corporation a special deduction which, under present law, reduces the effective corporate tax rate by 14 percentage points.

Prior to the enactment of the 1954 code any activity outside the Western Hemisphere disqualified a corporation from the advantages of the Western Hemisphere trade corporation provisions. To correct what appeared to be an obvious inequity in the administration of the Western Hemisphere trade corporation provisions, present section 921 as enacted in 1954 provides that incidental purchases made outside the Western Hemisphere will not disqualify a corporation from the special Western Hemisphere trade corporation deduction if it is otherwise eligible.

The present amendment eliminates interpretation of "incidental purchases" and extends the permitted activities of otherwise qualified corporations so that they can purchase goods, equipment and the like outside the Western Hemisphere without being disqualified. Allowing purchases to be made outside the Western Hemisphere by a Western Hemisphere trade corporation would

seem necessary to effectuate the policies for which the provisions were originally enacted. Furthermore, the present statute can be circumvented through the use of a non-Western Hemisphere trade corporation to make purchases outside the Western Hemisphere followed by a resale within the Western Hemisphere area to the Western Hemisphere trade corporation. The amendment would make it unnecessary to adopt such devious procedures.

The amendment made by this section applies to taxable years of Western Hemisphere trade corporations beginning after December 31, 1959.

SECTION 49. BASIS OF JOINT TENANCIES IN COMMUNITY PROPERTY STATES

Section 49 of the bill amends section 1014(b)(6) of the 1954 code.

Section 1014(a) provides in general that the basis of property acquired from a decedent shall be the fair market value of the property, at the date of the decedent's death. Section 1014(b) enumerates the categories of property deemed to have been acquired from a decedent and therefore taking such date of death basis.

Section 1014(b)(6) provides that a surviving spouse's one-half share of community property shall be considered as acquired from the decedent spouse if at least one-half of the community interest in the property was included in the decedent's taxable estate. The amendment extends the same treatment to the surviving spouse's one-half share of any property acquired with community property and held as joint tenants or tenants in common. This causes joint tenancies to receive the same treatment in community property and noncommunity property States, in addition to causing joint tenancies in community property States to receive the same treatment as community property.

Although the amendment achieves identity of treatment of tenancies in common with community property and joint tenancies in community property States, it does not achieve the same identity with the treatment of tenancies in common in noncommunity property States.

SECTION 50. BASIS OF PROPERTY ACQUIRED FROM A DECEDENT PRIOR TO HIS DEATH

Section 50 of the bill amends section 1014(b)(9) of the 1954 code.

Section 1014(b)(9) now contains a departure, in the case of property acquired from a decedent prior to his death, such as by a gift in contemplation of death, from the general rule laid down in section 1014(a) that the basis of property acquired from a decedent is its fair market value at the date of the decedent's death. Under section 1014(b)(9) the basis of such property is the market value of the date of death reduced by the deductions allowed to the surviving taxpayer for depreciation or depletion prior to the decedent's death.

This rule does not seem justified. Depreciation and depletion ordinarily are matched by an actual decline in the value of the property. There would seem to be no more reason for reducing the taxpayer's basis in the case of an acquisition before the decedent's death than where the property passes by reason of the decedent's death.

The amendment eliminates, in the case of property acquired before the decedent's death, the present reduction in basis for depreciation and depletion allowed to the taxpayer prior to such death.

SECTION 51. LIMITATION ON GAIN ON REPOSSESSION OF PROPERTY

Section 51 of the bill adds a new part IX, consisting of sections 1111 and 1112, to subchapter O of chapter 1 of the 1954 code.

Under present law, as expressed in sections 1.453-5(b) and 1.453-6(c) of the regulations, where property previously sold is repossessed, the fair market value of the property is treated as a payment on the obligations of the purchaser. The result can be unrealistic and a real hardship to the seller. For example, assume that real estate costing $5,000 is sold for $50,000, the seller receiving a down payment of $5,000 and a contractual obligation for the balance. Upon default, before any further payments are made, the property is repossessed at a time when its fair market value is $40,000. Since the seller treated the $5,000 down payment as a recovery of cost, the entire $40,000 is taxable, with no visible source of funds to pay the tax other than a resale of the property at a time of declining market values.

Under the amendment the gain taxable upon such a repossession will be limited to the excess of payments previously received over the sum of the previously reported gain and a constructive allowance for interim depreciation and depletion. On the facts of the example given above, gain would be recognized only to the extent of $5,000, the cash received.

The proposed amendment applies the rule presently applicable under sec. 1.543-6(b)(1) of the regulations where title to the property has not passed to the purchaser, with the exception that the amendment does not take the value of improvements made by the purchaser into account in calculating the repossession gain.

Subsection (a) of section 1111 states the general rule as to limited recognition of gain. In order to avoid undue complexity, the statute does not cover loss situations, nor does it cover situations where property has been sold without deferral of gain.

Subsection (b) sets forth the extent to which gain is to be recognized. Paragraph (2), which provides in effect that the recognized gain will not exceed what would otherwise be recognized under present law, will cover the unusual situation where the value of the property at the time of repossession has declined below its adjusted basis at the time of sale.

Subsection (c) sets out basis rules corresponding to the treatment under subsection (b).

Subsections (d) and (e) define the terms "repossession" and "obligations" broadly, to effectuate the purposes of the amendment.

The new section is designed to insure equal treatment of gains and losses on all repossessions of property. Under section 453(d)(1) of the code, the nature of the gain or loss on a repossession of property previously sold, where the sale was reported on the installment method, is determined by reference to the gain or loss on the original sale. Where the original sale was reported in accordance with the deferred-payment method, the regulations (sec. 1.453-6(c)) state that the gain on a repossession is ordinary income. The case law is unclear. There would seem to be no justification for differing treatment.

SECTION 52. GAINS AND LOSSES ON PURCHASE MONEY OBLIGATIONS

Section 52 of the bill adds a new section 1245 to part IV of subchapter P of chapter 1 of the 1954 code.

Under existing law payment on purchase money obligations may result in ordinary income to the seller, even though payment in cash at the time of the sale would have entitled the seller to capital gain treatment. *Joseph E. Gilbert*, 6 T. C. 10 (1946); *A. B. Culbertson*, 14 T. C. 1421 (1950). Conversely, in the case of a taxpayer other than a corporation, a loss due to worthlessness of a purchase money obligation may result in a capital loss under section 166 even though the entire transaction would have resulted in an ordinary loss if all of the consideration had been paid in cash at the time of the sale.

The amendment in general treats the proceeds of purchase money obligations as though they were proceeds of the original sale.

SECTION 53. UNCOMPLETED EMPLOYMENT RENDERED FOR 36 MONTHS OR MORE

Section 53 of the bill amends section 1301(a) of the 1954 code.

To prevent bunching of income in 1 year, section 1301 provides that in the case of employment covering a period of 36 months or more from the beginning to the completion of such employment, if the compensation received or accrued in the taxable year is not less than 80 percent of the total compensation from such employment, the compensation may be spread over that portion of the period of employment which precedes the receipt or accrual of the compensation.

At present a prerequisite to the right to spread the compensation over the years in which it was earned or accrued is completion of the employment at the time of receipt or accrual of the compensation. If the employment has not been completed at that time, the right to spread has not yet ripened and may be destroyed by the receipt of additional compensation in the future.

This amendment makes the 80 percent test determinable with reference to compensation received or accrued in the taxable year and prior tax years, without reference to compensation received or accrued in subsequent years. It accordingly establishes the right to spread at the close of the taxable year.

A comparison of the operation of existing law and the amendment made by this section is illustrated in the following examples:

Compensation	A	B	C
1st year	20	10	20
4th year	80	80	80
After 4th year	None	10	10
Total	100	100	110

Under A and B, existing law permits the compensation to be spread in the fourth year, although the right to spread is not established in the case of A until it is known that there will be no additional compensation after the fourth year or, in the case of B, until the exact amount of the compensation received or accrued after the fourth year is determined. The amendment would not affect the result in either of these cases, but the right to spread would be fixed in the fourth year.

Under C, no spreading is permitted under existing law because the amount received after the fourth year disqualifies the fourth year compensation under the 80-percent test. The amendment permits spreading in this case at the close of the fourth year, regardless of how much compensation is received or accrued in later years.

SECTION 54. EXCLUSION OF DOMESTIC CORPORATION ENGAGED PRIMARILY IN FOREIGN TRADE FROM CONSOLIDATED RETURN

Section 54 of the bill adds a new paragraph (9) to section 1504(b) of the 1954 code.

Under present law a domestic corporation engaged primarily in foreign trade must be included in the consolidated return of the group with which it is affiliated if the stock-ownership test is met.

The amendment excludes such a corporation from the consolidated return unless it files an election to be included. Such an election may be revoked, but only if there has been a change in the tax laws or regulations of the United States or of any foreign country which would make the continued inclusion of such corporation in a consolidated return less advantageous to it or to the affiliated group of which it is a member. A corporation whose election has been re-

voked may again elect to be included in a consolidated return. There are restrictions regarding taxable years to which an election or a revocation thereof may apply.

The amendment gives recognition to differences in the operations of an ordinary domestic corporation and of one which is engaged primarily in foreign trade. Enactment of an excess profits tax law is an example of an event which might make disadvantageous continued inclusion in a consolidated return of a corporation engaged primarily in foreign trade, and which would therefore permit it to file a separate return.

SECTION 55. EXTENDING PERIOD OF LIMITATIONS ON CREDIT FOR STATE DEATH TAXES

Section 55 of the bill amends section 2011(c)(3) of the 1954 code.

Section 2011(c) now provides generally that the credit for State death taxes against the Federal estate tax, under section 2011(a), shall be allowed only if the State tax was paid and the credit therefor was claimed within 4 years after the filing of the Federal estate tax return. It presently contains the following three exceptions to this 4-year rule:

1. If a timely petition is filed with the Tax Court, the period is extended until 60 days after the Tax Court's decision becomes final;

2. If the time to pay the Federal estate tax has been duly extended under section 6161, the period runs until the date such extension expires; and

3. If a claim for refund is duly filed, the period is extended until 60 days after the mailing of a notice of disallowance by the Commissioner of the claim or until 60 days after a decision by any court of competent jurisdiction, in a suit on the refund claim, has become final.

The third exception was added to section 2011(c) in 1958 by Public Law 85-866, as a new paragraph (3). It is felt that this addition does not solve all the problems in the area. If the Federal estate tax is deductible in computing State inheritance taxes, it may be impossible to determine the amount of the State tax until the Federal estate tax liability has been finally settled. The 60-day period provided in section 2011(c)(3) does not in all cases give sufficient time to determine the amount of the State tax, first requiring determination of the amount of Federal tax. The present amendment extends the period in which the credit for the State tax may be claimed until the last payment of Federal tax.

The amendment applies with respect to estates of decedents dying after the date of enactment.

SECTION 56. CREDIT FOR GIFT TAX AGAINST ESTATE TAX

Section 56 of the bill amends section 2012 of the 1954 code.

Under the present section 2012 the calculation of the credit for gift tax against estate tax involves the use of ratios and has other complications. A principal difficulty arises from the use of an average tax rate in allocating gift tax paid to a specific gift and also in allocating to the gift its share of the estate tax.

The present section 2012 requires that the credit be determined in accordance with its relationship to the gross estate rather than to the net estate. If two taxpayers making gifts in the same year pay the same gift tax and both die later with taxable estates identical in amount, but one has a larger gross estate and offsetting deductions, his estate will receive a smaller credit than that of the other donor. The amendment eliminates this inequity.

The amendment simplifies the computation of the credit. Under the amended as well as the present section 2012, the starting point is the amount of gift tax paid. However, the limitation is much simpler under the amended section. The total gift tax credit on account of all gifts of property included in the gross estate may not exceed that portion of the estate tax which is attributable to inclusion of the gift properties in the gross estate. Under both the present and amended section 2012 the credit allowed is the lower of the gift tax paid or estate tax allocable to the included transfer or transfers. The amended section 2012 provides in effect that the estate tax is determined in the top applicable bracket or brackets. This is adopted from the deduction allowed under section 691(c) for income tax purposes for estate tax paid on income in respect of a decedent, already familiar to those dealing with estates.

Ordinarily the credit will be limited to the gift tax paid. Mathematically a significant difference is possible in large estates when the lifetime gifts have also been large, but the number of such cases is considered too small to justify continued use of the present formula method. The simpler procedure can reduce administration costs both for the Treasury Department and for taxpayers.

The amendment applies to estates of decedents dying after the date of enactment.

SECTION 57. VALUATION OF UNLISTED STOCK AND SECURITIES FOR ESTATE TAX PURPOSES

Section 57 of the bill amends section 2031(b) of the 1954 code.

Section 2031(b) now provides that to determine the value for estate tax purposes of unlisted and untraded stocks and securities, comparison is to be made with stocks and securities of corporations, engaged in the same or similar line of business, which are listed on an exchange.

Generally speaking, a corporation whose stock is quoted but not listed is much more comparable in size to the company whose unlisted shares or securities are to be valued, and is much more likely to have similar product lines and similar conditions as respects operations, distribution of products and management, than the similar corporation whose stock is listed on an exchange. The amendment therefore provides that comparison is to be made with the value of stocks and securities of a similar corporation, whether or not listed on an exchange. This permits the best comparison; it does not preclude comparison with listed stocks or securities.

The amendment applies to estates of decedents dying after the date of enactment.

SECTION 58. DEDUCTION FROM GROSS ESTATE FOR DIVORCE SETTLEMENT

Section 58 of the bill adds a new subsection to section 2043 of the 1954 code and adds a new subparagraph to section 2053(c).

Section 2516 exempts from gift tax transfers arising out of divorce settlements. There is no corresponding section in the estate tax provisions. In *Commissioner* v. *Maresi*, 156 F. 2d 929 (2d Cir. 1946), claims against a decedent's estate arising out of a divorce settlement were allowed as a deduction for estate tax purposes only if incorporated in the divorce decree. There appears to be no valid reason for different treatment for gift tax and for estate tax purposes.

The amendment removes property transferred in divorce settlements from the taxable estate, with the exception that liabilities arising from the decedent's obligation to support the issue of the marriage are excluded only to the extent that such liabilities represent support payments for the period prior to the decedent's death. This exception departs from the gift tax treatment, where the exemption applies to a transfer for the support of the issue of the marriage during minority.

SECTION 59. RENOUNCED OR DISCLAIMED INTERESTS

Section 59 of the bill adds a new section 2045 to part III of subchapter A of chapter 11 of the 1954 code, and a new section 2518 to subchapter B of chapter 12.

Certain cases have held that renunciation or disclaimers of property received by inheritance are transfers subject to estate and gift tax. *Hardenbergh* v. *Commissioner*, 198 F. 2d 63 (8th Cir. 1952), cert. denied, 344 U.S. 836 (1952); *William L. Maxwell*, 17 T.C. 1589 (1952). Other cases have long held to the contrary as to property received by will. *Brown* v. *Routzahn*, 63 F. 2d 914 (6th Cir. 1933), cert. denied, 290 U.S. 641 (1933). The decisions depend in large measure on State law.

The differences in result are considered undesirable from the standpoint that similar transactions are not now treated uniformly for estate and gift tax purposes. Uniformity seems desirable regardless of whether the property interest in question passes from the estate of a decedent dying testate or intestate, and regardless of the State law applicable to the passage of title at death.

The amendments accomplish these purposes by exempting renunciations and disclaimers from tax if they are effective under local law. They equate the tax treatment whether the property was received by inheritance or by will. They also provide that a gift of property received by inter vivos transfer can be renounced without estate tax. Similar amendments are made to both the estate tax and gift tax provisions so that the same rules will be applicable for the purposes of either tax.

At present the Treasury Department apparently takes the position that no partial disclaimer is effective even as to property passing by will. § 25.2511-1(c) of the regulations. The new rules apply to partial as well as to complete disclaimers and renunciations, provided local law has been complied with.

If the renunciation is made in part for a consideration, the new provisions apply to such renunciation to the extent that it is made without full and adequate consideration in money or money's worth.

The amendment made by subsection (a) (relating to the estate tax) applies to estates of decedents dying after the date of enactment, and the amendment made by subsection (b) (relating to the gift tax) applies to renunciations and disclaimers made after the date of enactment.

SECTION 60. APPLICATION OF MARITAL DEDUCTION TO ALLOWANCE OR AWARD TO SURVIVING SPOUSE

Section 60 of the bill adds a new paragraph to section 2056(b) of the 1954 code.

At present the question of whether an allowance or award to a surviving spouse qualifies for the marital deduction may be answered only after the effect of the laws of the particular state is determined by the courts. *Cf. Estate of Edward A. Cunha*, 30 TC. 812 (1958), with *King* v. *Wiseman*, 147 F. Supp. 156 (W.D. Okla. 1956), and *Estate of Proctor D. Rensenhouse*, 31 T.C. 818 (1959). The amendment eliminates the present uncertainty and the necessity for litigating in each State the treatment of a widow's allowance or award for marital deduction purposes.

The time limit for payment of the allowance or award is the period of limitations for assessment of estate tax.

The amendment applies to estates of decedents dying after the date of enactment.

SECTION 61. EXECUTION FOR GIFTS OF CERTAIN FUTURE INTERESTS

Section 61 of the bill amends section 2503(c) of the 1954 code.

The amendment extends the annual $3,000 gift tax exclusion to all gifts of future interests (to both minors and adults) where the property will be used solely for the benefit of a specified donee during his life and the remainder of the property, if any, will, on his death, be included in his gross estate. Section 2503(c) (the so-called gifts-to-minors provision) is amended to eliminate the present requirement for dis-

tribution to the donee at age 21 and to permit gifts over to third persons should the donee die prior to termination of the interest.

Criticism of section 2503(c) has been directed mainly to its requirement for complete distribution at age 21 and to the impossibility of providing for a gift over to a third person upon the minor's death prior to termination. The original purpose of the future-interest exception to the annual exclusion was the apprehended difficulty, in many instances, of determining the number of eventual donees and the values of their repective gifts. This policy can be preserved, however, so long as the property given to a donee will be used by or for him alone during his life and will be subject to estate tax at his death. It should not be material when the donee will receive the benefit from the property or who will receive it after his death.

Under the amendment the donor can provide for termination at any particular age or even run the trust through the donee's entire lifetime. He can (but need not) provide for gifts over to third persons on the donee's death, so long as the property will be includible in the donee's gross estate.

The amendment applies either to outright gifts or to gifts in trust for the benefit of the donee, and whether the donee is a minor or an adult.

It is not intended that this amendment provide an exclusive method of creating a present interest. Nor is it intended to affect the application of the annual exclusion to outright gifts, whether or not the donee is under disabilities arising under local law by reason of minority or otherwise.

The amendment applies to gifts made after the date of enactment.

SEC. 62. PROHIBITION OF ADJUSTMENT OF AMOUNT OF TAXABLE GIFTS MADE IN PRIOR YEARS

Section 62 of the bill amends section 2504(c) of the 1954 code.

Section 2504(c) now provides that the value of a gift made in a prior year cannot be readjusted in subsequent years if a gift tax was actually paid on the gift made in the prior year and the period of limitations for assessment has expired for such year.

The amendment extends such protection to the allowance or disallowance of the $3,000 annual exclusion from taxable gifts.

The amendment applies to gifts made in the calendar year 1961 and subsequent calendar years.

SECTION 63. DEFINITION OF EMPLOYER UNDER FEDERAL UNEMPLOYMENT TAX ACT

Section 63 of the bill amends section 3306(a) of the 1954 code.

This amendment would reduce the arbitrary significance, in present law, of the timing of an acquisition in a situation where an employer, before the 20th week of the calendar year, acquires the assets and business of another person and employs individuals who were employees in the same calendar year of such other person.

Chapter 23 imposes on an employer a tax of 3 percent of the first $3,000 of wages paid to an employee during the calendar year. Section 3302 allows a credit against this tax for contributions to a certified State unemployment compensation fund, not in excess of 2.7 percent. Section 3306(b)(1) provides that where an "employer" acquires substantially all the property used in a trade or business of a predecessor employer, and takes over employees of the latter, wages paid to such employees by the predecessor in the same calendar year prior to the acquisition shall be considered as having been paid by the successor.

Section 3306(b)(1), however, applies only with respect to "employers" and under section 3306(a) an "employer" is a person who employs four or more individuals on each of some 20 days during the calendar year, each day being in a different calendar week. Thus, if the successor employer takes over the predecessor employer's business and employees on May 31, wages paid by predecessor count toward the maximum base of $3,000 of wages paid to an employee during the calendar year. Both predecessor and successor receive credit against the Federal unemployment tax for taxes paid to State funds.

If, however, the acquisition occurs earlier in the calendar year, before 20 weeks have passed, the result is quite different. Predecessor is not liable for Federal unemployment tax and wages paid to his employees are not attributed to successor, who must pay Federal tax on the entire first $3,000 he pays to each employee taken over from predecessor. At the same time successor is generally not entitled to full credit for State tax in respect of the entire first $3,000 he pays to each such employee.

This amendment would cause some persons to pay Federal unemployment tax who would not under present law. Persons having less than four employees for 20 weeks in the taxable year, but who had four or more in the preceding year, as well as those persons who terminated their trade or business before the 20th week of the calendar year, would be "employers" and would pay tax where they would not under existing law. However, an advantage to the form of this amendment is that it would conform the definition of employer to that in the majority of State unemployment compensation laws. In view of the interrelationship between Federal and State law in this field, such conformity is desirable.

The amendment applies to the calendar year 1961 and subsequent calendar years.

SECTION 64. DEFINITION OF PRICE FOR MANUFACTURERS EXCISE TAX PURPOSES

Section 64 of the bill adds a new paragraph to section 416(b) of the 1954 code, which defines the price for which an article is sold for manufacturers excise tax purposes.

Section 4216 originated as section 619 of the Revenue Act of 1932. The report of the Ways and Means Committee on that bill (H.R. 708, 72d Cong., 1st sess., pp. 37–33) showed an intent to base the tax on the normal factory price and where, by reason of the relationship of the parties, the price charged did not represent a fair value, the tax was to be on the same value as in the case of similar sales between independent parties. The courts have held, however, that where the manufacturer acts as distributor or sells through a controlled agency, the tax must be measured by the distributor's sales price, while the manufacturer who does not perform the economic function of distribution is taxed only upon the factory price. See *F. W. Fitch Company* v. *United States*, 323 U.S. 582 (1945).

The amendment excludes from the tax base, in such situations, costs attributable to selling and distribution, as distinguished from manufacturing.

The amendment takes effect on the first day of the first month which begins more than 15 days after the date of enactment.

SECTION 65. STAMP TAXES PAYABLE BY REGULATED INVESTMENT COMPANIES

Section 65 of the bill amends sections 4303(a) and 4381(b) of the 1954 code, and adds a new subsection to section 4382.

These amendments are intended to apply the "conduit" theory to Federal excise taxation of "regulated investment companies" (including certain common trust funds), as is now done in the case of common trust funds coming within the definition in section 584. It seems inappropriate to tax regulated investment companies while exempting some common trust funds from tax since both are essentially vehicles for the same purpose—that of providing the investor of limited means with more expert investment management. It also seems inappropriate to single out investment company securities for up to three documentary stamp taxes on each sale while other securities in normal market activity usually bear only one such tax, especially where the required excise taxes have been paid on the securities underlying the investment company shares.

Subchapter M of the 1954 code applies the "conduit" theory of income taxation to regulated investment companies. A unit investment trust or an open-end or closed-end management type investment company duly registered under the Investment Company Act of 1940, meeting certain requirements of the code with respect to investments, nature of income, and disbursement of dividends, and electing to be so treated, pays tax only on income not distributed to its shareholders. This theory recognizes that an investment company primarily serves to provide persons of limited means with a diversified, lower risk, professionally managed investment.

The funds received by investment companies from their security holders are used to purchase securities on which the required original issuance and transfer taxes have already been paid. When any such securities are eliminated from the portfolio, appropriate transfer taxes are paid, and the securities acquired to take their place have likewise been subjected to original issuance and transfer taxes. These amendments would eliminate what is in effect a duplication of taxes on the shareholders of regulated investment companies. The taxes eliminated include the original issuance and one or two transfer taxes imposed on the sale to shareholders of open-end management type investment company shares and, on increase of shares by charter amendment, closed-end company shares, as well as the further original issuance tax on the sale of so-called contractual plans issued by unit investment trusts. Securities of unit investment trusts and open-end management type companies are redeemable securities and are not usually subject to transfer taxes when presented for redemption; all investment company securities, however, are subject to transfer taxes when transferred for reasons other than redemption and cancellation.

These amendments are designed to include those few common trust funds presently encompassed in the definition of regulated investment company, and to make it clear that the qualification of a security as one issued by such an entity is determined as of the date of the issuance or transfer involved and not (as in the case of income taxation) on the basis of events occurring subsequently in the taxable year.

Under section 851, a regulated investment company must meet the standards therein set forth at the close of the taxable year. This is impracticable for stamp tax purposes, and therefore a test measured by the preceding year is being substituted. Where the preceding year test is not available because the regulated investment company is new, such companies are presently required to set forth in their registration statements filed with the Securities and Exchange Commission an indication of their intention to qualify under section 851. Under these amendments new regulated investment companies must meet this test for stamp tax purposes.

The amendments take effect on the first day of the first calendar month beginning more than 15 days after the date of enactment.

SECTION 66. ELIMINATION OF STAMP TAX ON CERTAIN TRANSFERS OF STOCK OR CERTIFICATES OF INDEBTEDNESS IN CORPORATE MERGERS AND CONSOLIDATIONS

Section 66 of the bill adds a new subsection to section 4321 and a new subsection to section 4331 of the 1954 code.

The courts have held that where one corporation is merged into another, even where shares of the acquiring corporation are issued directly to the shareholders of the disappearing corporation, the stock transfer tax is payable upon a constructive transfer from the disappearing corporation to its shareholders of the right to receive shares of the acquiring corporation.

In such cases the stamp tax upon the issuance of the shares of the acquiring corporation to the shareholders of the disappearing corporation is due. Thus two stamp taxes are imposed, an issue tax and a transfer tax.

The amendments eliminate the tax on the constructive transfer of the right to receive shares of the acquiring corporation. They extend the same relief where securities rather than stock of the acquiring corporation go to the shareholders or security holders of the disappearing corporation. However, the amendments are limited to cases where the shares or securities are issued directly by the acquiring corporation to the shareholders or security holders of the disappearing corporation.

The amendments take effect on the day after the date of enactment.

SECTION 67. ELIMINATION OF REQUIREMENTS FOR RETURNS AS TO FORMATION OR REORGANIZATION OF FOREIGN CORPORATIONS

Section 67 of the bill repeals section 6046 of the 1954 code.

Section 6046 requires a report to be made with respect to the formation or reorganization of foreign corporations; it contains an exemption with respect to confidential disclosures. Investigations indicate that the reports required under this section have been little used by the Internal Revenue Service. Initially, it was believed that the reports furnished statistical data, but they have not been so used; and if they were, the statistical data would, of necessity, be incomplete because of the exemption for confidential disclosures. These reports, which are troublesome to prepare and submit within the required time limit, do not bear upon tax liability of the person submitting the report or upon the tax liability of the person receiving payment from him.

The amendment applies with respect to the formation or reorganization of a foreign corporation completed after the date of enactment.

SECTION 68. JURISDICTION OF TAX COURT OVER MANUFACTURERS EXCISE TAXES

Section 68 of the bill gives the Tax Court of the United States jurisdiction over controversies involving manufacturers excise taxes. The jurisdiction of the Tax Court over manufacturers excise taxes will correspond to that which it now has with respect to income, estate, and gift taxes.

Numerous sections of the 1954 code are amended.

At present the deficiency procedure available to the Commissioner of Internal Revenue with respect to income, estate, and gift taxes is not available to him with respect to manufacturers excise taxes. On the other hand, when the Commissioner presses an assertion that such tax is payable, the taxpayer has no practical alternative but to pay the tax and bring suit in a court other than the Tax Court.

These amendments apply to manufacturers excise taxes the payment of which becomes due after the date of enactment.

SECTION 69. ELIMINATION OF CONDITIONS ON CREDIT OR REFUND OF MANUFACTURERS EXCISE TAX

Section 69 of the bill amends section 6416(a) of the 1954 code.

Section 6416(a) now provides that no credit or refund of any overpayment of manufacturers excise tax shall be allowed unless the person who paid the tax establishes, first, that he has not included the tax in the price of the article with respect to which it was imposed or has not collected the amount of the tax from the vendee, or, second, that he has either repaid the amount of the tax to the ultimate purchaser of the article or has secured the written consent of the ultimate purchaser to the allowance of the credit or refund.

Under these limitations the manufacturer must show that he actually bore the burden of the tax, as well as the fact that he paid it. This is a very difficult burden of proof.

The present section 6416(a) assumes that the tax has been illegally collected. In many instances the tax paid by the manufacturer has not been reflected, at least in the same amount, in his price for the article. The present provisions discriminate against a manufacturer who has promptly paid the taxes claimed of him as compared with a manufacturer who, in contest of the tax, has withheld payment.

The amendment eliminates the conditions laid down in section 6416(a) with respect to the recovery of overpayments of manufacturers excise taxes.

The amendment applies with respect to overpayments of manufacturers excise taxes made after the date of enactment.

SECTION 70. LIMITATIONS ON ASSESSMENT AND COLLECTION

Section 70 of the bill amends section 6501(c)(1) of the 1954 code.

At the present time there is no period of limitation on the assessment of deficiencies where returns which are held to be fraudulent have been filed. This not only means that so much of the deficiency as is held to have been due to fraud may be assessed at any time, but also means that the assessment of deficiencies resulting from nonfraudulent transactions is not barred by any period of limitations if there is a single fraudulent item in the return.

There is, however, a 6-year period of limitations on the criminal prosecution of a taxpayer accused of criminal tax evasion. The legislative policy which requires a statute of repose for criminal prosecutions also requires a statute of repose for civil purposes.

The policy behind the criminal statute of limitations is not that time cleanses a man of his sins. The policy is based on difficulties of proof incident to the passage of time, such as indistinct memories, the death of witnesses, and the loss of records through destruction, fire or accident. These same difficulties are just as real and troublesome in a civil case as in a criminal case, with the differences that they can do a defendant more harm in a civil case because of the Government's lighter burden of proof.

At the present time, taxpayers cannot with assurance destroy their financial records, including their cancelled checks, merely because a large number of years has elapsed.

As time goes on some witnesses, including the taxpayer himself, may pass away and their testimony be lost.

The amendment prescribes an 8-year period of limitations for civil fraud proceedings.

It is not expected that the cost of this amendment to the Treasury will be large.

The amendment applies to returns filed after the date of enactment.

SECTION 71. RELIEF OF FIDUCIARY FROM PERSONAL LIABILITY FOR FRAUD COMMITTED BY DECEDENT

Section 71 of the bill adds a new subsection to section 6501 of the 1954 code.

Under present law, an executor or trustee who distributes assets of the estate or trust becomes personally liable for taxes which may be due at the time of the distribution. If, unknown to the executor or trustee, the decedent for a period prior to his death, or the grantor for a period prior to the transfer, filed a fraudulent income tax return, there is now no statute of limitations which bars the Commissioner of Internal Revenue, after the executor or trustee has distributed assets, from asserting a deficiency against the executor or trustee for personal liability in respect of the income taxes of the decedent or grantor.

The amendment allows the executor or trustee to protect himself against liability for such income taxes of the decedent or grantor. The fiduciary may request the Commissioner that all income taxes of the decedent or grantor for all taxable years ending prior to or with the date of death or transfer be assessed within 18 months or within the normal 3-year period, whichever expires later, unless the Commissioner can establish that the fiduciary had actual knowledge of a fraudulent return of the decedent or grantor, or of fraudulent failure to file a return.

SECTION 72. LIMITATIONS ON CREDIT FOR OR REFUND OF OVERPAYMENT ATTRIBUTABLE TO FOREIGN TAXES

Section 72 of the bill amends section 6511(d)(2)(A) of the 1954 code.

Section 6511(d)(2)(A), extending the statute of limitations in the case of a claim for credit or refund relating to an overpayment attributable to a net operating loss carryback, is not clear on whether it covers an overpayment resulting from an election to deduct foreign taxes paid rather than to take credit therefor. The amendment provides that the section covers such an overpayment.

SECTION 73. RELEASE OF FUNDS FROM JEOPARDY ASSESSMENTS

Section 73 of the bill adds a new subsection to section 6861 of the 1954 code.

The right to levy jeopardy assessments against taxpayers is a drastic and far-reaching power which was originally intended to be used sparingly, and only in situations in which there is good reason to believe that the taxpayer is planning to conceal his assets or otherwise place them beyond the reach of the collection officers of the Treasury Department. Whatever the reasons which prompt its issuance, a jeopardy assessment has far-reaching and often disastrous effects on the taxpayer. At times the interests of the Government are also jeopardized. The freezing of the taxpayer's bank account may prevent him from paying fire insurance premiums on his property and from making necessary repairs, thus exposing the Government as well as the taxpayer to a risk of loss. The Government's interests, as well as the taxpayer's, require some means of relief in this situation. Similarly, the taxpayer should be permitted to make use of his property to pay his current income taxes, as well as deficiencies for years other than those involved in the jeopardy assessment.

Even more compelling than these considerations, however, is the necessity for safeguarding the right of the taxpayer to make an effective defense against a criminal charge of evading the alleged tax deficiency on which the jeopardy assessment is based, and to contest in the Tax Court the alleged liability for such taxes.

The amendment empowers the district court, in its discretion, to release such funds as are necessary for the purposes stated in the statute. Since the release of funds would be under the supervision of a district court, there would be reasonable safeguards against unwarranted expenditure of funds.

The amendment takes effect on the day after the date of enactment.

SECTION 74. JEOPARDY ASSESSMENTS

Section 74 of the bill adds a new section to part II of subchapter A of chapter 70 (relating to jeopardy assessments) of the 1954 code. It also amends section 2201 of title 28, United States Code.

The authority of the Commissioner of Internal Revenue to make a jeopardy assessment when he finds that assessment or collection of a tax will be jeopardized by delay is not, under present law, subject to judicial review. The absence of independent review permits the exercise of this authority in situations for which it was not intended, with, as a practical matter, relief usually not available to the taxpayer.

The amendment to the Internal Revenue Code enables the taxpayer to obtain a review in the district court of the question whether jeopardy exists, and authorizes the court to annul the jeopardy assessment if the taxpayer is able to prove that delay will not jeopardize the assessment or collection of the tax.

The amendment grants the taxpayer the right to have the Commissioner's administrative determination as to the existence of jeopardy reviewed under the declaratory judgment procedure in order to permit speedy determinations of the administrative determinations of the existence of jeopardy. The amendment also authorizes the district court to stay any further proceedings under the jeopardy assessment already made pending the outcome of the declaratory judgment suit.

Section 2201 of title 28, United States Code, now authorizes declaratory relief in cases except those dealing with Federal taxes. Conforming amendments to section 2201 permit a taxpayer to seek a declaratory judgment as to the existence of jeopardy and limit the court's jurisdiction solely to determination of the question of whether the collection of the proposed deficiency will be jeopardized by delay in making the assessment.

The amendments take effect on the day after the date of enactment.

SECTION 75. EFFECT TO BE GIVEN BY TAX COURT TO COURT OF APPEALS' DECISION

Section 75 of the bill adds a new subsection to section 7459 of the 1954 code. The Tax Court has stated that in the absence of action by the Congress or the Supreme Court, it will not consider itself bound to follow a rule of law announced by the court of appeals to which an appeal could be taken in a case pending before the Tax Court. Various courts of appeals have held that the Tax Court must follow a previous decision of the Court of Appeals on the same point. The problem was present in a case decided by the Supreme Court (*Commissioner* v. *Sullivan*, 356 U.S. 27 (1958)), but its opinion is silent on the question.

The argument most frequently expressed for the position of the Tax Court is that it produces a uniform application of the Internal Revenue Code on a nationwide basis. However, decisions of the Tax Court can be reviewed by eleven different courts of appeals, a situation not calculated to produce uniformity. Viewing uniformity as the paramount consideration would point to a Tax Court of Appeals, or providing for direct appeal to the Supreme Court. Both the district courts and the Court of Claims have original jurisdiction of suits brought on claims for the refund of taxes. Within this jurisdictional framework, uniformity, however desirable, is a practical impossibility.

The view that the Tax Court should follow the court of appeals to which an appeal could be taken in a pending case is rooted in the common law doctrine of stare decisis. The court of appeals has traditionally been recognized as making the law of the circuit and the orderly administration of justice requires that it be followed within that circuit. Furthermore, there is the practical consideration that neither the taxpayer nor the Commissioner should be put to the expense of an unnecessary appeal.

The amendment provides that the Tax Court shall give effect to a decision of the courts of appeals on the same basis as do the district courts.

The amendment applies to all decisions made by the Tax Court after the date of enactment.

SECTION 76. USE OF REGISTERED AND CERTIFIED MAIL

Section 76 of the bill amends paragraphs (1) and (2) of section 7502(c) of the 1954 Code.

Paragraph (1) of section 7502(c) now provides that sending certain documents by U.S. registered mail shall be prima facie evidence of delivery to the person to whom addressed, and that the date of registration shall be deemed the postmark date. Paragraph (2) permits the Secretary or his delegate to provide by regulations the extent to which the provisions of paragraph (1) with respect to prima facie evidence of delivery and the postmark date shall apply to certified mail.

Under present section 7502(c) there is uncertainty whether evidence of fruitless search would rebut the presumption of delivery; and if it would, the entire effect of the section would be largely negated. The amendment substitutes conclusive effect for merely prima facie effect.

The amendments apply with respect to all affected documents mailed by registered or certified mail after September 2, 1958, the date of enactment of Public Law 85-866, which amended section 7502(c).

SECTION 77. COSTS AWARDED TO PREVAILING PARTY IN REFUND SUIT

Section 77 of the bill amends section 2412(b) of title 28, United States Code. The present section 2412(b) sharply limits the costs which can be recovered in suits against the United States, including tax refund suits. The court decisions are not clear as to the costs which a successful plaintiff can recover in a tax refund suit brought against a district Director of Internal Revenue. Some decisions treat the district director as a private litigant with respect to costs; others limit costs to those which would be allowed against the United States. Where the district director is the successful party, costs are fully recoverable against the taxpayer as against any private litigant.

The amendment liberalizes the allowance of costs to a successful plaintiff in tax refund suits, whether the United States or a district director is the defendant. Costs are allowed on the same basis as in suits between private litigants. The uncertainty as to the allowance of costs in tax refund suits against a district director is eliminated.

The amendment applies with respect to actions in which judgment is entered after the date of enactment.

Gates Versus the Heralds of Doom

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Indianapolis News of February 2, 1960:

GATES VERSUS THE HERALDS OF DOOM

(By Stan Evans)

The cries of anger being directed at Defense Secretary Thomas Gates carry a noticeable ring of election-year politics. For when Gates "revised" downward U.S. estimates of Soviet power, he snatched away from LYNDON JOHNSON & Co. the allegation that something called "intelligence" backed their shrill declamations about the Kremlin's lead in missilery.

Gates is criticized for founding intelligence estimates on what the Soviets "probably will do," rather than on what they "are capable of doing." One angry Senator characterized this approach as placing us at the mercy of Moscow's beneficient intentions—a fantastic twisting of Gates' meaning and of the facts in the case.

The reference to "intention" does not mean "what the Soviets are going to do with their arsenal of weapons," but "what kind of weapons they are actually manufacturing." The question is not one of beneficence, of which the Kremlin has none, but of known activity.

The charge that "unprovable surmise" has replaced "known fact" is thus precisely the opposite of the truth. It is the theoretical "capability estimate," so joyfully wielded by the true believers in Soviet supremacy, which has no connection with known fact, and which has been constructed to serve in the place of fact.

Last September this column called attention to the failings of "intelligence" based on theorizing about "capability," rather than on cold facts about what was going on. It was then asserted that such estimates "necessarily incorporate a great deal of Soviet say-so as to their achievements, and have in the past proved misleading." Cited in evidence was the "capability" forecast conjured up for the Red air force, envisioned as an airborne colossus ready to pulverize American cities.

In backing up Secretary Gates, President Eisenhower last week made the same point that was raised here 5 months ago. "Only 3 or 4 years ago," the President said, "there was a great outcry about the alleged bomber gap in favor of the Russians * * * Now subsequent intelligence investigation showed that estimate was wrong and that, far from stepping up their production of bombers, the Soviet were diminishing it or even eliminating that production."

Gates is the third Secretary of Defense to voice skepticism about the missile lag. Secretary Wilson, it will be remembered, was regularly flayed for presuming to question Soviet omnipotence. Secretary McElroy, although for a time enmeshed in the missile gap doctrine that evolved from the capability estimates, was frank to say that we had no real evidence that the Soviets were ahead of us.

Testifying before the Senate Preparedness Subcommittee about some contrary statements by his subordinate, Dr. Von Braun, McElroy said: "My problem is this: That I do not know how fast they are going to go. Moreover, I have no assurance that they are ahead of us, Mr. Chairman. I have read what Mr. Von Braun has said, and he also I regard as a very excellent man, but whether he knows positively the things he said there I don't know. If he does I think he has knowledge that we don't have."

McElroy, of course, had available to him all the real intelligence information there was, as does Gates. The problem was that, by and large, there simply wasn't much information of any kind. The theoretical projections of a 3-to-1 missile lag were thrown together in the absence of data, and were based largely on the Soviets' own declarations.

In the meantime, a few shards of factual information have been pieced together—and, oddly enough, they do not support the apocalyptic visions being evoked by our heralds of doom and appeasement. One key fact, referred to previously in this space: In spite of diligent snooping, our intelligence operatives have been unable to locate even one Soviet ICBM launching site.

Churches and the Needs of Older Persons

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 23, 1960

Mr. KENNEDY. Mr. President, I am pleased at the growing recognition that steps must be taken to provide a healthy and constructive life for our older citizens. During the last half century more years have been added to our lives than in the previous 2,000 years of history. Fifty years ago a baby girl could expect to live to age 48. Today she can expect to live beyond the Biblical threescore years and ten.

With these increased expectations comes a need for a reorientation of our thinking and for legislation.

I have introduced a bill which would provide hospital and medical care for our older citizens, and I hope that hearings can be held and action taken promptly upon this measure.

An excellent discussion of the relationship between churches and the needs of older persons is contained in the current issue of Social Action, a publication of the Council for Christian Social Action of the United Church of Christ. I ask unanimous consent that the text of the first article in that publication, by William C. Fitch, executive director, American Society of Retired Persons, and formerly Director of the Department of the Aging, U.S. Department of Health, Education, and Welfare, which is entitled "Churches and the Needs of Older Persons," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHURCHES AND THE NEEDS OF OLDER PERSONS

It is a privilege to have part in the Consultation of the United Church of Christ on "The Church's Responsibility for the Aging." Because you represent a denomination with over 2 million members, this meeting can have far-reaching effects. We need a realistic approach to the needs of our older citizens. Too much emphasis has been placed on the problem, too many meetings of experts have been held to devise plans for study and research, and too little practical action has been taken at a level where the aging individual can feel its impact.

Our older citizens are not mere statistics. But it is important to know that we have over 15 million individuals in the United States 65 years of age or older. It is equally important in our long-range planning to know that there are over 35 million in the 45–64 age group.

There has been a dramatic increase in life expectancy. It has been extended 20 years since the turn of the century. Judging from the stacks of newspaper clippings about interesting older persons, one might almost assume that the promise of extending the life span to age 100 has already been fulfilled.

Never before in our history has the spotlight been so frequently focused on the aging. Much of this is due to the accelerated activity in preparing for the White House Conference on Aging. A great deal of the credit is due to the organizations that have been working in the field for many years. They have prepared the way for this tremendous growth of interest and activity. Unlike meetings held on other national issues, there is a remarkable degree of agreement on the main problems confronting the aging;

Insufficient income: It is a generally accepted fact that a large segment of our aging population does not have sufficient income to enjoy the later years. They live in constant fear of the diminishing value of the retirement dollar.

Age restrictions of employment: The employment barriers because of age are unrealistic. Mandatory retirement at 65 is not only demoralizing but is a tremendous waste of productive manpower.

Inadequate housing: Suitable housing for the elderly at prices they can afford is still a fond dream for most older persons.

Meaningless leisure time: The increasing amount of free time has little meaning unless interesting, enjoyable, and worthwhile programs are developed. The need to prepare for these years is no less important than for any other period in our lives.

Illness and the high cost of medical care: There is a greater incidence of illness among the aged. The fear of a chronic illness or disability is a constant threat to enjoyment of the later years. Financing the cost of medical care is challenging the best minds of the medical profession. It is no longer a question of whether, but how to provide against the economic hazards of hospital and medical care in the later years.

Into these five areas fall practically all of the major problems confronting our aging population. As we seek better understanding and more effective programs to meet these needs, we should examine each in the light of the church's opportunity to find practical ways to fit them into its program.

WHAT CHURCHES CAN DO

There may not be much the church can do to increase the income of retired workers, but it should be aware of the economic status of its members to be sure that those who are marginal know about the facilities and services to stretch the retirement dollar which are available in the church and community. Staff members of the church should become informed about the local resources and accept their share of community responsibility for expanding or establishing new services to meet the needs.

What has the church done to demonstrate that chronological are is no criterion for employment or service? Is there a mandatory retirement age for church employees? To what extent are mature workers being hired or kept in key positions, paid or unpaid, within the church organizations? This is not a plea for the hiring of older workers, as might be done in the case of the handicapped. It is a plea to consider the older person as an individual, able, qualified, and willing to meet the requirements of the job.

The churches have perhaps given their greatest support and leadership in the field of housing. The need is still great and the churches must review their progress and decide which direction their next efforts should take.

Housing is not just a shelter. It is many things. It may be an individual home, built to take advantage of all of the latest devices and plans that will make it comfortable, safe, and convenient. It may also be a cooperative type of dwelling, house, or apartment. For some it may mean a rest home or a nursing home planned, staffed, and equipped to provide limited services that do not require hospitalization. There will also be a need for modern hospitals to serve those in need of skilled medical care. Our aim must be to help individuals to live independently as long as possible and to provide various types of accommodations to meet the changing conditions of aging.

Free time can be a curse or a blessing depending on how it is used. We continue to need satisfaction from meaningful activity. We would not be content with "busy work" at any age, and certainly would not accept it as a substitute for job satisfaction. There is a place for hobbies, travel, yes, fishing, too—but not on a full-time basis.

For the church this is a challenge, opportunity, and responsibility. Every active church has need for volunteers to assist in implementing all of its many programs. The older members not only could, but would be thrilled to be asked. They have already demonstrated their skill as community fundraisers, and unless my church is unusual you also have an urgent need for these services.

Many churches have their senior citizens groups as well as youth groups. This is good, too, but it would be better to place greater emphasis on continuing the older persons as a part of the other groups of the church. They would prefer this if given an opportunity and if they were made to feel welcome.

Health needs may seem remote from the church's role, but there is a universal need to educate people concerning the preventive measures that are already available.

EDUCATION FOR RETIREMENT

Studies of successful retirement have shown that those making the best adjustment made some overt efforts to plan for the later years. Society is confronted with a two-phased problem: (1) To meet the needs of those already advanced in years, (2) to educate and prepare those approaching retirement to make the most of their free time, and the gift of added years.

Because the church is the center of our lives and the heart of the community it enjoys a unique opportunity for service which is not possible to the same degree in any other organization.

How will your church meet the challenge?

Wasn't World War I a War?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which should be vitally important to all of us who are interested in the plight of our forgotten veterans of World War I. The editorial appeared in the Reese River Reveille of Austin, Nev., on February 17, 1960.

The editorial follows:

WASN'T WORLD WAR I A WAR?

We're little old men whom nobody'll pay, baa, baa, baa.
It's many a year since we had our day, baa, baa, baa.
Veterans lost to all memory,
Men our country has ditched are we,
Congress hopes we'll just fade away, baa, baa, baa.

That paraphrase of the Gentleman Ranker song—better known in this country as the Whiffenpoof song, since somebody in Yale stole it and messed it up—describes the plight of the World War I veterans.

Too old—most of them—to be employed, never given a tenth part of the benefits, pay, and pensions showered on veterans of later wars, who today need it all much less, the veterans of 1917 and 1918 are justified in feeling they have been—and are being—given scurvy treatment by the country they served. Many of them are living precariously, many even impecuniously.

They are what rich organizations, many Congressmen, and even the administration, sneer at as "healthy veterans"—who are trying to rob the Government of money that should be distributed among foreigners.

The soldier of World War I was paid $30 a month—$33 overseas. When he was discharged he was given $60—not $20 a week for 52 weeks. He was given no help in getting education or training, starting in business or buying a home. The war was over. He had done the job he set out to do. The country had no further use for him.

With $60 and a wornout uniform he went out to find a job in a country where stopping of war industries had raised unemployment sky high. He learned what it was to skip meals and go hungry—not in the trenches as he had done at times—but in his own homeland, the country for which he had been fighting, and which didn't need him any longer.

Congress finally opened its heart. It passed what it called "adjusted insurance." That was a form of insurance under which—before the veteran was quite old enough to totter off the scene—he would be given some money, according to his length of service—but years in the future.

Then came the great depression. Those who are not old enough to remember it are lucky—but the veteran of World War I remembers it. Most of those veterans lost whatever they had managed to put together—and many others went into the soup line. Most of them lost the war insurance they had managed to carry up to that time. The only bright spot they could see among all the clouds was the fact the Government had promised them some compensation for their war service.

They appealed to the Government to make that payment then—when the veterans needed it so desperately—instead of at some time in the distant future, when they might no longer need it so badly—or would have starved to death. Congress sidetracked all their requests.

Probably the majority of Americans today have forgotten—if they ever even heard of—the march to Washington, by veterans hoping to persuade Congress to make at least some kind of a payment on the money that had been promised them. By that time they had families and small children going hungry. Many veterans disapproved of that march, and did not participate in it, but they all knew the truth about it.

Those hungry veterans moved into Washington—not to threaten—as cringing high officials in Government declared—but to plead. They were peaceful. They maintained strict order among themselves. Some were accompanied by their wives and children, who had no homes. As a part of their demonstration, they paraded—but they paraded at night. They did their best to cover their own condition and the Government's treatment of them by parading at a time when their rags and tatters would be less visible. One famous syndicated columnist, horrified by what he saw, described that parade to his readers as the "march of the ghosts."

Yet those ragged ghosts without even a thought of a threat among them, scared the administration of that day out of its wits. It ordered General MacArthur, who had under him and commanding part of his forces an officer named Eisenhower, to disperse what it called dangerous revolutionists, rioters and whatnot—of which not a single word was true.

Those American soldiers, acting under orders of their officers, fired on American veterans—unarmed and peaceful veterans. The blood of American veterans was shed by American soldiers under orders of American officers. Then their camp and pitiful belongings were burned and they were driven out of Washington.

That was a proud day in American history.

Every American officer and soldier who participated in that affair—and every official who ordered it—today would like to forget it—and probably can't.

There is no surer cause of lasting enmity—even hatred—on the part of one man toward another man that coming from a knowledge of guilt. Why is there so much determination on the part of certain groups and government officials that nothing shall be done for the veterans of World War I? Why is President Eisenhower so bitterly outspoken in his opposition to any such plan, although he is eager to distribute billions to foreign countries?

Today those veterans are old. Most of them are unemployable. Many of them are in need. The country for which they fought has done little for them—and that little grudgingly.

Now those veterans are dying at the rate of more than 130,000 a year. That means about 360 every day—1 every 4 minutes.

Whatever gratitude for past service the country may be willing to extend them will not be required too far into the future. It will amount to a lot less than we spend in foreign aid.

Yet year after year, as efforts are made to pass legislation that would give a lift to those old veterans of World War I, bitter opposition springs up. That opposition comes from many sides—the administration, Congress, and rich organizations of wealthy men.

Why? How much of that opposition springs from the realization of guilt, relating to deeds committed far in the past?

Day of Glory

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Day of Glory," which appeared in the February 18, 1960, issue of the Park City Daily News of Bowling Green, Ky.

The editorial is as follows:

DAY OF GLORY

We in the West are bound to view with mixed feelings the emergence of France into membership in the world nuclear club.

As a military man and leader devoted to the restoration of his country's former glory, French President Charles de Gaulle understands the decisive character of nuclear weapons in modern warfare.

With evident logic, he seeks this means of giving France a larger voice both in world affairs and within NATO and other Western councils. The explosion of an atomic device in the Sahara is intended as at least a partial cure for an inferiority which dates from the early years of World War II.

Possibly there will in fact be some gain to the West if France gets a feeling of greater equality from having entered the select nuclear circle, and from having freed itself, to an extent, from nuclear dependence on the United States and Britain.

But there are also serious drawbacks to this development. The explosion in the Sahara does not make easier the conclusion of a nuclear test ban agreement or general nuclear disarmament, which for 15 months has been under discussion in Geneva.

Thus far, France has not demanded a place at the Geneva parleys, but it may. If it does, the presence of a stiff-backed De Gaulle representative could delay even further the reaching of an accord.

Furthermore, France's entry into the club stresses once more the danger that still more nations will master nuclear technique and add to the double threat of nuclear war and contamination of the peacetime atmosphere.

On top of all this, the West may reasonably regard as wasteful the French diversion of funds and industrial capacity to nuclear effort which duplicates that of America and Britain.

More useful in the overall Western defense picture would have eben the fuller support of French ground armies needed for the fleshing out of NATO's far too slender barriers in Western Europe. France's detonation of a relatively crude atomic device is hardly compensation for this loss.

And this accomplishment in the Sahara could hardly come at a poorer time, in the light of France's deteriorating relations with Africa. The native peoples regard the event as both a physical danger and a deep affront.

No one can daresay the gains outweigh the losses from France's "big day" in the North African desert.

Water Pollution Control Saves American Lives

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. GEORGE. Mr. Speaker, the value of water pollution control to America and to the protection of the health of our citizens is well expressed in the Anderson Countian of Garnett, Kans., of which Mr. Leonard McCalla, Jr. is the publisher. He is associated with Mr. Earl L. Knauss who publishes the Garnett Review. Both of these men are leaders in the newspaper field and perform a single service to their community.

On February 18, 1960, an editorial appeared in the Anderson Countian in which it was pointed out that due to water treatment facilities, water-borne disease has been greatly reduced, and that death rate due to typhoid fever has been cut from 27 percent to zero in some areas.

The editorial expresses, Mr. Speaker, that although the Kansas public water supplies are in many ways better than the national average, constant attention must be given to the increasing needs for safe and unadulterated water.

With the water use in this country expected to double within the next 20 years, it is of the utmost importance that rapid progress be made in the purification of our water supply and in eliminating its contamination.

May I request, Mr. Speaker, that the article from the Anderson Countian be published in the extension of my re-

marks as its contents are very appropriate at this particular time:

FIFTY YEARS OF WATER PROTECTION—HUNDREDS OF KANSAS CITIES USE CHLORINATION AS DISINFECTANT FOR SAFETY

Kansas people demand that the quality of water be protected for all uses—human health, animals, plant life, and industrial uses. Promoting safe water supplies is one of the tasks of the State health department's division of sanitation.

When the division was established in 1907, Kansans were drinking unfiltered, unchlorinated water from rivers and wells. Fifty years later—in 1957, there were 449 municipal water supplies, only three of which did not disinfect the water by chlorination. At the end of 1959, only one town, Galena, did not provide continuous chlorination. In 1907, fewer than 50 towns had sewers to carry wastes out of backyards and ditches—in 1957, 305 cities had sewers, and all but 15 had sewage treatment facilities. Constant progress has been made since then.

Improvement in water treatment plant facilities has been paralleled by a marked reduction in water-borne disease. Since 1945, no major outbreaks of illness have been traced to this cause. Better water purification and sewage treatment practices were partly responsible for reduction of typhoid fever death rates from 27 per 100,000 population in 1907, to no deaths in 1957, and none through 1959.

More than 70 new city water supply wells were drilled during the 1956–58 biennium, replacing improperly located or unprotected old wells. In these 2 years, 20 new public water supply systems were built, replacing hundreds of private wells of questionable quality. Industry has matched municipal progress in control of its wastes.

Kansas public water supplies are better in many ways than the national average. But, constant attention must be given to increasing needs for safe water, the need to expand and modernize water and sewage treatment plants now in use, and the need to be on guard against new sources of contamination. With the customary citizen support—this can be done.

Communist Infiltration Into Churches and Educational Institutions

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. SMITH of Kansas. Mr. Speaker, the recent furor raised by some members of the National Council of Churches in regard to a statement in an Air Force NCO manual has brought forth many ideas and comments. I have found no one who denies that there are no ministers to be found in the international Communist conspiracy. The statement in this Air Force manual simply said this:

From a variety of authoritative sources there appears to be overwhelming evidence of Communist antireligious activity in the United States through the infiltration of fellow travelers into churches and educational institutions.

Everyone who has only read just a country newspaper knows that is a true statement. The Committee on Un-American Activities has probably hundreds of names throughout America of people who follow this classification either in the churches or in the educational field.

This Air Force manual in substance says that many people are innocently duped, deceived, and flagrantly exploited by the social gospel doctrine that has been advocated by many ministers. This article does not condemn churches and religion it simply calls attention to a well-known fact that some ministers fail to see that their placing of emphasis on the political-economic and social gospel matters is simply following the collectivist Communist road.

This article in no way belittles spiritual values or basic beliefs of religion. All this article is attempting to point out is this fact—that many persons in some church groups who support political-economic fronts render a greater service to these international propaganda projects than card-carrying Communists.

A few years ago an organization called the Circuit Riders of Cincinnati, Ohio, printed a list of 2,109 Methodist clergymen who were engaging in political, economic, and social gospel activities. The basic objective of this list was to point out the dangers involved in these propagandizing socialistic political activities and the sly attempt to whitewash the communistic attempts to defeat American ideals and concepts.

A few weeks ago I had occasion to read the following article by Rev. Billy James Hargis, minister, of Tulsa, Okla., who also points out these dangers. Here is his article:

APOSTATE CLERGYMEN BATTLE FOR GOD-HATING COMMUNIST CHINA

A United Press International News dispatch of May 27, 1959, said, "A distinguished American theologian has some stern words to offer on the problem of communism and Christianity." The distinguished theologian was none other than Dr. John A. Mackay, well known leftwing Presbyterian leader who has a long record of supporting Communist Party line objectives. The news dispatch went on to state, "Dr. John Mackay, retiring president of the Princeton Theological Seminary, charged that America is turning its back on untold thousands of Christians in Red China. Dr. Mackay called for the recognition of Red China—backing a resolution that had been adopted at the general assembly of the United Presbyterian Church meeting at Indianapolis. Dr. Mackay told the delegates that while Red China has done some terrible things, so has the United States."

Here is a typical example of the twisted and deceiving play on words used by leftwing clergymen in their attempts to disguise their blatant support of important Communist conspiracy objectives. Let's analyze Dr. Mackay's charge that "America is turning its back on untold thousands of Christians in Red China." This charge is merely a continuation of a propaganda campaign Dr. Mackay has been carrying on in behalf of the Red Chinese slavemasters for years. He called for recognition of Red China and its admission to the U.N. back in December 1949. On December 10, 1956, he spoke before 400 religious executive in Indianapolis, Ind., and called for the sending of a delegation of American church leaders to Red China to "reestablish contact with colleagues there." He said that it was absolutely imperative that this be done. From his actions and words, one gets the impression that Dr. Mackay is on fire for this vital objective of international communism.

Dr. Mackay and other apologists for communism in the churches would have us to believe that there is actually freedom of religion in Red China and other Communist conspiracy held nations. They refuse to face the documented and indisputable facts about the Communist conspiracy's takeover of churches in Communist nations, and how the Communists are utilizing these churches to promote the cause of atheistic communism. Now let us remember one thing—that is, that Dr. Mackay is not speaking of the suffering, persecuted Christians of China who have been tortured, sent to slave camps, and denied the right to worship God. Many were killed. Dr. Mackay is speaking of the so-called Christian leaders who were intimidated into cooperating with communism by converting their churches into tools for promoting Communist propaganda and objectives. He is speaking of the phony pastors placed in the churches by Communist leaders.

In 1949, the Chinese Reds set up what they called the Religious Bureau whose function was to supervise all religious bodies in China. The actual purpose was to operate behind Communist double talk and take over the churches for use as instruments of Communist policy in China. The techniques used were taxation and terrorism. The pastors were told that they could continue to conduct services if they would deliver sermons prepared for them by Communist propagandists or preach sermons along the Communist propaganda line. Those who refused had their churches closed by impossibly heavy taxes. These who defied the Religious Bureau were quickly arrested, imprisoned, and subjected to torture and brainwashing, or execution. Many Chinese Christians have suffered because they chose Christ instead of Mao Tse-tung.

Most Americans are unaware that there are two Protestant and two Catholic church groups in China. In April 1951, the Communists established the Three Self-Reform Movement to separate their collaborators from the faithful Christians. Only a small minority registered with this atheistic Communist movement, and this small minority's pastors are the Christians on whom Dr. Mackay claims America is turning its back. His interest is not in the true Chinese Christians who are persecuted, are underground, and who have formed a "Bible eating" movement in which each member takes certain Bible passages to memorize.

During March of this year, author John C. Caldwell, who has spent a number of years in China, reported recent church developments in Red China. Peiping's 65 Christian churches of a dozen denominations have been reduced to 4. Excess buildings were taken over for government use. One hundred and fifty excess preachers, Bible women, and assistant ministers were released and assigned to labor on a farm commune. Shanghai's 200 Protestant churches were cut down to 15, releasing another sizable group of ministers for forced labor. Attendance at the churches left open has dropped drastically, and average attendance is about 20. Of course, if some prominent visitor from outside the Iron Curtain nations visits one of these Communist-operated churches, he or she would find it packed full. The Communists would see to this. They always do.

The Red Chinese tyrants are moving to scrap the whole denominational system and create a Communist-controlled Chinese Christian church. This is the church with which modernist American churchmen are anxious to establish contact. When and where has John A. Mackay, or any like him, ever expressed compassion for the enslaved and persecuted Christians of Red China? Who is turning his back on untold thousands of Christians in Red China? What a

bit of subtle poisonous propaganda is contained in Dr. John A. Mackay's statement. Unfortunately it will make sense to a number of uninformed and brainwashed American church members, because they have not the foggiest idea about the nature, methods, and objectives of anti-Christ communism, or what it has done to churches under its rule.

In his statement, Dr. Mackay admitted that Red China has done some terrible things, but toned this down by saying that so has the United States. All nations governed by fallible human beings have done things which were wrong, but imagine comparing our Nation with the cruel inhuman dictatorship of Red China. These agents of anti-Christ communism have committed unspeakable atrocities against millions of Chinese and quite a few Americans; Chinese family life has been broken up and millions of Chinese men, women, and children herded like animals into communes to work as slaves of the Red government. Our Nation is indeed in deeper peril than ever before in its history when church members will listen to men with the ideology of Dr. John A. Mackay and take him seriously. Here is a man who has classed anti-Communists as being more dangerous than Communist conspirators. Our Bible warns us that by their fruits shall ye know them. Pray more for an awakening among sleeping members of American churches.

Senator Keating Honors Rabbi Goldstein

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 23, 1960

Mr. SCOTT. Mr. President, on January 31 there was an important meeting in New York. The World Academy in Jerusalem held a reception in honor of Rabbi Herbert S. Goldstein on the occasion of his 70th birthday.

It is fitting that this great man of God should be honored by the junior Senator from New York. Senator KEATING has been honored many times by Zionist organizations. In a recent trip to Israel, he was present at the dedication of the Ken Keating Forest.

The junior Senator from New York and I have agreed on many matters in both Houses of Congress. One of these is in our deep admiration for the people of Israel and for their great cultural attainments.

I ask unanimous consent that Senator KEATING's address and the one delivered by Rabbi Goldstein be printed in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR KENNETH B. KEATING, REPUBLICAN OF NEW YORK, AT A RECEPTION GIVEN BY THE WORLD ACADEMY IN JERUSALEM IN HONOR OF RABBI HERBERT S. GOLDSTEIN ON THE OCCASION OF HIS 70TH BIRTHDAY, IN THE GRAND BALLROOM OF THE PLAZA HOTEL AT 8 P.M., JANUARY 31, 1960

Mr. Chairman, fellow members of the celebration committee, ladies and gentlemen, this is a warm and wonderful occasion—because we honor tonight a man who, in a sense, has honored all of us by the gift to humanity of so long a life of service, of friendship, of dedication. Rabbi Goldstein, there are two ways in which I could reveal your age—by saying you have lived for 70 years—or—that the world about you has been enriched for 70 years. I think the latter is the best way to tell your age.

Many of your friends and associates here tonight have been privileged to have their own lives touched, and inspired and ennobled by your own. I have only read the story of the fruitful years you look back upon, across the vista of memory, but, that story of achievement—that generous giving of yourself to great causes, to great purposes over the years, is no less inspiring to me than to those so fortunate as to have been within the happy circle of your influence and your friendship.

Anyone studying your long and splendid career, Rabbi Goldstein, might well be moved to say: Here is a man who has made a happy blending of vocation and avocation—for, on the one hand he collects honors, on the other, he collects friends.

Surely, one of the most preeminent causes with which your name has been so closely associated is that of the World Academy in Jerusalem. No one can build you a finer monument than you have built for yourself—by your unceasing efforts in behalf of this outstanding cultural contribution to the history of the Jewish people.

I do not know of any way in which the meaning of the World Academy can be better expressed—or its essence better described—than in the words of the late chief rabbi of Israel, Isaac Halevy Herzog, who said: "The World Academy is to the State of Israel what the soul is to the body."

One has only to visit Israel—as I recently had the privilege of doing, to realize the truth of this statement—to appreciate the intensity and the scope of the spiritual and intellectual contribution of the World Academy. The facets of its program are many and they are vital. The academy is at once a repository and a source—filled with the great treasures of the past, enriching the present and the future with its research, its energies, its wisdom.

I look back with fond recollection on my visit to Israel. It remains one of the most vivid and illuminating experiences of my life. I was invited by the Israeli Government on the occasion of the dedication of the Ken Keating Forest—a great and cherished honor for me.

I do not believe I shall ever forget that dedication ceremony, high up on one of those beautiful Judean hills that look down upon Jerusalem. The soil was hard and rocky, and I could not help but remark to the chairman of the occasion: "It does not seem possible that trees would take root in this stony ground."

He smiled and said to me: "In Israel, the trees, like the people, are inspired to grow by the very difficulties of growing."

I have told this little incident to many of my friends, and I have impressed upon them that, to me, it sums up the greatness of spirit which alone can explain the success of Israel.

To read of Israel, her people, and her institutions is, in a sense, like reading the review of a book. To me was given the wonderful opportunity to read the book itself—to turn its pages, to dwell upon their grandeur, to study their meaning in terms of human spirit.

This fountainhead of Jewish culture has been built from the heart outward. It is a striving into which life has been breathed by a dedicated people. It is a historic breakthrough, out of the past and into the present.

Our guest of honor tonight has exemplified in his own life this spirit I found in Israel. The willingness—the hunger, almost, to meet new challenges—the freshness of what one might call constructive dissatisfaction—that is, an impatience to build, to achieve, to improve—to push, pioneerlike—toward new frontiers of creativity, toward a richer, fuller expression of the free spirit of man. These are the traits of a great culture because they are the traits of the great men who make that culture—men like you, Rabbi Goldstein.

One of the discoveries that impressed me most in Israel was the balance that has been maintained in the broad field of culture, between science and the broad fundamental values of the spirit and the intellect. The tremendous economic upsurge of Israel, with all the materialistic aspects it implies, has been accomplished in a perfect equation of the demands of existence with the demands of the spirit. Important as it is to the growth of Israel, science has its place, not its pedestal, in the total concept of Israel's meaning and its mission.

The Weizmann Institute, which I had the pleasure of visiting in the company of my good friend, Abba Eban, is unique in its part of the world. There is no other scientific research center between Rome and Tokyo that compares with it. Together with the famous Technion at Haifa—which Dr. James Killian called the "M.I.T. of the Middle East"—the institute has been the main factor in meeting and solving Israel's industrial development problems.

In this pattern of counterbalance I have referred to, the World Academy in Jerusalem stands as a prime and perfect example of the emphasis given by Israel to the deep spiritual and religious values in man's life as contrasted with the purely scientific and utilitarian.

Israel today stands as a great act of faith. Everything is related to that act of faith—is part of it—whether it takes the form of scholarly research into the roots of this great culture or scientific probing into the undiscovered and unknown.

Yes, Israel can well be summed up as an act of faith, brought to glowing life by the zeal and the energies of its people. Believe me when I tell you that, to the visitor, it inspires faith as well. It shows him what man can accomplish in this world when a great and noble purpose is infused with the heart and the will and the muscle to make it succeed.

In this regard, it is timely to pay tribute to the truly magnificent contribution made to the growth and to the success of Israel by her many and generous friends here in America. Rabbi Goldstein epitomizes this devotion of self to a great cause, but whether the giving is to be reckoned in time, in generosity, in energy, or in moral and spiritual support, Rabbi Goldstein finds himself in a numerous and dedicated company.

We know too well, all of us, that the great, overshadowing problem remains—the island status of Israel in an unfriendly surrounding sea. Yet, in this very metaphor of land and water, lies, I feel, the best hope of an ultimate resolving of the problem. By this I mean that the great force and influence of Israel is like a tide breaking upon a shore. The shore must change. It cannot ignore the tide. It must feel its pressures, it must take nourishment from its waters, it must one day realize the tremendous flow of vitality and health and human betterment that this ceaseless tide represents. By its will and its energies, Israel has pounded through the granite wall of the impossible to create a new nation. The wall of hatred and distrust that now confronts it is man-made and man can break down what man has erected. It is your fervent hope—and my own—that each passing day may bring us nearer to the realization of that sublime hope.

In general, we have done well as a nation in helping our friend Israel grow and prosper. However, I am greatly disturbed by some recent incidents.

In a news story a few days ago it was reported that the Navy had included cancellation clauses in its contracts with U.S.-flag

ships to take into account the Arab boycott of Israel. What the Navy had said in effect is that, if Arab nations won't let a ship with a Navy cargo use the Suez Canal or trade with Israel, the shipper is obligated to cancel his contract and to substitute another and exactly similar vessel to the Navy. As a consequence, no American shipper who does business with Israel could conceivably bid for a contract involving shipment through the Suez. The New York Times in a recent editorial recorded (and I quote) "shock to learn that the U.S. Navy is supinely accommodating itself to the Arab boycott of ships trading with Israel." The American Jewish Congress, in commenting on this same situation, noted that the Navy is in effect acting as enforcement agent for the Arab boycott.

The news about the Navy's Suez shipping policies is all the more troublesome because it comes so soon on the heels of the World Bank's endorsement of the Arab boycott in loaning the UAR $56 million. This will never do. Official American Government policy cannot and must not back the wholly indefensible tactics of Israel's hostile neighbors. The policies and official pronouncements of our Nation should not disadvantage our close friend and ally, in its efforts to engage in trade and commerce with the rest of the world.

Last week, I wrote a letter to the Secretary of the Navy on this matter asking for a full report on the Navy's policy precluding American shippers who deal with Israel from bidding for Navy contracts to carry goods of the American Government through the Suez.

I have asked the Secretary to answer the following questions, and I am anxiously awaiting his reply.

1. What are the reasons behind this official pronouncement of Navy policy which to many people seems to have the effect of backhandedly and subtly endorsing the Arab boycott of American ships trading with Israel?

2. Does the Navy intend in this way to indicate official or tacit approval of this boycott?

3. What, if any, steps have been taken by the Navy to protest the Arab boycott in general and to deal with the specific ramifications of the Navy's shipping policy towards American shippers who do business with Israel?

Now perhaps I should not have gotten into this serious subject on this auspicious occasion but it was very much on my mind and I couldn't refrain from sharing some of my thoughts with you.

Rabbi Goldstein, in my earlier remarks I spoke of the many lives you have touched in your long and distinguished career. I would be remiss, indeed, if I did not mention that your influence has radiated into my own life. Not directly, perhaps, but, under the circumstances, I think I could use the expression, "by remote control."

I must explain to our audience that one of the rabbi's fine sons, Simeon was one of the architects of my 1958 victory in the New York senatorial race. I suppose it's part of the old story: if the rabbi can't be there in person he'll send somebody.

We do honor to you tonight, Rabbi Goldstein, but I know that you would be the first to insist that it be a shared honor—that your life has borrowed from many lives to make you deserving of our tribute. Above all, the unfailing devotion of your wonderful wife—with all that she has meant to you in inspiration, in support, in the tenderness and sympathy that makes the burden seem less and the way seem brighter—his devotion richly entitles her to share in the tribute we pay to you on your 70th birthday.

Now most people who reach the age of 70 feel that they have arrived at a destination. I know, as well as Mrs. Goldstein does, as well as his family and his friends do, that to our guest of honor 70 is not a destination. It's a mere stop-over en route. His eyes are not looking backward, upon what has been done—but forward to what remains to be done. As you move into a new decade of service, Rabbi Goldstein, let us assure you that the hearts and the thoughts of your legion of friends are with you. May all the years ahead be golden years—and may happiness walking with you every step of the way.

ADDRESS BY RABBI HERBERT S. GOLDSTEIN AT THE RECEPTION HELD IN HIS HONOR AT THE HOTEL PLAZA, NEW YORK CITY, JANUARY 31, 1960

Mr. Chairman, distinguished Rabbis, Senator Keating, Mayor Wagner, honored guests on the dais, my dear friends all, I want to take this means of thanking each and everyone of you as fervently as I can for coming here tonight in connection with my 70th birthday. At 70, I should like to look back and look forward. I look back at my early manhood when the question of religion was the dominant motif when one was either a religious, or an irreligious Jew. I have seen it change to nationalism and Zionism and the dominant note became, not so much religion as Zionism. A little over 11 years ago the emphasis has been placed upon the recognition, thank God, of the State of Israel, and all that this implies.

Since the creation of the state, we were and are absorbed with the realization of the prophecy that there would be an ingathering of exiles into Zion. We have, both in Israel, and in the Diaspora, evidence of one of the loftiest lessons in the history of brotherhood. No stone is being left unturned to make room for the 1,200,000 refugees who have entered Israel, up to the present time. In Israel our people willingly denied themselves every comfort and unhesitatingly accepted the privations of food rationing, which the tremendous increase in population necessitated. The Jews in the rest of the world have made giving to the United Jewish Appeal and purchasing State of Israel bonds, a top priority, so that our brethren everywhere, may find a haven of refuge in their divinely deeded homeland.

As to the future, we now enter upon a new era in the history of the Jewish people. It requires a searching examination of the very foundation and function of our existence. We have been eminently successful in making the State of Israel a refugee land. We must now enter the next phase of converting the refugee land into our ultimate purpose and goal, namely, to have it become, once more, a holy land. Prof. Hugo Bergman has well put it in an article he wrote in 1949, right after the state was declared, "the question whether we are a nation like all nations; a secular people, or Israelis professing various religions, or whether we are a religious-national group of a special spiritual structure, is not just a question of amusing sophistry, but of great moment." Zionism, dear friends, means a return to Judaism, as well as a return to the land of the Jews. Israel may not be merely a state of Jews, but a Jewish state.

If we are true to ourselves, the conversion of the refugee land into the Holy Land will be a religious event in the life of mankind. Our prophets have envisioned the contribution of Israel to civilization, as a spiritual one. The spiritual one according to the prophets can only be a religious one and thus do we say three times daily in the Shemoneh Esra prayer the following words:

"And let our eyes behold Thy return Oh God in mercy to Zion." Since the destruction of the temple, we pray on the festivals, and on the Day of Atonement. "And gather our exiles to Thy holy courts to observe Thy statutes, to perform Thy will, and to serve Thee with a perfect heart."

The Emet World Academy in Jerusalem is dedicated, through its research in higher Jewish learning, to make clear the role and the responsibility of the Jewish people of this era namely the conception of our history is a holy one. Charles Journet, a Swiss-French writer, a devout Catholic, in his book "Destinees D'Israel," said "The gentile nations were bound to the laws of nature. Israel was chosen in order that through the patriarches, through Moses, and through the prophets, it might rise to a state," and I add with the Torah with its constitution. The Jewish state has yet to bring to the world one of its greatest contributions.

"And they shall beat their swords into plowshares, and their spears into prunninghooks; nation shall not life up sword against nation, neither shall they learn the arts of war any more." This prophesy in regard to disarmament, carries with it also an economic solution, namely, that if the swords are turned into plowshares and the spears into prunning hooks there will be enough food for all peoples and there will be no need of worrying about the overpopulation of the world. It will also mean the saving of billions and billions of dollars spent upon the swords and the other implements of war which could be turned into peaceful pursuits and last, but not least, it shall mean that men "shall not learn the arts of war anymore."

I propose, as a task for the future for the World Academy in Jerusalem, the establishment of "an institution for the advancement of world peace." We were never so ripe for this study in all of its ramifications, as we are today. It has become the new tune for the nations—even Mr. Khrushchev is now appearing as a pied-piper for disarmament—I hope and pray, it is not what the Psalmist said "High-sounding phrases are in their mouths, but the two-edged sword is in their hands."

With the help of God, I want to dedicate the coming years, with which I may be blessed, to the furtherance of world peace through the World Academy in Jerusalem. To help us realize this dream, we need a Joseph, a dreamer, whom the Bible also calls "A man of action," who can, as Joseph did, save mankind and make himself immortal, by the promotion of this holy task for the advancement of world peace. Without the prophetic idea of disarmament the world is doomed to destruction. With it, the Bible promises to all mankind peace with "none to make it afraid."

I felt it my function tonight, to express briefly my views concerning the past—my 70 years since my birth in my beloved city of New York, and to refer you to the present, so ably described by Dr. Leo Jung, and to the future task of the World Academy.

I can envisage our invitation to all the nations, to send their representative scholars to our campus in Zion, each one bringing his people's contribution, for the advancement of peace. From such a historic gathering, there is bound to emerge a blueprint, and inspiration, for all mankind to follow. Then will we realize the prophecy of Micah and Isaiah, "And many people shall go and say, 'Come ye and let us go up to the mountain of the Lord, to the House of the God of Jacob; and He will teach us of His ways, and we will walk in His paths.' for out of Zion shall go forth the law, and the word of God from Jerusalem."

I close with the same thought as does our Talmud, in its closing Mishnah, "There is no vessel that can contain true and full blessing unless it is the vessel of peace. May the World Academy sail on a vessel of peace until we reach the true blessing of God, namely, universal disarmament and world peace, and let us all prayerfully say, amen."

Our Thoughtful Collegians

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks, there follows a letter to the editor taken from the Daily Northwestern, newspaper published for Northwestern University students and faculty. Student John Kolbe, class of 1961, treats of the loyalty oath requirements of the National Defense Education Act. He favors the oath provisions as they are now carried in the law.

The letter follows:

I would like to add my voice to the controversy concerning the National Defense Education Act, and introduce an argument which, in my opinion, is all too seldom expressed in regards to the situation.

I, too, wish to criticize the stand which the administration of this university has taken in disapproving the affidavit requirement of that act, but for different reasons than those expressed by other letters to the Daily.

It appears that Northwestern has jumped on the "me too" bandwagon, already occupied by a dozen and a half eminent institutions of higher learning.

There seems to be something highly distasteful about declaring one's loyalty to the United States these days. People ask for money from the people of this country, but feel insulted if they are asked to promise to remain loyal to the country who loans it to them.

In the words of one institution who opposed the oath, "It trammels inquiry, affronts academic freedom, and unfairly and unjustifiably singles out as objects of distrust the needy students in our colleges."

Now I ask you. How can signing a loyalty oath possibly be an affront to academic freedom or a trammeling of inquiry? I have searched my conscience deeply, and indeed I cannot find an answer.

The affidavit required of recipients of the loan asks the beneficiary to state that he is not a member of an organization which teaches the violent overthrow of the U.S. Government.

The loyalty oath is virtually the same one taken by every elected official of the U.S. Goverment and members of the Armed Forces.

The student's freedom to inquire is no way restricted. If he concludes from his free inquiry that our Government needs changing in some way, there are certain methods enumerated in the Constitution which seem to have worked all right for the past 173 years.

Let us note the first two words in the name of the act under which this money is loaned: national defense. Herein is the true spirit of the legislation.

This is defense money. It comes in the Federal budget under the Defense Department appropriations. It is paid for by the taxpayers of America. The law states that "the security of the Nation requires the fullest development of the mental resources and technical skills of its young men and women."

In other words, the purpose of this act is to provide for the security and well-being of the United States, through the further education of some of its citizens.

Not by the longest stretch of the imagination is it consistent with national security to loan our hard-earned money to those who would undermine that defense and break down the system which it defends.

It is argued that this oath would not stop a Communist or a disloyal individual from taking the loan. True. Nor was that its purpose.

But it does give the Federal Government grounds to prosecute an individual who takes the money under false pretenses. Otherwise, there would be no legal objection whatever to a card-carrying Communist to apply for, and get, this loan.

I see no sense in furthering, with our own money, a cause which is so diametrically opposed to our own.

JOHN KOLBE.

Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 23, 1960

Mr. KENNEDY. Mr. President, last week marked the occasion of the 42d anniversary of the independence of the free Republic of Lithuania. I ask unanimous consent to have printed in the Appendix of the RECORD two resolutions which were adopted at meetings held in the Commonwealth of Massachusetts to honor this important and memorable event. Despite the 20 years during which Lithuania has been under subjugation by the Soviet Union, the Lithuanian national spirit remains unimpaired.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTIONS

Unanimously adopted at a mass meeting of Lithuanians of greater Boston held under the auspices of the American Lithuanian Council of Boston in the auditorium of South Boston High School, South Boston, Mass., on February 14, 1960, and attended by more than 1,100 persons with the Honorable Edward J. McCormack, Jr., attorney general of Massachusetts and representatives of the enslaved nations of Lithuania, Latvia, Estonia, and Ukraine.

Whereas the 16th day of February 1960 will mark the 42d anniversary of the declaration of independence by the people of the Republic of Lithuania proclaimed on February 16, 1918, after 123 years of Russian occupation;

Whereas by the treaty of Moscow of 1920 Soviet Russia recognized the sovereignty and independence of Lithuania and voluntarily and forever renounced all sovereign rights possessed by Russia over the Lithuanian people and its territory;

Whereas the guaranteed liberty of Lithuania was forcibly violated and suppressed by Soviet Russia in 1940, notwithstanding the solemn treaties and agreements of nonaggression;

Whereas the United States Government on July 23, 1940, condemned such aggression and refused to recognize Soviet occupation of Lithuania: Now, therefore, be it

Resolved, That we Lithuanian Americans reaffirm our adherence to American Democratic principles of government and pledge our support to our President and our Congress to achieve lasting peace, freedom, and justice in the world;

Resolved, That we join with all Lithuanians throughout these United States and call upon our representative in Congress to vigorously utilize all available means for the liberation of Lithuania and other Soviet enslaved countries;

Resolved, That our government's foreign policy shall include the liberation of Lithuania and other Soviet enslaved nations as an integral and inseparable part of its program;

Resolved, That toward this purpose the United States Government bring forth to the United Nations the problem of enslaved Lithuania and demand that the Soviet Government withdraw all troops and control from Lithuania;

Resolved, That copies of these resolutions be forwarded this day to President Dwight D. Eisenhower, Secretary of State, Christian A. Herter, Senator Leverett Saltonstall, Senator John F. Kennedy, United Nations Secretary, Henry Cabot Lodge, Congressman John W. McCormack, the Honorable Foster Furcolo, Governor of the Commonwealth of Massachusetts, the Honorable Edward J. McCormack, Jr., attorney general, Hon. John F. Collins, mayor of Boston and to the press.

AMERICAN LITHUANIAN COUNCIL
OF BOSTON,
JOSEPH ARLANSKAS,
President.
ANTHONY J. YOUNG,
Resolutions Chairman.

On February 16, 1918, Lithuania, one of the small Baltic States in Eastern Europe, declared her independence to the entire world. To commemorate the 42d anniversary of Lithuanian Independence Day, the committee, duly elected for its proper celebration and representing 67 organizations from the two Lithuanian parishes in Worcester, St. Casimir's, and Our Lady of Vilna, from the Lithuanian Aid Association, and from the Worcester branch of the Lithuanian community of the United States in America, arranged appropriate exercises which took place Sunday, February 14, 1960, at 4 p.m., in St. Casimir's Parish Hall. During these exercises, the members of the committee and the official delegates and the more than 1,500 people in attendance unanimously adopted and passed the following resolutions:

Whereas the Government of the United States stands ever firmly for the God-given and sovereign right that all nations, both large and small, have to be free and to choose for themselves their own political, cultural, and economic systems and ever remains convinced that relations between all nations must be guided by justice and charity and governed by the principle of equality; and

Whereas Soviet Russia, having formally recognized in 1920 the independence of Lithuania and the other Baltic States, 20 years later forcibly deprived Lithuania of her freedom and since then continues to this day to terrorize her people by oppression, dispossession, mass persecutions and exile, and to deny them the right of self-determination by staging mock elections, thus converting Lithuania into another vassal state; and

Whereas the Republic of Lithuania, a neutral nation ever advocating freedom for all peoples, made astounding advancement and progress in all fields of human endeavor during the years in which she enjoyed freedom (1253–1795 and more so 1918–1939); and

Whereas Lithuania continues in her desire to have and enjoy freedom and constantly reminds the free world: "There is no peace without freedom; there is no security without self-determination"; and

Whereas the Government of the United States in 1940 denounced the Soviet Government for forcibly incorporating Lithuania and the other Baltic States into the Soviet Union and since then has maintained its present policy of not recognizing de jure the unjust absorption of those countries within the Russian orbit: Now, therefore, be it

Resolved, That the Government of the United States continue to remind the free world of the injustice committed upon

Lithuania by Soviet Russia by continuing its policy of not recognizing "de jure" the ruthless seizure of Lithuania by the Soviet; be it further

Resolved, That the Government of the United States together with the other Western Powers take appropriate and concrete measures to force Soviet Russia immediately out of Lithuania and to compel her to return to Lithuania all Lithuanians now exiled to and forcibly detained in Siberia and elsewhere; be it further

Resolved, That the free world ever remember that all nations, regardless of how small they may be, have a right to freedom and justice and that, should be spoils of Soviet aggression ever be recognized, the Soviet would be encouraged to grab other nations neighboring her present boundaries and the cause of world peace would be grievously harmed; be it further

Resolved, That due admission and full approbation of Lithuania as a member of the United Nations be made for thus she would be in a glorious position to state her just case to the entire world; be it further

Resolved, That copies of these resolutions be forwarded to the President of the United States, His Excellency, the Honorable Dwight D. Eisenhower; the Vice President of the United States, the Honorable Richard Nixon; to the Secretary of State, the Honorable Christian A. Herter; to the U.S. Representative to the United Nations, Ambassador Henry Cabot Lodge, Jr.; to the Senators of Massachusetts, the Honorable John F. Kennedy and the Honorable Leverett Saltonstall; to the Representative of the 4th Congressional District of Massachusetts, the Honorable Harold D. Donohue, and to the press.

JOHN PIPIRAS,
Chairman.
JONAS PALUBECKAS,
Secretary.

Carlo Bianchi & Co. Against the United States

EXTENSION OF REMARKS
OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. SANTANGELO. Mr. Speaker, on January 27, 1960, I called upon the Attorney to protect the interests of the United States in the defending of lawsuits instituted against it. I stated that the case of Carlo Bianchi & Co. against the United States, Court of Claims Docket No. 466–54 had come to my attention. This case is one in which the Attorney General's Office had not properly represented the United States and was foreclosed from introducing proof to reduce damages. I also pointed out that this is a case I know about and I wondered how much more money the Government had squandered by reason of the laxity and lack of preparation in protecting the Government's interest.

On February 3, 1960, Mr. George Cochran Doub, the Assistant Attorney General in charge of the Civil Division of the Department of Justice, wrote to me and claimed that I was not correct in my statements. On February 8, 1960, my colleague, Mr. FRANK T. BOW, inserted into the CONGRESSIONAL RECORD a letter which Mr. Doub forwarded to him in connection with the Carlo Bianchi case.

In view of the misleading statements, I am setting forth Mr. Doub's letter to me dated February 3, 1960, and my reply to him dated February 19, 1960, and am forwarding this matter to the appropriate congressional committee for further investigation and for a determination as to the efficiency of the Civil Branch of the Attorney General's Office:

DEPARTMENT OF JUSTICE,
Washington, February 3, 1960.

Hon. ALFRED E. SANTANGELO,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN SANTANGELO: To straighten the record and in fairness to the trial attorney of this Department who is handling the case of *Carlo Bianchi and Co.* v. *The United States*, Court of Claims Docket No. 466–54, I wish to call your attention to some major errors in your extension of remarks referring to this case, contained in the CONGRESSIONAL RECORD for Wednesday, January 27, 1960, commencing on page 1293.

Your assertion that, after the Government was held liable in this case by the Court of Claims, the court will not now permit the Department to introduce any testimony with respect to damages, that the Government has been defaulted on the issue of damages and that as a consequence the United States has been held liable in the amount of $680,066 were not correct.

The court has not ruled that the Government may not submit any testimony on damages, has not defaulted the Government and has not held it liable for $680,066 or any other amount. The fact is that the Government attorney handling this case is presently on the west coast preparatory to offering before the Commissioner at a scheduled hearing commencing February 8 in San Jose, Calif., the testimony of one of the Government's most important witnesses, the resident engineer on the project.

A misunderstanding did arise between the Commissioner and the Government attorney regarding the time and place of presenting the Government's evidence and the court did deny a motion of the Government for leave to submit additional testimony on the basis of the situation then existing. However, in the event the Department of Justice concludes, after the taking of testimony later this month in California, that the Government's interest will require additional proof, it proposes to apply to the court at that time for leave to do so and we have no reason to believe that, in the event of such a reasonable application, the court will not permit the Government to present additional testimony on the issue of damages.

I have confidence in the competence and industry of the trial attorney handling this case who, under difficult circumstances with a heavy caseload, has handled an extremely complex and involved matter in an able manner and we cannot avoid the conclusion that your remarks criticizing this lawyer were unjust.

Very truly yours,
GEORGE COCHRAN DOUB,
Assistant Attorney General.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., February 19, 1960.

Hon. GEORGE COCHRAN DOUB,
Assistant Attorney General,
Department of Justice,
Washington, D.C.

DEAR MR. DOUB: On February 3, 1960 you forwarded me a letter in which, among other things, you assert that my statements regarding the case of *Carlo Bianchi and Co.* v. *The United States*, Court of Claims Docket No. 466–54, are not correct and that the Government has not been defaulted on the issue of damages. You further state that you have confidence in the competence and industry of the trial attorney handling this case. Based upon the docket at the Court of Claims, I question whether the best interests of the United States were adequately and competently represented by the Assistant Attorney General's Office charged with such responsibility. Our confidence in the ability of your Office to safeguard the taxpayers' moneys must not be weakened.

Under your responsibility, and in the name of the trial attorney whose name I do not care to mention at this point, a motion was made to reopen proof. Said motion was denied by the judge of the Court of Claims on December 18, 1959, with a notation "denied for the reasons that defendant has failed to show the Commissioner's action in closing proof was erroneous." Said decision was filed on December 19, 1959, and as of the noon of February 18, 1960, the docket of this case at the Court of Claims in the clerk's office does not show any permission to the Government to reopen proof. The only entry in the docket after the denial by the court of the Government's motion to reopen for the purpose of introducing proof is an entry showing that a duplicate set of exhibits, renumbered, were filed by the parties. In my opinion, the statements in your letter did not set forth the truth and approved to be intentionally misleading.

I am setting forth several statements in the moving papers which were submitted under your name and under the name of the trial attorney. They speak for themselves and indicate that the Government was foreclosed from offering additional proof to reduce damages.

On page 1 of the moving papers you make this statement: "Defendant respectfully moves the court for an order reopening proof herein so that it may present evidence essential to its defense of this action. Through inadvertence and misunderstanding on the part of defendant's counsel the proof was closed by the Commissioner, before all such evidence was presented."

On page 8 of the same moving papers, you state: "In the present status of this case the Commissioner has closed proof on both sides with the exception of one witness to be heard on behalf of defendant in San Jose, Calif., on February 8, 1960."

On page 8 of the said statement you state: "It is accordingly respectfully suggested, for the reasons hereinbefore stated, that the case be reopened and that a further hearing for the taking of defendant's testimony be set sometime before February 8, 1960."

On page 8 you state: "Although considerable extra expense would be involved, defendant, in the light of the misunderstandings above mentioned, would undertake to bring its witnesses to California for that purpose."

Your motion to reopen the case for the purpose of submitting additional proof was denied by the court, and, therefore, your statement that I am in error when I stated that the court will not now permit the defendant to introduce any testimony with respect to damages was not correct and was made for the purpose of avoiding the responsibility which is yours.

I am forwarding your letter to me and my letter to you to the appropriate congressional committee because I believe that our Government deserves better representation in the defense of law suits against it, and the appropriate committee will draw its own conclusions.

Very truly yours,
ALFRED E. SANTANGELO,
Member of Congress.

Here's Where the Money Goes

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mrs. GRIFFITHS. Mr. Speaker, it has always been my contention that one of the main ways we can save money and thereby bring about real cuts in the Federal budget, is to reduce the prices we pay for our armaments of defense.

At this time, I would like to point out the following excerpts from the latest—1959—annual report of the Comptroller General of the United States:

PROCUREMENT

Our audit work in the procurement area during the fiscal year 1959 included reviews and evaluation of the policies and procedures relating to the use of contractor-furnished drawings, the award and administration of procurement contracts, methods employed in the control of Government-owned equipment, and the computations for material requirements. Some of our findings in this work are described below.

Benefits of competition in procurement prevented by inadequate provisions for use of contractor-furnished drawings acquired at Government expense: Initial procurement contracts often require the contractor to furnish design drawings to the Air Force at Government expense. These drawings are essential if the benefits of competition are to be realized in letting additional contracts for the same items. We made a review of the use of contractor-furnished drawings at the Air Materiel Command prompted by the disclosure in our examination of contract award procedures at selected air materiel areas that a number of contracts were awarded to the first supplier on a sole source basis because contractor-furnished drawings were not available for use of other prospective suppliers.

We found in many cases that the Air Materiel Command (AMC) executed contracts without definite provisions giving the Government the right to use for procurement purposes the drawings furnished by the contractor. Contracts not containing the standard clause set forth in the Armed Services Procurement Regulation, which would give the Government unlimited right to use such drawings, were construed by the AMC as forbidding the use of such drawings by the Government. This construction was contrary to the policy of the Air Force and of the Department of Defense that, when the terms of contracts under which drawings are furnished do not specifically restrict their use, the Government has an implied right to use the mfor procurement purposes.

We also found there was no assurance that the Air Force received all drawings required to be furnished under the contracts and no effective controls existed to assure adequate followup action on missing drawings or proper identification of drawings received. The Air Materiel Command's drawing records and records showing whether the Government had the right to use contractor-furnished drawings were unsatisfactory and incomplete, resulting either in additional work and delay in furnishing drawings to procurement activities or a denial of the right to use the drawings in the absence of records of reproduction and use rights.

We recommend that (1) a definite provision be included in all future contracts regarding the Government's right to use drawings furnished under the contracts, (2) with regard to the records already on hand showing that the Government did not have the right to use contractor-furnished drawings, the applicable contracts be reviewed on an as-required basis to determine the correct system be adopted to assure that AMC receives all drawings to which it is entitled. Our recommendations were accepted by the Air Force and corrective action was begun.

Our report on this matter was submitted to the Congress on May 15, 1959.

Excessive costs in procurement of C–123 aircraft spare parts: In our review of the procurement of C–123 aircraft spare parts, we found that the Air Force may have to spend over $1,200,000 for parts which could have been purchased on the aircraft production contract for about $407,000.

Generally, lower prices are obtainable from the contractor while there is concurrent production of the aircraft and spares and before the dismantling or disassembly of the production line. The unit costs quoted to the Air Force by the contractor for items to be purchased after completion of aircraft production were greatly in excess of what the costs would have been had the items been ordered while production facilities were intact.

The C–123 contract provided that the Air Force could order additional spare parts or increase quantities of existing spare parts on order within 90 days before the scheduled acceptance of the last C–123 aircraft. Orders for additional spare parts or increase quantities of spare parts under this contract would have had to be placed by April 29, 1958. Although a computation showing requirements for the additional spare parts had been completed on April 1, 1958, no effort was made to expedite the review and place the items on the existing contract.

The Air Force told us that various factors influenced its decision to delay starting procurement, such as (1) lack of a firm program, (2) nonavailability of funds, (3) unreliable consumption data for the C–123 aircraft, (4) the basing of requirements on use of an aggregate program while aircraft delivery was on a staggered basis, and (5) other factors relating to individual items. We believe that the Air Force should have considered whether the resulting savings would have offset such factors as unreliable consumption data, vacillating flying program, storage, handling, and record keeping costs. If fund limitations were a factor, an effort should have been made to obtain the required funds to make the procurement at the lower prices.

We have recommended that the Air Force strengthen its controls to assure that timely actions are taken by responsible supply officials in determining requirements and starting procurement for spare parts applicable to end items going out of production to obtain the advantage of lower prices.

Review of shipbuliding contracts: We completed a review of 15 claims amounting to $6.9 million which had been submitted by 10 shipbuilders for damages allegedly arising from Government delays in furnishing plans and material. These shipbuilders were constructing, or had constructed, ships for the Navy under fixed-price contracts. Our examination of the 15 claims showed that the settlements were not necessarily representative of the true cost of the delays for which the Government was responsible. Neither the contractors nor the Navy had adequate information concerning the extent of delays or their cost and, for this reason, the claims were settled on the basis of inconclusive data.

To make such information available, we recommended that the Navy's Bureau of Ships (1) issue instructions for the guidance of contractors in preparing delay claims, (2) evaluate the effects of delays as they occur, and (3) encourage contractors to submit claims within a reasonable period after the end of the delays so that settlement can be negotiated before details of the delays are forgotten. The Bureau concurred with our recommendations and indicated that it will take appropriate action to put them into effect.

Review of ship overhaul contracts: Our review of ship overhaul contracting activities administered by industrial managers in the Bureau of Ships brought out that a lack of effective price evaluation procedures permitted the award of contracts at unnecessarily high prices. Our review further pointed out that laxity of controls over supplemental work increased ship overhaul costs. We found that additional repair work authorized after the award of contracts totaled about $16 million annually and that generally the prices negotiated for additional work were between 115 and 170 percent of competitive prices for such work. We found also that (1) failure to use split-bidding techniques unnecessarily restricted competition for ship overhaul work, (2) inequitable pricing of Government-furnished materials allowed contractors unwarranted benefits, and (3) a lack of coordination between inspection and contracting functions permitted overpayments to contractors."

Rising Natural Gas Prices

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. BROCK. Mr. Speaker, on February 9 of this year, I introduced the bill, H.R. 10309, to amend the Natural Gas Act to prohibit a rate increase from becoming effective, subject to bond, before a pending rate increase proceeding has been finally determined.

While the purpose of my bill was primarily aimed to affording relief to cities and towns in Nebraska, where gas consumers have been forced to pay many millions of dollars out of their pockets without benefit of final decision, it equally applies to hundreds of towns and cities in other parts of the country.

To be forced to pay one rate increase upon another, without benefit of final decision by the Federal Power Commission, is likened to "putting the cart before the horse," or being convicted without benefit of trial. Relief can be afforded to the gas consumers only by amending the existing provisions of the act.

It is very encouraging to find the case for the consumers being enhanced by an enlightening and aggressive editorial published in the February 11 issue of the Lincoln Evening Journal and Nebraska State Journal, a newspaper dedicated to the public interest in the State of Nebraska.

The editorial contains a precise analysis of the various gas rate increases that have been imposed on the consumers in the State of Nebraska since 1951. It should act as a stimulus to the consumer-public pulse, to keep the natural gas companies from further picking their pockets before the FPC regu-

latory body has a chance to sift the evidence and render a just and proper decision.

Therefore, Mr. Speaker, and with the unanimous consent of my colleagues, may I request this editorial be published in the daily CONGRESSIONAL RECORD, with the hope that it will be read by the many gas consumers throughout the Nation who have been similarly affected by these successive gas rate increases:

RISING NATURAL GAS PRICES

Amid deep concern for rising prices on every front, it is difficult to understand the apparent public apathy over rapidly rising costs of natural gas.

On December 27, natural gas users of Lincoln and many other Nebraska towns were handed their third price boost in 3 years due to increased prices for gas being charged by Northern Natural Gas Co. This imposed a cumulative increase of 23 percent in natural gas rates since 1957.

Few other commodities have risen in price at such a pace. Thus it would not seem amiss to suggest that something is wrong somewhere in the natural gas operation.

That is precisely why Lincoln city officials and executives of the Central Electric & Gas Co., local distributor of gas in Lincoln and a number of other Nebraska towns, are in Washington this week. They are appearing before the Federal Power Commission to protest these frequent raises Northern has loaded on local gas outlets.

Two factors bear close examination in this matter. First is the operation of the FPC itself. This regulatory agency, which has jurisdiction over gas rates, has yet to make a final ruling on whether any of the three raises by Northern Natural are justified.

By law, a rate increase can go into effect 6 months after it is announced if the FPC has not ruled on it. If the increase is later refused or trimmed, the overcharge is returned to customers with 6 percent interest. But this imposes undue burden on customers in the meantime.

Why the FPC now has more than 3,000 rate cases pending, including the 3 by Northern Natural, is a question that needs answers.

The problem seems to warrant passage of a bill introduced by Nebraska Representative LARRY BROCK, Democrat, Third District, to prohibit a gas rate increase from becoming effective while other price boosts requested by the same company are pending.

The second question in the case seems to be the soundness of Northern Natural's operation and the validity of its repeated applications for price hikes. Northern is a pipeline company which buys gas from independent producers and sells it to local distributors such as Central Electric & Gas.

Since 1951, Northern has had FPC rulings on five other price raise applications, in addition to the three still hanging fire. In the five cases disposed of by the FPC, Northern was allowed only about half the rate increases it claimed it needed.

Unquestionably, operating costs have increased in the past decade. But it seems significant that, during that time, Northern, the gas transporter, has asked eight price hikes, while Central, the local distributor, has not raised its rates except to cover increased gas costs imposed by Northern.

Residents of Lincoln and other towns served by Northern Natural have a great deal at stake in the FPC hearings now in progress in Washington. They can at least root from the sidelines for representatives of Central Electric & Gas, and for Lincoln and other towns who are protesting these frequent applications for rate increases.

Crime Prevention

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Crime Prevention," which appeared in the February 10, 1960, issue of the Messenger of Madisonville, Ky.

The editorial is as follows:

CRIME PREVENTION

There are so many special days and weeks and months that the calendar is not large enough to contain them all, so they overlap and duplicate and what not.

Most of the special periods are for good causes, though some of them are frankly commercial and designed to benefit a particular industry.

This week, in addition to observance of the 50th anniversary of the Boy Scouts, the Nation is observing National Crime Prevention Week, which is a meritorious project for the reason that crime is not only a nationwide problem, but an increasing menace which is causing no end of study and worry.

Huge sums of money are being spent daily in solving crimes, in protecting the public against them and in punishing lawbreakers who have been arrested and convicted. Behind Crime Prevention Week is the idea that the most effective way to rid the Nation of crimes, or at least substantially reduce their number, is to prevent crime before it happens.

President Eisenhower and FBI Director J. Edgar Hoover also believe that crime can be prevented, and we note that they have asked for the wholehearted participation of all law-abiding citizens in observance of the special week on the subject.

Late scientific studies tend to identify the home as the real breeding place of crime, and this does not merely mean homes in which there are a shortage of this world's goods. Some lawbreakers come from more fortunate homes, the records show, and here it is believed that the patterns of family life are the prime factors in the formation of juvenile delinquents and the shaping of future criminals.

Poverty and slums, long believed to be prime factors in the crime picture, are revealed now as only second considerations. That is why the slogan of this year's Crime Prevention Week is "Crime prevention begins at home."

This puts crime prevention in a new light and makes the solution seem less complicated. It puts the responsibility squarely on the shoulders of parents—where it properly belongs—and shows them that they need to start doing what is necessary to guide their children into paths of usefulness and honor, rather than neglect parental responsibility and letting kids drift into crime.

This guidance in the home—long practiced by millions of good parents—can be done by creating an atmosphere of love and understanding, in which parents are not too busy to train the children in the ideals and principles which made America great—and which must be recaptured if our country remains great.

Prevention of crime not only is a worthy goal, it is a must in the United States. And it is a must to which every good citizen should dedicate himself or herself.

J. Edgar Hoover and "Masters of Deceit"

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. SMITH of California. Mr. Speaker, I would like at this time to bring to the attention of my colleagues three excellent articles by Mr. George Todt of the San Fernando (Calif.) Valley Times, concerning the Honorable J. Edgar Hoover and his book, "Masters of Deceit":

QUALIFIED FOR WHITE HOUSE JOB

"The ripest fruit first falls."

—*Shakespeare,*
("Richard II," Act II, Scene 1).

Few items, it seems to me, have done a better job of pointing up the intellectual paucity and depravity of our times than the fact that a large weekly news magazine recently saw fit to devote its lead story and nine full pages of pictures (photos by the dozen) to the dowdy gambling of a most uninspiring New York heiress of something or other.

This is really a case of fiddling while Rome burns.

But it's only a case in point. Never was our Nation in graver peril than today, but few would guess it from any cursory inspection of the majority of the Nation's media in the communications field nowadays. Seems to be something of a mass drive underway to cause us to take our eyes off the ball. How about that?

I think it's time for a lot of serious reading by all of us. If the international Communist conspiracy is what we have been told, then there is nothing more important for Americans than to know their enemy.

On the other hand, if it's only a bogeyman and there's nothing to it—then maybe somebody had ought to tell us. What's the score, anyway?

Actually, if the mental caliber of so much of our mass communications media wasn't of such low grade, a much better job would have been done by this time to alert us to the real menace of Marxist Communism. At least, it seems that way—doesn't it?

On the other hand, we may well wonder whether the intelligence is really lacking—or has it all been planned that way?

This is a good question because we need go back no further than 20 years ago in our country to recall what a superbly brilliant job the communications media did to alert us to the dangers of one Adolf Hitler and his totalitarian National Socialists (Nazis).

So, we licked Hitler well enough. He's dead and his dreams of conquest lie with him in his grave. Now that this bloody despot has been previously taken care of—what about the totalitarian Communists now?

For some strange reason, many of our most vocal friends in the communications media never made it past the has-been Hitler stage. It's really a pity that they have forgotten their former zeal to devote to the modern Reds, too.

One great American whom I admire is a gentleman who has dished it out with both fists to Nazi and Communists alike—which proves that he isn't a phony akin to some we have been previously discussing here. This is J. Edgar Hoover, director of the Federal Bureau of Investigation. He's for real in my book.

Somehow, J. Edgar manages to catch criticism from both the extreme left and extreme right at the same time, which only goes to make him more acceptable than ever to the overwhelming body of citizens who beware the equal dangers of Scylla and Charybdis.

I don't know—since I've never asked—what Mr. Hoover's political affiliation may be, but sometime the day may arrive when either of our two major parties may outmaneuver the other one by actually drafting this great public servant to run for the Nation's highest office. This could come at the time of the public's greatest disappointment and disillusionment with the specter of encroaching world communism. Should this indeed happen, my guess is that Mr. Hoover might win by a landslide vote. Could be, maybe. Who knows?

Certainly, Mr. Hoover is probably the best-informed citizen in the United States regarding the true aims and methods of the Reds, both here and abroad. Their vendettas against him are the real tipoff as to his effectiveness, of course. We might have reason to doubt the good job he is doing if we didn't hear so often from the outraged comrades.

Their squeals of dismay should be the sweetest kind of music to our ears and the more they go after him—the more we should rally to his support. A man is known for the enemies he makes. Love that J. Edgar for his'n.

What America needs more than ever before is men and women with deep-rooted knowledge about the machinations of the Reds, not well-meaning dilettantes. Intelligence is required, not merely some good intentions. Although a well-known road is paved with the latter, it's hardly the road to success any way we figure it.

All other things being equal in the equation, I figure that J. Edgar Hoover is still the United States' best-informed scholar on the subject of communism, and—his detractors to the contrary—he continues to be the choice of most of us to spell out danger from the Reds in the most down-to-earth and practical way.

Who knows more about Marxist communism on our side than this man?

GRIM PROSPECT PUT INTO WRITING

"Fear that man who fears not God."—Abd-El-Kader.

Despite certain criticisms from extreme right-wingers which smack of rabble-rousing and bigotry, at least to this writer—I still consider J. Edgar Hoover's scholarly book called "Masters of Deceit" (Henry Holt & Co., New York) to be one of the most monumental works ever put together on the subject of communism and the wily, treacherous manner in which it operates.

Regardless of what one may have heard about this book in the past, my advice is to read it. There is so much intelligence to be conveyed in this masterful exposure of the comrades that anyone who fails to avail himself of its contents is at least two-down on his one-upmanship, and that's for sure.

Hoover is a profound thinker and scratches deep below the surface from the opening gun. Let me bring my readers a few pertinent passages as samples of what one may expect to find in the book:

"William Z. Foster, long-time head of the Communist movement in our country, has boasted that the Communist revolution, after the actual seizure of power, would 'develop even more swiftly' than the Russian.

"All industry would be nationalized and farms taken away from their owners. A small businessman is just as guilty as a large businessman; both must be liquidated. Rents, profits, and insurance would be abolished. Countless occupations, termed by the Communists as 'useless and parasitic' would be ended. Here is a part of their list: wholesalers, jobbers, real estate men and stockbrokers, advertising specialists, traveling salesmen, lawyers, 'whole rafts of government bureaucrats, police, clericals, and sundry capitalist quacks, fakers, and grafters.' The Communists have special disdain for lawyers. Perhaps it is because there will be no need for lawyers when there are no rights to defend. At any rate, Foster has said, 'The pest of lawyers will be abolished.'

"Action would be drastic, immediate, and without appeal. An armed 'Red Guard' would enforce the orders of party henchmen. Hotels, country clubs, and swimming pools would be used for the benefit of 'workers,' meaning, in most cases, party bosses. The workingmen in the mines, factories, and mills would be told to work certain hours for certain wages. Labor unions, as we know them, would be obliterated. All such organizations would be owned and operated by the Communist government, and no laborer would be permitted to organize a union or to strike against his 'government.'

"The press would be muzzled, free speech forbidden, and complete conformity demanded. If you expressed an opinion contrary to the party line, you should have known better and your 'disappearance' would serve as a lesson for others. Fear becomes an enforcement technique. Movies, radio, and television would be taken over by the government as agencies for government propaganda.

"Churches would probably not be closed immediately, but they would be heavily taxed, their property seized by the state, and religious schools liquidated. Clergymen would be required to accept the party line. 'God does not exist. Why worship Him?' say the Communists. Children would be placed in nurseries and special indoctrination schools. Women, boast the Communists, would be relieved of housework. How? Huge factory and apartment-house kitchens would be set up, so that women would be 'free' to work in factories and mines, along with the men.

"This picture of a Communist America is not overdrawn. Here are the words of William Z. Foster: 'Under the dictatorship all the capitalist parties—Republican, Democratic, Progressive, Socialist, et cetera—will be liquidated, the Communist Party functioning alone as the party of the toiling masses. Likewise will be dissolved all other organizations that are political props of the bourgeoisie rule, including chambers of commerce, employers' associations, rotary clubs, American Legion, YMCA, and such fraternal orders as the Masons, Odd Fellows, Elks, Knights of Columbus, et cetera.'

"Under this schedule many Americans are eligible for liquidation not once but several times, depending on their present freely chosen affiliations and social interests."

Pretty grim, isn't it? Can we afford to be complacent? Are we too proud—or too apathetic—to fight?

Why not read Mr. Hoover's instructive "Master of Deceit" and see where some of the bodies are buried?

ECCENTRICITIES OF KARL MARX

"There is no truth in him."—John. VIII. 44.

Just what sort of a human being, if we can afford to call him that, was the superman of dialectical materialism, the fountainhead of wisdom and veritable god of the anti-god Communist religion, and founder of the satannical Marxist cult—none other than Karl Marx himself?

As my readers already know, I have long considered him to have been a third-rate bum in his personal and family life. It is certainly a sign of the lunatic times we live in today to consider that anyone—but anyone—with a brain in his head could consider this false prophet to be the model man of the world of tomorrow.

Recently I was browsing through J. Edgar Hoover's informative book, "Masters Of Deceit," and came upon a thumbnail sketch on pages 16–17 of Marx by one of his contemporaries 100 years ago which bears repeating here. At the time, the Marx family was living in two furnished rooms on Dean Street, Soho, London. Listen to this on-the-spot description translated from an article by Gustav Mayer:

"In private life, Marx is a highly disorderly, cynical person. * * * Washing himself, combing his hair, changing his underwear and shirts are a rarity with him. * * * He is often lazy for days, but if he has a great deal of work, he works day and night with untiring endurance. Very often he stays up the entire night and then lies down on the couch fully dressed at noon and sleeps through until evening, undisturbed by the hustle and bustle of family life. * * *

"The room overlooking the street is the parlor and the bedroom is to the rear. In the entire apartment there is not a single piece of clean and good furniture. Everything is broken, tattered and ragged; everything is covered with finger-thick dust, everywhere there is the greatest disorder.

"In the center of the parlor stands a large table covered by an overhanging oilcloth. It is cluttered with his manuscripts, books, newspapers, the children's toys, scraps of cloth from his wife's sewing as well as some tea cups with chipped rims, dirty spoons, knives, forks, a lamp, an inkwell, drinking glasses, a Dutch claypipe, and ashes. In short, all this conglomeration is piled high and on one table. A junkshop would have to cede honors to this extraordinary ensemble.

"When stepping into Marx's room the coal and tobacco smog makes one grope around the room as in a cave until one's eyes gradually develop a tolerance to these fumes and one is able to make out, as if in a fog, a few objects in the room. Everything is dirty, everything full of dust.

"As for sitting down, that is a really dangerous matter. Here is a chair with only three legs; over there the children are playing at cooking on another chair which happens to be still unbroken. Sure enough, that is the one which is offered to the visitor, but without any effort to clean off the food. You sit down at the risk of ruining a pair of trousers.

"Such is a faithful picture of the family life of the Communist chief, Marx."

Must have been quite a character, what?

And yet, the evil brew distilled from his distorted, wicked and hate-filled mind is the best which the modern purveyors of the mad Marxian cult have to offer our confused, groping world of today, and tomorrow.

How can we be so foolish as to listen to their blandishments for even a tiny moment of our lives?

Worse still, how can we remain apathetic and careless in the face of the inexorable march of world communism at this time?

I can only sadly conclude that the reason lies in sloth and ignorance on our parts. We have been confused by charlatans in the Nation's communications media who have somehow taken our minds off the dangers at hand—often with the cheapest forms of entertainment.

My suggestion is that we all get a copy of J. Edgar Hoover's "Masters Of Deceit" and inform ourselves of the true nature of the international Communist conspiracy against man's free agency without further delay in the matter.

In knowledge there is power. Know the truth and it will make you free.

How can we hope to fight effectively against Marxist communism until we know what it really is, and what it is not?

Extension of the GI Bill

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. MULTER. Mr. Speaker, the following is my statement before the Veterans' Affairs Committee today in support of my bill, H.R. 4807, to provide vocational rehabilitation, education and training, and loan guaranty benefits for veterans of service after January 31, 1955:

STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER, DEMOCRAT, OF NEW YORK, BEFORE THE HOUSE VETERANS' AFFAIRS COMMITTEE IN SUPPORT OF H.R. 3807, TO PROVIDE VOCATIONAL REHABILITATION, EDUCATION AND TRAINING, AND LOAN GUARANTEE BENEFITS FOR VETERANS OF SERVICE AFTER JANUARY 31, 1955

Mr. Chairman and members of the committee, thank you for giving me this opportunity to appear in support of H.R. 4807. As you know, this bill will provide vocational rehabilitation, education and training benefits, and loan guarantees for those individuals called upon to serve during the cold war. You are also aware, I am sure, of the many efforts made by the Congress and by the Armed Forces to attract adequate manpower into our military services. Many reasons have been advanced concerning the inability of the services to attract and retain, on a voluntary basis, sufficient personnel to supply the manpower requirements of our current military commitments. It is still necessary to induct men into the services. The number of individuals drafted during recent months is not impressive. However, there is no record of the number of individuals who, because of the draft, elect to volunteer for service. This bill makes no distinction between those who, because of the draft, volunteer for service and those who, waiting until the final day, are actually "inducted." Benefits proposed by my bill should be available, without distinction, for all who serve.

There are many arguments in opposition to this legislation. Such arguments, in my opinion, fall within five major categories. First, there are those who oppose this legislation because of the cost. This group, not yet having fully analyzed the statistics published by the Veterans' Administration, look at the estimated $500 million annual cost of these benefits. And yet, data from the Veterans' Administration show conclusively that veterans of World War II and the Korean conflict, as a result of educational benefits, have increased their income levels so that they now pay, in additional income taxes, over $1 billion annually into the Treasury of the Nation. At this rate the entire cost of GI benefits will be paid, by those who received them, within the next few years. Thus, the initial cost, over a few short years, will be more than paid into the Treasury.

A second group of individuals oppose this legislation because of the small number who are actually subjected to induction. This group fails to recognize that many individuals, facing induction, voluntarily enlist. Others, offered choice assignments, volunteer for service. For this reason the actual number entering military service because of the draft is unknown. This group fails to consider the entire problem. They refuse to face up to our national obligation—an obligation to every individual—not merely an obligation to groups large enough to exert political pressure.

A third group opposes this legislation on the basis that such benefits will induce trained personnel, personnel who have been in the service for the required 2-year period, to leave the service and accept benefits offered by this legislation. It is true that some individuals failed to reenlist so that they could avail themselves of GI benefits. It is also true that such individuals provided, and still provide, a pool of trained manpower, better trained, in some cases, because of the higher educational level attained as a result of educational benefits. These individuals are available if needed, for the security of our country. They may be lost to the military services; but only temporarily; such loss may cause concern to the services; they may not be available on a full-time basis; but they are available for the security of this Nation and they can, and will, provide trained manpower if or when needed.

A fourth group opposes this legislation because it provides benefits not heretofore provided for the peacetime soldier who faces none of the hazards of war. This group points out that such benefits have in the past been reserved for those who served during periods of war. This group maintains that the peacetime inductee can anticipate the draft and plan accordingly. They say such planning was not possible by the wartime GI. This group points out that an individual can effectively postpone being drafted by attending school, or by enrolling for the 6-month training program. This legislation does not seek to change the law with respect to methods which can be used to delay and, in some cases, actually thwart military service. This legislation is designed to provide benefits for those who for one reason or another do not delay or postpone their obligatory services. To be a draft dodger or patriot is often a dilemma of a college student. Let us not continue to penalize those who choose to be patriots.

It is true that peacetime draftees do not face the hazards of war. It is also true that of the millions of men who were called into the service during World War II and the Korean conflict only a small number were actually involved in combat. And yet the GI bill did not distinguish between those who served in actual combat and those who also served. The cold war has not yet ended. Men are still being inducted into the service—they, too, serve—and deserve the benefits provided in this bill.

Finally, a number of individuals object to this legislation because there is no clear showing of need, that educational benefits should be provided for all individuals who have the capability and desire to continue their education. I agree and will fully support any measure which is designed to increase the educational level of our Nation. Such legislation is a must. But the Congress has not yet enacted legislation broad enough to provide sufficient opportunities for the educational advancement of all our younger citizens. The National Defense Education Act of 1958 was a step in the right direction. I am sure it will provide opportunities for many of our youths to attain higher education. The legislation here proposed, will not conflict with the objectives of that act. It will supplement the provisions of that law. It will encourage individuals to volunteer for service so that they can pay for their education by serving our country. This legislation will clearly and unmistakably serve as notice to all our youth that their obligation to serve their country is not a one-way proposition—that those who serve in the cold war are not forgotten by a grateful Nation.

There are many other arguments against this legislation and I am sure you gentlemen have already heard most of them. I will not take any more of your time to point out the invalidity of them. I am sure, in your consideration of this bill, you will clearly see that those objections are not founded on a careful analysis of the benefits derived by this Nation from the GI bills of rights. Instead, if I may, I would like to point out that many of the educators of our Nation are in favor of this bill. I would also like to point out some of the benefits derived by the Nation from benefits provided by the GI bill of rights. I feel that the same, or similar benefits will accrue from enactment of H.R. 4807.

The most important benefit to be derived from enactment of this bill seems to me to be our keeping faith with the youth of the Nation. The current draft law and obligatory service hang as a shadow over the youth of our country. Many are called, without their consent, to serve in the cold war. To them service is real. To them 2 years displacement from their friends and jobs places them at a disadvantage in their struggle for a place in our competitive society. They resent this disadvantage. They often feel they have been rejected. On return to civilian life they must once more be recognized. They must compete with those who are not called. Enactment of this bill will assist those individuals to find their place in our society. It will express, in no uncertain terms, the appreciation of this Nation to those who also served. It will assure such individuals an opportunity to compete favorably with those who managed to stay behind.

In conclusion, gentlemen, I would like to point out that passage of this bill will increase the educational level of our country and provide, in the long run, further revenue for the Nation. All of you are familiar with the number of veterans who took advantage of the GI bill. All of you are aware that the increased earning capacity of such veteran will in a few years pay in additional income taxes, for the entire program. An increase in the educational level of the Nation, a benefit national in scope, a benefit to enable us to compete with other world powers in scientific fields, is vital to our survival.

The program advocated here, like the GI bill, will increase the educational level of our Nation; it will provide educational opportunities for those who are called to serve in the cold war; it will recognize and provide some means of restitutions for those who, for 2 years, are called away from their jobs and friends; and it will, over the years, provide additional revenues offsetting, in no small way, the expenditures required.

I am certain that after careful consideration this committee will favorably report this much needed legislation.

Admiral Burke's Plea for More Polaris Submarines

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, February 23, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "For 45 Polaris Submarines," published in the Philadelphia Inquirer of February 23, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR 45 POLARIS SUBMARINES

Adm. Arleigh A. Burke's plea for more nuclear-powered submarines to carry the Polaris missiles seems like one that should be heeded. If, as Admiral Burke says, all the significant tests have been completed on this solid-fuel missile it ought to be made operational quickly and in sufficient numbers to serve its purpose.

In combination with nuclear-powered submarines which could fire it from beneath the surface anywhere in the seven seas, the Polaris missile is a mighty weapon, capable of destroying any nation that dared attack the United States. This should mean, it seems to us, that the quicker the United States builds up its fleet of Polaris submarines the better it will be for the country.

Above all, the mistake should not be repeated that was made with the Atlas program of going to great expense to develop a missile only to find that when it became operational that by the time launching sites in adequate numbers could be provided it would be obsolete. That is essentially the consideration holding down production of the Atlas.

As a consequence, although we have a well-tested ICBM, it is not serving its function as a deterrent to aggression, because there are only two exposed sites from which it can be fired. Better coordination of the Polaris program is highly desirable so that when the missile is declared operational it will be ready for immediate use.

Admiral Burke wants 45 Polaris submarines over the next few years, and 6 more right now than the 15 already authorized. The request seems reasonable. Congress and the President should see that it is fulfilled.

Resolution of City of Lawrence, Mass., in Favor of Raising the Federal Minimum Wage

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the resolution of the city of Lawrence, Mass., adopted on February 8, 1960, in favor of raising the Federal minimum wage:

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF LAWRENCE, MASS., IN FAVOR OF RAISING THE FEDERAL MINIMUM WAGE

Whereas there is now pending legislation before Congress to increase the Federal minimum wage to $1.25 per hour; and

Whereas the Fair Labor Standards Act calls for only $1 an hour; and

Whereas there are nearly 20 million wage earners who are completely without any protection with reference to minimum wage earnings; and

Whereas, in view of the steady rise in the cost of living and increased productivity, the city council hereby adopts this resolution calling upon the Senators of Massachusetts and Representative Thomas J. Lane, Majority Leader Congressman John W. McCormack and Secretary of Labor James Mitchell to lend their support to increase the Federal minimum wage and to support legislation to abolish this obsolete minimum Federal law and to broaden the coverage of the Fair Labor Standards Act; and be it further

Resolved, That a copy of this resolution be sent to the above named.

Attest:

JOSEPH R. SMITH,
City Clerk.

FEBRUARY 8, 1960.

Still a Champion After 30 Years

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I am including in the RECORD the following column, "Know Your Coast," by Ray Thompson, which appeared recently in the Daily Herald, Biloxi and Gulfport, Miss.

These columns by Mr. Thompson tell of some of the glories, past and present, of the beautiful Mississippi gulf coast or of the fine people who call that area home. They appear in the Daily Herald as a regular feature.

The particular column quoted below is a human interest story about a distance swimming champion, Mrs. Lottie Moore Schoemmell, who now lives in the quiet, but progressive town of Ocean Springs, Miss., across the bay from Biloxi.

The column follows:

STILL A CHAMPION AFTER 30 YEARS

Quietly residing off old U.S. 90 just east of Ocean Springs, and engaged in physiotherapy work along the coast, is a grandmother in her 60's who was, in the late twenties, champion woman distance and endurance swimmer, at one time holding 30 world's records. She is Mrs. Lottie Moore Schoemmell.

The amazing thing is that, according to the files of the International Professional Swimming Association, she still holds at least a dozen of those world's records—still unbroken by anybody else in 30 years.

Just this last summer there was a furor that 26-year-old Diane Struble had finally broken Lottie's famous 1926 record swim around Manhattan Island of 14 hours and 11 minutes. But further investigation revealed that Lottie's record had been based on a distance of 44½ miles, while Diane's record was for only 30 miles.

Lottie is a member of an unusual family. Her father, Ernest Moore, son of a British nobleman, was a deep sea diver who taught her to swim when she was 8 years old. He was one of the heroes of the burning of the *General Slocum* in the East River in 1941, when more than a thousand lives were lost. Moore, in a skiff, the side of which was burned out in his efforts, rescued more than a score of the victims. Her mother was the founder of St. Barnabas Lutheran Church in New York. Her sister, a nurse at Rockaway Beach Hospital, administered the first dose of the miracle drug aureomycin to save a life in 1949. Her brother was the head of the Spanish Department of Syracuse University and the author of several books.

Lottie herself, married at 17, was the mother of two children for whom she took up professional swimming to support in 1925 as the first female lifeguard of New York City, at which job she had 34 rescues to her credit. It was Commodore Harry Siexas, head of the New York Life Saving Service, who became her famous trainer in long distance and endurance swimming.

The twenties, as you will remember, was the era when marathon and channel swims were the vogue, and in 1926 Lottie Moore Schoemmel began to blaze headlines across the Nation with her long-distance swimming exploits. In 2 years time she had won 21 world championships and was the recognized world's best woman swimmer for a distance of 10 miles or more.

She swam around Manhattan Island for a distance of 44½ miles in record time. She lowered by over 2 hours channel conqueror Gertrude Ederle's record from the Battery to Sandy Hook, a distance of 22 miles which she swam in 5 hours and 57 minutes. But her most famous feat was the 153-mile-record-breaking relay swim from Albany to New York in October of 1926, bettering the previous Mille Gade Corson record set in 1921 by 6 hours and 24 minutes. In 11 days Lottie averaged 14½ miles per day in nearly freezing water lashed by a bitter cold wind. In the ordeal the battering of the waves wore out three bathing caps. Veteran Hudson River pilot Captain Grant, who guided Lottie's course, said it was the greatest exhibition of swimming endurance ever made by a woman.

It was in this famous swim on the second day that Lottie, her body chafed and raw by the friction of the bathing suit in cold water, introduced the grease bathing suit, covering her nude body completely with 10 pounds of axle grease.

In December of 1926, in honor of the Sesquicentennial of George Washington crossing the Delaware, Lottie swam the river amid its floating cakes of ice at exactly the same spot, diving overboard from the same island where Washington hid his boats from the Hessians. She completed the 1,200 feet in 10½ minutes. In this exhibition, however, she wore the standard bathing suit, rather than cause comment and criticism among the assembled dignitaries.

In 1927 Lottie stepped out of her swimming role just long enough to set a woman's rowing record of 30 miles in 7 hours and 48 minutes on Lake Champlain. In that same year she entered the rugged $40,000 William Wrigley, Junior Swimming Marathon between Catalina Island and San Pedro, clad in her now-famous grease bathing suit and her father's shark knife fastened to a belt around her waist. Because of a tendon torn in training she was forced to withdraw. But later that year she defeated George Young, winner of the Catalina Island Swim, and 422 other entrants in the 21-mile Canadian National Exhibition Swim at Toronto.

In 1928 she swam the Hudson River for 9½ miles in 2 hours and 15 minutes, handcuffed with the manacles worn by executed criminal Gerald Chapman.

It was also in this same year that Lottie established in the pool of the new Park Central Hotel in New York the world's swimming endurance record of 72 hours—3 days and 3 night without sleep or rest, without leaving the pool or touching its sides. She had just previously established a record of 32 hours in the Deauville Casino Pool at Miami Beach, bringing to America a record held by England for 47 years when, in 1880, Edith Johnson had established a world record of 31 hours in Blackpool, England.

In the early thirties the Queen of the Hudson, accompanied Johnny Weismuller on a nationwide tour under the direction of Steve Hannagan, covering 30,000 miles and chalking up about 20 more swimming records in demonstrating BVD swimming suits. Johnny went on to become "Tarzan" in the movies, but Lottie passed up a motion picture career to stick to swimming.

When the Detroit Times in 1930 sponsored free swimming lessons, for which nearly

10,000 readers enrolled, Lottie Schoemmel taught and supervised. She gave swimming lessons at Luna Park at Coney Island in 1931. It was Lottie who gave swimming instruction to the Chicago Cubs as part of their training. The now famous Dick Pope of Cypress Gardens, Fla., was her pupil at Miami Beach, where she was the first to adopt the bra and trunks as a swimsuit. The Miami River 5-mile swim was born in the fertile brain of Lottie in 1937, when she challenged the lifeguards and all comers to compete with her on the course under its eight bridges from which the spectators watched.

With no more records to conquer Lottie became known from Florida to New York to Texas as a swimming coach. But in 1946, when the 5-mile marathon swim along Galveston's seawall was revived Lottie Schoemmel, then 52 years old, came from retirement and entered. She was the only woman to finish this race, which was conducted in water so rough the small craft warnings were out.

Following the Galveston swim Lottie, having fallen in love with the Mississippi gulf coast on a previous trip through from Florida, came to Ocean Springs where she bought property and where she has been since—pioneering physiotherapy, studying taxidermy and hypnotism, befriending homeless dogs of which she has about 20 in her kennel, and giving swimming lessons at the Ocean Springs, community pier and the Buena Vista pier.

Although 65, Lottie has no intention of resting on her swimming laurels, chops wood every day to keep fit, and wants to make the 1085 Mississippi River relay swim, something that has never been done.

Her former manager, veteran publicist George H. Maines, who originally piloted her to fame and who is now managing Jimmy Durante and Gene Austin, just recently rediscovered her after 30 years. It came about when he read an item in Walter Winchell's column recalling her Washington crossing the Delaware swim and telling where she is now. He and Lottie are already planning a revival of swimming activities in 1960 and he has already booked her for 6 weeks at Lake George, N.Y., where she once established a 20-mile swim record.

Lyndon Johnson's Writing a Record To Run On

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. ANFUSO. Mr. Speaker, in its issue of Sunday, February 21, 1960, the Washington Post takes a look at Senator LYNDON B. JOHNSON as a candidate for the presidential nomination. The article, first in a series on the various candidates, is compiled and written by reporters of the newspaper's national bureau and is entitled "LYNDON JOHNSON'S Writing a Record To Run On."

Under leave to extend my remarks, I wish to insert the article into the RECORD:

LYNDON JOHNSON'S WRITING A RECORD TO RUN ON

Senate Democratic Leader LYNDON B. JOHNSON of Texas, is the one Democrat many of the party professionals think could not win a national election. But JOHNSON and his supporters are just as sure of the contrary: that JOHNSON is the one Democrat who could beat Vice President NIXON in 1960.

Why these violently contradictory opinions, each of which is held with a conviction bordering on the fanatic?

The JOHNSON critics maintain that because he is a southerner and, in their minds, a conservative, he could not win the big industrial States where Negro and labor voters hold the balance of power. Without New York and California, or at least one of them, plus Michigan, Ohio, Pennsylvania, and Illinois, no Democrat can win in 1960, the JOHNSON critics say.

They also argue that JOHNSON has another strike against him, the heart attack he suffered in 1955.

Attacks on JOHNSON by Senate liberals such as Senator WILLIAM PROXMIRE, Democrat, of Wisconsin, and by such organizations as Americans for Democratic Action have undermined what support JOHNSON has for his claim to liberalism, the critics say.

THE MAN'S ASSETS

JOHNSON supporters argue, on the other hand, that the country today is not prepared to vote for a flaming liberal like Senator HUBERT H. HUMPHREY, Democrat, of Minnesota. The public is, in fact, centrist or middle of the road in its political frame of mind, they say. It wants a mildly progressive leader, but not a crusading reformer.

The country is concerned primarily about foreign and defense policies and wants a man who has shown ability, as JOHNSON has, to deal with men and issues. Who, these people ask, would be as skillful as JOHNSON, the recognized master legislative leader of his times, in a conference with Soviet Premier Khrushchev?

With no great domestic issues before the country, with business good and labor reasonably contented, the Democratic Party must have a man who is recognized as responsible, astute, and capable, the JOHNSON supporters argue.

They say that because JOHNSON is a moderate, he could win important business support and carry the South, the Southwest, and the border States, part of the Midwest, perhaps a few New England States and one or two of the more middle-of-the-road industrial States such as Pennsylvania or Ohio.

ESSENTIAL TEAMMATE

If this analysis is correct, JOHNSON could win—by a narrow margin—without California or New York.

If JOHNSON should win the nomination, his first aim would be to persuade Senator JOHN F. KENNEDY, Democrat, Massachusetts, to be his running mate. A Johnson-Kennedy ticket is what the Johnson people want more than anything else.

In his more realistic moments before he became so deeply involved in his quiet but well-geared campaign, JOHNSON recognized the almost insuperable difficulties ahead of him. He even blurted out once that "I don't think anybody from the South will be nominated in my lifetime. If so, I don't think he will be elected."

That was an imprudent confession for a man running with as much determination as the astute Senate majority leader.

A few weeks ago, when someone dared say in his presence that he, as a Texan, could not win the election, the majority leader angered visibly.

NO KINGMAKER ROLE

For months, JOHNSON said that he was not a candidate and had no interest in even making himself available. But on his February trip to the Southwest, he began talking about his candidacy. He told reporters that he expected to be chairman of the Texas delegation to the Democratic Convention in Los Angeles "and I hope it will be committed to the support of my candidacy."

Anyone who knows JOHNSON knows that he is in the fight to win. He wants the nomination, not just the power to determine the course of the convention.

As the famous majority leader of the Senate, JOHNSON does not need to enter primary campaigns to demonstrate his claim to be of presidential stature. He has long since been a national figure and has as much right as anyone to the title of party leader.

HIS SELLING POINTS

JOHNSON'S strategy is to show himself around the country to the men who will control convention votes. His aim is to drill into their minds these points:

That he will have a big block of votes on the first ballot at Los Angeles, perhaps the biggest or certainly second only to KENNEDY'S. JOHNSON'S votes, unlike KENNEDY'S, will stay with him, too, some of his supporters argue.

That the party should not succumb, as he says, to "bigotry, whether of race, creed or section." The Senator is extremely conscious of the anti-Southern feeling he encounters.

That Texas is less and less a Southern State and more and more a Western State. El Paso, Tex., is west of Denver, Colo.

That the polls show that only he can carry Texas with its 24 electoral votes, sixth biggest block in the Nation, against NIXON. JOHNSON supporters also believe, and they have independent backing for their belief, that he is the only Democrat who can carry Florida against NIXON.

ANNOYED AT LIBERALS

JOHNSON'S major effort will be to guide the Senate so well this year that no one may dispute his claim to the title of Mr. Democrat. He recognizes that he has been hurt already by attacks from the Senate's liberal wing; he is out to repair the damage.

But he is nevertheless extremely annoyed by the criticisms. He thinks they are tearing apart the party record which he has worked to build.

On their part, many liberals have been distrustful of JOHNSON and accuse him, because of his cooperation with the administration, of failing to present the Democratic Party as a distinct and different entity standing in sharp (and, they hope, attractive) contrast to the GOP.

Their complaint about him is like that of the hero of "My Fair Lady" about the French, who "don't care what you do, actually, as long as you pronounce it properly." The liberals contend that JOHNSON'S boasts of enacting long lists of legislation are empty because the half-loaf laws themselves are empty of significant content.

By constructing an impressive record this year, with a strong civil rights bill, JOHNSON believes that he can make incursions into the Northern blocks of convention votes, including New York's 114, without completely alienating the South.

Franklin D. Roosevelt was JOHNSON'S political mentor, and JOHNSON has not forgotten Roosevelt's ability to work with the party leaders (bosses). They often are the key figures in the convention. These men understand JOHNSON much more quickly than they do the more vocal but less powerful persons represented in the ADA, for example, the JOHNSON supporters contend.

As an example, JOHNSON thinks he made a real impression on New York professionals during a trip there in January. New York City's Democratic boss, Carmine de Sapio, and former Gov. Averell Harriman are reported to be leaning heavily toward the JOHNSON camp; a significant number of the Empire State's delegates may be found voting for JOHNSON at some point in the convention next July in Los Angeles.

Until recently, JOHNSON'S legislative aim was to get things done; to reach agreement on bills which would be acceptable to the

administration even if they did not include all the provisions that the Democrats in Congress thought desirable.

JOHNSON did not want to fight Presidential vetoes and he did not want to be an obstructionist. He violently disagrees with the old axiom that the duty of the opposition is to oppose.

Now JOHNSON is more interested in a record—a record on which he and his party can go to the country and win votes. If the records which he writes encounters Presidential vetoes, JOHNSON will not be disturbed this year.

While JOHNSON is at his desk on the Senate floor, he will be campaigning as hard as some of his colleagues who have entered the presidential primaries. And Speaker of the House SAM RAYBURN, one of the most skillful politicians of them all, will be quietly organizing support for his fellow Texan.

Pollution Problem No. 1—Georgia Is Rich Field for Conservationist

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Atlanta Journal of December 27, 1959:

POLLUTION PROBLEM NO. 1—GEORGIA IS RICH FIELD FOR CONSERVATIONIST

(By Luke Greene)

Many parts of the world, and especially the United States, are in a considerable state of ferment about a possible shortage of water at some time in the future.

This many seem incredible to those who think that water is the one commodity we'll have in plentiful supply for as long as man inhabits the earth.

Yet the experts who study such things tell us otherwise.

INCREASING POPULATION

Not only are populations increasing at unprecedented rates—"exploding" is the term now in fashion—but modern-day living requires such great quantities of water that the tap is in danger of running dry eventually.

There is even talk of taking the salt out of the sea water so as to make it available for populations, but experiments so far show that this is a costly way to get pure water.

It isn't preposterous at all to say that water can be destroyed. When you destroy the usefulness of anything, you have for all practical purposes destroyed the thing itself.

That brings us to the topic of pollution.

When pollution impairs the quality of water to the point that it's unfit for human consumption or use, we have in a sense destroyed that water.

Pollution is something that we have become altogether too careless about in this country.

The dissenter may argue that we have learned how to purify polluted waters, so why go pressing the panic button.

Well, nobody is suggesting that we panic at this point. But we'll have to be less reckless about what we pour into our streams if we're going to make them go on serving our needs, and especially is that true in Georgia where we have so many fine rivers.

The more polluted our waters become, say the experts, the more costly will be their treatment for the uses they must meet.

Polluting our rivers, lakes, and bays and then trying to purify that water to usable condition is throwing the operation into reverse.

What we want and need is prevention rather than cure. It is important that we attack the pollution problem at the point where the wastes are discharged rather than where the water is used.

MANY CITY DWELLERS

A great many city dwellers—Atlanta possibly is an exception—probably would be shocked if they knew how much of their water had already been flushed through someone else's bathroom.

For fear that such a statement may bring agony to Atlanta Waterworks Manager Paul Weir, who takes such fierce pride in this city's pure water, we hasten to concede that today's purification plants provide a liquid that is cleaner and safer than most raw, untreated water.

Even so, this doesn't remove the necessity for a greater public awareness of the dangers of unlimited pollution, and what it can mean to our future water supply.

Lafayette, La., Girl State Winner in Voice of Democracy Broadcast Scriptwriting Contest

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. WILLIS. Mr. Speaker, I am indeed pleased and proud that a young lady from my congressional district is the Louisiana State champion in the 1959–60 Voice of Democracy broadcast scriptwriting contest. She is Miss Carolyn Ory, of Lafayette, who is in Washington this week competing with the other State winners in the finals of the 13th annual contest.

Miss Ory, a student of Mount Carmel High School of Lafayette and daughter of Mr. and Mrs. Sidney C. Ory of that city, competed with high school students throughout Louisiana by writing and delivering orally a 5-minute script on the theme, "I Speak for Democracy." A panel of judges determined that this script was the best submitted in the statewide contest and it was selected for entry in the national finals.

Winners from each of the 50 States receive a 4-day, all-expense-paid trip to Washington to see their Government in action.

The Voice of Democracy contest, open to all high school students, is sponsored by the National Association of Broadcasters and the Electronic Industries Association in cooperation with the Veterans of Foreign Wars. It is endorsed by the U.S. Office of Education and approved by the National Association of Secondary-School Principals, a department of the National Education Association.

The contest is designed to stimulate American youth to think about the meaning of our form of government in their own lives and to communicate their ideas to others.

Activities of the State winners on their visit here began Sunday, the eve of George Washington's Birthday, and will be climaxed by the national awards luncheon Wednesday in the Presidential Ballroom of the Statler Hilton Hotel, at which time the national winner will receive a $1,500 scholarship to any accredited college. The national champion will be chosen from among four finalists who will be given gold recording of their scripts. A certificate of merit is presented to the winner in each school, community, county, and statewide contest, and other awards may be set up local committees for winners in each community and State.

Miss Ory was accompanied to Washington by her mother.

The essay which won Louisiana honors for Miss Ory follows:

(By Carolyn Ory)

The 15th day of December—in the year 1791—a memorable day indeed, memorable because it influenced the thinking of all mankind from one end of the world to the other. Memorable because it was on that day that the Declaration of Independence was signed.

On that day, so many years ago, the gardeners of America planted the seed of the fruit of democracy which flourishes today. This basic idea of independence and equality has resulted in great products—staples of the American way of life.

From this core, this seed of equality, the roads of liberty are extended as cogs in a wheel to expand into a circumference of heavy duty activities, which are constantly being reinforced and refurbished, never to break down and halt the wheel of progress.

If we analyze each part of our wheel we shall unravel the mystery of its strength. The hub is the idea which was conceived in theory, born in turmoil, nourished by the surge of independence given to the colonies by the Stuarts and the Tudors and finally planted by the Declaration of Independence, our Constitution, and the Bill of Rights.

The roads of liberty are unobstructed and give us the right to do as we please in the activities to which they lead so long as we please to do right. Freedom and independence, the result of industriously exercising liberty, are the jewels we know in our commerce, industry, agriculture, security, professions and recreations.

In contrast to other ways of life our American way is dynamic as it releases the individual personality from bondage and encourages self-expression. In a recent publication entitled "Democracy," Harry Emerson Fosdick writes, "Democracy is based upon the conviction that there are extraordinary possibilities to ordinary people."

It is individualistic and personal for it is left up to the choice of the individual if he is to be associated with the Democratic, Republican, Federalist or any independent political party, if he is to own his home or pay rent to his neighbor, if he is to patronize a Government-owned steel mill or one privately owned; he may choose the school for his children and the church of his choice, and, if his choice is none, then that is his privilege.

It is a free enterprise way of life. Everyone is free to invest or engage in any kind of business and take the chance of profit or loss. Joe Doe may be frivolous in his youth or save his earnings for old age.

It is a capitalistic way of life. Mr. American may be rich or be poor. He may earn private property and if his talents so allow control the use of several thousands of dollars. Begger, orphan, or son of a million-

aire—they may all someday sit in a leather chair in Rockefeller Center.

Our America is logical as it complements the natural tendencies of a human which demand liberty of action. His wisdom tells man that he can only have freedom by exercising liberty justly and his honesty makes him assume the responsibility of his independence by being useful to others.

And what does this democracy mean to me, a 17-year-old high school student? It means that I can grow up normally as my Creator intended, gradually learning responsibility and relinquishing my carefree ways.

It assures me that my physical health and growth will never be stunted by lack of food nor my spiritual life be retarded by lack of Godliness for Americans are a Christian people. I need never fear that my education will be put in second place to physical labor as a machine for the state and also I know that a college education is mine either through the financial help of my parents or my government.

I can see where my father's taxes go and where mine of later years will be spent. The faults and the successes of our government agencies are open to my eyes. I am already a living, working member taking an active part in my great country.

We, both adults and youth, covenant with each other that having before all the world taken up arms against aggressors to our security, we will not lay down our guard until this democracy is secure in the world we live in. For this democracy I pray, in this democracy I live and of this democracy I speak.

MATS Has Delivered in Crisis

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a resolution which was adopted by the board of directors, Belleville (Ill.) Chamber of Commerce, on February 17, 1960, calling upon Congress to reassess the value of the Military Air Transportation Service and to increase its effectiveness so that it will be ready in any future emergency:

RESOLUTION FAVORING MATS

We have read with great concern the recent articles which are aimed at relegating the Military Air Transport Service (MATS) to an ineffectual arm of the U.S. defense effort.

Furthermore, this effort seems to be coming, not as a savings to the American taxpayer, but as an increasingly heavier load which will fall far short of the defense effort which is required if we, as the United States of America, are to be fully prepared in case of enemy attack.

It is inconceivable that the Congress of these United States could allow the American taxpayer to pay additional costs for services now being rendered by—

1. Turning additional MATS services over to commercial airlines at scheduled tariffs rather than on the heretofore successful bid system.

2. Requiring MATS to fly empty planes in order to keep their teams in combat readiness.

3. Loaning of funds to commercial airlines in order that they may purchase modern cargo jet planes which will enable them to take over MATS services, and further demand a guarantee for the military business to support this increased capability, and, at the same time, allowing MATS cargo fleet to further deteriorate instead of modernizing it as an effective strategic airlift force.

Be it understood that we do not condone the use of the Military Air Transport Service for the unfair competition with the scheduled airlines, but we believe MATS has effectively taken care of this objection through the single-manager system by contracting for $230 million with the commercial airlift during fiscal year 1959, an amount which is steadily increasing each year.

We further realize the partnership which exists between MATS and the Civil Reserve Air Fleet (CRAF), but we certainly are not naive enough to believe that this reserve fleet would be able to go into action in a relatively short period of time, and, therefore, will be of little value, particularly in this day of ICBM's carrying atomic warheads which can drop upon us at any moment.

We, therefore, call upon the Congress of these United States to reassess the value of MATS to our overall defense effort in that it has been proven time and time again in past wars that supply lines are of the most vital importance if our country is to be successful if and when another war breaks out, whether it be limited or an all-out effort.

We further call your attention to the fact that MATS has proven itself in the Berlin airlift, the Lebanon and Formosa situations, and, therefore, most certainly deserves your support.

Rather than decrease the effectiveness of MATS, we call upon you to increase said effectiveness by supplying MATS with a modern cargo jet fleet in order that we may depend upon them at all times.

Adopted by the board of directors of the Belleville Chamber of Commerce at their regular meeting, Wednesday evening, February 17, 1960.

ROGERS D. JONES,
President.

Attest:

CLIFFORD M. PEAKE,
Secretary-Manager.

Recognition Due Thomas A. Edison

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. WILSON. Mr. Speaker, too often, the views of our young people are taken lightly and seldom recognized by those in authority.

I have received a letter from a young lady in my district who has given serious thought to the life of a man who contributed in no small way to the betterment of our way of life. Miss Mary Lou Denman is concerned about the recognition we have given to Thomas A. Edison.

Following is the copy of the letter from Mary Lou which I respectfully call to your attention for your appropriate consideration and action:

LA JOLLA, CALIF., *February 11, 1960.*

DEAR CONGRESSMAN: I am a schoolgirl ("A" student) and 12 years old. I have been making a study of the life of Edison. I have found, in every book about him, the fact that he was one of the greatest men who ever lived. Today is his birthday. Did we get a holiday? No. I think that this should not be. A study of Edison's life would prove that he was just as great, if not greater, than Lincoln whose birthday we get a holiday for tomorrow.

I am not just plugging for another holiday. Edison was a colossal, I repeat colossal, man. Please bring this up in front of those in authority. (Congress, President, department of education, etc.) If you do represent me I will do my best to persuade those old enough to vote to keep you in office. Thank you ever so much for your time.

I remain,

MARY LOU DENMAN.

(I am a seventh grader at La Jolla Junior-Senior High School.)

P.S.—I also think we should have postage stamps memorating.

Are Depressed Areas Merely a Topic for Discussion and Not a Problem To Be Solved?

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. VAN ZANDT. Mr. Speaker, the following editorial from the February 12, 1960, issue of the Altoona (Pa.) Mirror reveals that aid to depressed areas has gone to metropolitan areas and the so-called stricken areas in rural America have been neglected.

Here we are in the middle of February and the area redevelopment bill is still bottled up in the House Rules Committee. As stated in the following editorial, it appears that Government wants distressed areas just as a topic to discuss, without its ever being solved. The editorial follows:

LITTLE AID GIVEN

Much has been said, but little has been accomplished over many years in districts that have been given the tag of "depressed areas" by the Federal Government and one wonders if the Congress and its associate commissions and committees aren't just using the depression fiction talk to spend more money for other projects, notably national defense.

In the last session of Congress some distressed area bills were proposed, but nothing came from the proposals.

President Eisenhower has pointed out that last year 42.5 percent of the total procurement awards for the Department of Defense went to labor surplus areas. Big cities got most of this money and the so-called stricken areas have been neglected.

In 1959, the Government reported 32 major labor surplus areas and 112 smaller areas. The smaller areas got very little relief, for metropolitan areas, all easy to get into, benefited.

It has been frequently pointed out, with no avail, that industry will not locate in areas which are difficult to reach or get out of. One of the Federal bills did mention paving access roads to plants, but that's only one minor step. Access roads have to lead somewhere.

The most important thing to many depressed rural areas is transportation facilities. For light industry, especially, good roads are essential. Yet the highway pro-

grams, both National and State, always get bogged down in politics and in gas-tax revenues. None of it reaches the small communities. The voters are in the big city areas.

It is regretted, but Congress hasn't accomplished anything worthwhile in helping rural distressed areas, or even helping them to help themselves. Everybody talks about it and nothing happens. It appears that Government wants distressed areas just as a topic to discuss, without its ever being solved.

Admiral Nimitz: Sense on Defense

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. HOSMER. Mr. Speaker, Fleet Adm. Chester W. Nimitz at age 75 spoke out some good sense on U.S. defense. It was reported by Washington Star Staff Writer L. Edgar Prina in last Sunday's newspaper. There is a way that considerably more light and considerably less obfuscation regarding the state of the Nation's defense could prevail. That would be for most of those now orating on the subject from shaky presidential platforms to follow the Nimitz example and withhold comment until their 75th birthdays. Mr. Prina's article reads as follows:

NIMITZ ON STATE OF DEFENSE

(By L. Edgar Prina)

Chester W. Nimitz, the last of the Navy's fleet admirals, has taken issue with opponents of the Joint Chiefs of Staff system and critics of current defense policies.

The five-star commander of the mightiest fleet in history will be 75 on Wednesday. But he has lost little of his vigor and, in answering a series of questions from a reporter at his home in Berkeley, Calif., the snowy-haired admiral did not duck controversy.

Present defense organization is working well and should be maintained, he said, adding: "It is essentially the one with which we won World War II."

He had one suggestion, however: The authority and responsibility of each service Secretary should be "upgraded and preserved."

While Admiral Nimitz agreed that the Joint Chiefs had not, up to now, proved effective, he did not blame them. In an interview with the Associated Press, he gave this as the reason:

"Various Secretaries of Defense have not functioned in the manner contemplated by the National Security Act."

This was a polite way of saying that he thought there has been a lack of decision-making by the Secretaries. He explained:

"The principal criticism of the JCS has been that service jealousies prevent the Joint Chiefs from making a decision. The Security Act set up a Secretary of Defense who would be the source of decisions when the Joint Chiefs could not agree.

"Their (the JCS) not being able to agree is not an unhealthy state of affairs, because it employs the various points of view from responsible people. The National Security Act foresaw these situations and set up the Secretary of Defense to make decisions."

CONFIDENCE IN GATES

The admiral said that he expected things to become better under Secretary Thomas S. Gates, Jr.

"Mr. Gates has proposed a new scheme for carrying out his responsibilities which I thing is very sound and workable. When important matters come up, the Secretary will meet with the Joint Chiefs and decide small points as they arise. This way JCS members will not reach a position from which they cannot retreat."

Asked about the recommendation by Gen. Maxwell D. Taylor, who retired last June after 4 years as Army Chief of Staff, that the JCS be jettisoned in favor of a single military chief, Admiral Nimitz declared:

"I don't agree with Taylor on scrapping the JCS, because the resulting organization would be so large it would be impossible to find a man properly qualified to handle it."

The man whose Pacific command in World War II covered 65 million square miles, had another reason for disagreeing with General Taylor.

PRESENT POLICIES OK

"You would have the problem of the man on horseback," he said, "an all-powerful fellow with a budget of more than $40 billion a year. I don't say it would happen here, but it could. A man on horseback can always become a dictator."

The admiral apparently believes that his old five-star colleague, General Eisenhower, is doing all right as far as our military posture is concerned. He told the Star:

"Defense is a matter of confronting the possible aggressor with the power to defeat him, no matter how he chooses to strike. It seems to me that our present national defense policies are designed to achieve this end.

"A military leader always feels he can use much more than he has in men and equipment in order to provide a margin of safety. However, just how much he gets is a matter for the heads of Government who must take into account the economic, diplomatic, and political conditions of the Nation and the world."

As many other military and nonmilitary leaders do, the admiral sees limited war more likely than all-out nuclear war. But, in either case, he is convinced the Navy will have the vital task of projecting our power overseas.

He did not downgrade the other services. On the contrary, he pointed to their importance when he said:

"It is clear that the Navy and the Air Force would play the leading roles in the initial stages of any future war.

"However, the reduction and occupation of certain strategic areas would require the utmost from our Army and Marine Corps. A foot soldier is just as important today as he was in World War II."

Admiral Nimitz cautioned that no potentiality of any of the services should be neglected.

"Each service must be assigned broad functions compatible with its capabilities and limitations and each should develop the weapons systems it needs to fulfill these functions," he said.

This, he believes, could not be done under any merger of the Armed Forces, an idea that still is being pushed despite repeated repudiations by Congress.

On speaking of the idea of a single service, the admiral once told a news conference:

"I see no tendency to merge all newspapers of this country under one newspaper. It has been done in some countries, and then you could have a common editorial policy and a common supply arrangement, and you could run your paper cheaper. Now just think that over."

Although he doesn't list it as such, sea power and its importance remains a Nimitz hobby.

He likes to recall that a naval force—of French ships—forced the surrender of Cornwallis at Yorktown. And he points out, too, that the Union Navy, in operating against a foe without a fleet, helped shorten the Civil War by blockading Confederate ports, bombarding forts, and controlling the Mississippi.

DIPLOMA AFTER 44 YEARS

The Nimitz career began when he left high school, before graduation, to enter the Naval Academy in 1901. Forty-four years and two world wars later he returned to his home town of Fredericksburg, Tex., and finally got his diploma—in his fleet admiral's uniform.

It is said that he first had his eye on West Point, even though his grandfather had been a sea captain. And after his first saltwater experience young Chet Nimitz must have wondered about entering the naval service. While in an Annapolis prep school he once sailed across the bay to Kent Island.

"I got frightfully seasick," he wrote later, "and must confess to some chilling of enthusiasm for the sea."

As an ensign Admiral Nimitz had an experience that probably made the odds prohibitive against his ever becoming Chief of Naval Operations.

"In 1907 I was in command of a destroyer, the U.S.S. *Decatur*. On a dark night I ran it onto a mud bank in Manila Bay. It was dark. I didn't know we were in mud. Anyway, there was a court-martial and the committee decided on a reprimand."

IMPORTANCE OF MORALE

This experience may very well have helped shape his attitude toward subordinates. Although firm, he has always been warmhearted. As commander in chief, Pacific Fleet, a job he got 2 weeks after Pearl Harbor when President Roosevelt vaulted him over 28 senior admirals, he said in an order:

"You can't make a soundman listen or a lookout look or a radarman radiate information by getting tough or putting him on report. You've got to instill morale—an eager desire to do the job not well but perfectly."

As he nears 75 the admiral continues his devotion to fresh air and the vigorous life. He likes to hike over the hills around Berkeley and watch the ships come in and out of San Francisco Bay, from where he first sailed in 1905.

He attends concerts given by the San Francisco Symphony Orchestra, for which Mrs. Nimitz helps raise funds. (She did the same for the National Symphony when they lived here.)

"All members of my family are musical but me, and I am a good listener," the admiral said. "I have to sit up front in the third row because my hearing is not so good any more."

For Better Service

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I wish to include, in connection with the post office appropriation bill which is being considered in the House today, the following

editorial which appeared in the Buffalo Evening News Buffalo, N.Y., on February 22, 1960:

FOR BETTER SERVICE

Representative PILLION, of Hamburg, who has worked for years to obtain a new post office for Buffalo, still is reasonably optimistic that the project will get under way this year as scheduled. This is despite a heavy cut voted by the House Appropriations Committee in requested funds for modern postal equipment in Buffalo and other cities.

Concern has arisen because the Post Office Department has dropped the Buffalo improvement to 18th place in a priority list of 20 projects. Representative DULSKI, of Buffalo, has charged that this was an attempt by the department to pressure the House committee and particularly Representative PILLION, a critic of some aspects of the modernization program, against reducing its fund requests.

However that may be, Buffalo has ample reason to be impatient after 4 years of frustrating delay and false starts on its proposed new post office. The need for this improvement is clear and urgent. Present mail handling facilities in the old post office building, which was opened 59 years ago in the Pan American year, are woefully cramped and antiquated.

In working for this necessary $15 million improvement the Buffalo Congressmen should have sustained community backing. Its realization holds the key to more efficient mail service throughout the rapidly expanding Buffalo area. Any attempt to browbeat Congressman PILLION should be resisted by fellow members of the Appropriations Committee as a matter of self-defense and for reasons of public policy.

Free Trade and Foreign Aid Are Ruining America

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. BARING. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to speak in behalf of H.R. 10181, introduced by the Honorable NOAH MASON, of Illinois. I can well understand and appreciate how the Congressman feels when he receives mail from a constituent telling him how he has been injured by the importation of items produced with cheap labor in certain foreign countries. I know that Congressman MASON introduced H.R. 10181 in an effort to do something for his constituents.

I might say that we who support his bill will also be helping our constituents. Scores of residents of my State have been and still are being hurt by the bureaucratic attitudes of the State Department as well as other Government agencies. There are companies in my State which have substantial investments in properties and facilities that were capable of producing lead, zinc, magnesite, tungsten, copper, mercury, and silicon, but they have been forced to cut back or shut down their operations entirely because of the importation of these same minerals from foreign countries using cheap labor and submitting to substandard operating conditions. Labor in this country is protected by law, and sweatshop conditions have long since been eradicated.

Dozens of cattlemen in Nevada are now in competition with foreign beef producers. Again we are in competition with cheap labor. I have been advised that last year 58,300,000 pounds of boneless beef were imported into the United States.

I could go on and on, but in short every facet of our economy is affected by the importation of foreign production. I think it is about time we gave consideration to the American producer and our taxpaying citizens instead of sitting complacently by as we watch our country ruled and ruined by "one worlders" who sit in Geneva as a GATT gang, pointing a "gat" at the basic economy of this country.

I suggest that every Member join me in supporting H.R. 10181.

Michael Aldrich Speaks for Democracy

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. McGOVERN. Mr. Speaker, Michael Aldrich, a senior student at Rapid City, S. Dak., High School, has authored a most challenging oration setting forth his views on American democracy. He is the South Dakota winner of the "Voice of Democracy" contest sponsored annually by the Nation's broadcasters and affiliated industries.

In spite of current problems of delinquency, I believe that America's youth are the finest this Nation has produced at anytime in its history. A reading of Michael Aldrich's essay has given me additional reassurance of my faith in American youth.

I include at this point in the CONGRESSIONAL RECORD the contest selection entered by this fine South Dakota student:

I SPEAK FOR DEMOCRACY

(By Michael Aldrich)

Last summer I made a trip to the east coast.

While traveling I saw Independence Hall, Congress, and the United Nations—places where men have gathered to build democracy.

I saw Valley Forge, Gettysburg, and Arlington—where the graves of American men reveal the struggle for democracy.

I saw the Washington, Lincoln, and Jefferson Memorials, symbolic of the leaders who have guided our Nation in democracy.

But besides buildings and monuments, I saw the people of democracy: A Mexican boy and a Chinese girl, standing in the lobby of the Chicago YMCA, discussing of all things, race relations; a tall, Irish guide at the Smithsonian Institute helping a young Negro boy find his way to the exhibitions; and a group of 120 young people in New York City, studying for a week at the United Nations, learning about the world in which democracy must thrive.

In reality, democracy is people working for individual freedom in a representative government. On behalf of these people, I speak for the principles of democracy and their advancement throughout the world.

And what are these principles? The principles are freedom—and they are best illustrated by individuals: Freedom of decision, as the voter marks his ballot and as the Senator battles for his legislation; freedom of protection, as the policeman directs traffic and the judge gives interpretation of law; freedom of expression, as the radio commentator analyzes all the news, and the clergyman tells his religion to anyone who will listen.

These are the principles, the concepts of democracy. The problem is how to make those principles known throughout the world.

To solve that problem, we must first understand the global situation. This situation was aptly described by a member of the American mission to the United Nations, who said:

"Take any group of people. Divide that group down the middle into two equal camps. To one side distribute rifles, and to the other give hand grenades. Feel the tension build up, increase? And to make matters worse, very slowly start to dim the lights—don't turn them out all the way, but leave just enough so that one side can barely see what the other is doing. In that tense situation, a shot or a shout can cause chaos."

And that is the situation that democracy faces in the world today. The question is, How shall our country compete in that tense, explosive atmosphere? Here's how:

Place between the two groups a small but effective organization: A peaceful body, called the United Nations. It is through that international assembly that we logically should spread democracy to the peoples of the world.

Of all the methods to peace, the U.N. is certainly the least expensive. Did you know that the total cost of the United Nations, in all the years it has functioned, has equaled the cost of about 2 hours of World War II?

Let us use the principles of democracy in the United Nations—and thereby show each nation the standards of American life. By doing so we accomplish our purpose with peaceful means. We can fulfill our goals at little expense with great return.

Yes, throughout America, one sees the working principles and historic monuments of democracy. I can look out my own back door and see Mount Rushmore, symbolizing more of our country's leaders. And I can look out the front door onto an American street, and everywhere see the principles of democracy in action.

I speak for these democratic principles, and for their perpetration throughout all countries. I stand with democracy, as it boldly faces the world.

Some Still Remember

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial about the sinking of the U.S.S. *Maine* on February 16, 1898, which appeared in the

National Tribune-The Stars and Stripes on February 18, 1960:

SOME STILL REMEMBER

It is a long time ago since the people of our country awakened on the morning of February 16, 1898, to learn of the destruction of the battleship *Maine* in Havana Harbor on the previous night. But there are some now alive who still remember.

We remember it vividly, perhaps because it was the most important thing that had ever happened in our young life—counting even death in the family which we could not understand at that early age.

Throughout the Nation in the days that followed the sinking of our proud battleship in Havana Harbor on the night of February 15, 1898, there arose the cry "Remember the *Maine*." The old men, survivors of the Civil War, shouted it. Perhaps their voices were not as loud as they might have been nearly 40 years earlier, but the spirit of patriotism was still strong within them.

The young men cried it out. Young men filled with the vigor of youth and the will to avenge the willful destruction of a vessel of the U.S. Navy which, only a few weeks earlier, had been sent to Cuba on a mission of peace.

The children joined in the cry and sang it out at the top of their shrill voices as they saw the young men march off to war when President McKinley called for volunteers in the war with Spain. There was no hesitation when the President's call was issued. Nearly 200,000 responded immediately—volunteers all—for in those days the spirit of patriotism ran high and the youth of our country felt no other urge than to fight for that country—to die even, if need be.

Yes, there are still some who remember that eventful day. There are survivors of those who fought in the years of 1898–1902—widows and children who still remember the stories they had been told of the tropical hardships in Cuba, Puerto Rico, and the Philippines—the embalmed beef in southern camps and the lack of medical care and supplies in every campaign.

There are still others who remember. They are the men who volunteered for service against Spain and again in the Boxer Rebellion and the Philippine Insurrection. Yes, these still remember although there are few of them left at this time, some 40,000, at the most.

But though their steps may falter and their eyes are dim with the advancing years, their memories are still bright as they recall the days of their youth.

We are fortunate here to come in contact with such men almost daily and it is a pleasure to see them and hear them. The spirit of the volunteer which made them fight for their country in the long ago is still strong.

Some of them are erect and some of them bent but they still remember the sinking of the *Maine* and the service they rendered for 4 long years.

True, like all ex-service men, while they remember the hardships, their greatest memory is of the pleasant days and it is of those days they talk about now. They apparently get more fun now about recalling the crazy antics of this soldier or that recruit or some ridiculous incident of service and the bad times are forgotten when they get together.

But there is one time in the year when these veterans do recall with proper solemnity the sinking of the U.S.S. *Maine* and that time comes on or about the anniversary of the battleship's destruction. At such a time those who are still alive, members of the United Spanish War Veterans and the older members of the Veterans of Foreign Wars of the United States—a veteran group formed from service from 1898–1902–meet together and reverently pay tribute to those 266 officers and men whose lives were lost when the *Maine* went down in 1898.

Yes, these men still remember. And why not? It might be well said that their young lives actually began with the sinking of the *Maine* and that all which followed after developed from the service they rendered their country.

While it may be true that if you were to ask the young high school or even the college student why February 15 should be a day set apart they will not be able to give you the answer. Our world has unfortunately grown altogether too far away from some of the finer things of life, such as love of country, such as the patriotism which inspired these volunteers of 1898 and the immediate cause of the War with Spain has never been told to them.

Therefore it is well that at this time those who still remember and are still alive to prove that rememberance and show by their devotion to the cause of freedom they espoused more than 62 years ago, should gather together and, in their quite way, demonstrate to our younger generation that love of country is still paramount in the heart of all true Americans.

Founders of a Great Country

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Founders of a Great Country," which appeared in the February 19, 1960, issue of the Breckinridge County Herald-News of Hardinsburg, Ky.

The editorial is as follows:

FOUNDERS OF A GREAT COUNTRY

The man who was most influential in the successful founding of the United States was, of course, George Washington, whose birthday anniversary is observed this month. The Nation's first President, and the General who won a war against Great Britain to make the colonies independent of that nation, is rightly remembered each February 22 and honored as the Father of His Country.

However, the proper observance of Washington's birthday anniversary did not come about overnight after his death. The Colonies and the States were slow to recognize the magnitude of the accomplishment and contribution of General Washington. Not only had he won independence for the Colonies, he had served as the first President, and he had set the precedent for a two-term limit for Chief Executive. Moreover, he had established the foundation principles of American governments—one of them being staying out of the affairs of other nations. That policy was the wisest course for the young Nation at that time, and this doctrine allowed the country to grow and prosper during its early years.

After he died, on December 14, 1799, the Congress—then meeting in Philadelphia—proposed that February 22, 1800 be observed throughout the country with exercises in honor of the first President of the country.

Thereafter observances of Washington's birthday spread rapidly, and today, observance of the anniversary of the birth of our first President and military hero, is general throughout the Nation.

Washington's high standards of conduct, morality, ethics, and statesmanship were, and are today, an example for Americans in public office. Because Washington had all these qualities, we are enjoying the fruits of liberty and strength.

Distribution of Surplus Food

EXTENSION OF REMARKS

OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. BAILEY. Mr. Speaker, the West Virginia Legislature has suggested the enactment of legislation which, in my opinion, will be an effective means of meeting Secretary of Agriculture Benson's challenging disposition of resistance to acts of Congress. In this regard, I wish to direct to the attention of our colleagues the resolution adopted by the West Virginia Legislature on January 28, 1960, requesting the Congress to enact legislation which would transfer the distribution of surplus foods to the Department of Health, Education, and Welfare.

Mr. Speaker, Secretary Benson has been telling the American public for the past 7 years that Congress has never given him the kind of a farm program he could properly administer. So, last year the Congress gave the Secretary the opportunity to employ his own dexterity in the matter of the distribution of surplus food to the needy in our own country. Instead of directing the Secretary to take action, the Congress gave to the Secretary the authority to institute a food stamp plan for the distribution of surplus food to the needy. What we did was to walk right into Mr. Benson's stockade. The Secretary, apparently, is of the opinion that the grant of authority justifies him in not acting at all. Mr. Speaker, this is just one more instance of the Congress surrendering its legislative prerogative to the executive branch. I commend the West Virginia Legislature for its resolution. The legislature realizes it would be futile to ask Secretary Benson to take action.

The resolution follows:

HOUSE CONCURRENT RESOLUTION 16—WEST VIRGINIA LEGISLATURE, HOUSE OF DELEGATES

Requesting the Congress of the United States to enact legislation making the Department of Health, Education, and Welfare responsible for the distribution of surplus food to the needy.

Whereas the purchase of surplus food by the U.S. Department of Agriculture is done primarily as a farm commodity price support program; and

Whereas the distribution of surplus food to the needy does not seem a logical duty of the U.S. Department of Agriculture whose primary purpose is the control and encouragement of the producing and marketing of agricultural products; and

Whereas since the U.S. Department of Health, Education, and Welfare is directly

concerned with the health and welfare of all our citizens it would seem to be more a duty of that department to distribute surplus food to the needy and to see that an adequate diet is provided these unfortunate people; and

Whereas a part of the cost of distributing these foodstuffs is included in the Department of Agriculture budget when in reality it is a cost that has nothing to do with agriculture but of welfare: Therefore be it

Resolved by the house of delegates (the senate concurring therein), That the Congress of the United States be requested to enact legislation whereby after surplus foods are purchased by the U.S. Department of Agriculture and they become available for distribution to those in need that they be transferred to the Department of Health, Education and Welfare for such distribution, and that the costs of distribution from that time on be assumed by said Department of Health, Education and Welfare; and be it further

Resolved, That if any program is instituted for the purchase of other food to supplement inadequate diets, that the same be placed in the Department of Health, Education, and Welfare; and be it further

Resolved, That the clerk of the house of delegates transmit a copy of this resolution to the Members of the Congress from the State of West Virginia, to the Secretary of Agriculture and to the Secretary of Health, Education, and Welfare.

I Am Your Bill of Rights

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. SCHWENGEL. Mr. Speaker, at the 34th annual Lincoln Day dinner of the Tri-City Patriotic Association in Davenport, Iowa, where I was privileged to be the main speaker on "Lincoln and the Civil War," I was thrilled by the introduction I received by Mr. Clifford Dawson, the master of ceremonies.

In his introduction, Mr. Dawson included a statement on "I Am Your Bill of Rights." This first person singular statement carries a ringing reminder for all of us and I ask consent to have it appear in the Appendix of the RECORD:

I AM YOUR BILL OF RIGHTS

I am 168 years old, having been born on December 15, 1791. I am the first of 10 amendments to the Constitution. Until I was written into the Constitution that document was like a body without a soul.

I am your Bill of Rights.

Don't take me for granted. Like all mortal creations, I can be killed.

The giant shadow of totalitarian state slavery moves over the world. Wherever that shadow falls, I am obliterated. That shadow has fallen over the United States.

Three men—Thomas Jefferson, James Madison, and George Mason—fathered me. As men brought me to life, I can be slain by men—and will be slain unless you and all patriotic American citizens organize to defend me.

I am freedom of religion; freedom of speech; freedom of press; freedom of assembly. I am the privacy and sanctity of your home. I am your guarantee of trial by jury, as I am the policeman who guards your property rights.

Cruel and unusual punishment and excessive fines and bail cannot be visited upon you so long as I am alive: I order that all rights not specifically mentioned in the Constitution shall be retained by you the people. I am rights of the States against engulfing centralized power.

I am the Bill of Rights—your signed lease to spiritual, mental, and physical freedom. I ask you to meditate on all 10 clauses. Memorize them. Engrave them on your hearts.

My existence depends on your vigilance—on how vigilantly you watch your rulers. My eternal enemies, known as dictators, are abroad in the world, and here in the United States.

Personal unlimited power has destroyed the liberties of many peoples in ancient and modern times. It can happen to you, and, maybe subtly and unknowingly to you, it is happening.

Put every law that is proposed in Washington and elsewhere into the crucible of my 10 commandments. Your question must always be: Not what does a law give me, but what does it take away from me?

I am the Bill of Rights.

When I am violated, a part of you dies.

I am 168 years old. Will I reach my 200th year? That depends upon you and your children.

Khrushchev Fears Our Navy

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego Union, February 9, 1960:

KEY TO SURVIVAL: KHRUSHCHEV FEARS OUR NAVY

In a speech before the San Diego Council of the Navy League Vice Adm. Ruthven E. Libby, First Fleet commander, pointed out that the Soviet Union regards the U.S. Navy as a prime obstacle to Communist world domination. He attributed the current Soviet campaign to downgrade naval forces as a move calculated to weaken Allied seapower.

While Soviet propaganda minimizes the need for naval and conventional forces, Admiral Libby reminded, the Reds continue to strengthen their own navy. They somehow hope to keep us so bemused with the grim prospects of general war as to cause our limited war preparations to receive inefficient treatment.

Like Adm. Arleigh A. Burke, Chief of Naval Operations, Admiral Libby regards complete reoccupation with missile and nuclear power as a fatal trap. But that is what the Soviets want us to do. They want us to concentrate on massive retaliation to the exclusion of limited warfare capabilities.

Admiral Libby gave an idea of what it would be like to be a second-class naval power. There would be isolation from our allies and from our continental European bases. Once we were cut off, the Reds could nibble the world to death with impunity.

This has not happened because the doctrine of the Navy as the first line of defense has been documented as historical truth. The Nation on occasion after occasion has seen that a powerful Navy and Marine Corps with deep and broad amphibious capability has permitted quick application of military force wherever needed. A strong Navy has enabled this country to exploit the flexibility, the mobility, and the operational economy in using the sea as a base. It is uniquely designed for limited war situations. And with it the United States has reaped the rewards of a system which relies upon trained landing forces—the U.S. Marine Corps—and fast-moving surface and undersea naval craft.

It may be seen that the Russians want us to forsake the maritime formula for the so-called fixed base or continental formula. If they can remove the bridge—the Navy—between our fixed bases, they can move as they will it.

Lebanon, Quemoy, Greece, and other troubled areas have demonstrated the overriding advantages of the maritime formula. With a balance of forces concept operating with a mobile Navy the United States has been able to put its power where it is needed, when it is needed. And it has been able to move that power around at will and without restrictions.

A downgraded Navy would weaken us so that the Reds would win limited wars. So the Reds are calling us down that path. We will not go.

The key to survival in the nuclear age is mobility. As long as we recognize that truth and keep it before us, we will have a strong Navy. For the Navy is synonymous with mobility—and security.

Don't Take Water for Granted—It's Valuable

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permisison granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Atlanta Journal of December 28, 1959:

POLLUTION PROBLEM NO. 2: DON'T TAKE WATER FOR GRANTED—IT'S VALUABLE

(By Luke Greene)

The industrial revolution that has swept through Georgia in recent years has brought great changes in the economic, social, and political life of the State—a development that doesn't come without certain strings attached in the form of greater responsibilities on us all.

No longer is the State geared to a strictly agrarian economy.

LUCRATIVE JOBS

Greater numbers of people are moving from the country to the city, seeking the lucrative jobs that so many manufacturing plants and industrial newcomers are dangling before them.

Even those who prefer the greater living freedoms of rural areas frequently find it necessary to supplement their income with a job in the city. This leads to daily commuting between home and job.

How did all this change come about? Why are so many industries finding it feasible to locate in our midst?

There are many reasons of course—not the least of which is a plentiful supply of water.

Most industries nowadays are thirsty. They gulp water by the millions of gallons. And all the additional people that are concentrated in any one area because of an

industry consume water in increasing quantities.

Our water needs are a far cry from the day when thirst could be quenched with a trip to the nearest well.

Water in many forms—flowing in streams, dammed up in lakes, confined in reservoirs, or circulating through mains—has become an important adjunct to business.

Before they locate in a specific spot, a great many businesses inquire into the laws and policies governing pollution in that locality.

And it's well that they do. For adequate pollution control is one of the best assurances that their water supply will not be curtailed in the future.

Another aspect of Georgia's future as an industrial State is the increased interest some of our leaders are showing in the erection of dams on major rivers.

Some water experts argue that a dam isn't the industrial attraction it's sometimes made to appear. They contend that building so many dams and interrupting the free flow of streams is not helping the pollution problem either, because dams destroy some of the natural means of purification.

Yet others look upon dams as offering even greater opportunities for pollution control because water can be released during low-water seasons and carry away pollution-causing wastes.

This was recently advanced as one of the reasons for seeking development of the great Altamaha River Basin in south Georgia.

ELECTRICAL ENERGY

Dams also make possible an increased supply of electrical energy—which is certainly needed by industry—and open the way for more river navigation. Their recreational and flood control advantages are well known.

So it looks as if the positive outweighs the negative when it comes to building dams.

The point being made here is that water, which we so often take for granted, has become a valuable commodity from many standpoints, and it behooves us to have such policies and laws as will contribute to its conservation.

Battle of Antietam

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. LEVERING. Mr. Speaker, Civil War historians tell us that the battle which took place at Sharpsburg, Md., on September 17, 1862, frequently referred to as Antietam, was the climax of the first of two attempts on the part of the Confederacy to prosecute the war into northern territory. General Lee with some 41,000 Confederate troops was opposed by a force of some 87,000 Union troops under the command of Gen. George McClellan. It is said that if the South had won a decisive victory it might have foreshadowed the final independence of the Confederacy. It is believed that the last chance of foreign intervention vanished when Lee turned back into Virginia.

It is reported that there were more men killed and wounded in the Battle of Antietam than on any other single day of battle in the Civil War; 12,410 men were killed and wounded on the Union side and the Confederate losses in killed and wounded were 10,700.

The Antietam National Battlefield site was established by an act of Congress in 1890. The National Cemetery at Antietam is the burial place of Union dead largely from the battles of Antietam and South Mountain.

In the face of growing commercial and residential developments over the past few years tending to threaten the integrity of the site, the House early this year passed H.R. 1805, an act to provide the protection and preservation of the Antietam Battlefield.

Mr. Speaker, under leave to extend my remarks in the RECORD I include a letter from Attorney Herschel G. Holland, one of my distinguished constituents which contributes an interesting sidelight on the Battle of Antietam and the importance of preserving this important national site:

MANSFIELD, OHIO, *February 15, 1960.*
Hon. ROBERT W. LEVERING,
Member of Congress,
Old House Office Building,
Washington, D.C.

DEAR BOB: With reference to the battlefield at Sharpsburg, Md., or Antietam, as it is usually called, I think few people realize the significance of what transpired here.

Up to this time the Union forces had been defeated at the First Battle of Bull Run, the Peninsular Campaign had been a fiasco, and then came the Second Battle of Bull Run, in which we suffered another serious and embarrassing defeat. In fact we had not won any major engagement since the opening of hostilities and the troops in the valley of the Shenandoah had their tongues hanging out running up and down the valley either trying to capture Jackson or getting the hell out of there when he turned on them. Morale in the North was at its lowest ebb. The conservative element did not feel that the preservation of the Union was of sufficient importance to warrant the bloodshed and treasure—particularly treasure that was being spent. The radical element was not at all keen about preserving the Union unless slavery could be abolished. As a matter of fact, the radical element had themselves wanted to abolish the Union, and denounced the Constitution as a compact with the devil because it countenanced slavery.

At the time the war began the South pinned its hopes largely on the supposition that when the supply of cotton was cut off from the English mills that Britain would intervene and assure the independence of the South; as far as the British business and financial interests were concerned they had done everything within their power to bring about this result.

Just prior to the battle of the Antietam, the Prime Minister of Britain had consulted with his Foreign Minister, who advised that Britain should attempt to affect a combination of European powers to work in consort to bring about the end of the war and if the other powers would not go along, he had urged that Britain go it alone.

This, of course, would have meant the recognition of the southern Confederacy and the division of the Union; it probably would have meant southern supremacy on the North American Continent eventually. The military had about given up hope of winning. General Sedgewick had written that there was no question but that the Union would be divided. The only question was where the division would take place.

Lincoln realized that the preservation of the Union was not sufficient to inspire the people to carry on the war. He wanted to inject the issue of slavery. He hoped to do this by an Emancipation Proclamation. Seward warned against this, saying that it would be taken as evidence of our weakness if we issued such a proclamation without any possibility of being able to enforce it. He insisted that unless we waited until after we had achieved a victory of some sort, the issuance of such a proclamation would be ridiculous. Lincoln had the proclamation prepared and it needed a victory to enable him to issue it.

England was waiting to see what happened to Lee's first invasion of the North before taking action to end hostilities. Thus not only the future of the country, but the future of the world depended upon this battle. Had Lee been victorious there would have been no Emancipation Proclamation; England would probably have intervened, the Union would have been dissolved, and America would probably have not have become a world power.

Projecting this into the future, we can see what might have happened in World War I if the result had been different; might have precluded World War II and the emergence of the Russian states as we now know it; Lincoln could not have issued his Emancipation Proclamation; as a matter of fact, had the battle gone adversely or had it not been fought, the probabilities are that Lincoln would not have survived his first term, and instead of being our national hero, would have been known as the man who was unable to prevent the dissolution of the Union. If he escaped the calumny of history, he would probably been ranked with such unknowns as Tyler, Pierce and others of similar stature.

When we have billions to waste in trying to perfect more efficient ways to commit suicide, it seems a crying shame that we cannot spare paltry thousands to preserve these hallowed spots, such as Antietam, Gettysburg and others from which spring our national heritage.

Very truly,

HERSCHEL G. HOLLAND.

Senior at Mondovi Completing Schooling in Spite of Handicap

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, a magnificent triumph over handicap was recorded in the February 4 issue of the Eau Claire Leader, of Eau Claire, Wis. The story concerns Arlen Segerstrom, the son of my very good friends, Mr. and Mrs. Rangner Segerstrom, who is completing his high school studies despite the fact that he is confined to a wheelchair because of cerebral palsy.

Arlen's achievement is shared by his parents and teachers, all of whom have worked hard to help Arlen help himself. Under leave to extend my remarks, I would like to include his story in the RECORD.

SENIOR AT MONDOVI COMPLETING SCHOOLING IN SPITE OF HANDICAP

MONDOVI.—Arlen Segerstrom, 21, will chalk up a new victory over handicap here this

spring when he is awarded his Mondovi High School diploma with the class of 1960.

Now in the homestretch of his studies, he's as wrapped up in class activities as any other senior with class pictures to exchange, a class ring on his left hand, and excited talk about the graduation to come.

For his parents, Mr. and Mrs. Rangner Segerstrom, Route 5, and his teachers, the ceremony will have a special significance, too. The youngest of six children, Arlen was born with cerebral palsy, his mind awake and alert to all that went on around him but his body almost completely unresponsive to control.

Today he pilots an electric wheelchair around the house and yard of the Segerstrom farm southeast of here. He reads books and magazines, improves his speech with a tape recorder, sells cards and knickknacks, and practices typing on an electric typewriter.

Segerstrom has made considerable progress in controlling his arms and hands but they still don't respond well enough to type. He began by hammering the keys with a pencil he held in his teeth. That was slow so he started using his tongue and in a remarkable show of determination has reached the point where he turns out copy that compares very favorably with that of his classmates.

Mrs. Segerstrom notes that teachers have contributed heavily to her son's progress. One of them, Mrs. Ella Olufson, was teaching at Pace School nearby when Arlen reached school age.

"Ella kept wanting me to bring him down," Mrs. Segerstrom recalls. "And finally we did." He attended the rural school with the teachers doing their best to help him learn and his mother and father driving over from the farm several times a day to bring him back and forth and to feed him his meals. Mrs. John Alme and Mrs. Lee Harvey also come in for praise for their assistance. They taught rural school classes he attended.

When it appeared that a high school education might be possible through "homebound" instruction, Superintendent of Schools William Hehli assisted the Segerstroms in making application to the State Department of Public Instruction.

Upon approval of the course of study, high school teacher Don Miles was assigned to instruct Arlen at the Segerstrom home. Four years of study after regular school hours two or three times a week and occasional evening trips followed. Superintendent Hehli points out that Miles became so interested in Segerstrom's progress that he put in teaching time beyond what the program provides.

During his high school years Segerstrom improved his speech greatly, Miles points out, through use of tape recordings of his voice which he played back so he could listen to himself.

His grades are average except for social problems in which he has an A so far this year. The course is one of his favorites. He also enjoys mathematics. "I really got a lot out of it," he says of his schooling.

Miles finds the friendly, cheerful Segerstrom an eager pupil and has helped open several avenues of self-improvement for him. "When he runs across something he doesn't understand he'll call up and ask me about it," Miles explains.

While his high school studies have been pursued in the home, Segerstrom hasn't missed everything. "He's pretty prompt with his money for his activities ticket," Miles says. His parents take him to football and basketball games, the class play, and even to some of the high school dances.

Segerstrom learned how to handle money well enough to conduct a brisk business in cards for special events and in small items, such as salt and pepper shaker sets. He has used the income from the sales to purchase his wheelchair.

I Speak for Democracy

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. GIAIMO. Mr. Speaker, these great United States have always found unity in diversity. America is not one man, one voice, one opinion. America is a blend of beliefs, a medley of voices. To everyone who lives in a democracy it has a special, highly personal meaning. I am pleased to note that this diversity of opinion has been highlighted by the annual Voice of Democracy contest sponsored by the National Association of Broadcasters and the Electronics Industries Association in cooperation with the Veterans of Foreign Wars. This contest is a nationwide competition for high school students. Each contestant is asked to speak on the theme, "I Speak for Democracy." Each speaker is given the opportunity to present his or her individual view of what democracy means. In this manner the contest underscores the dominant theme of variety in our citizens' thinking and beliefs and yet sustains a strain of solid unity in that each contestant speaks for the American way of life.

I am happy to have the address of Miss Leila Boyle included in the CONGRESSIONAL RECORD. Miss Boyle is a resident of Milford, Conn., and a student at Lauralton Hall High School in Milford. She competed with high school students throughout the State of Connecticut and her 5-minute talk was judged to be the best submitted in the State. Because of this achievement, Miss Boyle was selected to participate in the 1959–60 national contest finals now being conducted here in Washington.

The address follows:

I SPEAK FOR DEMOCRACY

I speak for democracy, the freedom that I love. I speak for the factory workers, and field hands, and farmers, who, like me, are fortunate enough to be freemen, Americans. I speak for a mezuzah over a door in Manhattan, for a crucifix on a wall in Queens, for a weekly paper in Kalamazoo, for a daily in the city of New York. I speak for a sign which reads "I Like Ike," and for another reading "All the Way With Adlai."

I speak through the lips of an immigrant as he hears for the first time the voice of America. As she beckons him to come, breathe her free air, smell her free smells. As he sees the beauty of a Boston, the nighttime of New York, he brushes away the tears of gratitude that must form in his eyes, for he knows, as only an immigrant can, what it is to be without this freedom that we love.

I speak for the blood we have shed for our cause, for the dead and the dying. I speak for the war-torn days of our first independence, for the civil strife that placed brother against brother, the saddest event in our history. I speak for the first great war, when our blood bathed the fields of France, for the second, with its lonely boy at Okinawa, and I speak for Korea, and the heartache of Heartbreak Ridge.

We have not been sparing of our blood, we freedom-loving Americans. We have shed it plentifully for our holy cause—to protect and spread our way of life.

To protect the way of life we love—a home, a school, a church. The things for which we have in the past, and for which we will in the future give our lives—for these things are far too precious to live without. They are the constituents of the American way of life. Each of us possesses a right to them—a right for which we would gladly die—were it necessary.

But our story is not entirely serious. Oh no, one cannot speak for democracy without speaking for the happy things—for football, the world series, hotdogs and potato chips, for coffee at midnight after the movie, for the Rose Bowl, West Point, and Annapolis; for ice cream and rock and roll, Pat Boone and Pat Rooney; for musical comedy, the Swanee River, the tree that grows in Brooklyn; for Tom Sawyer and Huck Finn; for bicycles and jalopies, popcorn and peanuts—little things, yes, but the things we would miss so much were we not free to enjoy them.

But there are some who do not believe this. To those, skeptics, for that is what they are, I say: Find me a better place to live. Find me a place that has the robust democracy of a New York daily, the competitive spirit of the Army-Navy game that converts to unity in the face of a common enemy, the feeling that comes with voting to choose one's own government, the old-fashioned freedom of a New England town meeting, the silent pealing of the bell of liberty, the peaceful reassurance of prayer, as we see fit to pray. Find me such a place and there I will go. But, skeptic, I beg of you, do not look too hard, nor search too long, for your cause is a fruitless one. I have found the way of life unequaled by any other, and so it is with a tear of gratitude in my voice and a song of joy in my heart that I speak for democracy.

Congress Must Find Some Meeting Ground on a New Farm Program

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. PELLY. Mr. Speaker, in connection with my bill, H.R. 10350, to repeal agricultural price support subsidies and provide for orderly disposal of the Commodity Credit Corporation inventory without disrupting normal marketings, I have received widespread interest and encouragement. One such communication was a letter enclosing an editorial from the February 10, 1960, issue of the Christian Science Monitor.

The sender hoped I would find time to read it as she said it expressed what most of the people at home have felt about the farm problem. I have read it and commend it to all Members of Congress in the interest of enacting at this session a new program to stabilize the farm economy without excessive Federal aid and controls. The editorial reads as follows:

IT DEFIES COMMONSENSE

There will be disagreement in Congress with the broad goals for farm legislation just offered by President Eisenhower. But there can be little disagreement anywhere

with his description of the present price-support program: "It defies commonsense."

It was designed to prevent wartime scarcity; it has been continued in peacetime, stimulating burdensome surpluses valued at $9 billion. It was supposed to ease the plight of small farmers; the great bulk of price-support payments go to big factory farms which need no subsidies. It was supposed to stabilize the farm economy; it has distorted it, centering excessive Federal aid on one-fifth of American agriculture and destroying foreign markets.

The President devoted most of his message to Congress to the most glaring example of folly—the wheat program. More than one-third of the Government's expenditure on crop surpluses goes into wheat although the crop represents only 6 percent of the cash receipts from farm products. The Government resells the crop surpluses it collects, but usually at a loss, and handling them costs $1.5 million a day. This is only one part of the charge on taxpayers; the other comes in the higher prices of supported crops.

It is only fair to say that processors and distributors of food (not the farmer) get the larger part of the consumer's dollar. But the plain object of price supports is to keep pyrices up, and this has some effect on retail charges. And it is time those who propose lower price supports tell the farmer frankly that this may mean at least a temporary decline in income. Even the President speaks rather of doing something to improve the low net income of farmers.

The candid remedy for this is to stop fostering inefficient farming and help marginal farmers to shift to more profitable work. The rural development program aims to do this and should be greatly expanded. If half the subsidies (some of them in $100,000 gobs) now going to farmers who don't need aid were put into this rural development program, more effective aid could be given small farmers.

The President urgently warned Congress of the danger that the whole present program will collapse—"visiting havoc on the very people this program is intended to help." He pleaded for prompt changes along the general line of less regimentation and less stimulus or surpluses. He offered to join Congress in reforms having such goals, leaving wide latitude for methods. But he barred a two-price system (to which some farm groups are now desperately turning) as bound to bring reprisals from foreign producers and to injure some farmers while seeking to aid others.

His newest proposal is for expansion of the conservation reserve—a plan for taking acreage out of production. He offered payment in kind (out of surpluses now held by the Government) for the reduction of acreage devoted to crops now in surplus. He added one vital proviso—so long as "measures are included to keep production below total consumption." Those measures are the great question here. And any acreage control tends to be ineffective when production per acre can be vastly increased.

We hope that all those who know the present program "defies common sense" will find some meeting ground on a new program within the general lines the President lays down.

Federal-State Relations in Education

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks, I include an address delivered by me before the Council of Chief State School Officers at Boston, Mass., on November 12, 1959:

FEDERAL-STATE RELATIONS IN EDUCATION

(By JOHN EDWARD FOGARTY, Member of Congress from the 2d District of Rhode Island)

I am pleased and honored to be invited to appear today before the Council of Chief State School Officers. It seems particularly appropriate that this meeting of the Chief State School Officers is being held in Boston—in a city and in a State which have been so closely identified with the educational and cultural development of America since the earliest Colonial times. It was Massachusetts, as you know, that had the first tax for free schools and first school at Dedham in 1636—the same year saw the founding of Harvard College.

As Chief State School Officers, you have been in the forefront of the struggle that has been waged to improve our schools and provide greater educational opportunities for the youth of America.

Educational legislation enacted in recent years, both by the Congress and by many of your State legislatures, has made changes in the legal framework by which the Federal Government and the State governments have been given increased responsibilities, as well as greater opportunities for service in meeting the challenges of a rapid changing world.

In this changing world, what has been and what is the Federal role in education? Examining the legislative background, we see there has been a Federal role in education since Congress on July 13, 1787 passed the Northwest Ordinance, which has been called the most notable law ever enacted by the representatives of the American people.

Not only did it mark the beginning of one one of the most remarkable growths ever known in territorial expansion, but it furnished the basis for the constitutions of several of our great States. It banned slavery north of the Ohio River; provided for religious freedom, guaranteed the right of trial by jury, and pledged public support to education. The setting aside of one section of land in each township for educational purposes 172 years ago was the first great commitment in Federal aid to education.

With this background, let us examine some of the issues in Federal-State relationships—issues that must be faced and resolved by such leaders as you within the next few years. What are some of the issues?

To my mind one really fundamental question in Federal-State relationships is whether Federal aid to education shall be in the form of categorical aid in specified areas, or whether the Federal Government should give broad, general support to education—or perhaps there might be a combination of both. It is not a question of whether we shall have Federal aid or not, but a question of how much and of what form Federal aid will take. The greater taxing powers of the Federal Government are certain to be utilized for meeting the growing national commitment to education.

Having been in the chair during the debate on the national defense education bill and thereby being able to insure its receiving a full and fair hearing, I was highly gratified, as were other friends of education, when the bill was enacted into law. It touches every level of education, public and private, from the elementary through the graduate, yet it is categorical aid to education. It is a major breakthrough in the effort to see that every young person, from the day he first enters school, should have an opportunity to develop his gifts to the fullest. It is the recognition that in a free society, the individual is the first line of defense, that gives the act its name.

The National Defense Education Act, as you know, is far-reaching in its significance for American education. This is true in several aspects. Not the least of the salutary results of the act is the contribution it has made to the working partnership between Federal and State education officials. It is magnifying the fine spirit of cooperation that has heretofore existed.

The Purchase Guide, which was issued in August of this year by the Council of Chief State School Officers, is a fine example of how the chief state school officers contribute to the common goal. The Purchase Guide is proving of tremendous value in the successful operation of title III, part A, of the National Defense Education Act. It is assisting school administrators throughout the Nation in the wise and economical purchase of materials, apparatus and equipment for improving instruction in the sciences, mathematics and modern foreign languages in the elementary and secondary schools. The Council of Chief State School Officers is to be congratulated for this noteworthy achievement.

As one who has vigorously supported the National Defense Education Act and other legislation administered by the U.S. Office of Education, I can say with confidence there is nothing in the history of the many Federal programs providing funds for education in this country that would justify unreasoning fear of Federal control. In reviewing the interim report on the National Defense Education Act, I am impressed by the virtually unanimous participation of the States and Territories. The speed with which they have submitted their State plans is impressive. It reflects alert competence at the State as well as at the Federal level in striving for efficient working relationships.

Let us review briefly some examples of categorical Federal aid that we now have in operating programs.

A primary objective of the National Defense Education Act is to prevent the loss of many able students who drop out of high schools each year. Some education officials believe that the measure's greatest contribution may be the spreading of testing and counseling programs throughout every State. The effort is being made to encourage and stimulate—on the part of the States at the 45,000 local districts and at the individual institutions of higher education—action to help this Nation do a better job in talent conservation and utilization with its most valuable resource, the vast energies of our youth. The number of guidance personnel working in 43 State departments of education has increased from 58 to 144 in 1 year, largely due to the stimulation of NDEA funds. A total of 2,209 teachers, who were enrolled in 50 short-term counseling and guidance institutes, have returned to their teaching positions in the secondary schools. They are sharing the benefits gained at the institutes with an estimated 750,000 secondary school students they will counsel this year.

In the passage of the act, the Congress recognized that the challenge confronting the Nation in our time is in large measure one which demands the development and utilization of trained intelligence of the highest order. The primary responsibility for meeting this challenge is placed upon American education.

While clearly recognizing that the basic responsibility of education must, consistent with American tradition, remain with the States and local communities and higher institutions, we must examine carefully in the national interest to determine if, and where, areas of weakness exist.

The needs of our educational system, both in quality and scope, require, in the opinion of the Congress, that the Federal Government undertake to assist the States and institutions to develop to the highest level those programs and areas in which deficiencies tend to handicap our national security. Sometimes there are differences of

opinion as to how this may best be accomplished.

Another example of categorical Federal aid was seen when Congress recognized that the national interest and security were at stake in the fact that America is a deplorably backward country when it comes to proficiency in the languages of other people. Millions of people—three-quarters of the world's population—speak languages taught but in few, if any schools and colleges in the United States. Yet this country has a critical need in these times to be better educated linguistically than any other country.

Steps that have been taken under this example of categorical aid include the operation of language institutes for the improvement of the qualifications of language teachers in elementary and secondary schools; the establishment of language and area centers for instruction in the needed, but inadequately offered languages and related area studies; the providing of language fellowships to encourage students to prepare for college teaching in these languages and for other public services; and the making of surveys concerning a wide range of problems in language instruction.

Let us look at the response. Over 250 colleges and universities from 49 States expressed a desire to conduct institutes. Within 3 weeks after the first summer institute was established with places for 100 persons, over 1,500 teachers from 48 States applied for admission.

The funds available for the program, however, could by no means accommodate all those institutions who desired and were qualified to conduct institutes. The act authorized $7¼ million for fiscal year 1959. The initial allocation of $400,000 was used to establish summer institutes at the Universities of Colorado, Maine, and Michigan, and Louisiana State University. These funds were supplemented by an appropriation of $1.1 million on May 20, 1959, which permitted establishment of eight additional institutes at the Universities of Georgia, Missouri, South Dakota, Texas, and Washington, Colgate University, Hollins College, and San Francisco State College. A total of 925 experienced modern foreign-language teachers have returned to their classrooms in public and private elementary and secondary schools, sharing with their students what they have learned in the 12 modern language institutes this past summer. In 1960, 36 summer institutes will be established with places for about 2,500 language teachers.

A total of 171 students preparing for college teaching in the modern foreign language field have been awarded fellowships in one of the following critical languages: Arabic, Chinese, Hindustani, Japanese, Portuguese, and Russian. They have begun their studies in various institutions of higher learning. Nineteen centers for instruction in languages rarely, if ever, taught in this country are underway. Twenty research projects have been contracted with institutions of higher learning, organizations, and individuals for the development of more effective methods of teaching foreign languages and the development of specialized materials.

The student loan program—title II of the National Defense Education Act—is another example of categorical aid that has received an acceptance from the colleges and universities of America to an extent that far surpassed expectation. It is designed, as you know, to reduce the costly loss of talent as 60,000 to 100,000 highly able secondary school graduates interested in college and another 60,000 students already in college are prevented each year from continuing their education by lack of funds.

During the first year, 1,190 higher educational institutions in the Nation requested a total of $70 million in loan funds. In this fiscal year, 1,370 institutions are participating, representing nearly 88 percent of the total full-time undergraduate and graduate enrollment. It is estimated that a total of 120,000 worthy students are studying with support from the student loan fund. The average loan is estimated at about $500.

To meet their estimated needs of $60½ million during the 1959–60 school year, the participating institutions will use $15 million on hand from fiscal year 1959 appropriations and will contribute about $4½ million of their own funds as required by the act. This left an original total of $41 million in loan requests, $11 million more than Congress has appropriated. The original total of $41 million in loan requests was reduced upon advice of a consultant panel to $34½ million. The deficit will be reduced somewhat by adjustments in the requests and by reallocation of funds from States where the allotment is greater than the requests to States which are short of funds. If during the first semester, the Federal appropriations turn out to be inadequate, consideration will be given to a supplemental appropriation at the beginning of the next session of Congress.

Let us look at a few highlights of other examples of categorical aid under the act. We see that 50 out of 54 States and territories are engaged in improving their statistical services with the assistance of funds received through the act. Under title III, thousands of local school districts under the provisions of approved State plans in 51 States and territories are purchasing and using equipment and materials and are making needed minor alterations, in strengthening science, mathematics, and modern foreign language instruction. The total distributed to the States in fiscal year 1959 for this purpose was $33,750,000. Under title IV, 1,000 recipients of fellowships are now studying at 123 graduate schools, representing 272 new or expanded programs of study. Under title VII, there are 23 research and 16 dissemination projects underway in the more effective utilization of communications media in the field of education. And under title VIII, thousands of individuals are being trained for useful employment as highly skilled technicians in recognized occupations requiring scientific knowledge in fields necessary for the national defense.

Looking at the other side of the issue, advocates of general Federal aid to education have pointed out that many States and communities under present tax policies and practices cannot hope to be able to pay for the extended education required in the country at large. In the past, public education has been largely supported by taxes on real property. The largest sources of taxable wealth are, however, no longer in real property, but rather in income. Because of the expansion of our industrial society, enormous differences in taxable wealth have been created in and among the several States. School communities with little industrial and commercial activity have relatively small taxable wealth to provide the funds for school purposes, while districts with considerable industrial activities can provide a high quality educational program with minor financial effort. These differences in the ability of the States and communities to support an adequate educational program—with adequately paid teachers—account for marked differences in educational opportunity among our people.

It is argued that if the present inequalities in educational opportunity are to be abolished, the taxing power of the Federal Government must be used to distribute school funds, regardless of their source, to where they are needed to provide a minimum foundation program for all children. If the benefits of education are to be enjoyed by all citizens without regard to place of residence, the tax burden should properly be distributed among the States in terms of their financial resources. From a percentage point of view, the Federal Government has increased from 30 percent of the total expenditures in 1902 to 65 percent in 1956. The States remained about steady, going from 11 percent in 1902 to 16 percent in 1956, but the local sources declined greatly, from 58 percent in 1902 to 19 percent in 1956. The number of dollars increased for each, but this is not reflected percentagewise. This indicates, therefore, that public education must look to the Federal Government for additional financial support since this is where the major amount of money is and there is no indication that a shift percentagewise will develop in the other direction.

Another example of Federal participation generally agreed to be without centralized control, domination, or dictation is found in the operation of Public Laws 815 and 874, providing funds for school construction and for operation and maintenance in federally affected areas and on Federal property. Since these two measures were passed in 1950, the Congress has appropriated a total of $962,585,000 under Public Law 815, in funds for school construction, and a total of $932,127,000 under Public Law 874 in funds for operation and maintenance of schools. The total amount appropriated under both Public Laws 815 and 874 from fiscal year 1951 through fiscal year 1960 is $1,894,712,000. A careful check of the records at the Office of Education shows that the total cost of administering this program, since it was enacted in 1950, is less than nine-tenths of 1 percent.

With the funds that have been authorized under Public Law 815 since it was passed in 1950, a total of over 45,000 classrooms and related facilities have been, or will be, constructed to house an estimated 1⅓ million children.

The appropriation for fiscal year 1960 under Public Law 874 is $163,957,000. This will cover an estimated 1,440,000 children. Over 4,000 school districts are participating in the program. The federally connected children in these districts amount to approximately 15 percent of the total enrollment.

Personally, I have been especially interested in that example of successful Federal participation reflected in the cooperative research program which was initiated on July 1, 1956, under Public Law 531.

There are now 17 Federal-State cooperative research projects underway. Ten of these projects in the area of mental retardation are in the States of California, Illinois, Kansas, Maine, Mississippi, Missouri, Nebraska, New York, Rhode Island, and Wyoming. The total sum of Federal funds obligated for all 17 Federal-State cooperative research projects amounts to $1,541,942. The 10 projects in the area of mental retardation show a total of $1,032,831 in Federal funds obligated. The States of Colorado, Delaware, Iowa, New York, Texas, and West Virginia have cooperative research projects in areas other than mental retardation for which Federal funds amounting to $509,111 have been obligated.

Educational officials at the U.S. Office of Education have stated that the cooperative research projects with the State departments of education are serving to increase the knowledge that can be gained by sound educational research while promoting excellent working relationships between the Federal and State educational officials. In addition to those significant cooperative research projects just mentioned that have been contracted with State departments of education, a total of 217 cooperative research projects have been contracted by the U.S. Office of Education with colleges and universities throughout the Nation.

Another important problem in Federal-State relationships is that of effective communication. The chief State school officers obviously occupy a key role in the discharge of this responsibility. As the findings of

new knowledge are gained by research, it is urgent that teachers and school administrators be alert and prepared to make application of such findings. Summaries of all completed projects are available from the Office of Education and there is much that can be done in getting the information to the people who can actually make use of the knowledge that has been gained.

Commissioner Derthick told me with much enthusiasm of the responsiveness of the chief State school officers to the problem of communication generally, but particularly of the lines you keep open between your office and the Office of Education. He is particularly proud of your meeting with him and his staff when the stage was set for the administration of the National Defense Education Act. The Commissioner is certainly dedicated to the idea of State control and keeping the Office of Education to a posture of service.

I want to commend unstintingly Commissioner Derthick for the manner in which he is administering the National Defense Education Act. He has stated that the act "will meet important national needs within the priceless tradition of State and local control." With unmistakable dedication and conviction, he added: "This vital new legislation is an extremely significant milestone in the Federal effort to offer leadership without domination and to render assistance without interference." And that is just the way he is administering the National Defense Education Act.

There are many Federal programs affecting education that are not administered by the Office of Education, but time does not permit us to deal with them today. Many of these programs use the purchase-of-service approach. The amount of Federal aid to higher education and research from all such programs in the fiscal year 1957 was $1,165,009,000.

We know there are many problems yet to be solved as we look toward the future. The classroom shortage continues to be a serious problem. The House Education and Labor Committee last June reported out H.R. 22, a modified version of the Metcalf bill, which called for about $1.1 billion annually for 4 years in direct Federal grants to States for school construction and teachers' salaries. Distribution would be on the basis of school-age population. When Congress adjourned on September 15, this bill was stalled in the House Rules Committee by an 8 to 4 vote against clearance. One suggested change in the measure is a proposal to remove the pending bill's provision for Federal aid to States for teachers' salaries. The assistance would then be solely for school construction. Another proposal would require that under certain circumstances and for limited periods, communities and States would be required to match the grants. In August, the Senate Education Subcommittee unanimously approved a $1 billion, 2-year grant program for construction only.

Experience has shown that the State legislatures generally provide the money necessary to obtain their share of any Federal funds that are available on a matching formula. Educational needs have been neglected frequently in past years because of the lack of Federal educational programs in competition with the programs offered for roads and other urgent needs. Tax revenues, whatever the source, are not unlimited. Competition for the tax dollar among various programs that reflect the public's interest in health, welfare, housing, roads, and other urgent needs has never before been so intense, and the list grows from year to year.

What are the present factors that have made it necessary for the Federal Government to become concerned about education in this country? There are three that come to mind as we probe the question. First, we can point to the mobility of population. Advances in transportation and communication and the concentration of industrial activities in urban centers have caused a rapid increase in the mobility of our people. The urbanization of our population has been swift and steady. The statistics of the last census showed that 25.2 percent of native-born Americans lived in some State other than the one in which they were born. Second, the need for technical, professional, and linguistic competence has become increasingly a matter of the greatest national importance. Our economic order is dependent upon how well we develop such competence through education. The general conditions of life and the expansion of the American economic system are determined by the amount and character of education among our citizens. Third, there is an increasing awareness of governmental responsibility to assure access to educational opportunity for all citizens. The welfare of the Nation demands that all children regardless of their place of residence receive a minimum basic education for the responsibility of citizenship, for a productive life and for personal happiness.

Congress, I believe, is coming to recognize this profound national interest in education and will act, in the future, to assist the States, communities, and institutions to strengthen education whenever educational needs require such action in the national interest.

What is the most appropriate way the Federal Government can translate into action the best thinking in this country for meeting the most critical educational needs? It seems to me that we must face the problem and arrive at decisions based upon an accurate observation and appraisal of conditions as they exist in 1959. When national needs have been identified, it is necessary to chart the course of action that is required. The key question which must be faced is whether the Federal Government should substitute its taxing power for the general support of education rather than the approach designed to stimulate or give special assistance for a limited period.

If Federal aid should be extended to broad general assistance, it should be remembered that the pattern of fiscal controls, such as the accounting procedures required by the General Accounting Office, would be applicable in the disbursement of Federal funds and would require compliance on the part of those who receive such Federal funds. There would be fiscal accountability. It would not be possible to bypass the Federal accounting requirements.

Most perceptive people are aware that, in times of emergency, it seems necessary to concentrate our effort on those things which seem most urgent. I fully appreciate your awareness that there are other aspects of education and many phases of the curriculum to which comparable attention and increased resources must soon be given.

In conclusion, as we consider education's contribution to national well-being and to the solution of national problems, we must never forget that in this country the State education departments and the chief State school officers have a prime and essential role. As we look toward the future, we must fully utilize their creative leadership and their traditional authority.

How Pure Is Your City Water?

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. BLATNIK. Mr. Speaker, the Speaker, the question as to how pure the Nation's water supply is at the present time is under careful study and investigation by the U.S. Public Health Service at its Robert A. Taft Sanitary Engineering Center in Cincinnati. Although no report has yet been made official certain findings have been made public.

The investigation has turned up "nematodes" which are microscopic worms in some of the water supplies of the Nation's major cities. These small worms are not in themselves dangerous, the experts tell us, but they feed on virus type germs. The danger is this: While the germs can ordinarily be killed by chlorination the worms cannot. Germ carrying nematodes in our water constitute a definite health hazard.

To help solve the problem the Federal Government should assist local communities in the construction of sewage treatment plants which will prevent the discharge of waste material into our streams and lakes which have become breeding grounds for water impurities. The Congress has enacted a bill providing such assistance. It was vetoed today by the President.

Mr. Speaker, tomorrow we shall have an opportunity to override this veto. There are few measures coming before the Congress of greater importance and it is my deepest hope that it can become law despite the President's objections.

Under leave to extend my remarks in the RECORD I include the following article from the U.S. News & World Report for February 29, 1960, entitled "How Pure Is Your City Water?"

HOW PURE IS YOUR CITY WATER?

CINCINNATI, OHIO.—The problem of drinking water—pure and free from disease-carrying organisms—is becoming a matter of increasing concern for American cities.

Unlike the tapwater of most countries, the water of the United States has been considered safe to drink anywhere, anytime. All of a sudden, that confidence is coming under question.

A study just completed at the Robert A. Taft Sanitary Engineering Center here puts new emphasis on the problem. This is a U.S. Public Health Service laboratory. The study reveals that drinking water taken from 13 U.S. rivers contains microscopic worms, called nematodes, that can carry disease-causing bacteria and viruses. These nematodes are able to withstand chlorination, the standard treatment for killing organisms in drinking water.

All the Nation's major rivers were included in the study. Nematodes also were found in a sampling of drinking water taken from Lake Michigan.

"Suds" on tapwater: This is only part of the problem of drinking water. In many water supplies, detergents, which pass right through the best systems of sewage treatment, are showing up in tapwater. This is also a problem in many suburban areas which depend upon well water for drinking and upon septic systems for disposal of waste. In some cases, so much detergent gets into wells that a sudsy "head" appears when a glass of water is drawn from the tap.

Along with the detergent problem, which comes mainly from washing machines and dishwashers in American homes, there is that of new industries which discharge wastes that baffle sewage-treatment experts.

As population rises and demands upon the Nation's water supply grows, research scientists explain that these problems will multiply. They say new methods of sewage and water treatment must be developed if

major rivers are to continue in use for the dual purpose of carrying away sewage and furnishing pure drinking water.

The wriggling nematodes: At the moment, the most excitement concerns the presence of microscopic worms in drinking water. These worms, which are known to breed in sewage-disposal plants, have been discovered in drinking water from one end of the country to the other. Their presence was discovered accidentally in 1955 by Dr. Shih Lu Chang, a microbiologist at the Sanitary Engineering Center.

Dr. Chang has just summarized results of a nationwide study of the nematode problem. The study covered a period of 11 months, ended late in 1959. During this period, thousands of samples were taken from the waterplants of 22 of the Nation's largest cities.

In 15 of the cities, waterplants drew water from rivers. These cities were on the Mississippi River in both Illinois and Louisiana, on the Missouri River in Kansas, the Ohio in West Virginia, the Potomac in Maryland, the Colorado in California, the Columbia in Washington State, the Chattahoochee in Georgia, the Delaware in Pennsylvania, the Detroit in Michigan, the Rio Grande in Texas, the Merrimack in Massachusetts, the Niagara in New York, the Red-Elm Fork in Texas, and the Tennessee River in Tennessee.

The water supply of a city on the Detroit River was found to be free of nematodes. In 14 cities on 13 other rivers, however, the water supplies were found to contain nematodes in both the raw water as it entered the plants for treatment and purification, and the finished water as it left the plants for taps in homes and offices.

In 4 of the 22 cities in which plants were studied, supplies were from manmade reservoirs. These were in New York, Massachusetts, Colorado, and California. Only one of these four, in Colorado, was found to contain nematodes.

Two of the cities with plants in the study were on the Great Lakes—one on Lake Michigan in Indiana and the other on Lake Superior in Minnesota. Nematodes were found in both the raw and finished water of the Lake Michigan plant. Water from the plant in a city on Lake Superior contained no nematodes.

When a member of the board of editors of U.S. News & World Report visited Dr. Chang in his Cincinnati laboratory, he was invited to take a look at the worms under a low-power microscope. Under the microscope, they looked like a can full of wriggling fishworms.

Disease carriers: Dr. Chang explained that the chlorination and flocculation process used in most water-treatment plants will eliminate the adult nematodes and some of the larval forms, but that significant numbers are able to go through the whole water treatment and come out still wriggling.

Asked if the nematodes are dangerous to humans, Dr. Chang said: "No, not by themselves, but we must point out the fact that, since some of these nematodes originate in sewage-treatment plants, there is the possibility that they will ingest pathogens—disease-causing backteria and viruses. And our studies show that these pathogens are completely protected by the nematodes against chlorination and that they can survive at least 24 hours, with 5 to 15 percent remaining alive. Thus, they could serve as carriers of disease."

Dr. Chang was then asked if the nematodes carry bacteria and viruses that cause such diseases as polio, dysentery, and typhoid fever. His reply:

"We have not run tests to isolate these bacteria and viruses from nematodes found in water supplies. We have found in laboratory tests, however, that the nematodes will feed on representative members of these pathogenic bacteria and viruses. Some of these bacteria are those that cause typhoid and paratyphoid fevers and food poisoning. Others cause bacillary dysentery. And, of course, any of the viruses are disease-causing, in the sense that they always cause some illness, ranging from the common cold to polio.

"But we must also point out that the chances of these nematodes to feed on pathogenic bacteria and viruses in the sewage-treatment plant, under normal conditions, are extremely small. The possibility is there, but it's quite remote."

That "musty odor": In addition to their possible threat to health, said Dr. Chang, the nematodes present an esthetic problem.

"Several of the worms that I have isolated produce a very distinct musty or earthy odor," he stated. "They may be responsible for odorous water supplies. In fact, a nematologist named Cobb reported as early as 1918 the possible role played by these nematodes in producing odorous water supplies. At this time most of the waterworks in this country were using slow sand filters. Cobb reported that you could find millions of worms per acre of sand filter, in the top 3 inches of sand. Today, of course, with a few exceptions, waterworks are using rapid sand filters."

Asked if he himself felt queasy about drinking water in cities where a good many nematodes have been found in the water supply, Dr. Chang said: "Usually, when I drink water, I just don't think about nematodes. But, when the worm density in water is high, I feel kind of reluctant to drink that water."

Dr. Chang stated that it would be difficult for cities with the nematode problem to get rid of them completely with present methods of water treatment. He did say: "Probably, at present, the nematode population in any water supply could be very measurably reduced by using superchlorination on the raw water before treatment and by having a more efficient flocculation process."

Needed—new methods: In addition to the need for improved water-treatment methods to deal with problems like the nematodes, research experts at the Sanitary Engineering Center are trying to find new methods of sewage treatment. Present methods cannot cope adequately with the detergents now used widely by housewives because these are soluble in water and go right through the best treatment plants essentially unchanged. In the same category are chemical wastes, particularly the wastes that flow from the petrochemical industries which produce such things as plastics.

"There's been a tremendous growth in the petrochemical industry since the end of World War II," said Bernard B. Berger, chief of the Water Supply and Water Pollution Research Branch at the center. "The problem lies in the fact that the wastes they produce are new to micro-organisms that break down sewage in treatment plants and in streams. Many of them present exactly the same problem as detergents."

Asked if these things were likely to cause cancer, Mr. Berger said:

"This is a question which, unfortunately, we cannot answer. Not only do we need research to determine the effects of these materials, but we need to develop improved techniques to find out just what we are dealing with. We have these materials in water. We know they are there because the water may be discolored, may taste, may have an odor. But still the material may be present in such a low concentration that we can't come to grips with it.

"We have developed a carbon-filter device which will concentrate certain kinds of organic materials present in water. The concentrate is in the form of a complex organic 'gunk,' resembling oil. It is difficult to resolve this gunk into component compounds. We need further research in capturing materials present in water and identifying the material we have recovered."

A growing problem, said Mr. Berger, is that of detergents finding their way into household water in suburban areas where water is drawn from wells and sewage is handled by septic tanks.

"What you have," he said, "is a continuous recycling. You have the water coming out of the house into the septic tank, into the ground, up through the well into the faucets, back to the septic tank. It keeps building up all the time, until sometimes there is a 'head' of suds on water drawn from the tap. We have gotten reports from many parts of the country that this is happening."

Radioactive river: Another water problem is generated by the atomic age—that of wastes from atomic-energy plants. Researchers from the center were called in when citizens of New Mexico became alarmed about radioactive wastes discharged into the Animas River by a uranium-processing plant in Colorado.

The Animas River rises in the Rocky Mountains of Colorado. In New Mexico, it is the water supply for Aztec, a town of around 11,000, and Farmington, with a population of 30,000. In the summer of 1958, sampling showed radium and strontium 90 present in the drinking water of both towns. Source of the radium was the uranium plant, while the strontium 90 resulted from fallout. But materials also were found in food and milk. Adding all the sources of radioactivity together, it was found that the total amount was on the order of 1.6 times the maximum allowable set by the National Bureau of Standards.

As a result of these findings, the uranium plant took measures recommended by a conference of the State and Federal water-pollution agencies concerned. Now, radioactivity in the water of the Animas is considered to be at a safe level.

Through a nationwide quality water network, the center in Cincinnati keeps tab on radioactivity in water in all parts of the United States. This network, now with some 70 stations and more to be added, checks not only on radioactivity but on the whole range of polluting materials in the U.S. water supply.

As to the future of the Nation's water supply, Mr. Berger said this:

"The burden on water is increasing. You put in a new sewage-treatment plant and there is unquestionably an improvement in water below that plant. Working against that, however, is the growing population and the increasing industrial establishment of the country. It's going to take a lot of effort just to stay even with the problem, and more if we are going to make any improvement."

What Counsel and Advice Would Abraham Lincoln Have Had for His Party Today?

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks I am inserting in the CONGRESSIONAL RECORD the prize-winning essay of Sarah Jane Goodyear, of Kankakee, Ill.

She is 17 years of age and an outstanding young lady in every respect. The title of the essay, in which many young

people competed, is "What Counsel and Advice Would Abraham Lincoln Have Had for His Party Today?"

The essay follows:

WHAT COUNSEL AND ADVICE WOULD ABRAHAM LINCOLN HAVE HAD FOR HIS PARTY TODAY?

Let us consider a speech which Mr. Lincoln might give today if he were to return.

As Republicans we meet today, our country—and our world—in a state of chaos. Upon our shoulders rests as great a task as has ever been faced by men: to preserve for posterity our liberty, our way of life, and the Nation for which men have lived—and willingly died.

Let us hold dear our basic rights which are the foundation of the democracy in which we live. It is painful to me that almost a century after the close of the Civil War men and women are denied equal rights of education and also are denied equal opportunity to vote for the candidates of their choice. Our forefathers etched upon the cornerstone of our Government: "All men are created equal." This is our greatest fundamental principle. If all races within the bounds of our great Nation cannot live together in harmony, then our enemies may rightly call us hypocrites, and the true friends of freedom shall doubt our sincerity.

Our Nation is no longer in its infancy. We are not States learning to live in harmony with one another, but a country, seeking to live in harmony with the world. Let our President speak with the leaders of all countries, and let him see their peoples, but let him no waiver in decision for "Important principles can and must be inflexible."[1]

If we propose to lead our fellow men, we must place before them leaders. We must encourage the people to vote without prejudice and then, in the "faith that right makes might,"[2] give them just and upright men. We must perpetuate "peace and prosperity," giving these words a true meaning for every man and women. With God's guidance and our adherence to that which is right, we surely cannot fail.

SARA JANE GOODYEAR,
WATSEKA, ILL.

[2] Address by Lincoln at Cooper Institute, New York City, Feb. 27, 1860.

U.S. Commissioner of Education Rebuts Vice Admiral Rickover's Criticism of School System

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 23, 1960

Mr. RANDOLPH. Mr. President, certainly there are persons who do not agree with much of the criticism Vice Adm. Hyman G. Rickover has spoken and written concerning our school system in the United States. Those who disagree with Admiral Rickover's comments doubtless find much satisfaction in testimony given by Lawrence G. Derthick, U.S. Commissioner of Education, before a House of Representatives appropriations subcommittee.

I ask unanimous consent that an article by Bess Furman, published February 20, 1960 in the New York Times, concerning Commissioner Derthick's testimony, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DERTHICK CALLS U.S. SCHOOLS BEST—REBUTS RICKOVER'S CRITICISM AND DENIES NEED TO COPY SOVIET EDUCATION PLAN

(By Bess Furman)

WASHINGTON, February 19.—The U.S. Commissioner of Education has made a spirited defense of the American school system against criticisms lodged by Vice Adm. Hyman G. Rickover.

This was revealed today by the release of testimony that the Commissioner, Lawrence G. Derthick, gave recently before a closed session of a House Appropriations Subcommittee.

In his appearance before the subcommittee, Commissioner Derthick also denied, as the admiral had charged, that the Office of Education had failed in its duty to alert this country to the strength of the Soviet competition in education.

The Commissioner further denied the admirals assertion that the Office of Education was oriented to the progressive-education ideas of the late John Dewey and was influenced too much by the National Education Association.

Admiral Rickover had made his statements in earlier testimony before the full Appropriations Committee.

ADMIRALS IDEA REJECTED

Mr. Derthick said that he flatly rejected the idea implied in Admiral Rickover's statements that "to equal or surpass the Russians in some missile feat he must design an educational system like theirs."

Mr. Derthick said that he flatly rejected the idea implied in Admiral Rickover's statement that "to equal or surpass the Russians in some missile feat he must design and educational system like theirs.

He contended that Admiral Rickover had been overimpressed by the Soviet Union's enthusiasm for its systems. Mr. Derthick contended that the American system was superior.

The Commissioner said that the only aspect of Soviet education that this country might well covet was its "total commitment to education."

For discussing an Office of Education publication of 10 years ago, "Life Adjustment for Every American Youth," Admiral Rickover had described it as "the most anti-intellectual document I have read in a long time."

Mr. Derthick replied that this pamphlet had not been designed to solve the problem of students dropping out of college, and not for college preparatory groups. He said that student dropouts had decreased since the pamphlet was published.

The Commissioner noted that Admiral Rickover had declared himself in favor of building brains rather than character-building, as being more useful for building submarines.

FAVORS CHARACTER BUILDING

Mr. Derthick replied that such a concept did not fit in with the ideals of the school system as conceived by the American people.

"I simply do not believe for one moment," he said, "the contention that in America the schools should bear little or no responsibility for character development."

Commissioner Derthick further contended that the comprehensive American educational system was better than the Western European system, which limits higher education to the talented and thus creates an elite class. He said that many visiting European educators had agreed with his judgment.

"More than 50 years ago American parents decided that they would not give any person the right to close any doors to the future for their 11-year-old children," Mr. Derthick said. "They made this decision with a full knowledge of the system of education used in Europe—and of the social consequences of this system."

A Realistic Farm Program

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego Union, Saturday, February 13, 1960:

NO MAGIC FORMULA—A REALISTIC FARM PROGRAM

President Eisenhower has made it clear in a message to Congress there is no magic formula for giving American farmers all the prosperity they want and deserve. He pledged, however, his determination to work out the best possible farm program without claiming it is any panacea.

The Chief Executive promised Congress he would approve whatever it enacts within a framework which recognizes realistic price support levels and avoids direct Federal subsidy programs.

Mr. Eisenhower's message reminds us that in this election year there is certain to be considerable agitation over farm legislation and policy. So it is not too early to lay on the line some of the facts concerning this traditionally controversial issue.

Remember, when you hear Members of Congress criticize them, that the current price support and production laws don't represent Republican farm policy.

Basically, these laws date back to 1933. They were intended to meet the crisis of a worldwide depression. Their purpose was to help farmers by raising prices they received for food and fiber. The basic idea was to create an artificial scarcity.

Then at the start of World War II, this policy of a scarcity was reversed to meet food demands created by global conflict. Price supports were raised to a high level during the war emergency and their continuation for 2 years beyond the war was assured.

But—and here's where the trouble started—in 1948, 1950, and 1952, three successive Congresses failed to remove the wartime level of price supports, despite the original intention of a 2-year postwar limit. Hence production began to exceed demand. This is the root of our present farm troubles.

During 22 of the 26 years encompassed by this legislative history, Congress was controlled by the party now in the majority, the Democrats. The Republicans held party responsibility only during 1947–48 and again in 1953–54.

Thus virtually all present farm legislation governing price supports and production controls was written by the Democrats.

They apparently are satisfied with the present farm program, for they have the votes in Congress to change it and have not done so. Yet the Democrats complain about what they call the Eisenhower farm program and blame their favorite whipping boy, Agriculture Secretary Benson.

Remember these facts as farm legislation becomes an increasingly greater issue in the months ahead.

An Invitation to the Academy Awards

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. SMITH of California. Mr. Speaker, out in California, we have two events that have become known to all Americans and all the world.

The first is the Festival of Roses and the Rose Bowl football game every New Year's Day. This occurs in my own hometown of Pasadena. Thousands come every year to see it. It is carried by radio and television throughout America and throughout the world.

And there is another annual event in our neighboring community of Hollywood. This, too, attracts the attention of the public in America and in the world. It is the annual presentation of the awards of the Academy of Motion Picture Arts and Sciences.

These awards have put a new word into practically every language on earth. The word is "Oscar."

The time is near at hand for these annual Oscar awards. Yesterday afternoon, the academy announced its nominees for the various categories of the motion picture art. A winner will be selected from each of these categories. And these distinguished Oscar winners will then be revealed on Oscar night—Monday evening, April 4, over an NBC radio and television network.

The annual Oscar presentations are sponsored by the motion picture industry itself. Last year, more than 70 million people saw these colorful ceremonies in the United States and Canada. This year, the industry hopes to have an audience of 100 million in this country and Canada.

I want to extend an invitation to all my colleagues to join the millions tuned in on the Oscar show this year. It will start at 10:30 p.m., eastern standard time, and will last an hour and a half. It has always been a good show, and from what I know of the preparations now going on in Hollywood, I think I can assure you that this year's will be the best Oscar night ever.

Here are the nominations in the key categories for this year's awards:

Best picture: "Anatomy of a Murder," Columbia; "Ben-Hur," MGM; "The Diary of Anne Frank," 20th Century-Fox; "The Nun's Story," Warner Bros.; "Room at the Top," Romulus.

Best actor: Laurence Harvey, "Room at the Top," Romulus; Charlton Heston, "Ben-Hur," MGM; Jack Lemmon, "Some Like It Hot," United Artists; Paul Muni, "The Last Angry Man," Columbia; James Stewart, "Anatomy of a Murder," Columbia.

Best actress: Doris Day, "Pillow Talk," Universal-International; Audrey Hepburn, "The Nun's Story," Warner Bros.; Katherine Hepburn, "Suddenly, Last Summer," Columbia; Simone Signoret, "Room at the Top," Romulus; Elizabeth Taylor, "Suddenly, Last Summer," Columbia.

Best supporting actor: Hugh Griffith, "Ben-Hur," MGM; Arthur O'Connell, "Anatomy of a Murder," Columbia; George C. Scott, "Anatomy of a Murder," Columbia; Robert Vaughn, "The Young Philadelphians," Warner Bros.; Ed Wynn, "The Diary of Anne Frank," 20th Century-Fox.

Best supporting actress: Hermione Baddeley, "Room at the Top," Romulus; Susan Kohner, "Imitation of Life," Universal-International; Juanita Moore, "Imitation of Life," Universal-International; Thelma Ritter, "Pillow Talk," Universal-International; Shelley Winters, "The Diary of Anne Frank," 20th Century-Fox.

Best director: William Wyler, "Ben-Hur," MGM; George Stevens, "The Diary of Anne Frank," 20th Century-Fox; Fred Zinneman, "The Nun's Story," Warner Bros.; Jack Clayton, "Room at the Top," Romulus; Billy Wilder, "Some Like It Hot," Ashton Productions and the Mirisch Co., United Artists.

How To Turn Khrushchev Against Khrushchev

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting report written by C. W. Boldyreff who represents the National Alliance of Russian Solidarists.

The report follows:

HOW TO TURN KHRUSHCHEV AGAINST KHRUSHCHEV

In an effort to increase the spread of Communist propaganda and soften the resistence of the free world, Khrushchev has now launched his peaceful coexistence program.

To assure that the "cultural" exchanges, an important part of the peaceful coexistence program, will serve to enhance the interests of the Kremlin and be least of all beneficial to the cause of freedom, the Soviet Government has sought to make these a purely government-to-government operation. This permits the Kremlin leaders to control the exchanges to their own advantage.

Time and again, in his speeches in this country, Khrushchev insisted that honesty and good will should dominate the relations between his country and ours. He accused the American neswmen of an attempt to "revive the cold war" when they asked him embarrassing questions. He demanded that we should not "throw dead rats into each other's mouths", that "friendship and truthfulness" must characterize Soviet-American relations, and so on. Khrushchev also insisted that the Soviet Union is a truly democratic country, and that the Soviet press is responsible and free.

All of these Soviet propaganda statements must now be put to test. Indeed, it is time that we, private citizens, work to turn Khrushchev's "peaceful coexistence" slogans to serve the cause of Freedom. As in judo, we must seek to use the strength and weight of our adversary to work against himself.

There is a great variety of things which we, as private individuals, or groups of private individuals, could do to this effect. All of these acts must be legitimate, honorable, and constructive. Their purpose is twofold:

(a) To put the Soviet Government on the spot, and force it to live up to its "peaceful coexistence" promises in such fields as it cannot control;

(b) To open up thereby ligitimate avenues for the people of Russia to put an ever-mounting pressure against their own government for greater democratization of the regime.

Here is a concrete project in which any American citizen may engage, without any financial effort or particular physical exertion. This plan requires only three things of a person: His will, his sincerity, his understanding and faith in America.

UTILIZE THE SOVIET PRESS

We all know that a day seldom passes without an article appearing in the Soviet press which, in one way or another, disparages the United States or her people. But very few of us are able to see these things which are written about us.

The Freedom Fund, Inc. (a non-profit, tax-exempt organization), 52 Vanderbilt Avenue, New York 17, N.Y., is now engaged in translating such articles, and making them available to any American citizen on request. In reply to these untrue reports in the Soviet press, American citizens can write to the Soviet editors and demand the publication of their letters in the corresponding Soviet papers.

HOW TO MAKE THE SOVIET EDITOR COMPLY

Step 1: Obtain the necessary article or articles from the Freedom Fund. Then compose the letter to the editor. This letter must be factual, honest, and not aggressive. It should point out what inaccuracies appeared in the article, and note the true facts in each case. The letter should make ample reference to Khrushchev's statements about the principles of "peaceful coexistence." On the basis of these statements, and others about the alleged freedom of the Soviet press, the editor should be requested to have the letter published. There should be no criticism of the Soviet regime or communism in this letter, lest it be used by the editor as a pretext for refusing its publication.

It is likely that the editor will simply throw this letter into the wastepaper basket. If no answer is received from him and the letter is not printed (the Freedom Fund will check this fact), this will signal the beginning of step two.

Step 2: A new letter, enclosing a copy of the original letter, should then be sent to the editor. This should be a registered "return receipt requested" letter. In this letter it should be stated that the author attributes the lack of any reaction by the Soviet editor to the fact that "the original letter must have gone astray." A request for the original letter's publication should be emphatically reiterated. A statement should also be made to the effect that, in view of the apparently unsatisfactory postal service, a complaint is being sent by the author to the Postmaster General in Washington and to Premier N. S. Khrushchev, Chairman of the Council of Ministers of the U.S.S.R., Moscow, U.S.S.R.

Confronted with the danger of a reprimand from Khrushchev (for how can the editor know that the author is not a friend of the Soviet Union of the "Cyrus Eaton type"?), the editor will most probably write to the author. In his polite letter he will express his regrets that the original letter was lost, and offer some excuse for not publishing it at that time (if he does not publish it), such as that too much time has

elapsed since the original article appeared. He may suggest that if you write again in the future, he will show more consideration, which would provide you with valuable ammunition for any future campaigns of letter writing to his paper.

Step 3: The important thing, however, is that with the copies of the original article, the original and second letters, and the editor's reply, there are the ingredients of a newsworthy story which an American newspaper will use. In this connection the Freedom Fund can be of great help.

When the article in the American newspaper appears, send it, along with the other material, to Premier Khrushchev's office. The whole incident has by now developed into highly harmful publicity for the Soviet Union. For this is a most crushing exposure of the true nature of Khrushchev's "peaceful coexistence" propaganda. There are now good chances that the original letter will be published. It would be most enjoyable to see the commentary which would accompany the letter, trying to make the letter seem misguided and unimportant, for the editors would realize that most Soviet readers could perceive the uncomfortable position they had placed themselves in. The text of the letter itself, which would be read by loyal Communists throughout the U.S.S.R., could have an enormous impact upon their thinking.

We have seen the potential which can be realized by a single letter. If other people in this town, and other towns throughout America, were to begin a campaign of this kind on a really large scale, the results could be devastating to Khrushchev's one-sided truthfulness campaign. The Soviet editors would be simply buried under a torrent of rebuttals whenever they printed anything untrue about America. Not only would this make them far more cautious in fabricating their lies about America, but news of the campaign would leak out to the Russian people. And they, the Russian people, would themselves begin to demand to know what the people (not the Government or the Wall Street sharks) of America want to say to them.

Whichever course the Soviet Government takes, either refusing the people's demands and trying to keep the progress of the campaign secret, or yielding to the demands of the people and allowing more truth about America to come into the U.S.S.R., it will make the Soviet people more anxious than ever to be friendly with America, and more impatient than ever with the irritating, cumbersome restrictions which the regime places on their free travel and communications. News of the American people's truth and friendship campaign would be broadcast around the world, and everywhere, from Chile to Pakistan, the Communists would suffer embarrassment, as the United States made friends.

CONCLUSIONS

1. Obtain the Soviet articles from the Freedom Fund.

2. Write a polite, nonpolitical, factual letter exposing Soviet lies. There is no need to have your letter translated into Russian, for many Soviet newspapermen can read English. Try to get other people in your office, or friends in the neighborhood, to sign your letter, for a collective letter is obviously many times more effective than one signed by a single person. Any editor, Soviet or American realizes that he is dealing with a far more formidable adversary in a group, than in an individual.

3. Send your letter. Keep in touch with the Freedom Fund for additional guidance.

4. Pass on copies of the Soviet articles to other people, and ask them to follow your example. Encourage local clubs to participate.

This is only one of the possible avenues by which you may contribute to the weakening of Communist prestige, and help to release the opposition energies in the Soviet Union and enable the people to increase their pressure on the Communist leaders in a legitimate way. The Freedom Fund can offer other ideas.

When doing things like this, use your own imagination and ingenuity. You can help to develop still more effective plans. As a free people we have a tremendous advantage—we can think, talk, and act independently. In this epic battle between individual citizens and the giant totalitarian colossus, we must take the active part. We must launch a large-scale offensive. Remember, a bite of one mosquito, although detracting and somewhat irritating, cannot accomplish very much. But a swarm of mosquitoes, attacking simultaneously in a concerted effort, may fell an elephant.

C. W. BOLDYREFF,
Representative of NTS
(National Alliance of Russian Solidarists).

British Worry About Television Too

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled, "British Worry About Television Too," which appeared in the February 13, 1960, issue of the Messenger of Madisonville, Ky.

The editorial is as follows:

BRITISH WORRY ABOUT TELEVISION TOO

Our cousins the British are worried about television too, but their worries are different from ours.

Over here we worry about quiz show fixes—or at least we did worry about them before we got to thinking about something else. We worry too about patent medicine advertising, about weird conglomerations of plumbing which are supposed to stimulate the human stomach, lungs, or nasal passages—about an overabundance of advertising about laxatives, body odor, and whatnot. These are minor gripes compared with those in Britain.

Our British cousins are upset these days over what their medical journal, Lancet, had to say about British doctors and their fears about what television viewing is doing to the human race. The physical effects, that is.

Because of the positions assumed by the viewer, some of the British medicos think watching television may contribute to heart disease, blood clots in the veins, and the protrusion of the stomach into the chest cavity. In addition, said Lancet, it is responsible for a cervical pain called "television neck."

This seems bad enough, but the indictment which appeared in Lancet gets worse, as shown by this quotation:

"Pressures exerted by the abdominal contents on the posterior part of the diaphragm could be transmitted to the heart and kink it forward—a distortion which, if prolonged and frequent enough, might be supposed to foster atheromas at this site."

Then, we are told, TV can arouse latent disorders into their full symptomatic fury. There are several forms of "acute television collapse," for instance, ranging from "simple faints" brought on by telecasts of surgery to severe chest pains; eye troubles and epileptic fits; aggravated behavior induced in psychotics.

As if all this were not enough, the British medical journal continues:

"Flickering of the apparatus has been known to initiate a fit in a susceptible epileptic. Furthermore, one doctor described a schizophrenic patient who manifested common automatism during commercial programs; an invocation to use certain hair tonic, accompanied by a demonstration, resulted in a patient scooping water from a nearby goldfish bowl and applying it to his hair."

Dreadful, all this, and we must say that we have never heard of such things in our own country, wretched though some of our programs and some of the TV advertising may be.

The worst television malady we know of in our country is boredom, though we heard of an instance or so in which a quick-draw practitioner shot it out with his set during a western. Even at that, the guy was having a good time.

One of the commentators, mulling over the dreadful picture presented by Lancet, said:

"U.S. television is not a statistically important hazard to public health and safety. Where British television seems to immobilize and hypnotize, American TV has the opposite effect, encouraging millions of Americans to get out of the house."

Let Us Build the First Bridge

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. ROOSEVELT. Mr. Speaker, I wish to bring to the attention of my colleagues a thought-provoking article which examines the crucial question of world disarmament and remilitarization of Germany.

The article, "Let Us Build the First Bridge," which appears in the 1960 winter-spring issue of the magazine Prevent World War III, published by the Society for the Prevention of World War III, Inc., is most timely and stimulating in view of the disarmament negotiations. Its association of the German problem to the goal of world peace merits, I believe, most serious study and consideration.

The article follows:

LET US BUILD THE FIRST BRIDGE

Addressing the National Trade Council in New York last November, Secretary of State Herter noted that there was an overriding common interest on both sides of the Iron Curtain. "That interest," he declared, "lies in simply the basic will to survive, shared by freemen and Communists alike. I think the Soviet leadership is reaching a conclusion similar to ours—that unless the course of events is changed soon, both sides face unacceptable risks of general nuclear war which would approximate mutual suicide."

Seen in the light of the accelerating arms race, Secretary Herter's estimate of the alternatives confronting humanity is a down-to-earth challenge to all preachers of "world disarmament," including Mr. Nikita Khrushchev.

The neat and attractive disarmament package presented to the United Nations by the Soviet Premier last September may have had some propaganda value, but it did not disentangle the disarmament deadlock. Though replete with happy generalizations,

Mr. Khrushchev's "bombshell" offered little in the way of specific and reliable controls. Even those who were comforted by Khrushchev's "pie in the sky" proposition must have been quickly brought back to the real world when he boasted 2 months later that in one Russian plant rockets with hydrogen bomb warheads were being manufactured at the rate of 250 a year.

Statesmen have been negotiating on postwar disarmament for more than 10 years. As their programs to disarm become more elaborate and as their pleas become more passionate, the manufacture of new weapons of mass destruction gathers more speed. Though it is a spectacle that would warm the heart of the cynic, we can ill afford that luxury when human survival hangs on thin threads. We must be wary, too, of the "supreme optimist." Given the present state of world affairs, rent as it is by deep-seated suspicions, unabating conflict and the devious designs of the Soviets, it would be worse than stupidity for the Western democracies to lower their guard, because Mr. Khrushchev smiles. The "supreme optimist" tells us to "forget the past" and dump all weapons into the sea. The "voice of despair" urges us to build bigger and better bombs. In both cases the will to survive is diverted from seeking a real way out from the present impasse.

This is the time for urgent action based on the realities of current world conditions. The gaps dividing states cannot be closed in one fell swoop. It is only by constructing the first bridge that we can build the last. There are too many wounds, too many hatreds, too many disappointments in dealing with Soviet diplomacy that can be assuaged with the balm of universal disarmament slogans. The process of healing depends on how determined we and they are to remove the existing obstacles barring the way to understanding.

Today, in the heart of Europe a time bomb ticks away. Arms and armies continue to multiply and deploy their power. Launching pads for nuclear rockets are beginning to mark the landscape. Germany, the spawning ground of two World Wars, looms as the cockpit of a third, and perhaps the finale for mankind. It is precisely here at this major focal point of the cold war where opposing armies literally glare at each other, that the first gap can and must be bridged. To put it another way, meaningful progress toward universal disarmament is impossible if simultaneously the territory of Germany is transferred into a major "place d'armes."

As World War II came to its close, the allies knew that a remilitarized Germany would again bring to the fore all of the factors that could lead to a new catastrophe. Therefore, their common objective, embodied in official documents and statements, was to prevent the resurgence of Germany's military might. Now, the thing they presumably dreaded and tried to avoid is coming to pass before our eyes. Once more Germany's military power is rising and as its shadow grows, tensions and fears mount while governments begin all over again to jockey for favorable strategic positions.

Five years ago Prevent World War III examined the question of disarmament (see No. 46, 1955, "The Prerequisite for World Disarmament"). At that time we arrived at the conclusion that the universal ideal required an initially powerful impetus, i.e., a concrete move that would take the problem out of the realm of platitudes and promises and demonstrate to a war-weary world that the negotiators meant business. Thus, we proposed a Big Four agreement on Germany's military status based on the following principles:

(a) That both East and West Germany be permanently demilitarized under United Nations control.

(b) That the territorial integrity of East and West Germany becomes the responsibility of the United Nations.

(c) That the United Nations shall establish armed force contingents to be located in Germany and in the states bordering Germany for purposes of implementing that responsibility.

(d) That both East and West Germany shall pay in cash to the United Nations a sum in an amount roughly equivalent to the cost of any occupation forces, or any other forces, which would have to be sited on German territory for the protection of peace and the maintenance of the balance of power in Europe. Such funds shall be employed to support the armed forces established by the United Nations for the protection of Germany's territorial integrity.

Perhaps the above proposals require modification of one kind or another in the light of present and future conditions. However, the principle of keeping Germany demilitarized has lost none of its validity or urgency. Indeed, the need is now all the more great because the time is fast approaching when no one will be able to keep the German Pandora box closed.

Even now the German claim for Wehrhoheit (the German term describing a country's exclusive prerogative to determine the size and disposition of its armed forces) has grown louder and more ominous. "In our opinion, the Federal Republic will never, in case of disarmament, submit to any other kinds of control than those to which all of Europe submits. If the Federal Republic were to submit to greater control, this would mean a political degradation which we cannot accept." (Chancellor Konrad Adenauer speaking before the Foreign Press Association, October 13, 1959.) The significance of Dr. Adenauer's categorical statement can perhaps be better appreciated in the context of his basic view on a Big Four summit meeting: "We are not prepared to accept any decision which did not conform with German interests." (Dr. Adenauer addressing a conference of the CDU, October 25, 1959.)

Shall world peace and security be held up by a German veto? Would it be politically "degrading" for the Germans to show the way toward broader disarmament and to prove her will to peace? Would the world be "dictating" to Germany by asking her to set an example, or would Germany be dictating to the rest of us by insisting on her right to restore her military power? Would German interests be violated if a summit meeting should agree at least in principle on the need to keep down Germany's military potential? Dr. Adenauer should answer these questions forthrightly, for the world must know where Germany stands on peace.

It is not vindictive to propose that Germany should be demilitarized. Germany owes it to mankind to do everything in her power to reduce the chances of conflict, just as the world owes it to the victims of World War II to secure a just and lasting peace. Indeed, Germany's own salvation lies in the plowshare and not the sword.

Obviously there can be no durable peace when the heart of Europe bristles with bayonets and nuclear weapons. Therefore, there is an underlying moral obligation on the part of all peoples, particularly the Germans to halt the arms race as its most sensitive point, namely in Germany itself.

What benefits would accrue to mankind if the first bridge were finally constructed and if Germany became a bulwark of peace?

(1) It would serve as a proving ground for a wider area of disarmament in Europe under U.N. control and inspection.

(2) It would provide the foundation stone for a general European security system.

(3) It would loosen the Soviet grip on Eastern Europe by doing away with the spectre of a remilitarized Germany.

(4) It would decrease Germany's ability to bargain with the Russians, to the detriment of Western security.

(5) It would pave the way for the reunification of Germany in peace and freedom.

(6) It could serve as a prototype for the demilitarization of other major areas of conflict and tension, i.e., the Middle East.

(7) It would encourage an international climate of good will and confidence and thus open new doors toward the ideal of world disarmament.

In his same speech before the National Trade Council, Secretary Herter said: "Even today, though the present arms race is dangerous beyond description, it still seems easier to continue on the familiar path than to try to break new ground." The "easier" path leads to a dead end. It returns us again to the awful scenes of World War I and World War II.

"Those who cannot remember the past," the philosopher Santayana said, "are condemned to repeat it." Is mankind fated to seal its own doom? This we cannot believe.

The Role of Military Assistance in Maintaining Peace With Honor

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an address by Williston B. Palmer, general, U.S. Army, Director of Military Assistance, Department of Defense before the Women's Forum on National Security, Washington, D.C., on January 28, 1960, entitled "The Role of Military Assistance in Maintaining Peace With Honor":

THE ROLE OF MILITARY ASSISTANCE IN MAINTAINING PEACE WITH HONOR

(By Williston B. Palmer, general, U.S. Army, Director of Military Assistance, Department of Defense, before the Women's Forum on National Security, Washington, D.C., January 28, 1960)

Ladies and gentlemen, the theme of your forum is "Peace With Honor." No theme could better bring out the existing dangers to the security of the United States and what we can and should do to avert those dangers; as President Eisenhower described it in his state of the Union address of January 7, 1960, "the calamitous cycle of frustrations and crises which, if unchecked, could spiral into nuclear disaster, the ultimate insanity." The frustrations and crises have all been caused by threats directed at peace with honor, at peace with freedom, at peace with justice.

President Eisenhower also said in that message:

"Concern for the freedom of other peoples is the intellectual and spiritual cement which has allied us with more than 40 other nations in a common defense effort. Not for a moment do we forget that our own fate is firmly fastened to that of these countries; we will not act in any way which would jeopardize our solemn commitments to them."

To open the discussions of your forum, I have been asked to speak tonight on the military assistance program as a tool for

peace with honor. It is self-evident that our military assistance program is a tool for peace with honor. The question is how effectively the tool is being used. I believe that it is being well used.

There has probably never been a time when a report on that subject was more timely and appropriate. The U.S. Government has been conducting its military assistance program for some 10 years, during which the principal factors of military strength have undergone revolutionary changes; and accordingly during the past year there have been some searching reviews of the program. The results have by now been pretty well crystalized, and tonight I can summarize for you the present status of the military assistance program as brought out in exceptionally careful and thorough studies by exceptionally able and distinguished men.

Our military assistance program is not a private affair of military men; it is an instrument of our foreign policy. Military assistance is a part of our broad program of aid to foreign countries, which in total is called the mutual security program. Since it is an instrument of our foreign policy, the mutual security program, including military assistance, is conducted under the foreign policy direction of the Secretary of State. The whole broad mutual security program is flexibly designed to meet military threats where they exist and to contribute toward economic development among the nations of the free world.

It is to be hoped, of course, that our leadership in assisting underdeveloped countries toward a better standard of living and a richer life will in the long run produce great benefits for the entire world; but the position of the peoples of the free world at the present moment is a good deal like that of our pioneer ancestors who carried the frontiers of civilization westward across America—while they cleared the wilderness and planted their crops, they had to keep their rifles always within arms' reach. Military security is a prerequisite to economic progress, and it is the shield of common defense which permits the nations of the free world to pursue independence and economic growth in honorable peace. That shield of common defense, formed by the combined military strength of the United States and its free world partners, is in large measure the creation of the military assistance program.

It must be obvious to everyone that there is a close relationship between our military assistance to many countries and the availability to us of oversea bases for the deployment of our own advance forces and missiles; that our national security is strengthened by the collective security of our alliances, while reciprocally our allies are strengthened by measures primarily designed for the national security of the United States.

As Secretary McElroy said to the American Legion:

"We intend through our military assistance program to continue to build up the forces of our allies. These are the forces which in many parts of the world would have to take the initial brunt of an aggressor's attack. Dollars spent wisely on them will increase our limited war, as well as our unlimited war capabilities, and save us many dollars in our own defense expenditures. Our Joint Chiefs of Staff recently stated, with complete unanimity, that they would not want $1 added to our own defense expenditure if that dollar had to come out of our military assistance program."

Let me give you some figures that show what the Joint Chiefs of Staff were talking about. The total of all our major national security expenditures over the fiscal years 1951–59 was approximately $377 billion. Of the immense sum, the military assistance program got approximately $23 billion, about one-sixteenth.

About half of the $23 billion was spent during and immediately after the Korean war, when we were striving to strengthen our allies in a hurry. For the past five years, the expenditures on military assistance have averaged about $2,400 million a year. We believe that it will be necessary to maintain a level of spending of about $2 billion a year on military assistance for several years yet—I would not care to guess how many.

You understand that each of the countries to which we give military assistance has a large military budget of its own, and as far as possible we expect it to raise its own forces, feed, pay, clothe and train them, and furnish them with military equipment to the extent its resources permit. And, as the economy of each country has recuperated and become capable of carrying a larger burden, we have asked them to do so.

Some countries have become almost wholly self-sufficient and self-supporting; some we are assisting only with the most complex and difficult of ultramodern devices, which are either beyond their technical capacity or beyond their financial means; while at the other extreme some of our sturdiest and most important allies, like the Turks and the Koreans, are entirely willing to keep large forces in the field, and are immensely valuable to the United States and to the whole free world for that reason, but simply do not have the financial resources to arm, equip, and train such forces and keep them on the payroll without our assistance.

We should all realize that our assistance is forthcoming for reasons of our own national self-interest. Our national self-interest is best served by allies whose defense posture is adequate, whose self-confidence has become stronger, whose determination to resist has become steadily firmer as they have acquired the ability to protect themselves against the threats and probings of aggressors. Knowing that they do not stand alone but that the United States stands with them, they have not faltered nor fallen back when the going got tough.

Consider the inflexible courage with which Norway and Denmark have invariably rebuffed Soviet threats; consider the stanch replies of Greece and Turkey whenever they are threatened—and it is not infrequently.

Consider especially the fine manifestation of NATO's unity in the face of the threatening Soviet moves against Berlin a year ago. The Soviets have endeavored most persistently to split the NATO alliance asunder. They are always full of slogans about the liquidation of foreign bases. They have never been able to open up even a small crack in the bonds of collective security which our military assistance program has nourished.

The existence of NATO's fighting forces is attributable in large part to our military assistance program and is perhaps the single strongest bulwark against Communist aggression. It protects all of Western Europe—an area of more than 1 million square miles, with 270 million people, possessing many of the highest technical, managerial, and cultural skills of the world.

Or consider the effective response of the Chinese Nationalist forces to the attempted aggression in the Taiwan Strait in the late summer of 1958, a response made possible through equipment and training provided by our military assistance program.

Indeed, all around the perimeter of the Communist bloc, allied forces which the military assistance program has helped to train and equip, stand ready to repel Communist aggressions. These allied forces deter and contain Communist probes designed to test the free world's ability and will to resist. I say again that, by the calculation of our own self-interest, the military assistance program has been an effective tool in giving us peace with honor.

In November 1958, President Eisenhower appointed a committee of very eminent private citizens, under the chairmanship of William H. Draper, Jr., to make an "independent, objective, nonpartisan analysis of the military assistance aspects of our mutual security program * * *." The committee gathered an extremely able staff, and over some 9 months examined the subject very thoroughly. Following a series of interim reports, the committee made its final report last August.

Considering the mutual security program as a whole, the Draper committee saw no competitive relationship between our military and economic assistance and did not consider that the military assistance program is too great in relation to the economic aid and development program.

The committee concluded that the mutual security program has played a significant role in deterring a third world war, in keeping many nations free, in supporting our strategic system of alliances and oversea bases, and in providing hope for economic progress among the peoples of the less developed countries.

The committee found:

That the military assistance program has provided cohesion, strength, and credibility to our collective security arrangements. It * * * has been one of the principal instruments abroad supporting our foreign policy objectives.

That is provided a large part of the weapons, material, and other support which made possible the rearmament of Europe. For the past decade further Communist encroachment in this vital area has thereby been denied, and the North Atlantic Treaty Organization continues as an essential security bulwark of the free world.

That it had achieved the strengthening of the nations around the periphery of the Sino-Soviet bloc.

That the military assistance program had influenced a shift in current Communist tactics from direct military aggression to subversion, propaganda, and economic offensives.

As to the future, the Draper Committee concluded that the necessary average level of expenditures that should be marked for military assistance over the next few years is not likely to be less in general than that required in the recent past. A moment ago I remarked that the average expenditures over the past 5 fiscal years have been at the rate of $2,400 million, approximately, and that we believe we must continue to spend at least $2 billion annually for some years to come. I am not sure that this nonpartisan committee of eminent private citizens would not favor a rate of spending somewhat higher than that, but they did say specifically that the appropriation last year should be for $2 billion. The Congress actually appropriated $1,300 million.

The Draper Committee recommended that the military assistance appropriation should be placed in the Department of Defense budget, in competition with the appropriations for our own Army, Air Force, and Navy, rather than in competition with appropriations for economic assistance, such as the Development Loan Fund and funds for technical help.

The detailed conclusions and recommendations of this Committee of eminent citizens would fill several pages, too much to cover in full here, but I can say that the Department of Defense has moved promptly to strengthen the administration of the military assistance program along the lines the Committee recommended. One of the first measures taken was to project the planning of the program 5 years into the future. The object of this is to provide a long-range, time-phased schedule of actions by areas and by countries, intended to assure that the furnishing of military assistance directly supports the U.S. military and foreign policy objectives.

At the same time, the planning of the military assistance program has been very much decentralized to the unified commanders of the U.S. Armed Forces in oversea regions, particularly to our commander-in-chief in Europe, our commander in chief in the Pacific, and our commander in chief in the Latin American area. It was felt that control had become too much centralized in Washington.

The Draper Committee also felt that too much time elapses between the day when the Congress passes the military assistance appropriation and the day when the money gets into the hands of the man in the executive branch who is to use it. The considerable number of Government agencies which have a legitimate say in how and where we shall use the military assistance tends to slow things down. Nevertheless, spurred by the Draper Committee, much improvement has been made already and I believe there is good ground for hope that next year we may put the money to work within the time limits the Committee recommended.

And last, the Defense Department adopted the Draper Committee recommendation that there should be in the Defense Department a Director of Military Assistance who would have full responsibility for the operation of the program. That position, as it turned out, fell upon me, and here I am.

Taking all these measures together, they obviously effect a major change in the whole management of the military assistance program. I have just moved in this month, but of course like any U.S. general I have had a good deal to do with military assistance in many earlier assignments.

We embarked on this program 10 years ago in a time of extreme danger and urgency, and like all emergency programs, in the early years, it had to be executed before it could be well planned.

During these 10 years, thousands of dedicated people have worked their hearts out to make the program work in spite of all handicaps. Perhaps the most characteristic difficulty has been countries offering to raise forces beyond their actual capacity to raise, and take on modern weapons and equipment far beyond their actual capability in technical and mechanical skills—while neither they, nor we on the American side, knew—or could know without years of investigation—what they really could handle. The world would not wait for us to spend those years investigating. The program had to proceed anyhow. Nobody has been more aware of these problems than the people who were sweating to make the program work. I have seen their efforts and I take off my hat to them.

There has been a steady improvement in the management—I have been in Europe during the past 3 years and noted a great improvement during that time—and when Mr. Draper came over to explain the task of his committee and what help they would want from us over there, I thought it was the most timely thing I had ever seen. There had been a lot of self-improvement and it was now time for suggestions from some distinguished outsiders.

As I have reported to you, the committee found the military assistance idea entirely sound and more than that—essential. They supported and recommended continuance of the level of spending in recent years, and made some excellent suggestions which the Defense Department has moved promptly to put in effect.

There remains one area which greatly disturbed the Draper committee. I their very first report they recommended "that every effort be made within the legislative and executive branches of the Government to bring clearly before the American people the relationship between the mutual security program and the national interest * * *"

And in their final report they said:

"Now, after much further study, we reemphasize the importance of this effort. The average American citizen does not now relate his own security to the effectiveness of the military and economic assistance programs. * * * He is aften unable to acquire a personal feel of the intensity of the cold war—of the deadly seriousness and growing strength of the Soviet threat. It is essential to bridge this gap of understanding."

They urged a major, sustained effort to make available to the public all the facts about the program; and * * * "that unjustified attacks upon the program be answered publicly, promptly, and forcefully."

You ladies and the 15 patriotic organizations you represent could undertake no greater service at this time, could make no greater contribution to the security of our country, than by undertaking to spread the facts on this program and convince the public that this program should be fully supported by annual appropriations. Make them understand that the military assistance appropriations are a part of the cost of our national security just as much as the Army, Navy, and Air Force funds. Make them realize that this program is designed to protect the future of your children and your children's children. I beg you to consider how your organizations can tackle this job, and then go home and get them behind it. You ladies have the strength to shake the world, and if you use it for this cause you will have served the Republic well.

Books for Friendship in Freedom

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting report written by C. W. Boldyreff, who represents the National Alliance of Russian Solidarists. The report follows:

BOOKS FOR FRIENDSHIP IN FREEDOM

Just as we are curious about the Russian people, so are the Russians about us. They are eager to know the truth about the people of America, their way of life, their beliefs, their aspirations.

There are three principal sources to which the ordinary Soviet citizen may turn for information about the United States. These are—the vituperous Soviet propaganda, the Voice of America, and the books written by American authors for American readers translated into the Russian language.

SOVIET PROPAGANDA

Through years of experience, Soviet citizens have learned that the main objective of the Soviet papers, radio, TV, movies, and so on, is to sell the party line. Although they have mastered the art of reading Soviet papers "between the lines," nevertheless, the continuous hammering about the "evils of capitalism," the "vile designs of the Wall Street sharks," and the like, still leaves a certain impression on the large, less educated masses of the people. But most important is the fact that the Soviet propaganda machine is least of all inclined to tell the truth about America, unless it is disparaging and harmful to the prestige of the United States.

THE VOICE OF AMERICA

The broadcasts of the Voice of America as a rule are strongly jammed. Today this jamming is selective (statements considered as harmless by the Soviet censors are permitted to go through, but anything that arouses their suspicion is strongly interfered with by powerful jammers).

Yet the Voice of America is listened to fairly eagerly in Russia, but mainly to hear the other side of the story, which, too, is accepted by the Russian listeners with a considerable amount of "salt." Having developed a well-justified attitude of distrust for their own government's propaganda, the Russian people are apt to be quite sophisticated whenever any official propaganda is concerned. They accept it as a government strategem, designed to achieve a certain political goal. Hence its truthfulness is questioned. "Every propaganda frog is bound to praise his particular swamp," concludes the Soviet citizen in his skepticism.

AMERICAN BOOKS

The only source of information which the people in Russia readily consider as truthful are the books written by American authors translated into the Russian language. These the Russian people read avidly.

The selection of American books in Russia is quite extensive, and they are published in very large numbers. But what are these books? In the first category are novels and stories penned by American Communists and all shades of fellow travelers. The second category consists of the "protest" works of such authors as Theodore Dreiser, Upton Sinclair, Lincoln Steffens. Included here is Harriet Beecher Stowe's "Uncle Tom's Cabin," for example, and Sinclair Lewis' "Babbitt." It is no wonder, then, that many Russian people sincerely believe that the social, racial, economic, and political conditions in America have hardly changed since the 19th century.

Good, honest books by contemporary American writers must be made available to Russian readers. The Soviet Government, of course, will never translate and publish them. It is our job to find the means and ways to have them translated, published, and distributed in Russia.

Here is a concrete plan on how this could be achieved by private citizens' efforts:

SELECT THE BOOK

The first step is to select a truly representative book. It could be a novel, a biography, an autobiography, a travelog—any form of literary endeavor, but it must be, first of all, expressive of the spirit of America. It must be entertaining, truthful, and well written.

Groups of students, women's clubs, various civic or community groups, church congregations, service clubs, should set up committees to determine first of all what elements the books should have to be considered truly representative of the aspirations and beliefs of the people of America. When the general character of the book is outlined, individual members should be requested to do the necessary reading in search of such books.

Finally the committee selects one book of the several proposed.

APPROACH THE RUSSIAN PUBLISHER

When the book is selected, the committee approaches the N.T.S. publishing house, either directly ("POSSEV," Merianstrasse 24-a, Frankfurt/Main, West Germany), or indirectly, through: Freedom Fund, Inc., 52 Vanderbilt Ave., New York, N.Y. Constantine W. Boldyreff, 2528 McKinley St., North Arlington, Va.

The N.T.S. and "POSSEV" have among their members several outstanding Russian authors and journalists. Some of them are also proficient in the English language, and they are capable of producing a first-class literary translation.

An estimate will be made by "POSSEV" of the approximate cost of translation and publishing of the book in the Russian language.

It should be noted here that, in view of the purpose of this project, "POSSEV" is willing to handle the job (translation and publishing) at cost price. (Tentatively, as a figure for orientation, a book with about 200 pages of the regular 5½ x 8½ format could be published for around $3,000, giving 5,000–6,000 Russian copies).

RAISING OF FUNDS

The two principal elements are now available; the book and the translator-publisher. The only problem remaining is to obtain the—perhaps—$3,000. A drive should be made among the members of the group concerned. This will produce the total amount, or but a fraction of it, depending on the financial potential and size of the group. If this is a group of students—the amount collected among them would probably constitute but a token sum.

When the drive is finished, and if the amount of money collected is insufficient, the committee should approach one of the various private foundations. There are a number of organizations which would gladly contribute the required amount for this important educational project. The committee could also inform the local community through newspaper, radio, etc., and solicit its help. There are many other ways by which a worthy project can be assured of the necessary financial backing, particularly when the capital needed is so modest.

DISTRIBUTION IN RUSSIA

When all of the elements (book, translator-publisher, funds) are at hand, the group informs "POSSEV" to go ahead with the translation. A copy of the translation will be submitted to the group for perusal and comments before the print is set.

At the same time, the group issues a press release, and approaches individual journalists, radio commentators, and similar people to ask that they inform the American public that several thousand copies of the selected book will soon be available from this group for American tourists planning to visit the Soviet Union, to be distributed as souvenirs to Soviet citizens. A modest price could be quoted, if it is desired to cover the publishing expenses (for example, if part of the capital was borrowed), or to create a revolving fund for further book publication.

In 1959, about 10,000 American citizens travelled in the Soviet Union. Unless conditions deteriorate considerably, an even greater number will visit Russia in the months to come. The great majority of American tourists were anxious to take along with them something they could leave with their new friends in Russia as souvenirs. Could there be a better souvenir than a good entertaining, and honest book about this country?

Many thousands of Soviet citizens visited Western Europe, and some even America, last year. Many more are expected to come this year. These books about our country could be given to them as goodwill gifts all over the world. N.T.S., which has members in many parts of the world, and many groups in this country which welcome Soviet visitors, could joint together in this cooperative effort.

EFFECT OF THE CAMPAIGN

To estimate the impact of this campaign, let us mentally trace the effect one such book could produce in 1 month in Russia. A book given to a Soviet citizen, in the span of 1 month, will be read by approximately five persons. Considering the novelty of the material, it is likely that each of these people will set out to comment upon it in detail to approximately 10 or more other people. And these people, in turn, will comment upon the book's existence to many, perhaps 10 or 20, or their own friends. Thus, in 1 month, a single one of these books could bear some effect upon the thinking of a thousand Soviet citizens. Its effect would be comparable to that of a stone throw into a pool of water. The first circle around the spot of impact would be relatively small but sharply delineated. The subsequent circles, while growing in size, would decrease in intensity. With reasonable luck, the life of this single book could be several years, in which it received far more than the normal wear and tear.

REACTION OF THE SOVIET GOVERNMENT

Under the present conditions, a book that is not critical of the Soviet Union, and contains no anti-Communist propaganda, cannot be confiscated from an American tourist by the Soviet Government. Since the idea is to publish a book of an American writer, designed for American readers, and dealing with matters purely American, the Soviet Government, paralyzed by its own "peaceful coexistence" propaganda, will not be in a position to do anything so long as the book is in the hands of an American citizen. When, however, it gets into the hands of a Russian, he himself will take the necessary measures of precaution to keep it away from the eyes of the undersirable elements. Remember that, even though the State Department magazine "Amerika," which is circulated in exchange for the Soviet "U.S.S.R." publication in this country, is not on sale on newsstands in Russia (it is available mostly on subscription to carefully screened readers, or could be bought in two or three specially authorized bookstores in Moscow), individual pages of this magazine are being sold for tens of rubles on the black market—such is the great thrist of the Russian people to learn the truth about the United States.

It should be added here, that the possession of such a non-political book is not illegal in Russia today, even by a Soviet citizen. However, people know how sensitive is the Communist government to their reading of uncensored literature, and this is the reason why they are so particularly eager to peruse it, and so skillful in hiding it from unsolicited attention of the party supervisors.

There is no need to stress the great importance of the promotion of better understanding and sympathy for America in Russia, but this plan also has an important educative significance for ourselves.

In the process of selecting the right book, we ourselves will start thinking of what is the message of America, what is the most precious of her treasures. While engaging in this creative effort, not only shall we strive to learn more about the Russian people, about the formidable problems which face the world today, but we shall also gain a better understanding of the great all-human purpose of those who have laid the cornerstone of the unique social-economic structure which the world knows today as America.

C. W. BOLDYREFF,
Representative of NTS (National Alliance of Russian Solidarists).

A Poetic Approach to Peace

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. WOLF. Mr. Speaker, Edith E. Brown of Cedar Rapids has a rare talent in presenting a poem to present a basic idea. How wonderful it would be if her poem could be made reality without self and fear:

HOW LONG, OH, LORD
(By Edith E. Brown)

The nations met together.
Each one sent their best
To represent them in this conference;
Those who had stood the test
Of wisdom and of magnanimity,
For both were needed.
Together these must rule, or else,
Destruction.
All the distinguished delegates were of one mind
In one respect;
All were agreed
That peace must be attained,
All realized omniscience, almost,
Would be required
To solve the multifarious problems
With justice and with mercy.
Peace was in their hearts,
Peace was their purpose.
Not a peace imposed by numbers or by force,
Not a peace depending on servility,
Nor peace that bribes could purchase.
It must be peace
That hurt no nation's pride,
That left no nation needy;
That announced, and felt, respect for every man
Of every race and creed.
Could it be done?
It could have been.
But there were two persistent devils who crept in
To those peace-loving hearts,
Self and Fear.
So they qualified proposals;
So decisions were postponed,
And peace again retired.
Self and Fear.
When those two devils shall be overthrown
We shall have peace.

Antarctic Continent Territorial Claims

EXTENSION OF REMARKS
OF
HON. CHARLES E. GOODELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. GOODELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Military Order of the World Wars, dated October 28, 1959, with a letter to the editor printed in the Washington Post on October 22, 1959, signed by E. A. Kendall of Washington, D.C.:

RESOLUTION OF THE MILITARY ORDER OF THE WORLD WARS

Whereas, over a great number of years the United States has sent exploring expeditions into the Antarctic and American citizens have explored parts of this vast continent; and

Whereas the Antarctic Continent is rich in mineral deposits and strategic in its location; and

Whereas the United States has made no announcement of territorial claims in Antarctica while other nations have laid claim to all but 25 percent of its territory; and

Whereas a proposed treaty with 11 other nations includes a freezing of the status quo relative to territorial claims: Now, therefore, be it

Resolved, That the Military Order of the World Wars, assembled in national convention in Detroit, Mich., this 15th day of October 1959, urge the U.S. Government an-

nounce its rightful claims and assert sovereignty over areas of the Antarctic that have been discovered and explored by official expenditions of the United States of America and its citizens; and be it further

Resolved, That a copy of this resolution be wired to the President of the United States and to the Secretary of State.

CLAIM THE ANTARCTIC

The U.S. public debt is nearing $300 billion. Income taxes are abnormally high. The United States has spent over $50 billion in aid to other countries since World War II. The United States has never yet claimed her antarctic territories.

Her taxpayers have spent $250 million in the antarctic just in the past few years; and during her total of explorations there the United States has paid for vast territories in lives, effort, and tax funds. After a study of these figures, and a study of the U.S. relationship to the Antarctic beginning 138 years ago, one can understand why the leading patriotic societies, some civic groups, and some veterans' groups have taken the position that the United States should definitely lay claim to the great rich tracts that she has earned in the Antarctic.

The kindest thing the United States can do for the world right now is to gird herself economically. There would be no benefit to the world, especially the smaller nations, if the United States impoverishes herself by abandoning any plan to claim her rightful antarctic territories very soon.

The world realizes what splendid work American explorers have done there. There would be no question of imperialism or expansion in connection with the United States making her rightful land claims in Antarctica because her work is well known and her boundaries have been fairly well defined after each expedition as most almanacs show.

The Antarctic Treaty Conference now under way has as its highly commendable themes the maintenance of peace and scientific cooperation there. As far as peaceful purposes and a welcome to scientists from afar may be concerned, these two factors have flourished in the United States since 1776 and there is every reason to think this country would operate her rightful antarctic territories under the same high standards.

Thus, American organizations have voiced their favoring proper U.S. territorial claims.

E. A. KENDALL.

WASHINGTON.

Grants for Sewage Pollution Control

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD a table showing amounts of grants which would be made available to the several States for construction of desperately needed sewage pollution control works under three different proposals.

The first is the President's budget proposal of $20 million, a clearly and grossly inadequate proposal which by no means will attack the problem of pollution of our rivers and streams with its accompanying health hazard and economic loss to farmers, business, municipalities, and its tremendous attendant danger to human life.

The second column shows the amount of grants available under Public Law 660 if the full $50 million is appropriated. This amount is about half that required to stimulate a sufficient growth in State and municipal programs.

The last column shows the amount of Federal grants to the several States under the conference report on H.R. 3610 of $90 million.

According to experts in this field this amount of grants will stimulate a sufficient rate of construction of sewage abatement works to clean up the foul, disgusting, and polluted rivers of this country.

I hope my colleagues will study these figures, especially insofar as their own States are concerned, since the President has vetoed H.R. 3610.

The table follows:

State allotments for grants for construction of waste-treatment works, fiscal year 1961

	President's budget	Present program	New program
Total	$20,000,000	$50,000,000	$90,000,000
Alabama	448,890	1,122,225	2,020,005
Alaska	170,650	426,625	767,925
Arizona	223,870	559,675	1,007,415
Arkansas	403,670	1,007,675	1,813,815
California	819,460	2,048,650	3,687,570
Colorado	252,000	630,000	1,134,000
Connecticut	247,770	619,425	1,114,965
Delaware	137,270	343,175	617,715
District of Columbia	180,260	450,650	811,170
Florida	360,146	900,350	1,620,630
Georgia	450,780	1,126,950	2,028,510
Hawaii	213,000	532,725	958,905
Idaho	235,570	588,925	1,060,065
Illinois	702,280	1,755,700	3,160,260
Indiana	419,530	1,048,825	1,887,885
Iowa	354,570	886,425	1,595,565

Roseburg, Oreg., High School Students Plan Friendship Tour to Mexico

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. PORTER. Mr. Speaker, we hear much these days about people-to-people relationships. Today it gives me a great deal of pleasure to announce that the members of the Roseburg High School Spanish Club, Los Conquistadores, hope to be active participants in the growing field of personal diplomacy. The students are working to raise the necessary $2,000 to charter a bus which will take them to Nogales, Hermosillo, and Guaymas, Mexico.

They have earned enough in their special projects to get there. They hope to have the cash for the return trip by the time school ends. The Roseburg School Board has approved this trip. It will be well chaperoned and is directed by Mr. Berton M. Bailey, who teaches Spanish at the high school.

The students intend to pay their own expenses which Mr. Bailey tells me will be modest because of the help being given the club by the Mexican Chamber of Commerce and the department of education. Nevertheless, there still are expenses to be met.

The students plan a variety of work projects. These include car washes, rummage sales, a candy sale, and a Mexican dinner. I know the candy is good because my staff and I received a box from the students. A special cover on the box read "Your purchase will help us take the friendship tour of Mexico." That message was prominently displayed on the cross-country trip from Roseburg, Oreg., to Washington, D.C. I understand the Mason Candy Co. helps students help themselves by making the candy available at a special rate.

I commend the members of Los Conquistadores for their project. I hope they are establishing a pattern which other student groups will follow.

I have brought their project to the attention of the very able and personable Ambassador Representative from Mexico to the Council of the Organization of American States, my friend Vicente Sanchez Gavito.

Persons interested in the project of Los Conquistadores could secure more information by writing directly to the club. I would be happy to relay ideas or thoughts to the students.

Under leave to extend my remarks I include at this time a newspaper article about the project and a portion of the letter I received from Mr. Bailey:

SPANISH CLUB PLANS TRIP—MEXICAN GOAL SET BY ROSEBURG GROUP

"Mexico, here we come."

With this idea in mind approximately 45 Roseburg High School students, who are

members of the Spanish Club, Los Conquistadores, will work toward the goal of a trip to Mexico.

Spanish Club students have received the approval of the school board for a trip to Mexico during June, providing enough money can be raised to finance the expedition. A total amount of approximately $1,600 will be needed in order to make the 10- to 15-day trip possible. If enough money is not raised, then the trip may be delayed for a year or perhaps the money may be spent for travel scholarships which would enable some students to make the trip.

MONEY PROJECTS EYED

As to how the students plan to raise the money—well, they're going to work for it. A candy sale and car wash have already been planned and other fund-raising projects will take place later.

The money which they earn will be spent for chartered bus fare. Each student will pay his own lodging and food expenses while on the trip.

The Mexican Chamber of Commerce and the Department of Education in Mexico are working together in making plans to provide for the students. In some cities the students will stay in private homes of Mexican students. In others they will stay in hotels.

As to the route for the excursion this is the tentative plan: Enter Mexico at Nogales and then proceed to Hermosillo. There they will visit the University of Sonora and the state capital. From Hermosillo they plan to go to Guaymas, which is located on the Gulf of California.

While on their trip, the students hope to see old museums, churches, different cities, and possibly a bull fight.

STUDENTS LIKE IDEA

Naturally the students are sold on the idea of a trip but there is a purpose behind this expedition. The advanced Spanish students will have the opportunity to visit a foreign country, which they otherwise might not visit. A better understanding of the way of life and the system of government in Mexico would be gained. This trip could make for better international relations and would definitely be of educational value.

The trip will be well chaperoned and be under the direction of Spanish instructor Berton Bailey. He has traveled, studied, attended school and lived in Latin America.

FOREIGN LANGUAGE DEPARTMENT,
ROSEBURG SENIOR HIGH,
Roseburg, Oreg., February 16, 1960.

The Honorable CHARLES O. PORTER,
House Office Building,
Washington, D.C.

DEAR MR. PORTER: Under separate cover I am sending you on behalf of the members of the Roseburg Hi Spanish Club (Los Conquistadores) a box of their Friendship Tour to Mexico candy. I think you will be interested in hearing about this fine project being undertaken by the Spanish students to further their knowledge of Spanish and a Spanish speaking country, while at the same time trying to further friendly relations between Mexico and the United States. And I might add that the students are dead serious about the latter point.

By various work projects, including candy sale, Mexican dinner, car washes, rummage sales, etc., these students are attempting to raise $2,000 to charter a bus to Nogales, Hermosillo, and Guaymas, Mexico, at the close of this school year. At the present they have enough money to get there—and in the next few months they hope to earn the return fare. Each student will pay his own expenses which will be very modest because of the help being given us by the Mexican Chamber of Commerce and the Department of Education. But as you can see, this is still quite a project. And I think that it is indicative of the community spirit of Roseburg in spite of the destructive blast.

If you recall your visit to Roseburg last fall, these are some of the same students to whom you spoke late that day. They are most active in their interest in Latin America.

Sincerely yours,

BERTON M. BAILEY,
Spanish Teacher.

Surplus?

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. WOLF. Mr. Speaker, sometimes words can be expressed better in poetry. Using our God-given abundance more fully to help people is my goal. Mrs. Brown's poetry tells the story well:

SURPLUS?
(By Edith E. Brown)

Surplus?
Is no one hungry?
Surplus?
No!
Impossible to grow
More food than needed
While one child says, "Please,"
Or one aged heart agrees
To die so prices may be kept just so.

Surplus?
Why
Should children cry
For food, and mothers weep
While we pay storage tax to keep
Luxury prices at parity?

Surplus!
Oh!
It must be so
The world could find a way
Of distribution, so all needy may
Honestly share . . . without charity.

REJECTION SLIP AND REPLY
(By Edith E. Brown)

"Sorry we must refuse
The quotation from BHAVE,
Though the thought is good.
It seems inappropriate to use
His words, when his religion
Is more religion of philosophy
Than one of deeds.
Ours, as you know,
Is more than one of creeds."
Oh!
Did you ever go,
Barefoot and thirsty
Along dusty roads;
Meagerly fed and scantily clothed,
Nothing to call your own but love
For needy thousands?
Day after day, month after month,
Using that love to say
"Share."
Finding your love pure and unselfed enough
To make others care . . . and give,
As BHAVE did?
Granted, his deeds are not the same as ours,
But are they less or of less worth,
When thousands with no choice but beg or starve
Now have their tiny fertile plots
With harvests enough to feed their own;
And yet the rich man is not poorer.

The Agricultural Situation

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. PELLY. Mr. Speaker, under unanimous consent I insert in the RECORD certain excerpts from a bulletin entitled "Perspective" issued last December by the investment management department of Calvin Bullock.

This material in an objective way gives a summary of the conditions in agriculture which to me strongly call for passage of legislation to repeal farm subsidies and return to the law of supply and demand.

The excerpts follow:

Agriculture has in 1959 been one of the few soft spots in an economy which in toto has been establishing new all-time records. The Department of Agriculture has recently reported that for the first three quarters of this year realized net farm income was at the seasonally adjusted annual rate of $11.2 billion as compared with $13.1 billion for the same period of 1958, representing a decline of almost 15 percent. * * *

In the report of the Department of Agriculture pointing out that net farm income in the first three quarters of this year was down 15 percent on an annual rate basis, there was also included a forecast that a further decline is expected in 1960, but of much smaller proportions than the drop occurring this year. In view of the fact that 1960 is an election year, it is certain that in the months ahead increasing attention will be given to the so-called farm problem. Back in 1952 it was stated in this publication: "* * * for the past two decades the American farmer has been living in what has been called 'the protective embrace of Government,' a position which has been rather unanimously solicited and continues to be fiercely protected by legislative representatives of agricultural constituencies." This statement is every bit as applicable to the current situation as it was 7 years ago. And, unfortunately, a solution to the problem seems no nearer than in 1952. * * *

The continuing protective embrace of agriculture by Government is evident from the composition of the Federal budget for the fiscal year ending June 1960. Expenditures for agriculture are estimated at $5,996 million, or approximately 6 percent of the total budget. In 1952 Federal expenditures for agriculture were $1,045 million, or 1.6 percent of the total. Furthermore, between June 30, 1952 and October 31, 1959, the investment of the Commodity Credit Corporation in surplus farm products has increased from $1,437 million to approximately $9,200 million. However, this accelerated aid to agriculture in the form of price support loans or outright purchase by Government, has in the current year been quite ineffective in reversing the downtrend in farm prices and incomes. * * *

Between 1949 and 1958 farms in operation have declined from 5,722,000 to 4,749,000—a drop of 17 percent. Farm population in the same interval has fallen from 25,954,000 to 20,827,000, or by 19 percent. Furthermore, it has very recently been announced that the 17th Census of Agriculture, now underway, may reduce the number of farms by about 500,000 as a consequence of a more precise definition of just what constitutes a farm. This revision of the basic agricultural

statistics will also probably remove about 4 million persons from the last total of farm population.

Farmers' income from nonagricultural sources has increased from $5,200 million in 1949 to $6,200 million in 1958, or a gain of about 19 percent. Farming is, of course, a highly seasonal business, and in recent years increasing numbers of farm people have found opportunities to supplement their earnings from other sources. It is estimated that the typical farm wage earner spends about 216 days a year in farmwork, whereas farmers engaging in nonfarm occupations spend about 62 days a year in that activity.

This combination of a decline in the number of farms (accompanied by an increase in size) and the total of the farm population, together with the increase in income from nonfarm sources, has made the per capita figures on farm income look very much better than the absolute totals. Specifically, per capita net income of the farm population from all sources has increased from $767 in 1949 to $1,066 in 1958—a gain of about 39 percent.

The problem of surplus-crop production continues, but it should be remembered that this surplus output is confined to a relatively few products—primarily wheat, corn, cotton, and tobacco. Furthermore, it is important to bear in mind that the big price declines in 1959 have been in livestock rather than in crops. Livestock production moves in rather clearly defined cycles, and, although an early change in the present trend is not likely, the problem of excessive hog and cattle population is much more susceptible of solution than the problem of crop surplus, which, to a certain extent, has been perpetuated by an unrealistic level of price supports.

Finally, it is obvious from some of the preceding statistics that the impact of declining farm prices and income on the total economy is much less today than when farmers accounted for 25 percent of the population, and farm income accounted for over 10 percent of the national income, as compared with 1958 ratios of 12 percent and 4.7 percent, respectively. This is a proposition which will hardly be espoused in legislative councils, but it is, nontheless, an economic fact.

Retirement Nightmare

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an editorial appearing in the Washington (D.C.) Post and Times Herald of February 20, 1960:

RETIREMENT NIGHTMARE

Everywhere in its travels around the country, Senator MCNAMARA's Subcommittee on Problems of the Aged and Aging heard anxiety expressed by older citizens as to how they would pay for medical care in their retirement. How can anyone with foresight, old or young, fail to be anxious about this problem? While a man is employed, he can enjoy the protection of some sort of group or private insurance program to cover medical and hospital bills if he becomes ill. The chances are, however, that when he retires he will no longer enjoy such protection; yet this is the time, obviously, when he will need it most—when, indeed, he is certain to need it sooner or later, which is what makes the cost of such private insurance prohibitively high for the aged.

The McNamara subcommittee came to the conclusion that this problem "should have top priority for legislative consideration in 1960" and recommended in its report an expansion of the system of old-age, survivors, and disability insurance to include health service benefits for all persons eligible for OASDI. We think this conclusion is inescapable. The essence of it is embodied in the Forand bill which would cost about $1 billion a year to be financed with one-fourth of 1 percent increase in social security taxes. Like other old age benefits, this would be paid for by a citizen throughout his wage-earning years, with a matching contribution by his employer. It would relieve retirement of one of the worst of its nightmares.

That the American Medical Association would offer its usual doctrinaire opposition to this proposal was as much to be expected as a bill from a doctor after a visit to his office. Senator MCNAMARA has observed that the AMA had "nothing to offer but tired abuse." This is not, by the wildest flight of the most neurotic fancy, socialized medicine or political medicine. It is simply a system, if the AMA could but calm its nerves enough to realize it, which, like Blue Cross or Group Hospitalization or any other insurance program, would enable a patient to go to the doctor and the hospital of his choice and pay the bills resulting from the care he needs in old age. It would help doctors, hospitals, and medicine in general. And it would enable American men and women to retire in their old age with more security and self-respect.

Scents, Cents and Sense

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. BLATNIK. Mr. Speaker, one of the clearest explanations of the water pollution control issue now before Congress is contained in the following editorial from the Washington Post of February 19. I recommend that all Members of Congress read the editorial prior to the vote on Thursday to override the President's veto of H.R. 3610.

The editorial follows:

SCENTS, CENTS AND SENSE

President Eisenhower now has before him a bill which appears to have the enthusiastic support of nearly everybody except his own Bureau of the Budget. This is the pollution control program which Congress has just sent to the White House and which has the dubious distinction of facing this year's first presidential veto. It seems incredible that a veto should even be considered a possibility for a program of such proved merit and of such self-evident importance to the health and safety of the Nation—especially when the Potomac's foul waters offer immediate witness to the need for cleansing our sewage-laden rivers.

Consider the impressive record of the existing program. In four years, $163 million in Federal funds has helped finance 1956 projects with a total estimated cost of $938 million—a ratio of $4.70 in local participation for each Federal dollar. Representative JOHN A. BLATNIK, author of the legislation, contends that no other Federal grant program can match this extraordinary record of stimulating the kind of local initiative that the President so frequently admires.

This performance helps explain why the pollution program has won so many converts event among State officials who once expressed reservations. State sanitary engineers and water pollution control administrators are virtually unanimous in urging continuation of the program at $90 million a year for 10 years. The League of Women Voters is firmly in support of the Blatnik measure, along with a host of civic and conservation groups. Even the President's own Federal Pollution Control Advisory Board has praised the existing program and has urged the Administration to support the kind of legislation now before Mr. Eisenhower.

In years past, the administration itself favored pollution control aid on a scale comparable to the Blatnik bill. But the counsel of save-now, pay-far-more-later has since prevailed. Surely the President ought to examine the merits of the program carefully before envisaging a veto which all Republicans—Mr. Nixon especially—would find difficult to justify in months ahead.

Tossing Away 20 Percent

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the February 9 issue of Chicago's American, in my opinion, is a most interesting and enlightening editorial which I am including in the RECORD for the consideration of my colleagues:

TOSSING AWAY 20 PERCENT

You think it's pretty nice that the Federal Government is distributing $9½ billion in grants-in-aid to projects in the various States this fiscal year? That old dream exploder, Senator HARRY F. BYRD, Democrat, of Virginia, says it isn't so nice; it's one of the important reasons why your income tax load keeps getting heavier.

In an address on this subject in the Senate last week BYRD introduced arithmetic into the discussion—an action which is regarded by many Members of Congress as a dirty trick. And BYRD's arithmetic showed that when the Federal Government makes these grants it is only giving the taxpayers back some of their own money—and charging them 20 percent as a sort of service charge.

The taxpayers lose one-fifth of their money by paying it over to the Federal Government and then getting it back in Federal grants. The 20-percent deduction is spent on Federal administration of the money, which means it is used to pay the salaries and expenses of Federal payrollers.

The payrollers wouldn't be needed if the States and local communities were permitted to keep this tax money at home and spend it themselves.

As BYRD pointed out, the grants-in-aid programs keep growing in number. There were less than half a dozen in 1933. In the present fiscal year [1959] there are 60 such grants to the States, involving expenditures of $6.4 billion, besides the 30 programs under which Federal money is paid directly to individuals, such as payments to farmers for their surplus crops and for not raising things. These will cost $3.1 billion

this fiscal year bringing the expenditures up to $9.5 billion.

Another billion will be added in fiscal 1960 by the Federal aid to education bill passed by the Senate last week if it is passed by the House and President Eisenhower should fail, for any reason, to veto it.

Also, as BYRD predicted, this will start the Nation's schools well on their way toward being controlled by the Federal Government, "with maximum extravagance and minimum efficiency."

Exchange Students Between East Harlem and Puerto Rico

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. SANTANGELO. Mr. Speaker, on Thursday, February 11, 1960, I was pleased to attend a dinner meeting at La Guardia Memorial House, located at 311 East 116th Street in my congressional district. La Guardia Memorial House is named after the famous Fiorello La Guardia, who represented my district many years ago and was the mayor of the city of New York for a period of 8 years. This institution is a central meeting place for all groups of people and a traditional landmark in New York City. This meeting of February 11 was attended by the leaders of the Puerto Rican and Italian-American communities. The leading priests and representatives of the major churches in the area and prominent labor leaders also gathered at this display of unity.

In the past, New York newspapers have proclaimed that tensions existed between ethnic groups residing in the East Harlem area of New York, and that gang rumbles and fights were the result of this seething conflict. On the assumption that a better understanding between these groups and an interchange of aspirations and ideas would eliminate the friction, community leaders gathered this year and initiated programs designed to promote better understanding and intergroup relations.

One of these programs was to send seven outstanding boys of Italian origin from East Harlem to Puerto Rico during the Christmas holidays at the expense of the Commonwealth of Puerto Rico, and Puerto Rico would likewise send to our area a similar group of young men in an exchange visit. The young men, who were selected by the church organizations, the schools, and civic organizations, went, saw, and reported. They were chosen because of their outstanding records as leaders in school and community affairs. They left for Puerto Rico on December 26 and returned January 1, 1960. Their observations and experiences were described to the audience by its spokesman, Mr. James Siniscalchi. His talk was a highlight of the evening. The boys who visited the beautiful island of Puerto Rico were: Anthony Bencivenga, David D'Aversa, John Munafo, Joseph Proto, James Siniscalchi, Louis DeRosa and Lawrence Totaro.

The cochairmen of these intergroup activities are the Honorable Manuel A. Gomez, judge of the magistrate court, and Edward Corsi, director of the La-Guardia Memorial House and former industrial commissioner of the State of New York.

During the evening Fortune Pope, editor and publisher of the Il Progresso, and president of radio station WHOM, sent a message through his capable and personable managing editor, Frank Cantelmo. His words reflect the spirit of the meeting and the aspirations of the community leaders who substitute distrust with friendship. I believe that the readers will enjoy Mr. Pope's remarks as much as I did hearing them. His talk follows:

I am delighted to greet you on behalf of Mr. Fortune Pope, editor and publisher of Il Progresso and president of radio station WHOM, who regrets he was unable to attend your dinner meeting tonight and who asked me to represent him. Perhaps the best way to express his feelings is to tell in his own words the thoughts he would have communicated to you had he been present tonight.

Americans of Italian origin in this city and State, who represent the largest single nationality group, desire the friendliest possible relations with all other ethnic groups in our community. They harbor no prejudices and no hostility toward any group. As regards the great mass of Spanish speaking peoples, Italians feel a kinship greater perhaps than with any other nationality group, because they have so much in common. This kinship is based on race, religion, and other common factors all of which serve to create indissoluble ties of friendship and neighborliness.

Mr. Pope was quite happy to participate in the mission of the seven Italo-American boys to Puerto Rico and he was delighted to present Vincenzo Gemito's statue of Columbus to the Governor and the people of Puerto Rico as a symbol of how much, particularly in the exploits of Columbus and the discovery of America, our two peoples have contributed to the greateness of this country. Mr. Pope was also happy to hear from the representatives of Il Progresso in Puerto Rico about the warmth with which these boys were received wherever they went and particularly by the Governor, by Commissioner Sierra, who is here with us tonight, by the mayor of San Juan and other spokesmen of Puerto Rico and the Puerto Rican people themselves who did so much to make these boys feel at home. And these stories appeared regularly in Il Progresso and were broadcast over the facilities of radio station WHOM.

Italian Americans, moreover, being themselves among the latest arrivals in the great migration of Europeans to the United States, and having still fresh in their memory the hardships and difficulties of settling in a new strange land, can understand far better than many others the plight of the Puerto Ricans in this difficult period of adjustment to continental American life.

Much has been said and written concerning the relations of Italians and Puerto Ricans in this city. But despite some bigoted extremists in both groups, Italians and Puerto Ricans are working and living together, side by side, in the same shops and factories, in the same restaurants and hotels, in the same labor unions. They are united in the struggle for a higher standard of living, better working conditions and a greater share in the well-being and prosperity of America.

In all sections of the city they live as neighbors—real neighbors. East Harlem is typical in this respect, and this joint neighborhood meeting—in which those of us of Italian background and you from the beautiful island of Puerto Rico break bread together and share common democratic ideals of fair play and social justice—represents to the greatest degree, the spirit of our common relations.

We wish the Puerto Ricans in this city the best of luck. We extend to them all the cooperation of which we are capable. Mr. Pope, together with Il Progresso and radio station WHOM, assures you that we shall do everything in our power to promote the friendship which is the prime objective of your committee.

As Americans of Italian origin, we feel strongly the Italian heritage of Columbus and that he should be so honored by all peoples. We are not unaware, however, that without the support, the finances and the contributions of Spain, Columbus might never have realized his dream of the New World.

In this connection let me say that Mr. Pope—as president of the Columbus Citizens Committee, which organizes the annual celebrations, together with the city of New York, in honor of Christopher Columbus—is hopeful that some way can be found to include in this huge demonstration, an active participation and representation of the Spanish community.

These are the sentiments of Fortune Pope, which I have had the privilege of communicating to you. For me (I also share these sentiments) this has been a gratifying task, because I am sure that the sentiments of Fortune Pope will do much to foster better understanding between our two peoples.

I thank you.

Two Federal Employees Honored

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. BROOMFIELD. Mr. Speaker. All too often, those of us who work so closely with laws and proposed laws, with paragraphs and policy statements, are apt to forget those who are serving our Federal Government on the local level.

Last Thursday, the Federal Business Association of Detroit paused to honor two of these Federal employees who have done a remarkable job for the Detroit area, for the State of Michigan and for our Nation.

These men have demonstrated outstanding ability, imagination, and devotion to duty. They are a credit to all of our Federal employees in all 50 of our States.

Mr. Fred W. Kaess was named "Outstanding Federal Administrator of the Year." He is U.S. attorney for the eastern district of Michigan. Recently, the Attorney General of the United States commended his office as being one of the best administered U.S. attorney's offices in the Nation.

The reasons for this recognition are many. The backlog of pending cases was considerably reduced. The office

also vigorously prosecuted those who had flouted Federal law, while at the same time he and his staff were equally diligent in protecting the rights of those who were innocent.

Mr. Carl Hauck, executive housekeeper of the U.S. Public Health Service hospital at Windmill Pointe, received the honor of being named "Federal Employee of the Year."

As head of the housekeeping department, Mr. Hauck is in charge of the cleaning and laundry work at the hospital. This responsibility also involves all of the auxiliary buildings and nine doctors' residences.

He has been officially recognized by the Public Health Service for his outstanding qualities through several letters of commendation, outstanding performance ratings, and superior accomplishment awards from Division Direcors up to the Assistant Surgeon General. He takes exceptional pride in the general appearance and cleanliness of the hospital grounds and has done much to make this hospital an excellent one in every respect.

May I extend to these two loyal Federal employees my heartiest congratulations for the honor which has been bestowed upon them, and I urge my colleagues to take note of their accomplishments.

More Grassroots Opinion on Farm Price Supports

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. PELLY. Mr. Speaker, the pastor of a church near my home writes me as follows:

Was heartened by the news in the Bremerton Sun the other evening in which you are recommending that Government get out of the price support program and related meddling in farm problems. I hope you will continue on this road—it may be difficult for farmers in the transition, but in the long haul the farmer would be better off left to work out his own problems.

Attached to the letter was a clipping from Christian Economics of February 9, 1960 which contained the following under the caption of "Do you know":

That one rice producer got a Government crop support check of $5,369,078 and another $1,331,723? Other rice checks were in excess of half a million dollars.

That barley price support checks exceeding $1 million to each farmer have been paid, that checks to dry bean growers are in excess of half a million dollars each, that wheat checks are in that category and soy beans, oats and other crops only a little less? How apt Will Rogers' reminder, "We ought not spend money we haven't got for things we don't need."

That 67 farmers received checks of $50,000 or more for withdrawing land from production, much of which would not have been farmed in any event? Two thousand four hundred and forty-two of these soil bank payments were $10,000 or more.

That, not including heavy interest, deterioration or transportation charges, storage costs for agricultural surpluses are running more than $1 million a day?

What Will Be Connecticut's Place in a Changing World?

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. DADDARIO. Mr. Speaker, I recently had occasion to look over the 1960 report to the people of Connecticut from the founders of the University of Hartford. This is the newest university in a State which has a long and distinguished record in this field.

All of us know, I think, how great an interest the American people are taking in the educational future of the country. Within a few short weeks, I hope we will have a chance to consider constructive aid to help keep open the opportunity for higher education to all those qualified.

The University of Hartford is an outstanding example of the way in which a community, through voluntary effort, can help meet this problem. This university was formed of three components which had been serving the people of Hartford County and the State. It set its goal, recruited people of proven ability to go about meeting them, and selected outstanding leaders for the working staff. To be its chancellor, the university's board chose Vincent Brown Coffin, a distinguished citizen, a graduate of Wesleyan University, a fine executive and administrator, and a man equal to the task of matching the university's goal with its performance.

Today, more than 10,000 students attend classes of the university, between 8 o'clock in the morning and 10 at night. Some 736 courses of high quality are offered, in the same pattern as such Connecticut schools of earlier establishment like Yale, Trinity, and Wesleyan. But what makes the University of Hartford unique is that 70 percent of its students hold jobs other than their studies. They are employed in 1,000, large and small, business, industrial, and professional firms, throughout Connecticut.

These students are fine examples of American men and women. They live at home, commute to college classes, and earn a substantial part, or all, of the cost of a college education while learning.

The University of Hartford is now constructing a new 150-acre campus. More than $13 million has been voluntarily contributed toward this necessary expansion. All of the money goes into instructional facilities. Heading the expansion program are Alfred C. Fuller, head of Fuller Brush Co., and 229 additional founders who are leaders in Connecticut life.

I would call you attention to the University of Hartford as an outstanding working model of how our American people can meet their problems by their own initiative. With the help of benefits that have been wisely written into the law to encourage, or, as the farewell message of our first great President admonished, promote, as an object of primary importance, institutions for the general diffusion of knowledge, the university will, I am confident, continue to grow. I include such benefits as tax exemptions and assistance which may have been or will be authorized to support facilities and scholarship in the public interest.

The university demonstrates the example of young people solving, through their own labor, the problem of financing a college education.

It shows educators solving a problem of increased costs by offering higher education while students live at home, thus saving about one-half the cost of college education away from home.

It shows business and industrial leaders contributing time, guidance, and leadership to solve the problems of expansion.

For all of us there is inspiration in this brilliant example of people working together.

The significance of this achievement, I think, is best stated in the report itself by Austin D. Barney, chairman of the university building and development committees.

Mr. Barney is a public-spirited citizen of first rank in the environs of Hartford. He is chairman of the board of the Hartford Electric Light Co., and he has participated willingly and vigorously in his lifetime in many civic and charitable causes. I know he feels that this University of Hartford program is one of the most important. I believe his statement concerning Connecticut's place in a changing world is a succinct summary of the role of the university and should be reprinted here:

WHAT WILL BE CONNECTICUT'S PLACE IN A CHANGING WORLD?

(By Austin D. Barney, chairman, University Building and Development Committees and chairman of the board, Hartford Electric Light Co.)

When Archimedes said, "Give me a lever and I will move the world," he might well have been referring to Connecticut.

The small State in which we live, only one twelve-thousandth of the earth's surface, has on more than one occasion changed the world's course. Eli Whitney's application of interchangeable parts to industry, for example, may have won the Civil War. And in World War II Connecticut, through both the resourcefulness and might of its manufacturing economy, earned the designation Arsenal of Democracy.

Simultaneously, one of the Nation's smallest States reached the top in average family income, as well as the highest income on a per person basis.

These achievements do not "just happen." In Connecticut's case the skill, resourcefulness, and energy of its people applied to manufacturing, insurance, and business were the "secret weapon" producing great benefits for our people.

Time changes. The world we live on revolves once every 24 hours. Automation, atomic energy, medicine, and scientific breakthroughs hurry the pace of change. Industrial know-how is no longer limited to the United States.

Let us be frank with ourselves: If Connecticut is to continue as the State with the highest average family income in the richest Nation of the world, we must meet, overcome, and ride abreast of the change around us.

How can we do this?

First, let us acknowledge that we never would have achieved our present prosperity on the basis of the State's oil, iron, uranium, or other natural resources. We don't have them. It is—and always has been— the special kind of people ("Connecticut Yankees," Mark Twain called them) who by their brains and brawn forged to the top of the heap.

People identical in quality are with us today. They have the moral fiber, thrift, muscle, and intellect to produce. But all around us—not only in Connecticut—we find that musclepower is losing to brainpower.

You see it daily in industry: production lines in Connecticut are nonexistent. Go see for yourself: small teams of men operating machinery in copper and brass plants; scientists and technicians in 358 research laboratories around the State; craftsmen building faster-than-man computers that function because of preciseness.

What is the "lever" by which we shall "move" this new world and maintain our present high prosperity?

We can sum it up in three words: trained brain power. Willingness and muscle energy are not enough. It is mathematicians, psychologists and artists Connecticut industry needs—physicists, metallurgists, chemists, and engineers.

How do we propose to get them? Obviously, from youth now around us and the population explosion projecting 46,000 Connecticut students in college by 1965.

The question of how education for these people is to be financed is crucial. The University of Hartford has committed itself to the traditional American way—community support through voluntary subscription and student support through proper tuition charge. The decision is based on far more than tax savings. In the university you have a student body studying harder than ever before—70 of every 100 students are holding jobs in addition to their studies—students attending evening school for 8 years to obtain a degree.

One realizes how proud we should be of today's young Connecticut citizens.

For these self-sacrificing, ambitious individuals the University of Hartford offers education of the highest quality. The knowledge they acquire is almost immediately transmitted into the Connecticut economy for today's University of Hartford students work in 1,000 large and small business and industrial firms throughout Connecticut. Alumni are, of course, an entirely separate and much larger group.

To work, a man needs tools. Once it was the ax, then the saw and then the wheel. Today it has become the computer, test tube and formula.

For today and tomorrow, education is the key. It is the key to better tomorrows that the University of Hartford offers for 2½ million people now and close to 5 million Connecticut people in the year 2000.

Castro Dances to Moscow's Tune

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. ANFUSO. Mr. Speaker, the question whether Fidel Castro is a Communist is by now academic. He is serving their purposes well, giving the Communists free reign to carry on their propaganda, to infiltrate, and organize for the takeover in Cuba in due time. Castro, more than anyone else, has enabled the Communists to penetrate into the Western Hemisphere almost at our doorstep. He does not have to be a Communist. He dances well to Moscow's tune.

The longer we wait, the more entrenched he will become in Cuba and the more difficult it will be to dislodge him. In the meantime, he is doing everything possible to convert the friendly Cuban people into enemies of the United States. Although I do not believe he will succeed in this effort, we have seen it happen in other countries through lies and propaganda.

I believe the time for action is now, and it is for this reason that I introduced my bill, H.R. 10570, which calls for a reduction of Cuba's sugar quota by the amount she will export every year to Soviet Russia. This action on our part would remove a major economic prop from the Castro regime and would also serve as a reminder to Castro that we will not tolerate his flirtations with the Communists and thereby endangering the security of the Western Hemisphere.

In this connection, I am inserting into the RECORD a series of three articles on the current situation in Cuba as published in the New York Mirror, February 21, 22, and 23, 1960, and written by Mortimer Davis and Harry Altshuler:

CUBA LOOMS AS REAL MENACE TO UNITED STATES

(By Mortimer Davis and Harry Altshuller)

(What's going on in Cuba? Is Fidel Castro pulling the strings—or is he the puppet of other hands, behind the scenes? A new look at our troubled neighbor is in order—for a clear understanding of what's going on could be vital to all of us. Here is the first article of a Mirror series viewing Cuba's revolution and what it means.)

This time it's different.

That is the one point of agreement among all those in the United States who have cast an anxious or even a casual glance down toward our small but explosive neighbor, Cuba.

You can't write Fidel Castro's revolution off as just one more of those typical Latin-American temperamental upsets in the government, when the outs become the ins, the ins take it on the lam 'til next time, and life goes on as usual with the vast bulk of the people.

This revolution is more than a year old now. The shape of it has been emerging, disquietingly.

More and more, Americans are seeing sharp problems. Few or none mourned the passing of the corrupt Batista regime, so Castro started off with all the goodwill in the world. Friendliness seemed the natural attitude to show, and the natural expectation, originally, was that Fidel was a reformer with aims and objectives along the lines of our own democracy.

It is clear now that this was a miscalculation.

How grave?

Is it as bad as some fear—that we will look up one day into the face of the enemy, grinning at us over a stockpile of missiles on our doorstep?

A lesser matter—but still an embarrassing and dangerous one—could be the possibility of Cuba voting with the Soviet block in the United Nations.

Our Government has been walking softly, speaking in quiet, even tones, even offering quick and humble apology to Castro for something like the private-plane bombing adventure he protested last week, though the United States obviously had no responsibility for it and seeks to halt such incidents.

In the face of this attitude, it is increasingly disconcerting to hear the shrieks about "Yanqui imperialists" rising louder and more frantically.

Are we, one wonders, being used as the "whipping boy," to take the blame for everything wrong with Castro's grandiose and dreamy plans?

Or—an even darker possibility—is what we hear not the authentic voice of Cuba, but a ventriloquist with a detectable Russian accent making all that noise?

There is more than noise going on, too. The recent Cuban visit of shrewd Deputy Premier Anastas Mikoyan, one of Russia's top horse traders, proves that.

Only now is the size of the deal he set up being glimpsed.

Russia will buy Cuba's sugar—at a price a lot lower than the United States pays for it. In return they'll send machinery, tools, manufactured articles. We can't help wondering, what sort of articles? Not MIGs, Castro says. Guns? Who knows? But, without a doubt, along with these articles will come technicians, teachers, propagandists, Communist apparatniks.

If the Reds have their way in Cuba, what far-sighted Americans fear is some manufactured incident, perhaps involving the lives of 6,000 U.S. citizens living on the island, which would force Uncle Sam to step in, however reluctantly. Before all the world, the Red propaganda machine would brand this country as the "imperialist aggressor," treading on the little fellow.

The first big question, then, becomes the flat one: "What's the truth about Fidel? Is he a Communist?"

We have an answer to it, given recently by Gen. Charles P. Cabell, deputy director of our Central Intelligence Agency, in testimony before a secret session of the Senate Internal Security Subcommittee.

About Fidel, he said:

"Our information shows that the Cuban Communists do not consider him a Communist Party member, or even a pro-Communist.

"On the other hand, they are delighted with the nature of his government, which has allowed the Communists opportunity to organize, to propagandize, and to infiltrate.

"We know that the Communists consider Castro as a representative of the bourgeoisie, and were unable to gain public recognition or commitments from him during the course of the revolution.

"It is questionable whether the Communists desire to recruit Castro into the Communist Party, that they could do so if they wished, or that he would be susceptible to Communist discipline if he joined."

The general summed up his conclusion: "Fidel Castro is not a Communist; however, he certainly is not anti-Communist."

What, then, are the Communists up to?

"Their primary interest," General Cabell told the Senators, "is to influence Castro in favor of an aggressive, 'anti-imperialist' nationalism supported by non-Communists, but which will defend the rights of Communists to express their views openly and engage in legal activity. In their attempt to influence Castro, the Communists are known to be utilizing five principal channels."

Cabel listed these channels as:

1. Close associates who are known pro-Communists: those include Castro's brother, Raul, and Reaul's pal, Ernesto (Che) Guevara, head of the Bank of Cuba, a notorious Argentine Communist who flaunts a Red star on his cap.

2. Trying to guide the policies of the government and the 26th of July movement, the revolutionary forces, by getting sympathizers appointed to key jobs.

3. Seeking to implant elementary Marxism as the political philosophy of the nation, to replace Castro's own personal ideas.

4. Propagandizing the Cuban people endlessly through their newspapers, radio and television programs, faking news and hiding truth.

5. Organizational activity among peasants, army men and labor.

So, through longtime personal friends such as Maj. Pedro Diaz Lanz, who headed Castro's air force in the struggle against Batista, have sworn Fidel is an out-and-out Communist, we can discount these personal reactions and accept the sober CIA evaluation:

"Castro is not a member of the Communist Party and does not consider himself to be a Communist."

But where does that leave us? The subcommittee chairman asked the question this way:

"To say the least, the Communist movement has made very great progress in Cuba since Castro took over, has it not?"

"That is correct," General Cabell answered. "Yes, sir."

PEONS ARE HAPPY—FOR THE MOMENT

(By Mortimer Davis and Harry Altshuler)

(Promises are one thing—performance is another. How is Fidel Castro's Cuban revolution working out? Where is it pointing—and what dangers for the Cuban people, for ourselves, and the rest of the free world are becoming evident? Here is the story of what's happening on the island, in the second of a series of Mirror articles.)

The length and breadth of Cuba, the little fellows, the peons, love their hero, Fidel Castro.

Isn't he giving them what peasants the world over have always craved, a bit of land to call their own?

Yes, indeed, one must agree.

But note the tricky wording. They can "call" it their own. And that's just about all they can do with it—except work it as their fathers did before, for the landlord.

As for ownership, real ownership—that's a laugh, though a sad one, for there is nothing funny about people deceived in their aspirations.

The Agrarian Reform Law of Cuba was published last June 3. It banned large landed estates, called latifundios, and laid down the rule that, with certain exceptions, the largest landholding permitted to a person or a corporation should be 1,000 acres.

How it works was outlined several months ago to the Senate Subcommittee on Internal Security by an expert in this sort of land reform: Joseph Zack Kornfeder, a former member of the Communist apparatus who was in charge of efforts to organize some of the Latin-American countries. Stalin's purges disillusioned him and he broke with the party in 1934.

"Land distribution," he pointed out to the subcommittee, "had been done in many countries before communism heard of it—but when the Communists use it, it is not an honest reform; they simply use it to ride into power, and once they are entrenched they take the land away. They sort of play the game of Indian givers.

"Now, the pattern that Castro has been playing," he continued, "is similar to that of the Communists, because his land reform, which I studied quite thoroughly, does, and proposes to do, a tremendous job in expropriating, but he does not distribute the land to be fully owned by the peasants. He gives it to them—and at the same time tells them they cannot sell it, cannot buy land, cannot mortgage it.

"Only the state, and what they call the cooperative system, or collectives, can do such things by permission of the authority created under his law, which is an authority entirely under the control of Castro who, on the basis of this law, is the absolute boss of it."

Questioning brought out further points: The peons are required to work the land, the state can take it away from them if they don't; they cannot turn it over to a tenant to farm.

The new occupant can't even make his own decisions on what to plant, where to sell it, or how much to ask for it.

As for the privilege of conveying the land to his children by inheritance—all it amounts to is inherited serfdom, not ownership.

The way Kornfeder summed it up was, "The state becomes the owner—and the new boss, of course, is a worse boss because, as John L. Lewis at one time said, 'I prefer a boss who is not a jail warden at the same time.'"

Head of Cuba's Agrarian Reform Institute, which was set up to carry out the land distribution, is Antonio Nunez Jiminez, not on record as a card-carrying Communist, but a man whose actions follow the party line consistently. Much of the thinking in the institute appears to stem from Dr. Carlos Rafael Rodriguez, editor of the Communist newspaper Hoy.

"The Communists are a part of Castro's revolution," Rodriguez bragged last May. "We are not participating in the actual government," he disclaimed, "but we are participating in the revolution. If you will read our program—written in 1956—you will see the coincidence between the program of the Castro revolution and the Communist program."

The institute has been spreading out, reaching into everything it can lay a tentacle on. Its accounting is invisible—nobody knows how much is being taken in, how much is spent, and who gets it. It's a situation bound to arouse, and justify, suspicion.

For instance, it took over a dredge and tugboat owned by a U.S. citizen, worth $500,000. No authorization, inventory, or receipt was issued. No protests have been heeded. Getting far away from the fields, it even took over the Havana sales and service office of the Otis Elevator Co.

A 23-year-old named Julio Caseres, fresh from school in Mexico, walked in as manager, boss of the staff of 200 persons. His qualifications? He is a friend of "Che" Guevara, Communist head of the Bank of Cuba. The Otis company hasn't been expropriated; merely, as they say now in Havana "intervened." This means it still belongs to Otis—but Otis has no say in the management and gets no part of the income. This puts ownership on the same level with the peons who are told they "own" their farms.

United Fruit Co. has property worth about $32 million in Cuba, spread over almost 149,000 acres, which it has been informed is subject to expropriation. Sugarcane lands will not be taken before the 1960 crop is in. Cuban officials said graciously, but already cattle properties and reserve lands totaling 22,000 acres, worth $2,500,000, have been "intervened."

And even this has not been done in accord with Castro's intervention law, the company reported to its 90,851 American stockholders recently. The company is battling the seizure in the Cuban courts—so far without result.

The big King ranch in Cuba, 35,000 acres, was taken over last November, except for 1,666 acres which the owners were allowed to retain. The land taken will be paid for on Castro's terms—with 20-year Cuban bonds calling for 4½-percent interest.

Much the same thing is happening to other enterprises. Huge losses for stockholders are inevitable. Careless, inexperienced handling undoubtedly means bankruptcy and chaos, eventually, for many of the intervened enterprises.

At this moment, however, that means nothing to the little fellows. What they care about is that they used to get two meals a day, if they were lucky; now they get three meals. It's practically paradise.

The Agrarian Reform Institute has opened stores, across the island, with cutrate prices for countrymen. For their necessities they are paying only half as much as they had to pay before. Their rents have been slashed, often by half. Are they going to worry, at this stage, whether the landlords can stay in business? Hardly.

And yet they are on the path which can lead only to disaster of one sort or another: bankruptcy their children will have to pay for, at higher rates than the current 3-percent wage tax and 4-percent voluntary contribution to buy arms for the nation; or utter chaos, which will give the Reds their chance to step in as rescuers and grab everything.

CUBA'S BOSS WALKING A TIGHTROPE

(By Mortimer Davis and Harry Altshuler)

(Every day, more disquieting news comes out of our troubled neighbor, Cuba. Big-time Soviet trade deals, government control over all private enterprise, denunciations of "Yanqui imperialists." What does it all mean? Is Cuba going Communist? Here is the final article of a Mirror series based on top-level evaluations now being made by concerned quarters in Washington.)

Havana—the glittering Havana of the free-wheeling, free-spending American tourists—is a dead city these days.

There are so few tourists that the shoeshine boys split up jobs; when they can find a customer, two boys share the work. Each shines one shoe.

A see-the-sights taxi ride around town that used to cost $20 can be had for a mere $5 now, so hungry are the cabbies for business.

The extravagant luxury hotels built in Batista's day are almost empty of guests—but they are fully staffed, as usual. Nobody can be fired.

From a naive point of view, this is "protecting the workers"—but anybody except an economic illiterate can see it must lead to bankruptcy in short order.

Situations like this—and the hotels are only one example of many—set the stage for the new Cuban law promulgated over last weekend, bringing all private enterprise under direct government control.

The just-announced law sets up a central planning board to supervise and coordinate the entire business and economic life of the nation. It will make rules by which every business must abide—or be wiped out. Fidel Castro will head the board, but, significantly, one of its other members will be the notorious Communist, "Che" Guevara, who already holds many of the economic strings in his grasp.

Is this what Fidel Castro has been aiming for all along—and does it mean the sovietization of his country? Will it become part of the big Red bloc?

This is the question that worries Washington. For clearly we could not tolerate a bastion of world Communist power on our doorstep.

Careful evaluations of all the information streaming into Washington indicates Fidel himself is not a Communist—either in his own or the Communists' view.

But he thinks he can use the Communist—and they think they can use him.

He is a man on a tightrope. One false step, one miscalculation, and the balancing act comes to a tragic end. The Reds are confident he will fall to the left.

Meanwhile, they keep moving into spots of power. They have "Che" Guevara, the powerful head of the National Bank of Cuba, who keeps a tight grip on export-import affairs and is strangling trade with the United States to the extent that even the familiar American cigarets are getting rare. Russian cigarets are becoming common.

What the tourists don't see is how the Communists have taken over in the middle levels of leadership. For instance, the labor union, which they are turning into instruments of party discipline.

Early this year Jesus Soto, the pro-Communist director of the Cuban Confederation of Labor, got a law rammed through giving him power to purge any officer of an affiliated union whom he considered counter revolutionary.

Promptly, under attacks from the Communist newspaper Hoy, all the leaders who had fought the Communists in the trade union movement, and had beaten them in elections, were tossed out.

David Salvador, well-known Red who is secretary-general of the labor confederation, blandly told one union, the Association of Cuban Theatrical Artists, that they had to get rid of their anti-Communist president, Manuel Fernandez, or be thrown out of the confederation. The actors reaffirmed support of Fernandez, but he knew his time was up—he resigned in order to save the union, then took refuge in the Chilean embassy to keep from being jailed.

In order to hire or dismiss any person, a private business needs an authorization from the Ministry of Labor—whose boss is militantly pro-Communist Augusto Martinez Sanchez.

That has meant, in effect, that anybody who wants to get a job has to sign an application for membership in the Communist Party as his basic credential.

Such a situation suits the Communists. As long as they can keep it going this way, they feel no need to try to push Castro aside and take control in their own name.

In spite of all the power the Communists hold, it seems there is only one government in Cuba today and that is Castro himself. The Reds are quite content to let him stand out front. He's going their way, they feel, whether he knows it or not.

If Castro develops a clear, adult philosophy of government, however, and tries to settle down to sensible democratic policies, he'll find himself in trouble with the Reds. It does not appear that at this stage even they would dare break openly with him. More likely, they would try to set up an assassination and seek to pin the blame on the "Yanquis."

Just in the past month there have been voices in Cuba expressing apprehensions many thoughtful Cubans are coming to feel. The Cuban Confederation of Labor pro-Red slogan, "He who follows the Communist Party supports Castro," has been challenged by a strong group called Autentico, whose members can show anti-Batista and pro-Castro records, though they despise the Communists. Whether they can get anywhere still remains to be seen.

Castro thinks that not only Cuba, but the whole world, has been given a new chance through his revolution. He thinks history is starting now—and he is making it. But what will history think of him? That is the question for all Americans to ponder now before it's too late.

The Truth About Missiles

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article "The Truth About Missiles," from U.S. News & World Report, February 29, 1960:

THE TRUTH ABOUT MISSILES

Cutting through the welter of argument over the missile might of United States and Russia turns up these basic points, now on the record:

United States, this year, has the power to destroy Russia. Russia cannot destroy United States.

By 1962, Reds will have an edge in long-range missiles—but it will not be decisive against a variety of U.S. weapons in being.

Beyond the "danger year" of 1962: A standoff balance in armed power on both sides.

Is the United States today faced by the threat of a gigantic Pearl Harbor? Will Soviet Russia in the foreseeable future hold the means to destroy this Nation without risking destruction herself?

In brief: What is the truth about missiles?

The public is bewildered by claims and counterclaims of what Russia can and cannot do to the United States—and of what the United States, in turn, can or cannot do to Russia. President Eisenhower, at his news conference on February 17, felt it necessary to reassure people about America's defenses. On February 21, he scheduled a radio-TV address to the Nation on the same subject.

The truth is that facts are available from official testimony upon which to base a comparison of Soviet ability to destroy the United States with U.S. ability to destroy Russia, over the next 3 years.

How strength compares: What these facts show, as given to Congress, is this—

In 1960. At present, United States is in a position to destroy Russia by a variety of means. Russia, however, is not in a position to destroy the United States, either by missiles or bombers. U.S. strength is centered in its vastly powerful Strategic Air Command. The United States also possesses carrier-based bombers and missile bases overseas. Russia has significant bomber strength, but it is not comparable with U.S. strength. Neither side has missiles enough to knock out the other.

In 1961. Russia's strength in intercontinental ballistic missiles will become dangerous in this period. U.S. strength in long-range missiles will not match that of Russia. But America will possess at least 80 submarine-based missiles of 1,200-mile range—each capable of knocking out a Soviet city. The United States also will possess significant numbers of medium-range missiles based in Europe. Jet-bomber forces will continue to be the main deterrent to attack by Russia.

In 1962. This is the year of greatest danger. Russia then will possess an estimated 300 or more long-range missiles, to launch at U.S. cities. She will have even more medium-range missiles aimed at European cities and military bases. Surprise attack, if carried out successfully, might take out much U.S. strength to retaliate. The United States will have fewer long-range missiles than Russia—perhaps a third to a half as many.

Yet America, in addition to her ICBM's, will possess about 130 submarine-based Polaris missiles, plus 100 Thors and Jupiters on station with their 1,800-mile range. And U.S. bomber strength will remain high, augmented by Hound Dog missiles that can be launched from bombers and that have a 500-mile range.

In 1963 and later. Both sides, by this time, will possess vast strength in long-range missiles. Russia can have several hundred of its long-range, liquid-fueled T-3 missiles. The United States will have 270 of its liquid-fueled Atlas and Titan missiles, and will be getting delivery of its Minuteman super-missiles—with 6,000-mile-plus range, powered by solid fuel and fired without a countdown. This missile can be based upon mobile railroad cars or trucks, as well as on fixed bases.

The United States will possess large numbers of Polaris missiles, with their range increased substantially, and based upon submarines, cruisers, even ocean freighters. Missiles to be launched from jet bombers will be important in calculating national strength, too.

Those are the basic facts revealed in testimony before Congress or in published announcements. There are other recent revelations that help to round out the missile picture.

Ahead: faster warning. On February 16 the Navy announced that the range of its key Polaris missile will be raised in a few years from 1,200 miles to 1,800 and possibly to 2,500—more than double the range of its first model.

Then, on February 17, the significant details of a new Ballistic Missile Early Warning System—BMEWS—were made public. This network of super-radar installations is designed to give 15 minutes' warning time if Russia should launch a surprise ICBM attack. The central station, at Thule, Greenland, is to be finished by the end of this year. Another, in Alaska, is due next year. And a third now is contracted for in Britain. Each will have a range of 3,000 miles, to cover the U.S.S.R.

Two reports during the week add to the picture about the forthcoming Minuteman. In secret testimony before Congress, heavily censored and then made public, Air Force officers reported that Minuteman is likely to become "operational" in 1962, with quantity production well under way in 1963. In addition, there was reference to "thousands" of Minuteman missiles on order.

The danger period: What does all this mean? Simply, officials say, that the years 1961 and 1962 will be the years of greatest danger, with the danger lessening in 1963. Those coming 2 years will be the period in which Russia will hold dominance in long-range missiles and, if planning to attack United States by surprise, would enjoy the best opportunity.

If those are the facts, what has all of the argument in Washington been about?

Argument has concerned what to do for special protection in the principal years of danger, 1961 and 1962. The Strategic Air Command of the U.S. Air Force has favored setting up a constant airborne alert. Under this alert, about 200 bombers, armed and ready to go, would be kept in the air at all times, invulnerable to surprise attack. The White House and top-level defense planners, however, have opposed this type of alert.

Why the opposition? The answer is: cost. An alert of this kind would cost an estimated $600 million for the first year and $1 billion the second year, owing largely to wear and tear on bombers. Instead of a full alert, the administration has favored spending about $90 million to lay a base in standby

equipment for a possible future alert in case of emergency.

Within the Air Force itself, the official view is given by the Chief of Staff, Gen. Thomas D. White, in secret testimony just released by Congress, in which he says:

"We are continuing to work on our dispersal of the SAC units, and we expect to have, as of next September, the first of the ballistic-missile early-warning sites [part of testimony deleted].

"[Deleted.] Those are the two major elements we have, plus the fact that there are * * * a great many B–47's and B–52's right now on a 15-minute ground alert; so, at the worst, we would assume that, with this segment of BMEWS warning, some of the B–47's and B–52's, or a large segment of them, are going to survive."

Other reasons why the United States is not considered to be a "sitting duck" during the 2-year danger period ahead are cited by other top-ranking defense planners. The charts on these pages give you an idea of what is involved.

A surprise attack? The central point, in a nutshell, is this:

Russia, with no oversea bases, can strike the United States only with long-range missiles, manned bombers or missile-carrying submarines. As a practical matter, the United States has fairly effective defenses against bombers, and Russia still has no Polaris-type missile with which to cover much of the United States from submarines—so that a Soviet surprise attack must rely mainly on a limited number of ICBM's.

The United States, on the other hand, has many ways to strike back at Russia in addition to its ICBM's, now few in number but to be increasing in months ahead.

There are more than 100 bomber and missile bases abroad, ringing Russia. There are carrier task forces which can reach Soviet territory with jet fighter-bombers from the Mediterranean and the Western Pacific. There are squadrons of Matador and Mace pilotless bombers stationed in West Germany. There is a squadron of 6,000-mile, jet-propelled Snark missiles now operational in Maine. And there are Allied forces, such as the 250 British H-bombers, able to strike retaliatory blows.

In addition, there is the prospect of special, nuclear-powered submarines, each armed with 16 Polaris missiles, traveling undetected beneath the surface in waters near Russia, able to launch nuclear attacks while still submerged and invulnerable to Russia's arsenal of big and little missiles.

It is these Polaris submarines which are counted upon to provide sure-fire retaliation, regardless of how successful a Soviet surprise attack might be. At this time, four of the special subs have been launched —the U.S.S. *George Washington*, the U.S.S. *Patrick Henry*, the U.S.S. *Theodore Roosevelt* and the U.S.S. *Robert E. Lee*.

Two of the submarines are to be ready for wartime use, with their missiles aboard, by the end of this year. After that, others are to be commissioned at the rate of one each three or four months under present plans; more frequently, if the Navy gets its way. Polaris missiles themselves are relatively cheap, at 1.5 million dollars each, while the submarines to carry them cost about 100 million dollars each.

The time element: The other factor that U.S. defense planners are counting on strongly is the virtual impossibility of a real surprise attack by the Soviet Union, using today's long-range missiles.

To be effective in preventing retaliation from SAC and America's ICBM's, such an attack would have to strike all U.S. air and missile bases simultaneously and without warning. The new BMEWS system may provide the needed 15-minute warning. But, whether it does or not, there is this to note:

Today's long-range missiles, using liquid fuel, cannot be launched on an exact schedule with any assurance of success. Because of the need for some sort of count-down and the prospects for a delay in the process, even one missile cannot ordinarily be relied upon to fire within 10 minutes to half an hour of its planned take-off time. To fire more than 100 missiles on an exact schedule, so that they will arrive on target at the same time, thus, is considered to be impossible. As a result, some missiles would arrive long before others, providing a warning of attack and time for bombers and missiles to take to the air in retaliation.

Evidence is strong that the Russians still use liquid-fueled missiles, too, and that they are behind the United States in development of solid-fueled types that can be launched quickly and on schedule. Even their submarine-based missile, now in its test stage, is reported to be a liquid-fueled model, despite the hazards of using liquid fuel at sea.

The U.S. arsenal: Just how does the United States stand in long-range missiles? The facts, now coming to light, show this:

Right now, the United States has one squadron of 6,300-mile Atlas missiles available in the hands of troops at Vandenberg Air Force Base, near Los Angeles. This squadron has 10 missiles, half of which are being used for training, with four or five kept ready for emergency use if war comes. Atlas just completed its 19th successful test in a row, is considered highly reliable. Another squadron is due for activation in April at Warren Air Force Base, near Cheyenne, Wyo.

Titan, the planned successor to Atlas, has been plagued by a long series of test failures, has fallen behind schedule despite intensive effort put into its development. One official described the present efforts to push Titan to completion as being "like trying to have a baby in 6 months." There have been official hints that, unless Titan shows spectacular success in the near future, it may be abandoned and Atlas production stepped up instead. The plan, as of now, is to produce 130 Atlas and 140 Titan missiles by 1963.

Minuteman, due in quantity by 1963, is reported to be on or ahead of schedule, with its solid-fuel design and extra-long range.

Balance of destruction: How do the Nation's top military men view the big argument over missiles now? Their conclusions, in thousands of words of testimony, boil down to this:

Russia, in the years just ahead, will be able with ICBM's to destroy much of the United States, but will not be able to prevent effective retaliation by the United States.

America, with missiles based overseas, aboard submarines, on bombers and at home, will be able to destroy much of the U.S.S.R. at any time, but will not be able to prevent massive Soviet attacks.

The time seems to be approaching, with different kinds of missile arsenals built up on both sides, when neither side will have an absolute advantage—and big war may be prevented by an effective balance of destructive power.

Where U.S. Thors Stand Guard

Feltwell, England.—Here on the bleak plains of southeastern England, the first U.S. missiles able to deliver thermonuclear warheads from an overseas base to Moscow have been unveiled and stand ready to fire.

At this Royal Air Force station are 15 Thor intermediate-range ballistic missiles—1,800-mile IRBM's—on 5 separate groups of launching pads. The entire complex covers many square miles, since the firing sites are at least 12 miles apart.

Elsewhere in England, two other Anglo-American Thor units are now operational. A fourth unit will be ready this summer. In all, 45 missiles, able to wipe out Moscow and almost every other Russian city west of Moscow, already are poised for action. By summer, there will be 60.

These missiles are manned around the clock. They can be fired under ordinary alert conditions within 15 minutes. In a full-scale emergency, Thors can be kept fueled up for several hours —and fired within a minute or two.

Normally, the live H-bomb warheads are not kept fitted to the missiles. They are stored in secret pits guarded by men of the U.S. Air Force. But the warheads are mounted whenever international tensions rise.

These Thors are vulnerable to surprise attack because they are above ground, at fixed sites.

But a complete surprise attack is considered impossible. And the 4 Thor units in Britain add 60 H-bombs, ready to fire, to the deterrent power that the United States and its allies are leveling at Russia from many directions.

Loyalty Oath

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. WOLF. Mr. Speaker, I have received from many Iowans expressions of opposition to the loyalty oath and disclaimer affidavit requirements of the National Defense Education Act of 1958.

The State Board of Regents in Des Moines, at its regular meeting held January 14–15, 1960, adopted a resolution expressing its support for the loyalty oath but opposing the disclaimer affidavit.

The letter from the Secretary of the State Board of Regents and the text of the resolution follow:

State Board of Regents,
Des Moines, Iowa, February 15, 1960.

Hon. Leonard G. Wolf,
House Office Building, Washington, D.C.

Dear Sir: Enclosed is a copy of a resolution regarding certain provisions of the student loan program of the National Defense Education Act adopted by the State board of regents at a regular meeting held January 14–15, 1960.

You will notice that our board believes in asking the students who are asking for the loans provided by the act to subscribe to the loyalty oath but that it takes position against the execution of the disclaimer affidavit.

At the direction of the board, I am requesting your consideration of its position and that you support legislation which will remove the requirement of the affidavit.

Most sincerely yours,

David A. Dancer,
Secretary.

National Defense Education Act: Student Loan Program; Disclaimer Affidavit

Whereas section 1001(f) of the National Defense Education Act of 1958 provides as follows:

"No part of any funds appropriated or otherwise made available for expenditure under authority of this act shall be used to make payments or loans to any individual unless such individual (1) has executed and filed with the Commissioner an affidavit that

he does not believe in, and is not a member of and does not support any organization that believes in or teaches, the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods, and (2) has taken and subscribed to an oath or affirmation in the following form: 'I do solemenly swear (or affirm) that I will bear true faith and allegiance to the United States of America and will support and defend the Constitution and laws of the United States against all its enemies, foreign and domestic' "; and

Whereas it is the consensus of the State board of regents that the oath required in part (2) of the above provision should be taken and subscribed to, but that the disclaimer affidavit required in part (1) of the above provision is unnecessary, unfair, ineffective, discriminating, and tends to defeat the purpose of the student loan program of the National Defense Education Act: Now, therefore, be it

Resolved, That the State Board of Regents of the State of Iowa express its opposition to the disclaimer affidavit required by section 1001(f), title X, miscellaneous provisions, Public Law 85–864, cited as the "National Defense Education Act of 1958," and ask the Iowa Senators and Congressmen in the National Congress to work toward removal from the law the requirement of a disclaimer affidavit.

Resolutions Adopted by the Queens County Chapter, Catholic War Veterans, U.S.A., Inc.

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. BOSCH. Mr. Speaker, from January 20 to January 23, 1960, the Queens County Chapter, Catholic War Veterans, U.S.A., held its silver jubilee convention in Astoria, N.Y. Among the resolutions adopted in this convention were six sponsored by the Americanism committee.

Under leave to extend my remarks, I include the text of these six resolutions:

PEOPLE-TO-PEOPLE PROGRAM

Whereas our country has instituted the people-to-people program, which is aimed to promote an understanding, of the coexistence brand, between Iron Curtain countries and the West; and

Whereas we believe an extension of this program will not assist the free West to reach the people behind the Iron Curtain in a more effective way: Now, therefore, be it

Resolved, That the Queens County Chapter of the Catholic War Veterans of the U.S.A., Inc., in silver jubilee convention assembled, urge our Government not to extend, nor expand, the people-to-people program, and to cease appropriating funds for that purpose.

ILLEGAL USE OF PASSPORTS

Wheras the House Committee on Un-American Activities hearings, and a study by the Senate subcommittee demonstrate fradulent use of U.S. passports for international use by those serving the Communist conspiracy; and

Whereas a recent Supreme Court decision makes it impossible for the Department of State to refuse passports to Communists who are American citizens: Now, therefore, be it

Resolved, That the Queens County Chapter of the Catholic War Veterans of the U.S.A., Inc., in silver jubilee convention assembled, urge the Congress of the United States of America to adopt remedial legislation as recommended by the American Bar Association in this and all matters affecting national security.

LIBERATION OF THE SATELLITES

Whereas the resistance of the free people against the Russian oppressors is continuing constantly; and

Whereas no peace and stability in the world is possible until the Red army is withdrawn from Eastern Europe: Now, therefore, be it

Resolved, That the Queens County Chapter of the Catholic War Veterans of the U.S.A., Inc., in silver jubilee convention assembled, petition the President and the Government of the United States to use all available means for the liberation of the Communist-enslaved countries.

LOYALTY OATHS

Whereas the heads of the progressive and liberal education movement in the United States have urged Congress to kill a provision in the National Education Act calling for loyalty oaths from students getting Federal scholarships; and

Whereas such denouncing of the loyalty oath requirement, as humiliating and unworkable, is coupled with a refusal to participate in the Federal scholarship program; and

Whereas we, American citizens, who have fought for the protection of our beloved country and who today stand ready to preserve it against all its enemies whomsoever see no fault in the pledge of loyalty to the United States by any of its loyal citizens: Now, therefore, be it

Resolved, That the Queens County Chapter of the Catholic War Veterans of the U.S.A., Inc., in silver jubilee convention assembled, call upon the Congress of the United States to oppose those who aim to remove this legislation from the defense education act.

SUMMIT MEETING AND INTERNATIONAL DELIBERATIONS

Whereas the President of the United States represents the people of this Nation, at the summit meeting and at other international deliberations; and

Whereas in previous meetings failure to recognize God-led to little, or no, success toward a permanent peace: Now, therefore, be it

Resolved, That the Queens County Chapter of the Catholic War Veterans of the U.S.A., Inc., in silver jubilee convention assembled, petition the President and other officials concerned to see that at these meetings appropriate recognition be given to the Supreme Being in all deliberations concerning international negotiations.

AMERICAN TEACHERS

Whereas despite the unquestioned loyalty and self-sacrificing devotion to duty of the preponderant bulk of America's teachers, there are yet many hundreds of teachers who are Communists; and

Whereas Communist teachers radiate an influence much greater than their proportionate number; and their influence has reached out into the community, among parent-teacher organizations, and youth, and Communist-front groups; and

Whereas, a Communist is not a fit person to be placed, or retained, in a position to influence the minds of the youth of America: Now, therefore, be it

Resolved, That the Queens County Chapter of the Catholic War Veterans of the U.S.A., Inc., in silver jubilee convention assembled, urge school authorities, colleges and local boards of education to institute positive programs to teach both teachers and pupils the nature of the Communist conspiracy that is attacking the whole structure of our society.

The Case of the Dying Dollar

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. LEVERING. Mr. Speaker, the American people stand second to none in the world for their generosity to other nations and other peoples. Our glorious history is replete with examples of sharing with the less fortunate the objects of our bounty through famine, flood, earthquakes and disaster of every kind. Mr. Speaker, we would be an unintelligent and ungrateful nation if we did not recognize that as the leader of the free world we cannot escape the responsibility which is ours in helping to maintain the social and economic stability of our friends in the world as a bulwark against international communism that would destroy all of us. But, frankly, Mr. Speaker, in the face of mounting evidence that the giveaways in our foreign aid program are not accomplishing the real objective of mutual security; the unwillingness of those who administer the program to insist upon an accounting from the recipient countries and worse yet an unwillingness to account to the American taxpayer for the billions that have been spent as well as the huge unexpended balances from previous appropriations; the unnamed instances where our local interest is suffering directly or indirectly as a result of the program; a constantly developing attitude that we have enough for our friends overseas but not enough for our own folks at home; a reluctance to place the program on a more business-like basis of repayable loans; the persistent refusal to further substitute food for dollars to effectuate a greater person-to-person approach in the program; a failure to place greater emphasis on self-help projects and technical assistance, together with the unspeakable waste and extravagance involved generally and as exhibited particularly in Laos, has caused many of our people to lose patience and to urge an abandonment of the program altogether.

Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the February 19 Ashland Times Gazette, a fine daily paper published in my congressional district which reflects to a great extent the thinking of the people it is my honor to represent in Congress:

INTERNATIONAL PAYOLA OR THE CASE OF THE DYING DOLLAR

(By Robert M. Beer)

Our President is asking Congress for a billion more (dollars, that is) for foreign aid

funds to further safeguard the free world against Communist imperialism. This colossal plan, conceived by a Democrat administration and sated and defended by a Republican replacement, is starting its 15th bloodsucking year with a bigger appetite than ever, $3,200 million was granted last year, a third more is sought for the next free ride, $4,175 million in all, over half of it to be used for other-than-weapons aid.

It would seem that the futility of this and comparable visionary remedies would be damnably clear and indisputable. Not so in Washington—not even after Cuba and other beneficiaries of the grand and perpetual handout have accepted it without sense of purpose or appreciation. Advantages that our friends and neighbors have gained from the immortal Marshall plan are beginning to show up in foreign trade circles. The sick and needy countries are now exporting billions of dollars in product value to the United States at prices that our industry cannot hope to match. This competitive merchandise and raw material is produced by low salaried workers whom we have taught to compete and who are nurtured directly or indirectly by free American food, materials, machines and Yankee bucks. When and if tax is levied in many of these nations it is either easily evaded or, if collected in part, never reserved in anticipation of debt payment. No genuine effort is made toward an eventual and honorable return to financial independence and total self-sufficiency.

Our President tells us that we simply "do not understand the need and value of foreign aid." He accuses his critics of shortsightedness and he seems to be convinced that tremendous and lasting respect and national security is being successfully purchased * * * that a vital postwar emergency not only still exists but has become more severe to the extent of $1 billion additional.

Where, oh where, is the end of it? The abused American dollar is pale and anemic from overcirculation abroad and malnutrition at home. Money has become the hapless solution to every problem here and away. It tragically buys unraised grain, stores surplus food that it bought at a premium, pays for work undone and is used in payment of interest on itself for borrowed funds to support the farce.

The hands across the sea, the hands of Uncle Sam, now rich and generous, will be bitten and bloody when they no longer hold a dollar's worth of allegiance. There is not a single so-called free nation that would not establish a dictatorship with either socialistic or communistic principles if that type of government appeared to be expedient. France, top banana on the overseas gift parade for the past 14 years has resorted to the one man domination of a dictator as an emergency measure. Even Japan, defeated, gravely wounded and destitute in 1946, has made a sensational recovery with the aid of its U.S. conquerer. Stores here in America are loaded with low-priced oriental versions of our own cameras, toys, housewares, and hundreds of other well-made articles that hurt our tax-ladened and cost-ridden Yankee producer and those whom he hires.

Ninety percent brackets for the very rich, legalized featherbedding for unproductive labor, billions for subsidies, millions for storage of unneeded food and the idiotic and inconceivable expense of administering the domestic and foreign handout are not, you can be sure, the problems of Russia, our struggling allies or the past enemies of the United States.

Do most of us seriously believe that this course of spending and giving is sound and successful? If any of us thought otherwise would there be anything we could do about it?

In this current dilemma of democracy and abuse of the dollar there seems pitifully small chance that there can be any change in our stupid march to certain oblivion.

With only two major political parties, both hopelessly dedicated to unlimited extravagance and progressive policies (almost identical) of distributing something for nothing, there will doubtless be more of the same regardless of the outcome of November elections. After all, candidates are not selected by the voters. Delegations and conventions do that job for us. They choose the personality most likely to win, reject the ones who are nonconformists and carefully construct a platform designed to please all and and offend none.

Such is the system of government that we try so hard to foist on the rest of the world with $4 billion of international payola.

Indeed, we may pay them for listening to our tune, but they don't have to buy it.

How very interesting it would be if the Gallup people (did they ever ask you?) would endeavor to determine how many of us would vote for a party and a candidate that would actually deliver a sensible and economic government devoid of visionary spendthrift theories and futile giveaways, and be faithfully dedicated to the general well-being, safety and confidence of the citizen who pays the bills.

Some self-styled authorities maintain that the transition is at hand * * * that it's far too late to take the dole out of the dollar * * * that the pattern is set and that we must live or die with the consequences.

Are there no old-style statesmen, no courageous mavericks and no champions for economic survival in this bewildered age of electron, proton and moron thinking?

Where are the great men who came to our rescue in past time of national distress. Are they a lost breed, like Lincoln, belonging to the ages?

If, God willing, we can find such a man again we can make him President * * * whether he's Republican, Democrat or neither.

Notes Uncle Sam Bill in Senate Pigeonhole

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. BOSCH. Mr. Speaker, on July 20, 1959, the House passed House Concurrent Resolution 106, "recognizing the grave of Samuel Wilson, progenitor of Uncle Sam, as a national shrine." This bill has lain dormant in the other body since that date.

Under leave to extend my remarks, I include a letter which appeared in the Tablet, Brooklyn, N.Y., on February 13, 1960:

NOTES UNCLE SAM BILL IN SENATE PIGEONHOLE

DEAR SIR: In the readers' column of the Tablet on April 25, 1959, Helen P. Lasell, chairman of the U.S. Flag Committee, called our attention to the "rank propaganda intended to undermine the significance of Uncle Sam and therefore help destroy that which he symbolizes."

Since the above data, patriotic Americans took up the pen in order to repulse the "vicious and sinister attack directed at 'Uncle Sam'," through their representatives in the Congress. Even though the House of Representatives, on July 20, 1959, passed House Concurrent Resolution 106, "recognizing the grave of Samuel Wilson, progenitor of 'Uncle Sam,' as a national shrine" the battle has not been won.

"Uncle Sam" is bottled-up in the Public Lands Subcommittee of the Committee on Interior and Insular Affairs of the Senate.

It is time to counterattack with an expression of support of House Concurrent Resolution 106 to our Senators and the above committee.

H. JOSEPH MAHONEY.

European Common Market

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. COOLEY. Mr. Speaker, it was the privilege, on last Thursday, of the members of the House Committee on Agriculture, of which I am honored to be the chairman, to have Mr. André Ladener, French journalist and lecturer, address us on the subject of the "European Common Market" of the "European Community."

Mr. Ladener is traveling over North and South America with an exhibit "Welcome to Europe," consisting of more than 2,000 photographs and several films. Before the trip is completed Mr. Ladener and his party expect to have traveled some 26,000 miles.

Previously he has presented the film "Europe" in all the capitals, and in many towns of Europe, in connection with the Information Service of the European Communities (Common Market, Coal and Steel and Euratom).

Mr. Ladener already has much knowledge concerning the different States of the United States, and of Latin American countries, making him uniquely qualified to present to us his convictions on the European Common Market and related organizations.

Our guest was formerly a parliamentary secretary, and a technical counselor. He writes articles about trade and tourism, agriculture and beverages for various newspapers. He is also a wine expert, and at one time was secretary to former French Minister, Mr. Clapede, for wine and wine questions.

With Count Jean de Brettes and F. Hirigoyen, Mr. Ladener is founder of a committee for the promotion of European industry. This committee is to extend business between America and Europe, to encourage intercontinental tourism, and to affirm the solidarity of the West.

Before departure for New York, Mr. Ladener spoke about the new organization of Europe and the development of South America, in Brussels at the House of Latin America, under the sponsorship of Mr. Carton de Wiart.

Mr. Ladener's address to members of the House Committee on Agriculture follows:

WASHINGTON, *February 18, 1960.*

First of all, I am very glad to meet you; let me thank you for your nice welcome and many thanks to your chairman for his

friendly hospitality. This is my fifth trip around the States and I know pretty well the quiet city of Washington.

Today, I must forget about my citizenship as I want to speak about Europe. I think that it is necessary nowadays to contemplate the problems from a larger point of view. For peace and human progress, the time of nationalism has definitely passed. Our goal is to help you know Europe better by encouraging you to visit it.

Do you know Europe? It is very easy to cross over the Atlantic Ocean with the jets. You can have breakfast before your departure from Washington and dinner in Paris, looking at the Eiffel Tower. We invite you to visit our old continent.

But, dear American friends, false ideas must disappear from your minds. Paris is not Pigalle, heart of Paris by night. In the same way, the little Mannekenpiss is not the principal Belgian monument; Germans do not spend their time drinking beer; Italians do not spend all their waking hours playing the mandolin. Europe is not a "dear, sweet old thing."

Now, all its energies are being put into play; coal, steel, oil, electricity, and the atomic industry are being mobilized for progress. The days of the Marshall plan and of American aid are past for us. Europe is grateful toward the States and the solidarity of the West remains at the service of civilization for the benefit of all mankind.

I think that the power and splendor of modern-day civilization depend on the importance and the vigor of international, technical, and cultural exchanges. Maybe you have some difficulty in understanding me, with my French accent and my bad pronunciation, but, with your kind attention, I am sure that you have understood my purpose.

With my wife, my assistant, Miss Bonnel and Mr. Jaime Devesa, we are taking a trip around North and South America. Our traveling exhibition "Welcome to Europe" (around 26,000 miles by car) is aimed at presenting to the public a synthesis of Europe, from the artistic and cultural point of view as well as the economic and social point. I am speaking in connection with the Information Service of the European Community.

What is our European Community? First of all, the European Common Market is the first step on the way to the free trade, and for you, a new opportunity for the American business.

In the field of commerce, administrative redtape too often hobbles the flow of merchandise which the buyer and seller are anxious to move for their common good. International laws and rules must become more standardized. Economic and social legislation measures must be more closely and progressively alined. We must throw down protectionism. In other words, no longer must there be economically weak nations in a world where science has made such enormous progress.

If Europe's industry and trade enter into lively competition with the American economy, it will be for the good of millions of men and women.

The six following nations: Belgium, France, West Germany, Italy, Luxembourg, and the Netherlands are represented in three organizations: Common Market, Coal and Steel Community, and Euratom, to above all end forever the conflicts which had so long divided the nations of Western Europe. (You remember that a war breaking out in Europe means the war all over the world.)

We wish to restore the weight and importance of Europe in world trade and world affairs, to raise living standards, and speed technical progress in an extending economy. It is necessary to abolish the outdated trade barriers which split up Western Europe into small protected markets.

Finally, we desire to set up the institutions which will form the basis for the future United States of Europe. Yes, Europe is on the move. The European Community has become a reality. Before leaving Paris, I spoke to several ministers in different countries. Mr. Jacques Rueff, Financial Councellor of the French Government said: "The first economic unit in the world and our example are the United States of America and their Federal system of Government."

The Common Market, whose institutions were set up at the beginning of 1958, will gradually (over 12 to 15 years) pool these nations' other economic resources—in a mass market of 165 million consumers. This is a fact. It is possible to extend the Common Market in the future to several other countries.

Near to the Common Market, there is a free exchange area in Europe. It would be advisable for the six members of the Common Market to cooperate with the seven nations of this free exchange area. The Common Market presents an advantage: it has a common economic, financial and social policy.

Euratom, the third European Community, set up at the beginning of 1958, helps to endow the Community with a powerful atomic industry pledged to the peaceful uses of nuclear energy.

Especially associated with the European Community in the Common Market Treaty are those non-European countries and territories which have special relations with its member states. Most of these are situated in the African continent.

A European Parliament, whose 142 members are at present elected by and from the legislatures of the member countries is situated in Strasbourg. Provision is made for direct universal suffrage in the future. Its members are divided into three political groups (Christian, Democrats, Socialists, and Liberal), each of which sits together in the chamber, irrespective of nationality.

We have also a Court of Justice, an Economic and Social Committee, a Monetary Committee, a Transport Committee, and a Scientific and Technical Committee.

I believe that the European Common Market is not only the lowering of customs duties and tariffs and the suppression of import quotas; and it is not only the establishment of an economic policy involving six nations. It is very nearly, above all, the permanent encouragement needed to modify antiquated economic structures.

My first goal is to shed light on the efforts of Europe, its citizens, its statesmen. I do not speak officially, but I am a free citizen of free Europe. I know our difficulties and all our possibilities. United Europe is the way to a lasting peace. We are always ready in Europe to extend a helping hand to further efforts bent on facilitating Internation Exchanges creating international understanding and cementing solidarity among peoples, particularly for the common defense of liberty against communism.

On the table before you is literature on the European Community which I hope you will take and read, in order to get the details of the efforts being made to weld, into one economic unit six European nations, Belgium, France, Germany, Italy, Luxembourg and the Netherlands, in order to end forever the conflicts which so long have divided the nations of Western Europe and thus remove trade barriers.

Thank you for your very kind attention, and I wish to drink with you champagne and wine to the success of men of good will around the world.

Networks' Policy Bans Topnotch Documentary

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. HOLTZMAN. Mr. Speaker, that fine columnist, Marie Torre, of the New York Herald Tribune, has a most interesting column today, which I commend to my colleagues for reading.

The column follows:

[From the New York Herald Tribune, Feb. 23, 1960]

NETWORKS' POLICY BANS TOPNOTCH DOCUMENTARY

(By Marie Torre)

It is not without irony that while the networks are intensifying public affairs programing to show that they're answering the call of duty, perhaps the best documentary ever made on the vital subject of space flight is being withheld from the television audience by network decree. Or, should we say, network whim?

Our uncertainty is real.

For there is no rule in the TV rulebooks that says what each of the networks stated, twice around, with each rejection of "The Race for Space," an independently produced two-part documentary which offers 20–20 insight into the space contest between the United States and the Soviet Union.

All three networks have refused to provide commercial air time for "The Race for Space," which comes with a ready sponsor (Shulton, Inc.), because, they say, "It's a matter of policy." The networks hold, even though there's no such regulation in the TV code, that programs in the field of news and public affairs must be produced by the networks' own staffs rather than outside parties.

In the case of "The Race for Space," which this viewer saw at a private showing, the rejection is akin to a literary magazine turning down an Ernest Hemingway original because he's not a member of the magazine staff.

Nothing the networks have done on the subject of space flight tells the story with the simplicity, thoroughness, and perspicuity of "The Race for Space." Produced by David Wolper at a cost of $100,000, and graphically narrated by Mike Wallace, part one of the documentary represents an unusual assemblage of actual film footage which includes American and Soviet rocket and space films never before seen by any one outside the intelligence services.

The documentary begins just after the turn of the century, with actual films of the Russian scientist Konstantin Tsiolkovsky and his early experiments and theories on space flight. The story progresses to the experiments of Dr. Robert Goddard, an American, who began building rockets using liquid fuel, to the German Rocket Society, to the development of man's first space weapon, the V–2, to the efforts of Gen. Holgar N. Toftoy to get the cream of the crop of scientists and enough V–2's to start a limited missile program in the United States.

The point made in the documentary is that the United States could have launched the first earth satellite nearly 2 years ahead of the Russians, if we hadn't fallen on complacent times after World War II. Lest some regard this a subversive message, it should be known that Mr. Wolper's film

was made with the cooperation of the Department of Defense, the Army, Navy, and Air Force, as well as the Ministry of Culture (U.S.S.R.) and the British Information Service.

In addition, "The Race for Space" won the "Best Documentary of the Year" award at the San Francisco Film Festival recently, it's been nominated for an Academy of Television Arts and Sciences Award, and it's scheduled to be shown soon to the cadets at West Point.

There's reason to believe that the networks haven't heard the end of "The Race for Space," for neither Mr. Wolper nor the Shulton Co., it's reported, is of a mind to accept the decision of the networks without a legal flight. One of the areas to be explored is restraint of trade. But there's a more important, though perhaps not legally valid point that ought to be considered, and that is: By what right do the networks, as custodians of public trust, deprive the public of a film that should be seen?

Just the other day the distinguished news analyst and reporter, Howard K. Smith, had edited out of his script some references to Vice President NIXON's differences with President Eisenhower's statements on our defense posture and our defense program.

It seems fundamentally wrong for a network to arbitrarily rule or edit out any program or item on the theory that it conflicts with its own policy. The missile and space race has been, is, and will undoubtedly continue to be the subject of great controversy and even greater confusion. While there has been some partisanship on both sides, no one doubts that it remains a most important and vital issue that confronts our country. The vast majority of Americans, in and out of public office, are sincere in their desire to know just where we stand, and the exceptions, if any, represent a minutia of our people.

As one Member of Congress, I submit that it is not only wrong but self-defeating to exaggerate our weaknesses, if any, in missiles and in space. Similarly, it is less than reassuring and equally wrong to gloss over any gap that may exist. It is less important when the gap occurred, or who was to blame for it, than it is for us to know our position today and what we are doing about it. It also disturbs me greatly to have our President dismiss as "parochial" military experts of the stature of Generals Medaris, Taylor, Power, and many others.

Mr. Speaker, the networks, the administration, the Congress—yes, all of us—owe a great responsibility to our people to give them the facts. We need more than a "father knows best" attitude, more than an arbitrary and capricious ruling that a factual program conflicts with the policy of the networks. In other words, Mr. Speaker, we need the facts. Only in this fashion can there emerge a clearer understanding of our problems and a program to solve them.

Miss Torre certainly deserves a tribute for pointing this up in her column.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Progress in Space

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 24, 1960

Mr. ENGLE. Mr. President, our distinguished colleague, Senator STUART SYMINGTON, addressed the World Affairs Council in Los Angeles on February 15, 1960, on one of the most important problems facing the United States in the space age. In an outstanding address, he spelled out the steps which must be taken if America is to make the kind of progress in space that it has made in the past in developing its own frontiers. Reminding Americans of the great accomplishments of the pioneers in opening up the West, he calls the exploration of space America's new manifest destiny. Senator SYMINGTON has asked America to answer this new call to greatness "eagerly, unafraid, with the spirit and cooperation that has won her a cherished place in the history of man."

I ask unanimous consent that this excellent address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PROGRESS IN SPACE

In the year 1484, a young Italian sailor named Columbus approached the King of Portugal with a plan to sail west and find a new route to the Indies.

Columbus wanted the King to outfit three ships, give him the title of "Great Admiral of the Ocean" and assure him one-tenth of all the revenues and precious metals derived from the lands he discovered.

At the same time, he sent his brother Bartholemew to interest the Kings of England and France in the same expedition.

All three monarchs rejected the idea. It sounded good, they said, but it was too expensive.

Eight years later, Columbus made the same offer to the Queen of Spain; and because she undertook it, it was Spain and not the other nations which led the way to discovery and colonization of the New World.

The claims established by Spain, and the wealth that poured in from the treasure houses of Mexico and Peru, changed her from a collection of little states to the preeminent power in Europe for 100 years.

For the next two centuries, command of the ocean routes was to be the basis of wealth and world leadership.

The opening up of the New World had shifted the balance of power among nations.

Discovery became an obsession.

Those countries which channeled their energies into this field were able to compete with Spain and eventually surpass her.

Those who hesitated lost their rank among the nations of the world.

This bit of history points the way to anyone who considers the course of America in the exploration of space.

For man's first ventures into space have opened up a chapter of history as vital to modern nations as the voyages of discovery were for the past.

It is not just another job for government to meet by creating a new agency and requesting a bigger budget.

It is a grand enterprise of discovery, full of opportunities that challenge our imagination.

The world we know today, full of change as it is, is going to be rendered obsolete by what is done in this great new dimension of man's progress.

Eventually, the exploration of space and the results of that exploration will play a major role in the life of man.

Even before that day, what happens in space will greatly influence our security and our position in the world.

I do not speak just of efforts that have already been planned and projected—such as probing the moon, and orbiting a space station. I speak of the even more ambitious projects which will exert increasing influence over conditions on earth, and eventually send men far into the universe, to tap the resources of the planets.

Of course such activities strain the imagination of many of us today.

But the history of progress is the history of accomplishments that could not be envisioned by ordinary men.

It has been estimated that a manned flight to Venus, at a minimum launching velocity of 38,000 feet per second, would take 5 months.

This is no longer than a trip by covered wagon took from Missouri to California in 1849, on the Santa Fe trail.

Deep space flight will pose many dangers, some of which we can predict, others we cannot.

But the covered wagon trips which opened up the West were fraught with many great dangers to the first pioneers.

I believe that the nation which leads the way into space, and follows up that lead, will hold in its hand the key to the future.

The advantages accruing to those who first master this new dimension are enormous—for possible war and for peace, for good or for ill.

The peaceful exploration of space can create world living standards higher than earthbound men can dream of.

Think of the utility of a space vehicle that could predict weather conditions even before they occur.

Through the knowledge gained from such meteorological satellites, we could eventually make giant strides toward controlling the weather.

By regulating rainfall, we could eliminate the arid conditions which now chain the productivity of millions of acres in our Nation, as well as in Asia and the Middle East.

By regulating temperature, we could open up new areas of the earth for comfortable settlement.

Nor can we exclude the possibility, once space flight is achieved, of the discovery and colonization of other planets.

In these ways, many of the basic causes of international tension—poverty, disease, and hunger—could be eliminated, and with them war itself.

Now let me just mention a few of the new applications.

There is now in development a television reconnaissance satellite which can photograph objects 7 feet in diameter, from 300 miles above the earth.

The nation that can orbit such a reconnaissance vehicle obviously has an advantage in the field of intelligence.

There is now in development a nuclear weapon which can first be placed in orbit, then recalled, electronically, to hit any point of the earth.

Any nation orbiting such a weapon literally holds the sword of Damocles over its adversaries.

And it is not outside the scope of present studies to imagine a space vehicle which could, through ground control, turn back aircraft or other space vehicles by the mere turning of a switch or pressing of a button.

Another tremendous reward for leadership in space is the impact on the minds of men.

The heavens can be seen by the eyes of all men. For centuries, people have looked at them in awe. There is no more effective place to display scientific accomplishment.

Last month, the head of the U.S. Information Agency, George Allen, testified before Congress as follows:

"It is hardly an overstatement to say that space has become for many people the primary symbol of world leadership in all areas of science and technology.

"Our space program," he said, "has an importance far beyond the field of the activity itself. It bears on almost every aspect of our relations with people of other countries, and another view of us as compared with Russia."

As the man in charge of America's strategy in the contest for men's minds, this is what he believes.

"The seesaw seems to have tipped solidly in the Soviet direction in world opinion" as a result of sputnik, the moon shot, and other dramatic achievements on this great world stage.

The Soviets do not intend to rest on their accomplishments so far. They intend to press their advantage in space—to play it for all it is worth.

In reading Soviet scientific literature, one cannot help but be impressed by the boldness, the scope, and the dedication of the Soviet effort toward the ultimate conquest of the cosmos: Manned interplanetary travel.

There seems to be no question in the Russian mind that man's most cherished dream will be fulfilled in and by the Soviet Union.

They have already made great strides toward attaining this goal, including their large geophysical research rockets and their massive artificial earth satellites, plus extensive detection, tracking, and data-handling network associated with that satellite program.

Their confidence in the ultimate result is reflected in the fact that, whereas originally sputnik observers were asked to send their tracking data to Moscow sputnik, they now ask that data be sent to Moscow kosmos.

In such a competition, it is essential to have a clear idea of where we are behind and where we are ahead.

Certainly the Russians have the more spectacular accomplishments to their credit. They got there first, with the most.

We have orbited more earth satellites than have they—but the Soviets have put more weight into space in one shot than we did in all of ours put together.

And make no mistake about it: Weight in space is a measure of control of space.

But our situation is far from hopeless. We have made more progress than the Soviets in instrumentation; also in communication from satellites.

We discovered the radiation belts, which must be surmounted if successful manned flights are to be attempted.

We have, right now, the scientific competence and the resources to overtake the Soviets in the space field.

To this end, I would now make the following seven suggestions:

The unrealistic efforts to distinguish between civilian and defense aspects of space activities should be stopped. It was well intentioned, but it has fallen flat on its face.

In most cases, no such realistic distinction can be made, and further attempts to do so will merely add to the wasteful duplication and confusion now characteristic of our space policies.

There must be one coordinated overall space program, not two or more, and the products of such a coordinated program should have both military and civilian uses.

For this purpose, the authority, funding, and responsibility for such a program should be placed under one man.

The head of such agency should be a member of the National Security Council, and he should report directly to the President.

The present Space Council in the White House should be abolished.

A regular flow of information about the space program should include all facts which will not affect adversely this country's security. In a democracy the people have the right to know all truth which will not help the possible enemy.

I make these suggestions with full realization that without a greater sense of urgency the best organized program will continue to stumble along in second place.

More than anything else, our space program needs a topmost priority in the must-do list of our Government.

The exploration of space is America's new manifest destiny.

It must be treated as more than just another Government program.

It must be treated as the opening of a new frontier; as prudent an investment as the Louisiana Purchase; as vital to our Nation as the push over the Alleghenies, the settling of the Mississippi Valley, and the opening of the West.

The age of space has now given us a new chance to shine with the spirit of the American pioneer.

Let us set ourselves to the task—together.

Let history record that America did not end up in second place in space.

But that she stepped forth eagerly, unafraid, with the spirit and cooperation that has won her a cherished place in the history of man.

You and I, all of us, desire a first-rate, first-class, first-place America.

First in space as well as first on earth.

And, above all, first in the hearts of all mankind.

Pollution Abatement

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. PELLY. Mr. Speaker, I have received a number of communications urging me to support H.R. 3610 to authorize an increase in Federal grants to municipalities for sewage treatment works. Since those who urged this increase in the amount of authorized Federal grants under the Water Pollution Control Act are highly responsible groups in my State I feel it is especially incumbent upon me to clarify my position on this legislation.

When President Eisenhower vetoed this bill he pointed to its defects; namely, that it held forth the promise of a large-scale program of long-term Federal support, and thus was actually a temptation to municipalities to delay their essential water pollution abatement efforts while waiting for Federal funds on a priority basis from year to year.

The President in his veto message called for Federal stimulation of State and local action and promised a national conference to make local taxpayers and industrial business firms more conscious of their obligation to prevent pollution. An extended life of the Federal program was recommended in his message.

My own position, Mr. Speaker, on the Federal plan of financial assistance to local communities is based in part on my basic philosophy, but far more on special consideration of my congressional district and the State of Washington. In the river basins of the Pacific Northwest, in our streams and lakes, as with the ocean salt water of Puget Sound and our costal inlets, as with no other area in the Nation, there is a priceless resource which even with present industrialization development and population growth is being despoiled. Our fishery and recreational values are threatened, and I wish the answer were as simple as enacting an increase in the Federal program.

However, Mr. Speaker, I believe the reverse is the case. Here is why. The Lake Washington Basin is a case in point.

Assume that all municipalities in this basin could qualify and took advantage of Federal assistance. Assume the affluent of all such treatment plants poured into Lake Washington. Already the chemical properties from existing treatment plants of the lake have so changed the water that excess algae has increased and green scum has blighted the clear water almost beyond cure. The affluent property should be piped to distant and deep salt water where tidal action will dissipate it.

The Seattle metropolitan area has a $40 million project ahead of it and the skimpy potential Federal contribution which could not possibly exceed $450,000 offers no real financial solution.

The Washington State Pollution Commission has made a survey of sources of pollution and it has both the responsibility and policing power to stop it. At the State and local level a comprehensive and complete program should be undertaken. Every individual industrial plant should be required to finance and treat its own waste and with municipalities it should be the same.

Federal assistance sounds good and can help local authorities supply valuable pollution abatement information and advice on interstate matters and frankly I agree that public health is certainly a proper function of the Government. But a city's drinking water supply and its sewage disposal are not Federal problems. This bill is a sewer grant bill. That is really what it is. I do not think the Federal Government should build city sewers or collect and dispose of garbage. This should be local.

I believe my area has more water to protect than any other geographical locality. But the Federal Government has no authority to compel my industrial plants to cease dumping waste into streams and inlets and to stop the killing of fish and ruining the banks and beaches for swimmers and those who desire wholesome recreation. The sports fishermen and the boating fraternity and the conservation organizations have a real job to do in my State. Adequate laws and enforcement on the local level are the answer and that is why, Mr. Speaker, in all conscience I feel compelled to vote to sustain the President's veto of H.R. 3610. But God knows, Mr. Speaker, I want clean, pure water as much as anyone and will do my utmost toward a proper solution of this serious problem.

A Night To Remember—The Caryl Chessman Case

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 24, 1960

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "A Night To Remember," published in the Oakland (Calif.) Tribune of February 21, 1960. The editorial deals with the case of Caryl Chessman.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A NIGHT TO REMEMBER

Long after Caryl Chessman has met his maker by natural death, if not by legal execution, the repercussions from the events of Thursday night will re-echo.

Even his depraved crimes against helpless women (one now in a mental institution as a result) seem to have been forgotten in the hysteria of the hour.

To our young people as well as to the world we appear to have demonstrated that no matter how vicious a criminal, or how heinous his crimes, if he is only devilishly clever in invoking all types of technicalities he can cheat the lawful sentence of our courts and the decisions of our juries and can make a mockery of the processes of law and justice.

From now on any condemned man has the assurance that the longer he delays his execution the easier it will be to claim that the very act of prolonging his life in prison will be considered "cruel and inhuman punishment" and will then be taken up by fuzzy-minded people all over the world as a cause celebre.

To be sure there are many sincere people who believe that due to the circumstances of the Chessman case and the prolonged delay in carrying out the judgment of the trial court a basis existed for judicial reversal of the judgment or for executive clemency. But certainly not for the reasons

given by the Goevrnor's office nor in the way it was done.

Is the criteria for justice or clemency in California now to be determined by the threat of mob violence in foreign lands?

Each time that an American President, Vice President or Secretary of State makes a good-will trip is he to be subjected to blackmail? Are we in the position that unless one of the 50 American sovereign States commutes a death penalty or frees a prisoner that ill will and perhaps violence will be directed against our officials?

Far better that all such trips be canceled than that the prestige of our Nation and the dignity of our States be reduced to this sad condition.

Instead of wiring the Governor of California, Assistant Secretary of State Roy Rubottom should have cabled the Government of Uruguay that if their country was not prepared to give the President of our Nation a friendly welcome the visit to that nation would be forthwith canceled but that our Federal system of government would not be compromised.

Then, to cap the climax and to remove the last shred of dignity from legal procedures in California, Governor Brown announced that he is going to pass the buck to the State legislature and throw the whole question into the political arena.

This ignores the fact that the legislature had the chance last April to repeal the death penalty and refused to do so.

Now instead of the issue being determined on its merits, by dragging it into a special session within the 60-day stay of execution period, he involves it in sort of a popularity contest on Caryl Chessman. Probably world-wide demonstrations will be held demanding the legislators vote for repeal of the death penalty and windows in our embassies will be broken if they don't so vote.

Is that how the protection of law-abiding citizens of California is to be determined? Because of violence abroad are gunmen to escape their crimes of shooting down bank tellers and policemen sworn to uphold the law? Are kidnap-perverts practicing their crimes of violence against women and children to be freed of the full penalty for their crimes along with murderers who plot the death of innocent victims?

If 60 days pass and the legislature has not repealed the death penalty, what then? As violence adds to violence abroad has the Governor opened a Pandora's box when those mobs and not he will become the custodian of the constitutional power of clemency in California? Having yielded to international extortion once, will he not be expected to yield again?

The Governor's action and his reasons for the same have stripped dignity from California's legal processes and left us naked before the world.

U.S. Customs Makes Enemies

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 24, 1960

Mr. McCARTHY. Mr. President, the Minneapolis Star, February 15, 1960, carried an editorial entitled, "U.S. Customs Makes Enemies," by Everett Helm, a Minnesota-born composer and critic now living in Wuerttemberg, Germany, who recently had the opportunity of viewing the operations of our immigration and customs departments in New York.

Because of the serious nature of Mr. Helm's observations of the processing of immigrants to this country, I am bringing this editorial to the attention of the Congress. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

U.S. CUSTOMS MAKES ENEMIES—THE WAY IT'S RUN, AMERICA SEEMS LIKE A POLICE STATE

(By Everett Helm)

An American returning to the United States after a long stay abroad has a tendency to view his own country in a somewhat impersonal way—almost as if it were another foreign country. This, at least, has been my experience in the past, and it happened again this time. One sees the good and the less fortunate aspects of one's native land through a magnifying glass, as it were.

It has been said that first impressions are extremely important, and if this is so I hate to think what damage is done by the first impressions foreigners receive when they arrive in New York by ship.

First of all they are kept waiting aboard ship to go through immigration until all American citizens have been taken care of—all, that is except those having alien spouses. (Being in this category, I have had ample opportunity to observe and sympathize with the newly-arrived foreigners at the Port of New York) I know of no other country in which landing is made to be such an ordeal as it is here, and certainly of none in which its own citizens are given this kind of preferential treatment.

After all Americans have disembarked, the foreigners then are obliged to line up in endless ques to wait their turn with the immigration authorities, who are generally quite pleasant, to be sure, but who ask all kinds of questions about the nature and purpose of one's visit to the United States, where one will stay, when leave, etc.—all of which has already been covered in the visa application.

I can see no valid reason for this interrogation, which, rightly or wrongly, gives the foreigner the impression of entering a police state. When a visa has been issued by the U.S. consulate abroad, the questions should have been (and were) asked there. That should be enough.

When they have finished this ordeal of standing in line and interrogation, the newly-arrived passengers are then set off the ship into an enormous customs shed—unheated, draughty and utterly confused—to search out and assemble their baggage, which may or may not be placed in the area marked by the first letter of their last name.

When I landed recently, the porter service was functioning hardly at all, and almost everybody was obliged to wait for the appearance of his bags as they came piecemeal and at infrequent intervals from the ship.

It was anything but a heartening sight to see elderly French ladies struggling to carry large bags from one end of the huge pier to the other and struggling as well to obtain some kind of information that would help them understand what was going on amidst this incredible disorder. Needless to say, nobody on the piers—porters, policemen or officials—speaks anything but English.

On this particular occasion it took me, to whom all this is familiar, a good 4 hours to clear customs. For after one has finally assembled all his baggage, a new martyrdom begins: that of standing in line awaiting one's turn with a customs inspector. There were several hundred people in this line, which moved slowly, due to a shortage of inspectors.

The inspection itself went quickly and pleasantly. But then came another wait in line for a porter to take the luggage to a taxi. Although large signs are posted declaring, "Porter Service Is Free," anyone who believes this is in for a rude awakening.

And woe to the well-meaning foreigner who gives what by European standards would be a generous tip. He will find himself no less roundly abused than the returning American.

To cap the climax of this series of indignities, the passenger is even now not able to step into a waiting cab, because the cabs are not waiting. They have to be fetched by a professional fetcher, who makes it clear that he expects a very generous tip for his efforts, since he, unlike the free porters, draws no salary. Fetching a cab oneself is entirely out of the question, for the cabbies would not dare drive up without the protecting escort of a fetcher.

At a time we are trying to make friends and influence people for American democracy, it seems monstrous that foreigners should be given this first impression of our country.

In my inner ear I can hear the screaming and villification that would ensue if American visitors to Europe were given similar treatment. The fact is, they are not, and there is no reason why landing in America cannot be made as relatively painless as it is in Europe.

It is not enough that this or that feature of the process should be improved or made less unpleasant, as the actual baggage inspection has been. The entire system should be revised. Then visitors to our shores would not think of democracy as meaning that everyone is treated equally badly but rather that all are treated equally well. This would be a great step forward.

Disarmament and Missile Gap Incompatible Issues

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pittsburgh Post-Gazette of February 24, 1960:

DISARMAMENT AND MISSILE GAP INCOMPATIBLE ISSUES

(By David Lawrence)

WASHINGTON, February 23.—Politicians are supposed to be pretty good at picking out issues for an election campaign, but sometimes they can't be in the position of urging the American Government to accelerate its missile program and at the same time declare that nuclear tests must be abandoned and disarmament negotiations speeded up.

A political party can't be arguing persuasively for more defense on the theory that war is imminent in the next 2 or 3 years and at the same time be blaming the administration for not bringing about disarmament. In fact, some Democrats have insisted that the United States should abandon its nuclear testing whether or not the Russians agree to inspection.

What will the mood of the electorate be next autumn? Will the public be so scared of the prospect of war that it will wish to punish the administration in power for not having built enough missiles for our Armed

Forces? Will the voters believe the President when he says our overall defense is adequate as a deterrent against attack and that we are not relying on the missile alone or on any one weapon? He isn't running for reelection and will, therefore, wield a powerful influence. Presumably the Democratic candidates are betting on the idea that the country will vote the Republican administration out of power for allegedly having failed to close the missile gap

But what will the Republicans be saying in answer? Already they are getting out charts and tables showing that the Democrats were in charge of the executive branch of the Government to January 1953, and they spent for missiles a total of only $1,155 million from 1947 through the fiscal year 1951.

As for the Republicans, in the ficsal year 1953 they spent $1,116 million on missile programs, and every year thereafter they increased the amounts, so that in 1956 they were spending $2,270 million. In 1957 they spent $4,470 million and added to this until they reached nearly $7 billion in 1959. They have almost that same amount scheduled for the fiscal year 1960.

If money is everything and if budgetary considerations should have been disregarded heretofore, then the query is what happened between 1947 and 1953 when it is presumed the Soviets got their start?

Also, since the hydrogen bomb is the key to vast destructive power today, why was there a lag in developing the H-bomb? Several years elapsed while a battle went on inside the Truman administration against developing the H-bomb as Russia moved on with her tests. One of the principal scientists in our Government who argued against developing the H-bomb was later declared a security risk not because of any act of disloyalty on his part but because of his indiscretions in mingling with Communists.

Anyway, the H-bomb lag is the most serious of all, and if the missile lag is to be a campaign issue, it could be that the whole messy story may be revived.

The principal inconsistency, however, among those who are playing the defense issue is that no candidate can afford to be pictured as concentrating on how to build up more military power at a time when supposedly the world is anxious for disarmament.

Miss Carol Ann Heiss Wins Gold Medal for United States

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. BOSCH. Mr. Speaker, I am sure all of us have followed with great interest the VIII Winter Olympic Games now in progress at Squaw Valley, Calif. Therefore, I am sure you can understand my pride in announcing that my constituent, Miss Carol Ann Heiss, Ozone Park, N.Y., has won for the United States its first gold medal. Of course, we had no doubt that Miss Heiss would win this honor as it was the only one left in the figure skating field which she had won.

In 1956 Miss Heiss took second place in the figure skating competition at the VII Winter Olympics. She went from there to Garmisch-Partenkirchen, Germany, to win the world championship that year. In 1957 she won the women's North American figure skating championship, and in both 1958 and 1959 she won the United States and world championships. With this outstanding record to her credit, I am sure we all share in her joy at winning this coveted honor—one she says she has been working toward for 15 years.

Under leave to extend my remarks, I include the text of the telegram I have sent to Miss Carol Ann Heiss:

Miss CAROL ANN HEISS,
U.S. Olympic Team (Skating),
VIII Winter Olympics,
Squaw Valley, Calif.:

Congratulations on your splendid victory. We in Queens County, N.Y., especially Ozone Park and the Fifth Congressional District, take great pride in the honor you have brought to yourself, the United States, and to us in winning the first gold medal for this country. It is impossible for me to find words to tell you how happy I am for you, your coach, your family, and your friends. Your performance in the free skating which I witnessed on television was superb.

Congressman ALBERT H. BOSCH.

Estonian Independence Day

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

Mr. DERWINSKI. Mr. Speaker, today, February 24, is the anniversary of Estonian Independence Day. It is a tragic thing that this occasion receives little attention since Estonia, as much as any other nation, stands as a constant reminder of the basic treachery of Soviet dictators and their complete disregard for the rights of mankind.

Estonia, due to her brief span of independence and isolated geographical position with a relatively small population, never received the attention of the world that larger nations receive while undergoing the same brutal oppression. However, we should maintain the moral dedication and strength of our foreign policy by continuing to emphasize to the United Nations the barbaric domination that Soviet forces exercise over Estonia and her neighboring Baltic States—Latvia and Lithuania.

With all the phony Soviet propaganda concerning the termination of the cold war, we should point to a tragic people, such as the Estonians, to remind ourselves that until they are restored to the political, social, economic, and religious freedom that they desire, we will never have true world peace. In the coming summit conferences, President Eisenhower should be forewarned of the constant deceitfulness that is the standard Soviet diplomatic procedure, when he remembers the tragic diplomatic errors of his two immediate predecessors.

Estonia and her brave people in their tragic suffering serve to constantly remind us that only through national strength and support of free nations of the world, and by efforts to constantly expose the insidious worldwide communistic agitation can we maintain for ourselves and all peoples true freedom and world peace.

Treasury and Post Office Departments, and the Tax Court of the United States Appropriation Bill, 1961

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 23, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 10569) making appropriations for the Treasury and Post Office Departments, and the Tax Court of the United States for the fiscal year ending June 30, 1961, and for other purposes.

Mr. O'HARA of Illinois. Mr. Chairman, may I remark that I was possessed by a great emotion, which I am sure was shared by all my colleagues in this historic Chamber, when the able, dedicated, and beloved GORDON CANFIELD spoke for the last time from the well for the appropriation bill reported by the subcommittee of which he is the ranking minority member and of which he was chairman during the years when the Republicans were in control and JOE MARTIN, deeply embedded in our hearts, was Speaker.

I confess, Mr. Speaker, and I am not ashamed, that there were tears in my eyes when the distinguished gentleman from New Jersey told us of the circumstances of his recent illness, of the strength to fight through and conquer that came from his mother, and now that she has passed to the rarefied realms above, how her presence and her influence remain with him and are the source of his determination to retire from the Congress at the end of his present term.

I wish that every American could read that eloquent tribute of a son to his mother. I feel privileged and grateful that I was present to hear that tribute voiced from the Speaker in the well with the rich eloquence which comes only from deep and sincere emotion, the words springing from the heart.

I shall remember especially three occasions since I have been a Member of this body that stand out. One was when Ed Hart spoke on the death of Joe Tumulty and recalled the days and the personalities of the Woodrow Wilson administration. It was oratory in its very highest expression, and as LEE METCALF remarked to me immediately after its delivery when all who heard it were in a magic spell, "perhaps we have just listened to one of the great orations of history."

Another occasion was when in the early months of the first Eisenhower administration, Dan Reed, tall, athletic, handsome, fighting a losing battle for what he believed was right, so won by his eloquence of sincerity the hearts if not the votes of his colleagues that every Member on the floor and there were few absentees that day, arose as a man and applauded for a very long time.

The third occasion was when GORDON CANFIELD spoke today. There doubtless will be similar occasions as the years roll

on, but none to excel in the drama of pure emotion.

The gentleman from New Jersey represents in my book the first attributes of heart and mind. I doubt if he ever said an unkind word of any person. His consideration of others, his helpfulness and kindnesses, his modesty and entire lack of affection, his constant doing of good deeds dictated by a good heart, stamped him in mind, as I know they did in the minds of my colleagues on both sides of the aisle, as a true practitioner of the religion of self-abnegation.

I also, Mr. Chairman, would extend my congratulations and heartiest commendation to the outstanding chairman, the gentleman from Virginia [Mr. GARY], and all the members of the subcommittee that has established such an enviable record for close working together and gaining the approval of the House within the very minimum of trouble.

Conservation Workshop Camp Program, Wisconsin

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, February 24, 1960

Mr. WILEY. Mr. President, as Congress attempts to find ways and means for dealing with the many complex problems confronting us, it is always gratifying to find local leaders "picking up the ball" to promote progress in fields in which this can be constructively accomplished at the level of the local community.

Today, I refer particularly to one such endeavor in Wisconsin aimed at promoting conservation of our natural resources.

Recently, I was pleased to have forwarded to me a résumé of the "Conservation Workshop Camp Program," by George W. Barber, superintendent of schools at Waupaca, Wis.

The program, designed for rural teachers, is aimed at promoting creative efforts in utilization, as well as preservation, of our soil, lands, forest, and other natural resources.

In addition to the leadership by Superintendent Barber and his associates, the program has the farsighted participation of such agencies as: Wisconsin Lions Camp for the Visually Handicapped; Waupaca Lions Club; State soil conservaton committee; Wisconsin Conservation Department; extension service; University of Wisconsin College of Agriculture; soil conservation service; U.S. Geological Survey, Ground Water Division; and State department of public instruction.

Reflective of the kind of constructive, creative efforts needed at the local level for not only best utilization, but also conservation of our natural resources, I ask unanimous consent to have a brief résumé of the program and its objectives printed in the Appendix of the RECORD.

There being no objection, the résumé was ordered to be printed in the RECORD, as follows:

PARTICIPATING AGENCIES AND GROUPS

Wisconsin Lions Camp for the Visually Handicapped; Ray Hemple, Popsippi, Wis.,

Waupaca Lions Club, sponsor; Victor Billmeyer, president.

State soil conservation committee; Don Niendorf, Manitowoc, Wis., erosion control agent.

Wisconsin Conservation Department:

1. Arthur Jorgenson, Madison, Wis., supervisor of education and information.

2. Harold Steinke, Oshkosh, Wis., game manager.

3. Robert Heding, Oshkosh, Wis., fish and watershed management.

4. Dale Tubbs, Waupaca, Wis., assistant district forester.

5. Sidney Miller, Waupaca, Wis., forest ranger.

Extension service:

1. Joe Walker, Waupaca, Wis., county agriculture agent.

2. Gene Hoye, Waupaca, Wis., club agent.

University of Wisconsin College of Agriculture; Robert Ellarson, Madison, Wis., extension specialist in wildlife management.

Soil conservation service:

1. John Nimlos, Waupaca, Wis., work unit conservationist.

2. Herbert Tauchen, Waupaca, Wis., soil conservationist.

U.S. Geological Survey, Ground Water Division; Charles Berkstresser, Madison, Wis., survey technician.

State department of public instruction; Miss Leona Fischer, Frank N. Brown, supervisors.

IN MEMORY OF R. S. IHLENFELDT

(By Frank N. Brown)

Conservation is a philosophy of life. While we find many who would agree with this belief, few have made a determined effort to instill such a philosophy in others. When such a person passes on, the loss to a community, state and nation cannot be measured. Thus, the passing of Roy S. Ihlenfeldt on February 13, 1959, has dealt a blow to conservation education in Wisconsin. With his passing go ideas that he had conceived and propagated for perhaps half a century. While there is no substitute for ideas expressed by one who is active, alert, and intelligent, consolation, if there be any, can be found in the fact that Roy has left his imprint in the hearts and on the minds of thousands of people. These imprints have been made by word of mouth and through the printed word. For nearly a quarter of a century, conservation education and Roy Ihlenfeldt were synonymous in the State of Wisconsin. Wherever people assembled to discuss conservation education, Roy was present either in person or influence. If people gathered to share ideas to be put in print, Roy was there to share and in many instances to perform the Herculean task of pulling these ideas together and phrasing them for publication.

Roy S. Ihlenfeldt will be remembered for his work in conservation education. Yet, he never lost sight of the fact that while conservation has its place, it plays only one role in developing and practicing the good way of life. These ideas have been carried to thousands of the youth of Wisconsin through the teachers who studied in the county colleges of the State. It was Roy who worked closely with these institutions in an effort to develop a program of education that would prepare teachers to meet all of the challenges of educating boys and girls throughout the State.

Yes; Roy's energy, enthusiasm, and ability gained for him recognition in many phases of life and education by individuals and organizations. Yet, for those of us who knew him well, it would seem that the greatest tribute that could be paid would be that of continuing to encourage everyone to develop and practice a philosophy of conservation that will help to assure the good life.

CREED OF THE SOIL CONSERVATIONIST

(By C. W. Gee)

I believe God created the earth by His divine processes for the benefit of man, not one man, nor one generation, but mankind for all time.

I believe the Almighty gave man an inheritance of the earth, not to be hoarded as a miser guards his treasure, but to be used with wisdom and in the fullest for the perpetual benefit of all men.

I believe all of mankind, regardless of race or creed are entitled to a fair and equitable share of the earth's bounty commensurate with their own efforts. But in so believing, I hold the irrevocable conviction that man himself owes earth a debt of respect and fealty.

I believe that whatsoever a man soweth, that shall he also reap; that he who manages his fields, pastures, woodlands, and streams with respect and wisdom shall reap the bountiful harvest and so shall his descendents while he who uses them selfishly, thinking only of his own immediate gain, shall bring to grief his land, himself, and his children's children.

Holding these beliefs to be true I dedicate myself to the task of helping my fellow men realize their own personal responsibility in conserving the earth for the generations which follow them. To this end I shall devote my best knowledge in guiding the efforts of those who till the soil so that the land which nurtures us shall be fruitful without end.

For truly, the earth is the Lord's and the fullness thereof, but the responsibility for its stewardship is vested in man.

OBJECTIVES

1. To broaden interests through active participation.

2. To enrich teaching methods through a "learn by doing" procedure.

3. To coordinate the efforts of conservationists, lay people, club leaders, and schools in making conservation everybody's job.

4. To organize a systematic approach to the study that will effectively utilize the contributions of all conservation agencies.

5. To create an awareness of and to develop an understanding of conservation problems beginning with the local to countywide, statewide, and national.

6. To consider the possibility of a biannual workshop camp that will become a continuing process open to all conservation-minded persons.

Constituents Oppose Farm Program

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. PELLY. Mr. Speaker, I believe it was last year in debating an agriculture bill that one Member suggested it would be simpler and far more economical to pay a cash sum to each farmer rather than to appropriate the billions of dollars necessary to carry out the price support farm subsidy program. I figure on that

score that each farmer would get about $1,090 a year.

However, the answer lies in repealing the laws and letting the farmer in a free economy work and make his living without all the Federal regimentation.

My constituents are opposed to the current law. Here are a few of the things they say:

I would like to take a minute of your time to express my opinion on the farm product surplus problem. I feel the Federal Government should not lease any federally owned land for agricultural uses whenever it would contribute in any way to increasing the surplus. I feel it would be cheaper to buy up the marginal agricultural land and put it in a federally owned soil bank rather than pay exorbitant rental payments to accomplish the same thing.

Why does the U.S. Government support tobacco raisers when the medical profession has pretty well concluded that smoking is a contributing cause of cancer?

The Kitsap County Republican Women's Club, at their February 11 meeting, heartily endorsed your nonsubsidy farm plan and wish to commend you for your leadership in this matter.

Let's do something about the agriculture surpluses. Somebody should have the courage to change the current mess, even though it might mean political death.

I am against price supports and for a free and open market. Let things seek their own level—they will if the Government would keep out.

We have much surplus grain, some of it spoiling, still we are paying a very high price for bread.

Supply and demand should be the rule.

Why should one small segment of the population be subsidized and guaranteed prosperity at the expense of all?

In times like this it seems ridiculous that we pay taxes to make prices higher.

There is no reason why the farmers have to be paid to not raise foodstuff.

Let's have the farmer go back into competition with other farmers as in other industries. That would eliminate surpluses and require farmers to plan their crops ahead.

Let the farmer run the farms and let us get back to supply and demand. Get the Government out of the various businesses and attend to governing.

Get rid of the surplus, give it to needy countries, or burn it. Why pay millions of dollars to store it when it will probably never be used?

I sincerely believe our farm surpluses should be given as an economic aid to needy peoples here and elsewhere in the world.

The Need for Survival Insurance

EXTENSION OF REMARKS

OF

HON. HOWARD W. CANNON

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 24, 1960

Mr. CANNON. Mr. President, in the past 2 weeks the Committee on Aeronautical and Space Sciences and the Preparedness Investigating Subcommittee of the Committee on Armed Services have been holding hearings on the Nation's missile and space programs.

Certainly, it is too early at this time to draw definite and directional conclusions from the testimony presented thus far on every subject.

However, Mr. President, I believe that in the conflicting testimony of our experts in the field representing the three major services, it has been made demonstrably clear that our efforts in the fields of missiles and space have been tailored to preconceived budgetary notions. This has been stated by our top men in the Navy, Air Force, and Army.

Certainly, most of us who have given time and study to this vital question of survival and to the crucial need for maintaining an adequate deterrent must realize that we cannot cut too fine the assessments of relative strength between the United States and the U.S.S.R. One miscalculation based on insufficient intelligence or failure to properly read what is now popularly called the "intent" of a potential enemy could lead to disaster.

Mr. President, when all the arguments pro and con are submitted, I am sure that the Congress will respond to the feeling of the people that it would be a wiser course for all of us to take a position of adequate insurance to deter whatever intention the Soviets may have. We are not dealing with a precise mathematical equation in which the numerical factors on both sides are positively known. I believe that it would be incumbent upon us—indeed, it would be our constitutional responsibility—to provide every possible insurance against a fatal miscalculation in our intelligence assessments in the missile field.

In that connection, I ask unanimous consent that the recent column of Joseph Alsop entitled "The Basic Crime," be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Feb. 10, 1960]

MATTER OF FACT—THE BASIC CRIME

(By Joseph Alsop)

Go to the old Navy Department, to hear the story of the great Polaris submarine-and-missile project. It is an inspiring experience. It is also a deeply reassuring experience—until you begin to think about it.

Here are just about the most technically advanced weapons man has ever devised, considerably more complex, over all, than our Atlas ICBM for instance. Here is a weapons system requiring many tens of thousands of human and mechanical components, ranging from men for the missile crews to air cleaners for the submarines, to fabulously accurate gyros for the missiles themselves. Here is a project demanding continuous, coordinated forward movement on countless different fronts.

This marvelous movement began, almost from scratch, in 1956. Less than 4 years ago, the Polaris project was set up on the lines of a smaller Manhattan District, under the brilliant and hard-driving Adm. W. F. Raborn, Jr. Yet today, all the fantastically complex parts are nearly ready to be fitted together in the first operational Polaris. Before the year is out, the *George Washington* will be at sea with 16 missiles abroad, any one of which will be able to kill a medium-sized city.

The Polaris project is inspiring because it shows what we in America can do if we put our minds to it, and it is reassuring because it promises important reinforcements for the American deterrent. But this project is also the very opposite of reassuring, if you just crank the Polaris experience into the current great debate about national defense.

At bottom, the defense debate concerns only one question. The question is whether the Soviets now have or will soon have the small number of intercontinental ballistic missiles needed to wipe out the American deterrent, which is now totally vulnerable. The number needed at this time is only 150 Soviet ICBM's. The national intelligence estimates say that the Soviets do not now have 150 ICBM's, and further say they will not have the still small but gradually increasing numbers of ICBM's they will need later. The President has therefore neglected to budget the relatively modest sums of money that are needed to make the American deterrent less vulnerable, by maintaining an airborne alert and in other ways. Yet, merely by its brilliant success, the Polaris project raises at least two kinds of grave doubts about the dependability of the national intelligence estimates on which so much dependence has been placed.

On the one hand, it raises technical doubts. For example, the able Director of the Central Intelligence Agency, Allen W. Dulles, has testified that there are good reasons to believe the Soviets do not have weapons crews for a decisive number of ICBM's. These reasons are fairly persuasive if the Soviets are assumed to need the same large numbers of men included in the American ICBM squadrons. But these reasons are less persuasive when you note 33 men on the *George Washington* will service and if necessary fire a total of 16 Polaris missiles.

Suppose it is certain that the Soviet ICBM is liquid-fueled, rather than solid-fueled like the Polaris and the prospective American Minuteman missile. Suppose that a Soviet ICBM weapons crew has to be proportionally four times larger than a Polaris weapons crew, because of the greater difficulty of servicing liquid-fueled missiles. But suppose also that the Soviet ICBM's are as fully automated as Polaris, and that the Soviet ICBM crews are as economically organized as Admiral Raborn's Polaris crews.

You then get a figure of only about 1,300 men in specially trained weapons crews to fire 150 Soviet ICBM's. And how on earth can anyone but the all-seeing Almighty be sure that a mere 1,300 men have not been specially trained somewhere in the vast reaches of the Soviet land mass?

In the same way the Polaris project also raises what may be called grave organizational doubts about the national intelligence estimates. To be specific, former Assistant Secretary of the Air Force Trevor Gardner, who was eventually fired for being too right about the missile gap, wisely fought for a Manhattan District type organization of our ICBM program. Gardner was defeated in this fight, however. Under Gen. Benjamin Schriever, great things have nonetheless been accomplished with our ICBM program. But because Gardner was defeated, General Schriever has always had to work through channels, and mostly through half-clogged channels. Hence Schriever has lacked the immense organizational advantages of Admiral Raborn in the Polaris project, and of General Groves in the Manhattan District.

Meanwhile, under the prevailing estimating system our own ICBM performance is our yardstick for Soviet ICBM performance. The Soviet program began years before ours did. Only suppose that the boss of the Soviet program has enjoyed the same organizational advantages as Admiral Raborn. Then there is no reason why all the

needful components—missiles, weapons crews, launchers, and so on—may not suddenly be brought together into a complete, decisively powerful Soviet ICBM system in the near future, just as all the Polaris components will be brought together in the near future in the George Washington.

These doubts about the national estimates do not reflect on the CIA, which only claims to produce informed estimates, not gospel truth. These doubts reflect, rather, on the use of the administration is making of the estimates.

Just this is the crucial point. The national intelligence estimates may be correct to the last decimal. Pray God they are. But they may also be wrong by a considerable margin. If the estimates of Soviet ICBM's are wrong, even by a very narrow margin, the error can be fatal. Basically, therefore, it is not merely foolish, it is really criminal to use the national estimates as precision instruments which show how little we need to do. Common prudence demands insurance against error in the ICBM estimate. The national interest demands measures, such as the airborne alert, to end the total vulnerability of the American deterrent. And sound practice demands that the use of mere estimates as precision instruments be abandoned and condemned, as wholly pernicious and improper.

Report of President of Society of American Registered Architects

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 24, 1960

Mr. TALMADGE. Mr. President, on last September 25 and 26 the Society of American Registered Architects, an organization representing registered architects, held its first national meeting in Kansas City, Kans. A highlight of that meeting was the report of the society's founder and first president, Hon. Wilfred J. Gregson, of Atlanta, Ga. I ask unanimous consent that the account of Mr. Gregson's report, as carried in the current ARA brochure, be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT OF THE PRESIDENT

"You are my report. You are the ones who have made the first great step toward a unified profession of architecture. You are a living report that will go to every part of these 50 United States."

So said President Wilfred Gregson in his report to ARA members at the opening sessions of the national meeting.

"You will take back the olive branch as a token that the waters of selfishness are receding," said the founder of ARA. Describing the founding of ARA through his own efforts and with the aid of many others, Gregson stated that ARA is now a powerful society throughout the United States.

"We have succeeded in proving that there is a great need for the Society of American Registered Architects; that there are unlimited ways such a society can be of value to each architect, his client, his town, State, and nation. * * * We can't cure all the ills at once, but we have started and can see possibilities of great expanses."

The president of ARA predicted that the unselfish work of ARA members will end in "finer architecture and more unified distribution of the proceeds."

He stated that the task of ARA members is to enlist every registered architect in the United States.

"Architects must be represented before Congress," the president declared. He asked that some ancient taboos on advertising be recognized as now out of date."

The theory "it's better to do nothing than to be called unethical" has played into the hands of a few moguls and helped a few gigantic firms to flourish, Gregson stated.

The ARA program is simple. It is all architects for all architects. ARA policy is to build up architects, not fence them in, the president explained.

"We must alert architects to the greatness which is ours. We must teach our own people that there is a God of plenty in the heavens and that the doctrine of insuffiency is evil.

"The control of ARA is by officers who are elected each year at the annual meeting. The nominations committee is also elected at each annual meeting. There can be no stacked vote or perpetuation of officers. This includes your president who automatically becomes past president at the meeting of 1960, when a newly elected president will take the gavel."

As a final charge he told members that ARA must not become overcomplicated, or its objectives forgotten.

WILFRED J. GREGSON,
National President.

Jurisdiction of International Court of Justice

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, February 24, 1960

Mr. BEALL. Mr. President, on February 17, 1960, Mr. Frank B. Ober testified before the Senate Foreign Relations Committee with regard to Senate Resolution 94 which would repeal the Connally reservation.

Mr. Ober is an able constitutional lawyer and his testimony gives scholarly treatment to this most important issue. I recommend a careful reading of its contents to all my colleagues.

Mr. Ober has prepared a short summary of his testimony and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

CONNALLY RESERVATION

Briefly, the history of the present movement, as I get it, is as follows:

1. The United Nations Charter, article II, section 7, expressly prohibits intervention in matters "which are essentially within the domestic jurisdiction of any state or which require the members to submit such matters to settlement under the present Charter."

2. The provision for the World Court required affirmative adherence by separate action. The United States, like 16 other countries, in the Connally reservation (adopted 61 to 12) excluded from the compulsory jurisdiction of the Court such matters "essentially within the domestic jurisdiction of the United States of America, as determined by the United States of America."

3. In 1947, before the cold war and the disillusionment as to communism, a movement was started to rescind this reservation, and was even recommended by the house of delegates of the American Bar Association.

4. Since 1947 the movement was apparently completely dead because of a lot of history under which the State Department started trying to regulate domestic matters by treaty without amending the Constitution. This gave rise to a general proposal to limit the treatmaking power, which failed by one vote of reaching two-thirds because Secretary Dulles assured the Senate committee that no further efforts would be made to pass such treaties.

5. The Senate Foreign Relations Committee suddenly took up the Connally proposal that everybody thought had been dead for more than 10 years, heard two or three witnesses, and was about to propose action in the Senate, but has apparently been deterred by being reminded that it would involve a fundamental change in our Constitution in surrendering to a foreign court the determination of matters "essentially within the domestic jurisdiction of the United States of America, as determined by the United States of America." Yesterday, because of the uproar, they had another hearing and I submitted my statement, but did not go over there because there wasn't time enough to make certain that I would be given a chance to make an oral statement.

6. It seems to me as a matter of constitutional law that to vest a part of the judicial power over domestic matters in a world court instead of the Supreme Court would, at the least, require an amendment to the Constitution.

7. That no such amendment would have a ghost of a chance of adoption, partly because the Court would be composed of 15 judges, only one of which can be from this country, many of them being from Communist and other totalitarian countries where judges regard themselves as agents of their respective states. This seems strange to us, but they haven't the slightest conception of the independence of the judicial function. What, if any, ideas of the judicial function will come from the 40 additional so-called nations being added, from Africa, the Middle East, and parts of Asia, it is impossible to foretell except that they cannot have any training in our kind of law or the constitutional preservation of liberties or property.

Conflict-of-Interest Legislation

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, February 24, 1960

Mr. KEATING. Mr. President, the report of the special committee of the Association of the Bar of the City of New York on conflict-of-interest problems is reviewed in a very fine editorial in this morning's Washington Post. The editorial emphasizes that the legislation recommended by the special committee of which I am a cosponsor has a double purpose: First, to make it easier to remove from Government positions officials who have a conflict of interest; and, second, to remove unreasonable impediments in existing conflict-of-interest laws to the recruitment of competent well-trained persons.

I believe that the Washington Post editorial will be of interest to many persons, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Feb. 24, 1960]

CONFLICTS OF INTEREST

A special committee of the Association of the Bar of the City of New York has handed Congress a very thorough study of the conflict-of-interest problems that are plaguing the Federal Government, together with a bill designed to bring about suggested reforms. The study group takes its stand on the basic principle that "a democratic government cannot risk having its officials in a position where loyalty to their official duties conflicts with their personal economic interest." But the committee also sees that the divestment of public servants should not be carried to the point where it is difficult to hire top executives for high governmental posts. The bill is thus designed to serve a double purpose.

We think the idea of passing a comprehensive new conflict-of-interest statute is excellent. Most of the laws now on the books are related to problems of the post-Civil War period. Since then the Government has grown to enormous proportions; Civil Service has supplanted the spoils system. Administrative machinery has been highly developed. New sources of possible conflict have arisen, and the whole problem needs to be viewed in the light of present-day conditions. There should also be a substantial advantage in bringing together all the law and the rules on this subject so that they will be readily available to administrators, Federal employees and the private interests with which they come into contact.

The proposed statute would write into the law a general provision against gift-taking by Government employees. In general it would strike at gifts from persons having interests that might be substantially affected by an employee's performance or nonperformance of official duties. Enforcement of the law would be sought chiefly by administrative remedies, including dismissal, leaving criminal penalties for the more flagrant cases. The emphasis of the program would be preventive rather than penal.

Not all of the committee's voluminous recommendations are designed to impose new restraints on Government servants. It found that "the strict requirements of the Senate Armed Services Committee on the divestiture of stock have made it difficult for the Department of Defense to procure top level executives." To meet this obstacle to recruitment, the study committee suggests that employees of private companies coming into the Federal service be allowed to continue participating in private pension plans under various safeguards. The Armed Services Committee has been quite erratic in its demands that some nominees to the Defense Department (but not others) divest themselves of stocks in order to win confirmation. It has shown little interest in other forms of wealth held by nominees. The need for a more consistent policy is obvious, and it should encourage the recruitment of highly skilled executives as well as the elimination of conflicts of interest.

The committee would also draw a line between regular Federal employees and consultants who give only par time to governmental work. This distinction obviously would not relieve policymakers of the necessity to guard against special-interest influence from consultants. The constructive and soundly based bar association study offers no panacea for the perennial problems of conflict of interests, but its new approaches should help to isolate a few bad eggs without subjecting the vast majority of honest and conscientious Government employees to impossible working conditions.

The Right To Vote and the Commission on Civil Rights

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the CONGRESSIONAL RECORD a speech entitled "The Right To Vote and the Commission on Civil Rights" delivered at the City Club of Chicago on November 3, 1959, by the distinguished visiting associate professor at Notre Dame Law School, Mr. Harris Wofford, Jr.:

THE RIGHT TO VOTE AND THE COMMISSION ON CIVIL RIGHTS

(By Harris Wofford, Jr., visiting associate professor, Notre Dame Law School)

I understand that a recent talk to this club by the scientist Dr. William Davidson was read and cited by Mr. Khrushchev on his trip here. I doubt that my talk will have that fortune or misfortune, but perhaps Mr. Khrushchev should read the report of the Commission on Civil Rights. For one reason, he certainly has civil rights problems of his own—ours must seem small to him compared with those he faces in Eastern Europe and with the educated, restless, questioning Soviet young people. I could list this worldwide ferment for human rights now underway in Africa, Asia, and South America, throughout the colored majority of the human race, as one of the reasons to expect further progress in this country and ultimately perhaps in the Soviet Empire. It is in the context of this world process that the report of the Commission on Civil Rights must be read and its work judged.

Another reason Mr. Khrushchev should read the Commission's report is that there are critics who say he would find some affinity with it. Senator EASTLAND said that many of the Commission's recommendations "could only have been equaled by mutterings from the Kremlin." Senator STROM THURMOND said that he had "never heard the Marxist philosophy more succinctly stated" than in the closing statement of Father Hesburgh at the end of the report. And Senator TALMADGE says that "the Commission on Civil Rights is the antithesis of everything for which we Americans claim to stand."

Two years ago when the Commission was established to find the facts about denials of the right to vote and other alleged violations of the constitutional rule of equal protection of the laws there was also considerable criticism—then in the form of general skepticism. Southern white politicians and Negro leaders alike saw it as a delaying tactic that would stall further congressional action on civil rights. Why study the situation any more? Negro spokesman asked. This American dilemma has been studied and surveyed and appraised for a century, they said. It is now nearly 90 years since the 15th amendment clearly prohibited the denial of the right to vote by reason of race. The American Negro is sick and tired of being studied. He wants his rights.

Those of us who went to work for the Commission also saw this shadow of futility hanging over us. Many of us wondered whether the facts we found would become dead and distant things, whether the report we were writing would turn out to be a cemetery for buried hopes, whether in truth the Commission was an albatross that would serve to plague us all.

The composition of the Commission was not reassuring. With three members from the North and three from the South, with not a single liberal or northern Democrat, with no member who had been in the forefront of the cause of civil rights, there seemed to be a built-in stalemate.

Whistling in the dark, some of us said that at least there would be an interesting dialogue. The three southern members were distinguished lawyers and public servants and presumably believed in the rule of reason. I recalled Chancellor Hutchins' old refrain that ours is the civilization of the dialogue.

But there was a hollow ring to our talk. For at first ours was such an isolated and lonely dialogue. From April 1, April Fool's Day, 1958, when I joined the Commission's staff, one of the first attorneys to arrive, throughout the spring and most of the summer not a single sworn complaint alleging denial of the right to vote was submitted. NAACP officers generally took the position that we were a hopeless bunch and that it wasn't worth wasting time and postage or risking lives sending a complaint to us. But in order to invoke the Commission's duty to investigate there had to be a sworn complaint. This was no Commission to take a broad construction of the Act and go on a fishing expedition. So we studied the laws and read books and wrote memorandums, and our staff investigators spent the summer doing research in the Library of Congress, and some of us began to devise in our minds a musical comedy on the whole fiasco.

Then one day nearly a year after Congress had passed the bill establishing the Commission, and 5 months after the Commission was in real operation a complaint arrived. It was rather a broad one, alleging "that through threats of bodily harm and losing of jobs, and other means, Negro residents of Gadsden County, Fla., are being deprived of their right to vote." The complaining party did not even claim that he himself was being deprived of the right to vote. But nevertheless the Commission by unanimous vote decided to conduct an immediate field investigation. Surprised and encouraged by the Commission's prompt action, other Negroes began submitting complaints from other southern States, first, from Alabama, then from Louisiana and Mississippi, and in each case the Commission unanimously voted to investigate.

Soon a small flood of complaints from black belt Alabama counties led the Commission unanimously to decide to request local officials to let Commission investigators inspect the registration records. When the Alabama officials refused, the Commission unanimously voted to hold a public hearing on all these complaints in Montgomery, Ala., and to subpena the records. You probably recall some of the events of the hearing, generally well covered by television—the 33 witnesses who gave personal accounts of being denied the right to register in 4 counties. Ten were college graduates, 6 of whom held doctorate degrees. All were literate. Only seven had not completed high school. Some were war veterans with battle decorations. You may have seen the dramatic appeal by Commission Member Battle of Virginia, a former governor and avowed segregationist, who

begged the Alabama white officials to cooperate with the Commission and to disprove these allegations if they could.

Perhaps you did not follow the legal tangle after the hearing. Finally the Commission, under court order, was able to inspect most of the records it needed, although the State of Alabama quickly passed a law providing for the destruction of registration records within 30 days after the rejection of applicants. After appraising these records and the sworn testimony, the Commission unanimously adopted findings of fact describing the various ways qualified Negro voters were being denied their right to register.

I have emphasized the unanimity and promptness of the Commission's action in order to show that those who decided that the Commission was not worth using and testing were wrong. It also explains why some of us on the staff felt a growing hope that in some measure the Commission was going to take itself and the country by surprise. My own hope had always been that having been put on the spot, the Commission would rise with the occasion—that it would rise, and be better than the sum of its parts, because it was an instrument of law, of our highest written law, the Constitution, at a time when the law was in motion. Time is needed to fulfill great constitutional promises, but it has been a long time. Our national frustration, I hoped, had reached that necessary critical point after which remedial action, however painful, was probable.

As the reports came in from the field, of hesitant, doubtful Negroes who were ready to risk everything to tell their stories—of an old farmer who received our investigator saying that this was the first time in 60 years that the big Government had shown any interest in him, asking, Is the big Government really going to do something to let me vote?—we could measure the effect on ourselves and more importantly the Commissioners.

I will not try to go through the history of the Commission here. But the momentum of these first investigations led to the scheduling of the hearing in Louisiana and also to hearings on discrimination in housing in New York, Atlanta, Chicago, and Washington, and a conference in Nashville of school officials from districts in Southern and border States that had experienced some desegregation, to compare experience and discover sound methods of desegregation.

Now that our full 600 page report, our 200 page abridgment, and our thousands of published pages of hearings have been submitted to the President and Congress, you may still ask the question, was it worthwhile after all? The facts have been found, unanimously—facts showing clearly that qualified Negroes are being denied their right to vote in a considerable number of southern counties, facts showing that school integration can be and in some places is being used to raise the standard of education of both Negro and white students but that the constitutional requirement of desegregation is not being complied with nor is likely to be complied with in many areas of the South; and facts showing that discrimination in housing exists in cities North as well as South, West as well as East, and particularly it exists in Federal housing programs which are supposed to be subject to the constitutional rule against discrimination.

But what good will all these facts be? Who will be moved to do something about them? In our New York housing hearing Judge Justine Wise Polier cited Disraeli's remark that there was hardly a woman in England who would not be more disturbed by the smashing of the joint of her small finger in a carriage door than by hearing that a million children had died of famine the preceding week in China.

How many Americans will be moved to action by the knowledge that Negro schoolteachers in Terrell County, Ga., are denied registration because they pronounced "equity" as "eequity"; or that in Louisiana Negroes are denied registration if they fail to give a reasonable interpretation of the following clauses of the State constitution:

"The legislature shall provide by law for change of venue in civil and criminal cases."

"The exercise of the police power of the State shall never be abridged."

And ponder this one:

"Prescription shall not run against the State in any civil matter." One registrar disqualified a Negro voter for "Error in Spilling," and in his affidavit the registrar himself spelled it "spilling."

And what good will our collection of county-by-county voting statistics be? While the statistical picture isn't yet complete (there are no statistics county by county yet for Tennessee, and Mississippi is not up to date), it is ugly enough. Consider just these few items: The Commission found that there were 16 counties where Negroes constituted a majority of the voting-age population in the last census but where not a single Negro was registered at last report; it found some 49 other Negro-majority counties where a few Negroes were registered, but less than 5 percent of voting-age Negroes. There are 14 Mississippi counties with a total 1950 population of about 230,000, of whom 109,000 were Negroes, where not a single Negro was at last report registered.

But where will this officially documented knowledge take us?

Let me be the optimist and suggest that the Commission's Report itself is an important milestone that marks and will henceforth measure the progress in this field. First, the facts found took the Commissioners, or all but one of them, to positions some of them had not expected to reach. Five of the Commissioners, including Dean Robert Storey of Southern Methodist University Law School in Dallas, Tex., and former Gov. Doyle Carlton of Florida, joined in recommending that in cases of discriminatory denial of the right to register, the President should be empowered to appoint temporary Federal registrars, from existing local Federal employees such as the U.S. Postmaster, who would actually register citizens who qualify under State law, applied without discrimination.

Most southern legislators and newspaper editorials have professed shock that two such respected southern conservatives would have supported so far-reaching a recommendation.

But Commissioners Storey and Carlton state in the report why they supported it: "We strongly believe in the right of every qualified citizen of the United States, irrespective of his color * * * to register, vote, and have his vote counted," they said. "We regard full protection of these rights of suffrage by both State and Federal Governments as necessary and proper." They joined in recommending temporary Federal registrars because, as the Commission unanimously reported, "Against the prejudice of registrars and jurors, the U.S. Government appears under present laws, to be helpless to make good the guarantees of the U.S. Constitution."

Governor Battle of Virginia could not agree to this drastic remedial action but he did join in the findings of denial of voting rights, he stated that he believed "that all properly qualified American citizens should have the right to vote," and he joined in four less—far-reaching Commission recommendations to strengthen present laws, including a recommendation that voting records be made public records to be preserved for inspection for a period of 5 years.

I am emphasizing the position of the southern members because I believe it points to the way forward. On the right to vote there was no disposition to defend the practices of the black belt counties and two of the three southerners supported all-out preventive action by the President and Congress. As former Governor Carlton of Florida used to say around the Commission on occasion, "We must take the bull by the tail and look the ugly facts straight in the face." The southern members did not like the facts that were found on denials of voting rights in their region. But they were lawyers and public servants sworn to uphold the Constitution of the United States. And, it is interesting to note, the Southern press, in criticizing the Commission's recommendations, almost unanimously condemned the practices which these recommendations were designed to cure.

Here it seems to me is the open door. The solid South is split on this issue. The wedge of the Constitution must widen that split at just this point. For this is the creative split that we have been loking for. This is the split that can carry Texas, Florida, Tennessee, North Carolina, and Virginia into the camp of the Constitution. Here is the issue that can divide the great cities of the South—Atlanta, New Orleans, and others, where the Negroes vote in large numbers and without discrimination, from the black belt rural counties which are the strongholds of the southern white supremicists and the strangleholds of Southern State politics.

It seems to me also that a shift of focus for a year or so from the frustratingly slow and complex problem of school desegregation to this clear-cut issue of voting rights is politically right and psychologically healthy. The 14th amendment is after all subject to varying interpretations and the Supreme Court school decision reinterpreting the equal protection clause to prohibit what an earlier Court's had upheld is subject to fair criticism. I agree wholeheartedly with this Court's interpretation, and I am glad that the Commission unanimously stated that "The constitutional right to be free from compulsory segregation in public education can be and must be realized, for this is a government of law, and the Constitution as interpreted by the Supreme Court is the supreme law of the land." And I think it was useful to have this Commission, with its three southerners in accord, stating that: "The problem, therefore, is how to comply with the Supreme Court while preserving and even improving public education," and to have the Commission state bluntly that "The ultimate choice of each State is between finding reasonable ways of ending compulsory segregation in its schools or abandoning its system of free public education." But the Commission did not throw much if any new light on how the dominant forces and opinion in a whole region are to be persuaded by law to move in this regard with all deliberate speed. "There remains," as the Commission reported, "the enduring American problem of obtaining the consent of the governed."

But that problem is nowhere near so great in respect to the right to vote. The 15th amendment is after all quite clear, and there has never really been any doubt that it means just what it says: "The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude." By the very terms of the amendment Congress is empowered to enforce this right by appropriate legislation. By exercising this power now, as the Commission has recommended, Congress can cut through the white southern case about "judicial legislation." It can demonstrate that the Government of the United States is not helpless to make good the guarantees of the U.S. Constitution. By

so doing, by at last establishing this first right of Americans, the right to vote, Congress would be giving new momentum to the fulfillment of all other rights, and particularly of the right to an integrated public education. Thus I do not propose a retreat on the public school front but an advance and, I hope, a breakthrough in the field of voting rights at a time when very little advance in school integration is possible.

So I am suggesting that a significant action has already taken place simply in the presentation of the Commission's report with strong new recommendations to protect the right to vote. When the Commission rolled its 2-year factfinding into one ball and tossed it into the hands of the next session of Congress and of the President of the United States, it changed the whole legislative picture. As an editorial in the Washington Post and Times Herald stated, the Commission's far-reaching voting proposals make the previous Presidential and legislative civil rights proposals "look pallid by comparison." By the way, I should include in the package presented by the Commission the proposal by the Chairman and by Father Hesburgh and Commissioner Johnson for a constitutional amendment to further protect the right to vote by establishing a universal franchise, limited only by State age and length-of-residence requirements. This would prohibit the literacy and interpretation tests through which most of the discrimination occurs. It seems to me that these Commissioners are right that "the time has come for the United States to take the last of its many steps toward free and universal suffrage." Together, the temporary Federal registrar and this universal suffrage amendment, for the first time would enable the Government of the United States to enforce its first principle throughout the land.

These proposals made by the official Commission assigned to find the facts and make appropriate recommendtions seem destined to become the chief civil rights questions before Congress. This will be a particularly important test for the Republican Party. For everyone knows that the Democrats are regionally split on this issue. But if the Republicans in Congress will join the majority on the Democratic side in supporting strong right-to-vote legislation there are enough votes, more than enough, to pass it. LYNDON JOHNSON has underscored the test for Republicans by agreeing that civil rights legislation will be brought to the floor of the Senate shortly after the Republicans have returned from their Lincoln's birthday speeches, this February.

If the congressional Republicans put their cloakroom coalition with Southern Democrats above their public commitments to civil rights, then they will surely pay the price in the 1960 election. And the result, whether this session or after the next election, is surely going to be a strong new civil rights bill. The Civil Rights Act of 1957 was the first legislation by that name or for that purpose in 82 years. But the passage of that act, over ineffective southern opposition, and the creation and operation and report of the Commission on Civil Rights, have set a new pace.

The test, however, is not that of Congress alone. Between the lines of the Commission's report emerges a strong plea for greater Presidential leadership. Will the President recommend to his party leaders and to Congress the adoption of the Commission's proposals for right-to-vote legislation? Will he support it with all of his persuasive power? Will he issue the Executive order on equal opportunity in housing, to govern all Federal housing programs, which the Commission unanimously recommended that he issue? Will he, in these last months of his administration, give to this crucial domestic problem of civil rights the direct personal attention that he is now giving to foreign policy?

The Commission reported to the President that "some dramatic and creative intervention by the leaders of our national life is necessary" in order to eliminate discrimination. In the past Executive leadership has proved effective in other aspects of civil rights. President Roosevelt's wartime Fair Employment Practices Committee, established by Executive order, diminished racial job discrimination in the war effort. Discrimination in the Armed Forces was largely ended as a result of President Truman's Executive order calling for equal opportunity for all American servicemen. The Presidential committees on equal opportunity and equal treatment in the fields of Government contracts and Government employment, started by President Truman, have also made contributions. President Eisenhower has continued these earlier Presidential initiatives but he has not given the powerful new leadership that the problem, now at its head, requires.

The President repeatedly says that discrimination is a matter of the minds and hearts of men. But he is sworn to "take care that the laws be faithfully executed." In Little Rock he demonstrated that he would carry out this duty even if it took bayonets. But the logic of his position is that since he must enforce the laws and since their enforcement depends on changing the minds and hearts of people, he, as Chief Executive, as the one in the most powerful position to reach and influence the minds and hearts of Americans, must give his full political and moral leadership in this endeavor. "Law," said the Commission's report, "must be inventive, creative, and educational."

Now I have not discussed Chicago and it is too late to do so fairly. The Commission's report, based on its hearing here, says a lot about Chicago. Perhaps I should just leave this as an inducement to you to read the report. You know that the report described Chicago as the most residentially segregated large city in the country. It also raised the question whether Chicago and Illinois should not be considering the adoption of civil rights law prohibiting discrimination in housing at the same time that Congress is debating new civil rights legislation. The Commission found that city and State laws against discrimination in housing and official agencies enforcing those laws primarily through education, conciliation and mediation have been helpful in New York and elsewhere. The Commission found further that in Chicago, where no such laws exist, the Negroes' primary method of securing better housing has had to be through the mutually unsatisfactory system of block-busting with the consequent uprooting of adjacent white neighborhoods and with inevitable racial tension. The Commission also found unanimously that where public opinion makes possible the adoption of laws against discrimination in housing this could make a significant contribution.

Is Chicago not a city and is Illinois not a State where public opinion does make possible such a forward step? Establishing equal opportunity in housing will take imaginative and brave leadership, but will it also not require the leadership of the law?

If those regions of the country that are insisting upon national action to enforce constitutional rights will practice what they preach and embody in their State and local laws the principles they advocate for national application, the prospects for nationwide action will be brighter. At least the facts of discrimination on our own doorsteps are more like an injury or a threat to our own bodies than a famine in China or even a denial of the right to vote in Mississippi. Yet the promise of the Constitution fulfilled anywhere leaves the Constitution stronger everywhere.

Progress on the Nicolet National Forest in the 1950's in Wisconsin

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, February 24, 1960

Mr. WILEY. Mr. President, the preservation, and best utilization of our forests, as well as our soil and water resources, is extremely important—if we are to perpetuate such resources for the benefit of the generations in the years ahead.

Throughout the country, constructive programs are underway to meet these objectives.

Recently, I was privileged to receive from Mr. K. P. Butterfield, forest supervisor from Rhinelander, Wis., a brief résumé of the progress in utilization as well as preservation of the Nicolet National Forest in Wisconsin during the 1950's. In addition to preservation practices, the program has included a wide variety of other activities, including: providing out-of-doors opportunity for recreation for millions of people, carrying forward constructive wildlife management work; sales of timber including over one-half million acres of pulpwood, 30 million board feet of saw timber; treeplanting of over 2,000 acres; and other special uses for recreational, educational, and utilitarian purposes.

Overall, I believe the report is representative of the constructive way in which our national forests' resources can, and should, be utilized. I ask unanimous consent to have the report printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

PROGRESS ON THE NICOLET NATIONAL FOREST IN THE 1950'S

Since we are now starting on a new decade, it seems to be a good time to take a look back and see what has been accomplished in the past 10 years. Since the forest was established in 1933, our objective has been to increase the productivity of the land to its full capacity for the production of timber, game, fish, and other recreation resources and to satisfy the demands on it within the limits of its ability to produce on a sustained yield basis.

Progress toward attaining these goals is made by protecting the area against fire, insects, disease, and an overpopulation of animals; by providing for young growth where such is lacking either by planting or by proper cutting methods which will insure the establishment of a new crop; by building and maintaining roads into areas now relatively inaccessible; by giving special consideration to roadsides in order that their aesthetic values will be maintained; and by developing picnicking, camping, and swimming areas for the use and enjoyment of people who like that kind of recreation.

The 1950's were years of progress toward our ultimate goal of full productivity and full utilization. In most respects, 1959 was the best year of the decade, giving promise of still greater progress in the 1960's. The following paragraphs have been prepared to give you an idea of what has been going on

in the Nicolet National Forest for the past 10 years.

RECREATION

The estimated number of people using the national forest for recreation purposes has more than doubled since 1950. There were 123,000 in 1950, and 325,000 in 1959. Total for 10 years is 2,706,000: 358,000 picnickers, 316,000 hunters, 531,000 fishermen, 165,000 campers, 41,000 skiers, and 1,295,000 came for other recreation purposes, mostly just sightseers. In an attempt to keep up with the booming demand for picnic and camping sites, 59 new units were constructed and 68 of the old ones were rehabilitated. This has not been enough to prevent severe overcrowding by the 68,000 campers and picnickers last summer.

WILDLIFE MANAGEMENT

Most of the wildlife management work for the forest is done with the cooperation of the Wisconsin Conservation Department and some of the sportsmen's clubs. Under this program, 7 dams have been built to provide small water impoundments for the benefit of migrating waterfowl; 30 fisheries have been stocked and apparently are prospering; 330 miles of logging roads have been seeded to clover and grasses for the benefit of ruffed grouse. Timber sales provided untold quantities of deer food on the 100,000 acres cut over. An additional 1,408 acres were treated for the specific purpose of improving game habitat. Dear-hunting laws have been liberalized slightly so that there is now a somewhat more realistic harvest of deer than in the middle years of the decade. However, tihs is still a touch-and-go proposition and we cannot point with a great deal of pride to the progress made toward attaining the proper balance of the deer herd with its food supply. Sixty-six miles of hunter access roads have been constructed which are of considerable benefit in getting hunters back into inaccessible areas.

TIMBER SALES

One-half million cords of pulpwood and 30 million board feet of sawtimber were sold during the 10-year period. The amount harvested was 414,000 cords of pulpwood and 31 million feet of sawtimber. The amount sold in 1959 was the greatest in the history of the forest. It was 89,080 cords of pulpwood and 6.1 million board feet of sawtimber—nearly twice as much as any other year. Our management plan cutting budget allows a sustained-yield cut of 66,000 cords of pulpwood and 5.2 million board feet of sawtimber per year. We have not yet harvested the full amount in any year. The closest was in 1958 when 53,000 cords and 2.5 million board feet were cut.

There is always a lag of 2 or 3 years between amount sold and amount cut. The large amount sold in 1959 and expected sales in 1960 should provide for harvests of close to the allowable amounts in 1961 and 1962.

TIMBER STAND IMPROVEMENT

Nature grows trees in a wasteful manner without regard to their utility to man. Cull trees and trees of unusable species grow along with the good ones. Good forest culture aims to eliminate the undesirables so that most of the light, moisture, and space is used for the growth of trees of greatest value. Part of the job can be done by adopting good cutting methods. The rest of it has to be accomplished by the expenditure of labor in thinning, weeding, and release cuttings. In the 1950's, 15,030 acres were so treated.

PLANTING AND PLANTATION CARE

Over 3,000 acres were planted in the past 10 years. The total to date is 70,037 acres of successful plantations. To keep the plantations healthy and growing it has been necessary to protect them from insect epidemics and to keep them free from the competition of inferior trees. It was necessary to spray 40,000 acres for insect control. Release from overhead competition was accomplished on 29,503 acres.

SPECIAL USES

The regulations of the national forests permit some types of uses by local governments, educational institutions, organizations, corporations, and individuals. Examples on the Nicolet include powerline, telephone line, and road rights-of-way; gravel pits; cultivation; pasture; and town dumps. The Sheltered Valley ski area is on the national forest, but is run by an association under a lease. Trees for Tomorrow Camp at Eagle River operates under a free permit. The Hugo Sauer Tree Nursery at Rhinelander is rented free to the State of Wisconsin. Purdue University has taken over the Lost Lake Organization Camp and is using it as a summer school for its forestry students. In all, about 1,700 acres of the forest are used for these purposes.

FIRE PROTECTION

The U.S. Forest Service furnishes fire protection to 960,087 acres of land. Most of this (640,235 acres) is Government-owned. The other 319,852 acres are intermingled private, State, county and other ownership. In the 1950's there were 282 fires, burning 2,208 acres. This compares favorably with the 454 fires that burned 3,040 acres in the 1940's. During the decade we have installed a completely new ultra-high-frequency radio communications system. This has permitted us to abandon many miles of costly telephone lines.

ROADS

Since the beginning the Forest Service has constructed 557 miles of roads. In the past decade 90 miles were built. Proper signing of roads has been a problem, but a great deal of progress was made within the past 3 or 4 years. Nearly all roads now have number plate identification. Rustic directional signing is about half done. Just this past year the Wisconsin Highway Department has put up signs showing where forest roads enter the State highways. There is an annual budget of approximately $120,000 for road construction and maintenance.

FINANCES

In 1950 receipts from the sale of timber and land rentals were $127,816. In 1959 they were $195,114. Total for 10 years is $1,752,548. Of this, $435,025 was returned to the counties. Amount received by each county, 1950 to 1959 was:

County	Total 10-year period	1959 payment
Florence	$54,509	$6,176
Forest	228,198	25,549
Langlade	21,218	2,367
Oconto	93,028	10,401
Oneida	6,851	763
Vilas	31,170	3,522
Total	435,025	48,778

SOME FACTS ABOUT THE NICOLET NATIONAL FOREST, 1959

General information

Gross area of forest (acres)	988,853
Net national forest ownership (acres)	640,235
Area protected from fire (acres)	960,087
Number of developed recreation areas	30
Fishing streams (miles)	840
Lakes (207) (acres)	34,614
Yearlong employees	34
Seasonal employees	71
Area planted to date (acres)	70,037
Road maintained (miles)	263

Accomplishments during the 10 years (1950–59) and for the year 1959

	1950–59	1959
Pulpwood sold (cords)	500,000	89,080
Sawtimber sold (M board feet)	30,000	6,100
Pulpwood harvested (cords)	414,000	40,484
Sawtimber harvested (M board feet)	31,000	3,285
Tree planting (acres)	3,185	345
Plantation and timber stand improvement (acres)	44,533	7,331
Insect and disease control (acres)	40,000	1,631
Roads constructed (miles)	90.0	19.4
Number of recreational visitors	2,706,000	325,000
Number of hunters	316,000	59,000
Number of fishermen	531,000	84,000
Total national forest receipts	$1,752,548	$195,114
Receipts returned to counties for schools and roads	$435,025	$48,778

It Will Be Eventually

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. ULLMAN. Mr. Speaker, water pollution is a subject of particular interest at this time, and, under leave to extend my remarks, I would like to enter into the RECORD the following editorial from the East Oregonian, of Pendleton, Oreg., dated February 8, 1960. Though it deals with the problem on a State level, it is a reflection of the concern which people all across the Nation are feeling:

IT WILL BE EVENTUALLY

There are many who think that pollution has an effect that is as detrimental as hydroelectric dams to the existence of fish and there are some who think its effect is greater. That the State sanitary authority thinks degree of pollution is a powerful factor in maintaining fish runs is evident in its 1959 progress report.

Although improvements in both domestic and industrial pollution control during 1959 resulted, the authority says, in slightly better stream conditions in the Willamette River, there remains much to be done to reduce the dumpings of pulp mills into that river.

There is much that remains to be done to eradicate pollution in this State, but it also should be noted that much has been done. A total of 179 public or semipublic sewage treatment plants were in operation in Oregon as of December 31, 1959. These serve an estimated 835,000 persons, or more than 90 percent of Oregon's residents whose homes are connected to sewers. Only 49 treatment plants, serving 93,200 persons, were in operation when the sanitary authority was credited in 1938.

That the sanitary authority's program to curb pollution is continuing is evident in the report that at the end of last year 13 new treatment plants with a design capacity of 83,420 persons were under construction.

As aforesaid, industrial pollution continues to be a major problem. But it is significant that in contrast to some previous sanitary authority reports, the 1959 summary is generally complementary to progress by the pulp and paper industry.

"Through improved operation of their waste disposal facilities, more efficient chemical recovery, and better inplant con-

trols," the report said, "the pulp and paper mills in the Willamette Basin effected further reduction in the pollution loads being discharged from their operations into the river system. For example, during the month of August, which was the most critical streamflow period, the combined waste discharge from the four sulfite mills on the main river (at Salem, Newberg, Oregon City, and West Linn) had an oxygen demand nearly 15 percent less than for the corresponding period of 1958 and nearly 80 percent less than in 1950, which was before any steps had been taken by the mills to abate their pollution.

"The best performance since monitoring surveys by the authority were started in 1950 was during the first half of September when the pollution load of the wastes being discharged reached the lowest figure on record," the report continued. "This was due in part, however, to the fact that the Spaulding (mill) was shut down during that period."

Industrial pollution will not be eliminated in the immediate future but it will be eventually. The State sanitary authority will see to that.

A Salute to the White House Youth Conference

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, February 24, 1960

Mr. WILEY. Mr. President, during the week of March 27–April 2, 1960, the Sixth White House Conference on Children and Youth will be held here in Washington.

As we recall, the first such conference was called by President Theodore Roosevelt in 1909. Since then, successive meetings have been held at 10-year intervals.

A major purpose of these conferences in which citizens and their Government collaborate, has been to assess on a regular basis the needs and conditions of children.

The ultimate objective of this forward-looking program, of course, is to provide each child with an opportunity to grow into a healthy, happy adult and take his place as a responsible citizen in our society.

The theme of the 1960 conference is: "To promote opportunities for children and youth to realize their full potential for a creative life and freedom and dignity."

In response to President Eisenhower's invitation, more than 7,000 persons are expected to come to Washington from Wisconsin, and other areas of the country. These will represent many more thousands of persons and organizations in their home communities who are working to develop constructive programs relating to the wholesome growth and development of our children.

In a rapidly changing world, we realize that the process of child growth does not just occur automatically; rather, constructive programs for care and opportunity to progress must be provided, if these youth are to grow into strong, creative adults, capable of assuming full responsibility in a free society.

Although the era of youth—of growing up—is often thought of as just a "happy time," actually each child faces a series of difficult challenges in his introduction to—attempts to find a place in—and efforts to contribute to—our complex society.

In addition to the individual problems, the child of today can face any of a wide variety of serious social and economic difficulties, including: broken homes, exposure to influences toward delinquency, existence in slum-type housing, lack of educational opportunities, adjustments to migrations from place to place, as more of our families move annually. These, and other problems, confront the child in the 1960's.

Despite these difficulties, however, there are constructive, forward-looking, creative programs, aimed not only to resolve these problems, but to provide ever-greater opportunities for the youth of America.

The White House Conference, I believe—designed to provide guidance and leadership to local community efforts to improve the climate for youth progress—will make a major contribution toward bettering the outlook for our children now, and in the future.

Recently, the Interdepartmental Committee on Children and Youth prepared a splendid publication entitled "Children in a Changing World."

Among the richly informative data in this booklet is included a "Children's Charter."

Prepared in 1930 for President Hoover's White House Conference on Child Health and Protection, it enumerates the rights and opportunities which we must seek to achieve for all children living under the American flag.

Fundamental in its approach, the charter contains basic objectives still essential to improving the outlook for the youth of America.

I ask unanimous consent to have the charter—accompanied by an article from the Melrose Chronicle, of Melrose, Wis., relating to Wisconsin participation in the upcoming White House Conference, printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE CHILDREN'S CHARTER

President Hoover's White House Conference on Child Health and Protection, recognizing the rights of the child as the first rights of citizenship, pledges itself to these aims for the children of America:

I. For every child spiritual and moral training to help him to stand firm under the pressure of life.

II. For every child understanding and the guarding of his personality as his most precious right.

III. For every child a home and that love and security which a home provides; and for that child who must receive foster care, the nearest substitute for his own home.

IV. For every child full preparation for his birth, his mother receiving prenatal, natal, and postnatal care; and the establishment of such protective measures as will make childbearing safer.

V. For every child health protection from birth through adolescence, including: periodical health examinations and, where needed, care of specialists and hospital treatment; regular dental examination and care of the teeth; protective and preventive measures against communicable diseases; the insuring of pure food, pure milk, and pure water.

VI. For every child from birth through adolescence, promotion of health, including health instruction and a health program, wholesome physical and mental recreation.

VII. For every child a dwelling place safe, sanitary, and wholesome.

VIII. For every child a school which is safe from hazards, sanitary, properly equipped, lighted, and ventilated.

IX. For every child a community which recognizes and plans for his needs.

X. For every child an education which, through the discovery and development of his individual abilities, prepares him for life.

XI. For every child such teaching and training as will prepare him for successful parenthood, homemaking, and the rights of citizenship.

XII. For every child education for safety and protection against accidents to which modern conditions subject him.

XIII. For every child who is blind, deaf, crippled, or otherwise physically handicapped, and for the child who is mentally handicapped, such measures as will early discover and diagnose his handicap, provide care and treatment, and so train him that he may become an asset to society rather than a liability.

XIV. For every child who is in conflict with society the right to be dealt with intelligently as society's charge, not society's outcast.

XV. For every child the right to grow up in a family with an adequate standard of living and the security of a stable income.

XVI. For every child protection against labor that stunts growth, either physical or mental, that limits education.

XVII. For every rural child as satisfactory schooling and health services as for the city child.

XVIII. To supplement the home and the school in the training of youth, * * * every stimulation and encouragement should be given to the extension and development of the voluntary youth organizations.

XIX. To make everywhere available these minimum protections of the health and welfare of children, there should be a district, county, or community organization for health, education, and welfare.

For every child these rights, regardless of race, or color, or situation, wherever he may live under the protection of the American flag.

[From the Melrose Chronicle, Feb. 18, 1960]

SET WHITE HOUSE YOUTH CONFERENCE MARCH 27–APRIL 2

Official invitations were received this week from the President of the United States by the 90 delegates who will represent Wisconsin at the Golden Anniversary White House Conference on Children and Youth. On March 27 to April 2, delegates concerned with the interests of children and youth will meet in Washington to develop recommendations for citizen action programs to meet the needs of America's youth in the next decade.

Eighteen forum topics will provide the framework for conference discussion and will deal with many of the problems anticipated in the rapidly changing world of the 1960's. An entire forum of more than 500 persons will be devoted to the problems of youth in conflict, covering all phases of juvenile misbehavior.

Another forum will review the impact of the mass media on children and youth. Workgroup discussions within this forum will deal with comic books and comic strips as well as radio, TV and motion pictures. Throughout the entire conference runs a central concern for ideals and values.

Delegates from Wisconsin will represent the State generally as well as some national organizations. Seventy persons were selected to fill the State quota by a committee of the Wisconsin Committee on Children and Youth, designated by the Governor's office to serve as liason for the preparation and participation in this conference. Hundreds of nominations were screened to select a broadly representative group which include professional and lay adults, youth and young adults. Other delegates were selected to represent national organizations, were asked to participate on the conference program, served on the President's Conference Committee, or are foreign visitors.

White House Conferences on Children and Youth have been a decennial tradition in America since the first was called in 1908 by President Theodore Roosevelt to discuss the plight of the dependent child. Every 10 years the President has called such a conference to discuss the ever widening facets of child-related problems and to recommend citizen action and participation. Material for the conference will include State reports and research studies evaluating the past decade. County committees on children and youth contributed county reports from which the Wisconsin report to the White House Conference was compiled.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

OFFICE ADDRESS: House Office Building, Washington, D. C.

[Streets northwest unless otherwise stated]

Appendix

Soviet Power Progress

EXTENSION OF REMARKS
OF

HON. ERNEST GRUENING

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Thursday, February 25, 1960

Mr. GRUENING. Mr. President, our colleague, the able junior Senator from Utah [Mr. Moss], yesterday delivered a most important address before the National Rural Electric Cooperative Association at St. Louis, Mo. He gave an account of our visit to Russia. It is an account which I commend to all of our colleagues, because it shows how rapidly the Soviets, under a system of government in which we do not believe and which is in many respects antithetical to ours, are going ahead full steam developing hydroelectric resources while we, under the policy of no new starts, are doing nothing.

Mr. President, I ask unanimous consent that the address of our able colleague [Mr. Moss] be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SOVIET POWER PROGRESS

On October 9 of last year, nearly 3,000 miles east of Moscow near the border of Outer Mongolia, I stood with 10 other Americans and saw under construction what will be the largest dam and hydroelectric power station in the world. It is the gigantic Bratsk Dam on the Angara River. It is in an advanced stage of construction. Its capacity of 4,500,000 kilowatts will make it more than twice the size of America's largest hydroelectric project, Grand Coulee on the Columbia. A large sign at the site proclaimed that this project would produce more than Boulder Dam and Grand Coulee combined.

Looking down from a height of 100 feet above the Angara River, I had no doubt that we were witnessing the building of the foundation of a great industrial empire for Russia.

For I am sure that no one understands better than do we Americans that even more missiles and rockets and hydrogen bombs, the wealth and world power of a nation rest upon its resources and the state of development of those resources.

We recognize that modern industry requires large quantities of electric power, and that a close correlation exists between the amount of electricity a country develops and its gross national product.

Our inspection trip of the power projects of the Soviet Union came about in this way:

Senator ALLEN ELLENDER of Louisiana, in his capacity as chairman of the Senate Committee on Agriculture, visited Russia on three occasions. From him the Senate heard what sounded to some like fantastic reports of a very large hydroelectric power development program. These reports were corroborated by the U.S. Army Corps of Engineers and others. Reported also were plans for even greater developments in China.

So, a year and a half ago, the U.S. Senate, by unanimous resolution, authorized a study of the facts. Two Senate committees were assigned this task, the Interior and Insular Affairs Committee and the Public Works Committee. A special subcommittee was appointed, consisting of Senator ERNEST GRUENING of Alaska, Senator EDMUND S. MUSKIE of Maine, and myself as chairman.

We were accompanied by four staff members representing the two committees: Vic Reinemer, executive secretary to Chairman MURRAY of the Senate Interior Committee; Milton C. Mapes, Jr., of the committee staff; Michael W. Straus, consultant to the Interior Committee and former U.S. Commissioner of Reclamation; and Theo W. Sneed of the staff of the Public Works Committee.

Four nonpaid consultants also accompanied us—men with a broad background in the fields of engineering, power development, dam construction, and rural electrification: Hon. Clyde Ellis, your general manager and former member of Congress from Arkansas; Harry Kuljian, president of the Kuljian Corp; Harvey McPhail, chief, Hydroelectric Division, Kuljian Corp., and former Assistant Commissioner of Reclamation; and Alex Radin, general manager, American Public Power Association. George Winters, economic attaché of the U.S. Embassy in Moscow, accompanied us throughout Russia. He speaks Russian. Our task was to investigate the extent to which the U.S.S.R. is developing its water resources for the production of electric power.

Negotiating the subcommittee's itinerary required more than a year. We wished to see not only the more commonly visited areas of the Soviet Union but also eastern Siberia, where, it was reported, some of the largest dams were under construction. We finally saw most of the projects requested.

The U.S.S.R. possesses the largest water resources in the world, about 10 percent of our earth's supply, compared with about 3 percent for the United States.

Russian river development is complicated by the fact that in the Asiatic part of the U.S.S.R. about 55 percent of the water flows northward into the icebound Arctic Ocean. Russia has, however, a much greater hydropower potential than does the United States.

Let me digress to stress the fact that this large supply of water is, in itself, of great significance. I come from a State that could not have developed as it has without reclaiming thousands of acres of land from the desert and I know my audience today recognizes fully the importance of water. It is only the last few years, however, since tremendous pressure has been placed on our resources, that water conservation has come to be recognized as the national problem which it is.

The United States is presently using about 250 billion gallons of water a day. This alone means that all our readily accessible and relatively inexpensive supplies are in use. Because of spectacular increases both in population and in requirements per person, our rate of consumption is increasing so that our expected need by 1975 will be 350 billion gallons of water a day. This is a 90-percent increase over the amount used in 1950. For the future I can think of no greater asset that any nation could ask for than a large supply of fresh water.

Tremendous effort is being exerted to develop as much electricity as possible on these great Russian river systems. Full development of the resource is the rule. Priority of use has been established, with hydropower development first. Complete surveys and development plans are made to determine size, location and building schedules before construction work begins on any unit. We visited 10 projects on 8 rivers, and saw a variety of sizes and types of hydroelectric power stations.

We traveled more than 12,500 miles inside Russia; 10,800 by air, mostly in very modern jet planes; about a thousand miles by automobile; and 300 each by boat and train. The jets carried 100 passengers, each one flew more than 500 miles an hour. They were filled. Russia has a fairly good network of railroads upon which it depends to move most goods. Other transportation is comparatively primitive, particularly outside the Moscow area.

And now—what did we discover concerning Russia's supply of electric power for the years ahead? How fast is it being developed? Is she catching up with us?

On the Khrami River in the Republic of Georgia, we saw a project being constructed entirely within a mountain. Water from a glacial lake will fall nearly a thousand feet through a tunnel to drive underground turbines.

At Kuybyshev on the Volga River we saw what is presently the world's largest dam with a capacity of over 2 million kilowatts. Grand Coulee develops just under 2 million. Kuybyshev was built as a symbol of Soviet ability and determination to excel in the hydro field. Let's look at its construction schedule: Preliminary access road and city construction started in 1950. Work on the main dam structure began in 1952. In 1953 and 1954 some 1,900 cubic meters of concrete a day and 300,000 cubic meters of earth placements a day were poured. In those years employment on the dam reached its maximum of 16,000. In 1955 the initial turbine and generator were installed, followed by 11 more huge units in 1956. The dam was dedicated in 1958 by Premier Khrushchev with what amounted to a national celebration.

Even if we take into account the Soviet system which enables them to channel money and manpower where it is wanted, this is remarkably fast construction.

Being built lower on the Volga River is the still larger Stalingrad Dam which will have an installed capacity of over 2½ million kilowatts. This giant, alread generating electricity, is a year ahead of its 7-year plan construction schedule. Stalingrad will have 22 generators—2 more than Kuybyshev. We were impressed with the Soviet determination to produce the electricity they want when we saw three of the generators operating under temporary shelters pieced together from used lumber, tar paper, and scrap corrugated iron. The chief construction engineer, Alexander Alexandrov, told us they would get around to putting a roof on the powerhouses when the crews had time.

Stalingrad will be the world's largest dam for a very short time, however. I have already mentioned Bratsk in eastern Siberia, the capacity of which will be 4½ million kilowatts. It is being built in a remote forest. A railroad, highway, and sawmills have had to be built. A worker's city is also going up, and will be the nucleus of an in-

dustrial complex. When we were there, there were 14,000 workers on the payroll. The builders boasted that crews were working around the clock on three shifts and we saw for ourselves the floodlight towers to light the nightwork. We were told that the works in place were 2 years ahead of construction schedule.

The other Siberian dam, which we did not see, is at Krasnoyarsk on the Yenisey River. It is in the initial stage of construction and will be still larger—in excess of 5 million kilowatts. We saw an operating scale model of this Krasnoyarsk Dam, the capacity of which will be almost twice that of all 31 dams in the Tennessee Valley.

The two largest hydroelectric dams going forward outside Russia are in China and Egypt—the Ichang Gorge Dam on the Yangtze and the Aswan on the Nile. We saw test models of the Aswan Dam in one of the hydroelectric project laboratories we visited. The Russian construction engineer who built Kuybyshev Dam stated that he has been designated as the construction engineer for Aswan, and that the generators are now being designed by Electrosila in Leningrad.

The Ichang Gorge Dam was originally planned at 15 million kilowatts by John Savage of the U.S. Bureau of Reclamation. It is being redesigned by Chinese and Soviet engineers for a first-stage capacity of 25, later going to 40 million, kilowatts. This will be 12 to 20 times the size of Grand Coulee. Several of the top Soviet engineers have been serving for several years as consultants in Communist China which has embarked on a program aimed at developing 70 million kilowatts of hydropower by 1970. Flood control is also one of the principal objectives of Chinese river development.

The past few years have also seen tremendous Russian progress in transmission of electric power. We visited the substation at Noginsk which serves the Moscow area. Its electric power is transported from the Kuybyshev Dam 600 miles away at higher voltages than are presently used anywhere in the United States. Long-range transmission is, of course, one of Russia's particular problems since the sources of their power are, on the whole much further from the customers than are ours.

The current 7-year plan calls for construction of five integrated transmission systems—five great regional grids which will be pulled together into one national network. The five does not include eastern Siberia which is to be brought in later. Seventy percent of Russian cities are now part of interconnected grid systems.

Although the efficiency and economy of shifting peak powerloads over a large geographic area have been recognized for many years, the Soviet program contrasts sharply with the absence of regional grids in America.

We recently made our formal report to the two Senate committees which sent us, and these are some of our conclusions:

The Russians have been in this field only about 30 years. They have caught up with the rest of the world in hydroelectric development techniques, and are preeminent in certain specific aspects.

They have pushed their program with great vigor, and are installing new hydro capacity at a very much faster rate than is the United States.

Although they now have only about one-third of our installed capacity, they allocate some 79 percent of their electric power to industry. The United States uses only about 31 percent for industrial and commercial purposes.

Russian electric production is now being built at a rate which makes it possible for them to overtake us in about 15 years. We have no way of knowing, of course, how long this rate of increase will be sustained; but unless they slow down or we speed up, Russia will be able to produce more electric power in 1975 than will the United States.

In the U.S.S.R., as in the U.S.A., about 20 percent of the electricity is generated by hydro, and about 80 percent by thermal stations. The Soviets intend to maintain this ratio for some time to come. Also in both countries atomic development is not expected to provide significant amounts of power in the next few years.

It must be emphasized that the Russians are doing all this with their own talent. One of the greatest resources a nation can possess is what we Americans have named "know-how," the training and experience which enables us to carry out the thousands upon thousands of tasks that keep our complex civilization operating. The Russians have had to develop this know-how.

Prior to Second World War, the American engineer who went to Russia was commonplace. He is no more. All of the work we saw is being engineered by Russians, designed by Russians, built by Russians. The powerhouses of these dams are being equipped with turbines and generators made in Russian factories.

One of our stops was the Electrosila manufacturing plant in Leningrad where generating and transmission equipment is today being made for half the world. Twenty years ago most of such equipment came from us—and from Western Europe. This fact in itself represents a great change in the relative industrial status between East and West.

The Russian engineers were quite frank in giving America and the nations of Western Europe full credit for the original developments in the hydroelectric field. They admit that they are building on our technical achievements. Numerous times the engineers mentioned to us the building of their first dam on the Dneiper River by Colonel Cooper, an American engineer.

They have, of course, developed techniques of their own to meet their special conditions. Russia is approximately 1,000 miles north of the United States. Moscow is about the same latitude as Hudson Bay. So they have had to find ways of constructing concrete works in freezing weather. Using heated forms and heated mix, they pour concrete the year around.

One of their more interesting applications is the use of large precast concrete blocks. When the Russians build a dam, they first put up concrete block-casting plants. These produce five or six standardized sizes. In some areas of the dam, stacked blocks are sufficient to hold the reservoir. They are set in place by huge cranes. Reinforced concrete sections are used as forms for lockwalls, piers, and powerhouse walls. Where solid concrete is needed, it is poured between the blocks or sections. Thus, the work of putting up and taking down the wooden forms we use is eliminated. They claim that this construction method cuts both building time and building costs about a third.

It appeared to us, however, that Soviet designs do not provide as high a safety factor as do ours. In many of theirs, it was apparent that elimination of spillways and overflow sections (the costs of which are very high) was a factor in making the savings they claimed.

The Russians are still very far behind us, not only in power production, but also in transportation, in housing, in virtually all manufacturing, in agriculture—most noticeably in agriculture.

Clyde Ellis was asked to write the section on Soviet agriculture for our report. He tells us that this is the weakest link in the Soviet economy.

After pointing out that nearly half of Russia's 210 million people are engaged in farming in comparison with 10 percent in the United States, Mr. Ellis says:

"If the efficiency of Soviet agriculture could be brought up to that of the United States, 67 million people could be released from the farms to the factories and other segments of the economy."

And we believe that this is exactly what the leaders of Russia hope to accomplish soon. Although Russian farming is almost primitive by American standards, the country has three times the area of the United States, and the features needed for development—broad expanses that are easy to work with machinery and generally favorable climatic conditions. What is needed is the machinery and rural electrification.

Little more than half of Russia's farms are electrified, in contrast with our 97 percent.

A visit with a farm family in their home in Siberia gave us a close look at housing and farm life.

In discussing the backwardness of much of the Russian economy, however, we must not forget that they are first developing those portions which they believe to be basic and are deliberately holding back other portions.

I believe it would be a mistake for us to believe that the Russian people are greatly dissatisfied with their economic lot. They appeared to be comfortably though not fashionably clothed, and well fed. They are poor by our standards, but they have no means of judging by our standards. What little they have is more than their parents and grandparents had.

Russia, I think, can be compared to a poor student, who, though living on little, is working hard toward his objective and is pleased with both his opportunity and his progress.

No outward evidence of the Russian determination to advance, and of the differences between our countries is more striking than the billboards. In place of advertising items for sale in retail stores, the Russian billboards without exception exhort the people to greater and greater effort to reach the major national goals—raise more food, weave more cloth, build more houses, generate more electricity. The emphasis is all on production, on meeting the quotas of the 7-year plan.

A striking example of progress is the great surge in housing, both multiple and single unit. They may have less than 60 square feet of space per person now, but huge apartment buildings are going up in every city we visited. In some cases whole new cities are being built. Stalingrad, which was leveled in the bitter struggle that is considered the turning point of World War II, has been completely rebuilt. At the site of Kremenchug Dam in the Ukraine we saw the entire new city of Khrushchev going up.

The Russians have a burning desire to build like the West, especially the United States. You all remember Khrushchev's many references to the fact that Russia was already, or would soon, be building things comparable to almost everything he saw in this country.

I can see no reason to believe that the regime cannot successfully continue to take the great bulk of Russian production for industrial uses so long as it allows the standard of living of the people to rise, however slowly.

The revolutionary leaders of Russia early recognized that the greatest difference between their country and the West lay in the ignorance of their people. From the beginning, education has received the highest of priorities. From a country that was 80 percent illiterate, they have produced one

that is 100 percent literate. Today, everyone in Russia can read. The schools we saw were clean and well managed. From the fifth grade on, all students take at least one foreign language, in some cases, two. In Stalingrad I addressed a fifth grade class and had a 12-year-old girl translate my remarks. As you can imagine, it was most impressive.

Mathematics and the sciences are stressed, as we know only too well. Once a student begins a particular science, he is expected to follow it through. Students who are chosen to go to college are paid and are paid more if they do well. We were told that Ph. D. candidates receive almost as much as beginning instructors. The Russians say that have 50 million people—one-fourth of their population—in school. We noted that many of those attending Moscow University were above middle age.

Everyone in Russia is reading, even the taxicab drivers as they wait for fares. Books are subsidized. Well-printed and comprehensive volumes—engineering and technical publications of all kinds (not the lurid-cover novels we see everywhere here) sell for a fourth of our prices.

Taxes are almost nonexistent because the Government monopolizes enterprise and uses price fixing both to channel most of the gross national product into industrial and military production, and to push buying of some products—books for example—and to discourage others such as automobiles which are priced at near the equivalent of $6,000.

In addition to many production incentives in industry, there is also some free enterprise. Farmers who are members of a collective may be alloted 1 or 2 acres of land, and after they have worked their 8 hours in the collective's fields, may work their own tracts. The produce is then sold on the free market. Outside regular hours, doctors may treat patients. Lawyers have some private practice, particularly in divorce cases.

We were invited to a number of luncheons, usually by project engineers and construction executives. We had occasion there to exchange observations, and these all indicated that the Soviet people have little conception of what we mean by freedom, independence, or liberty. They do not understand the freedom which we have to express our views, to have newspapers that may oppose the Government, and the related rights which are so precious to Americans.

There can be no question that the Russian people long for peace. Even recognizing how the regime is pushing the peace question, we should realize that their sufferings in the war were intense. They know at firsthand the devastating effects of war, and the one thing they discuss most frequently, next to the desire to catch up with the United States, is for peace with us. We have no way of assessing finally how far the Russian leaders are prepared to go to achieve the goal of world communism. I believe we must remain strong. But I am sure that the better the people of Russia get to know us the more they will see that we desire nothing for them but to see them prosper in peace.

Russia is today producing the generation and transmission facilities to bring abundant power to that enormous area. The leaders of today have not forgotten Lenin's dictum: "Communism is Soviet political power plus electrification of the entire country."

We are far ahead of them. We have established the enviable record of bringing electricity to 97 percent of America's farm homes.

But we still have 200,000 family units without electricity, and rural power loads are doubling every 5 to 7 years. Providing abundant power for America's future will require full development of all our resources.

Let's Get on the Record With Our Spending Votes

EXTENSION OF REMARKS
OF
HON. JOSEPH W. BARR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. BARR. Mr. Speaker, today I introduced a resolution providing that—

Resolved, That rule XXI of the Rules of the House of Representatives is amended by adding at the end thereof the following new paragraph:

"7. No bill or joint resolution of a public character making an appropriation shall be finally passed, and no amendment of the Senate to, or report of a committee of conference on, such a bill or resolution shall be agreed to, unless the vote of the House is determined by yeas and nays."

This resolution translated into plain English as understood in Marion County, Ind., means simply that every Member of the House must stand up and be counted on the record when he votes to spend the people's tax money. Surely the people have the right to know how their Congressman votes on spending bills. Strangely enough, they usually do not get this information.

Since January we have voted to spend in excess of $6 billion on different bills. We voted to spend about $27 million for the District of Columbia, about $760 million for the Commerce Department, $543 million for Interior, $4,795 million for Treasury and Post Office, and an extra $23 million for NASA. Not one of these spending bills has been recorded by a rollcall vote. Every bill has been rammed through on a voice vote and the people have not the vaguest notion of how I or any other Member voted.

Frankly I am amazed at the sight of some Members screaming about economy knowing full well that they can vote for billions for pet subjects and never get their votes recorded. They will make a great hullabaloo about bills that amount to a fraction of 1 percent of our total spending, and then let billions pass through this Congress without a murmur. In southern Indiana, where I grew up, they have a saying, "It helps to save pennies, but not very much." It does not make much sense to save pennies and fritter away dollars.

All of us know that the income of the United States will be around $82 billion to $83 billion in this coming fiscal year. Most of us agree that we should save part of that income to cut the debt. We disagree on where and how to spend the rest.

I intend to vote for less than the total the President asked, but in some individual instances I will vote for more than he asked. Surely my voters should have the chance to decide first of all—did I vote to spend more than our income; and secondly, do they agree with the places where I voted to spend their money?

They cannot find that out from the record today. They could if this resolution were adopted and all of us were forced to stand up and vote on the record when we spend money.

Governors Were Talking of Roads To Curl the Hair

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, February 25, 1960

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a forceful editorial entitled "Governors Were Talking of Roads To Curl the Hair," published in the Nashville (Tenn.) Tennessean of February 20, 1960. This is a great newspaper that stands guard for the public interest. Its editorial policy is a clarion call for the growth and development of America.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOVERNORS WERE TALKING OF ROADS TO CURL THE HAIR

The five Governors who assembled in Washington in an effort to restore highway allocations reduced by the Eisenhower administration may not be rewarded with success.

But at least they already have succeeded in dramatizing a deficiency in administration thinking which persists and which threatens the Nation's security as well as its progress.

Consider the shrinking posture of a President who insists the Nation cannot afford to meet its own highway commitments, cannot afford to improve its schools, cannot afford to make capital investments in national resources; yet who blandly terms removal of the interest ceiling on Federal bonds the most pressing issue ever to come before his administration.

Mr. Eisenhower's devotion to the budget is perforce spasmodic. When constructive spending programs are proposed, he worries about the curl in Mr. George Humphrey's hair. Only when increases are needed to pay off past obligations at a higher rate of interest does he seem to recall that hair curling can be a relative thing.

Before Mr. Eisenhower claims that the Governors, like his defense critics, are politically motivated, it should be noted that the 5 were representing 50. And that among the 50 are both Republicans and Democrats. Before he contends that he knows more about highway needs than almost anyone in the country he should recall his own words of a few days ago with respect to school construction—that local officials know more about local needs than the Federal Government.

This leaves the President only one of his favorite rejoinders against those who find fault with his policies: He can claim that these 50 chief executives, like his generals, have a perpetual yearning for more money.

To determine whether they need more money for roads, it might be in order to sug-

gest that the President come down from the clouds and drive the clogged roads of the States—States like Tennessee. It might give him a more realistic view than he can obtain from the Columbine or one of his helicopters. And it can certainly portray road needs in more graphic terms than a trip to Canaveral can suggest defense needs.

Economic Facts of Heart Disease

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from a recent issue of the Gaffney Ledger, Gaffney, S.C., of February 20, 1960:

ECONOMIC FACTS OF HEART DISEASE

All of us, at one time or another, have been face to face with the economical and emotional crises that overwhelm a family when heart disease strikes. Such experiences are not readily forgotten. They explain why new volunteers are constantly joining the vast army of men and women who freely give their time and energy, year after year, to the heart fund drive.

The heart diseases not only cause untold human suffering but they also affect our community's economic welfare. They are as much a threat to the well-being of the economy as they are to the security of the family. To understand this fact, we have only to gage the impact of heart disease on those in the most productive years—the years between 44 and 64 years of age.

Most of us in that age bracket are at the peak of our skills—whether we are salesmen, industrial executives, machine workers, factory workers, physicians, lawyers, or newspapermen. In many instances we have advanced, after costly years of training, into key company positions.

Our responsibilities as mature heads of families make us perhaps the largest single segment of the American market for most goods and services. But, as a group, we are also one of the prime targets of the cardiovascular diseases which, as most Americans now know, are not essentially diseases of old age. The fact is that more than 50 percent of all deaths, from all causes, among persons 44 to 64 are due to the heart diseases. South Carolina leads the Nation in deaths from heart and vascular diseases, among white males, 44 to 64 years of age.

On the industrial balance sheet, the heart diseases cause the loss of 69,200,000 manhours of production each year. The cost of this loss is estimated at a billion dollars. Additionally, our Government is deprived of $133 million in Federal income tax revenue on lost earnings which must be recovered from other tax sources.

In the face of these facts, every businessman obviously has a vital stake in the fight against the heart diseases. Each forward step of medical science in controlling these diseases through improved diagnosis, and more effective methods of prevention and treatment reduces industry's risks.

Some of the business leaders of Gaffney have recognized their responsibility and have volunteered to conduct a "Heart-Days for Business" drive here. They will help collect contributions for the Heart Fund from their fellow business and professional men in the commercial sections of town. Have the economic facts of heart disease firmly in mind when a volunteer calls, and give liberally in the interests of employees, associates, business and the economic well-being of this community.

Federal Aid for Education Contributes to Defense

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 25, 1960

Mr. WILEY. Mr. President, we recall that the Senate recently passed a bill, S. 8, to provide additional Federal aid for improving our educational system throughout the country.

As all of us are aware, there are wide differences of opinion on Federal participation in our educational programs. The questions, among others, include: How much should Uncle Sam spend? For what educational purposes should the money be earmarked? Upon what formula should it be distributed?

Today I was pleased to receive from Prof. Burton W. Kreitlow, of the University of Wisconsin, a thoughtful, detailed letter outlining the way in which Federal funds have helped to speed up research at the University of Wisconsin.

The specific research project, entitled "Long-Term Study of Educational Effectiveness of Newly Formed Centralized School Districts in Rural Areas," has been speeded up by Federal grants.

As we consider legislation—particularly of a controversial nature—it is always helpful to know just how such funds are utilized to help accomplish objectives at the operational level—in this case in realistic efforts to find ways and means to improve our rural school programs.

Reflecting a constructive contribution of Federal assistance in the field of educational research, I ask unanimous consent to have the letter by Professor Kreitlow printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE UNIVERSITY OF WISCONSIN,
Madison, February 23, 1960.

Hon. ALEXANDER WILEY,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: On April 1, 1958, a grant was made to the University of Wisconsin by the U.S. Department of Health, Education, and Welfare, Office of Education, on a research project entitled "Long Term Study of Educational Effectiveness of Newly Formed Centralized School Districts in Rural Areas." This initial grant is to run until June 1961. These funds from the U.S. Office of Education have been aiding a project which was begun in 1949 and which moved ahead each year on the basis of minimum funds provided by the University of Wisconsin and maximum energy provided by those of us with a real concern for the improvement of schools for rural village and farm people. A considerable backlog of material was awaiting analysis at the time the Federal grant was made. This financial assistance from the U.S. Government has made it possible to speed up the progress of this research considerably and this year I am particularly aware of the contribution that Federal aid to education has made when granted for research.

The study deals with the effectiveness of different kinds of school districts in rural areas. It deals with two basic types, first, the reorganized district which is a single district including grades 1 through 12 in both the village and the farm service area of a community and secondly with a type which I describe as nonreorganized. The nonreorganized represents the more traditional Midwest pattern of many small one- and two-room schools in independent districts and a village high school and often a separate village grade school.

The tentative conclusions that come out of a long-term study which looks at the same youngsters as they move from first grade through high school and beyond, give considerable support to the reorganized type school district that has sufficient size and financial stability to develop a comprehensive curriculum from first grade through 12. This is a critical time in Wisconsin to have these kinds of data available and it is my judgment that without the help that the U.S. Government gave to this project, the results of this research would not now be available.

Let me give you an example of the extensiveness of interest in this particular project at this time. During the course of the last legislative session all Wisconsin legislators were provided with copies of the results of the study to date. Governor Nelson has kept in close touch with the results of the study and action last year by the assembly and senate and by the Governor has provided that all areas in Wisconsin be in a high school district by the end of June 1962. I believe that at least some small part of this progressive action in Wisconsin is a result of the knowledge provided by this study which was aided by your support in the Senate in Washington.

The results of this study were recently reported in an afternoon session during the annual University of Wisconsin Farm and Home Week, in addition, a booth identifying the results of the study was on exhibit in the exhibit space provided in the stock pavilion. Several weeks earlier I reported on the results of this study to the State School Boards and School Administrators Convention in Milwaukee. On February 17, I reported on the results of this study at the American Association of School Administrators meetings in Atlantic City and on March 21, a somewhat similar report is being made at the Great Lakes Conference on Rural Life and Education being held in Chicago. Following the report in Chicago the delegates will spend the better part of the afternoon looking at the implications of the findings for school improvement in the Great Lakes States.

As an active researcher at the University of Wisconsin and a person whose research work has been aided measurably by aid from the U.S. Government I have written this letter to let you know that Federal support makes a difference in the speed with which research can be accomplished. Thank you for your past support in the field of education. I am sure that the education of Wisconsin's children will be better because of it.

Very truly yours,

BURTON W. KREITLOW,
Professor of Education.

Tiso and the National Catholic Shrine

EXTENSION OF REMARKS
OF
HON. THOMAS E. MORGAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. MORGAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include a newspaper item, which has been sent to me by my friend and constituent, George P. Baluh of Farmington, Pa. He is an active member of the Jednota—the First Catholic Slovak Union—in Fayette County. He informs me that a large number of the members of Jednota concur in the views expressed by Philip A. Hrobak, who is editor of Jednota and president of the Slovak League of America. The item follows:

TISO AND THE NATIONAL CATHOLIC SHRINE—FREEDOM OF THE PRESS IN ACTION

The Evening Star (Washington, D.C.) of December 8, included a letter by one John Bowler which smeared Tiso and with him all Slovak patriots and promoters of freedom and independence among nations. "Buried in the account of the dedication of the beautiful Catholic Shrine of the Immaculate Conception at Catholic University," Bowler starts out, "was the announcement that a flag of Monsignor Tiso of Czechoslovakia had been installed near one column and dedicated with some ceremony, attended by the Slovak-American Catholic hierarchy of the United States."

"By enshrining the militant symbol of a flag of a controversial figure, whose very name brings sorrow and division to the Czechoslovak people," Bowler snorted, "the American Catholic hierarchy has done a disservice and has sown an element of disunity."

Now, we have tried to verify this part of Bowler's story with several Americans of Slovak descent who attended the dedication. Nobody seems to know anything about Monsignor Tiso's flag being dedicated with or without "some ceremony" by the Slovak-American Catholic hierarchy of the United States, which was not present at the dedication. Mr. Bowler either knew or did not know what he was writing about. We know that he did not. His letter reveals that he knows not the truth about Tiso and the Slovak people. It reveals, too, that he is against Slovak freedom and independence. No matter, though, what Czech propaganda and Mr. Bowler say, the fact is that Monsignor Tiso is forever enshrined in the hearts and minds of the Slovak people everywhere. His stature is growing with the years. He gave his life for his church and his people. Who did or could do more?

Having received a clipping of Bowler's letter, I wrote the Evening Star on December 14 in rebuttal thusly:

BOWLER WAS "BRAINWASHED"

DECEMBER 14, 1959.

LETTERS TO THE EDITOR,
The Evening Star,
Washington, D.C.

For the edification of the readers of the Evening Star, I take my pen in hand to reply to John Bowler's letter, which was published December 8 under the title "Monsignor Tiso's Flag." I state at the outset that Mr. Bowler is either terribly ignorant about what happened in Czechoslovakia in 1938–39—and in Slovakia during the presidency of Monsignor Tiso—or else he is knowingly distorting facts. In the first place, Monsignor Tiso made no pact with Hitler by which Slovakia was severed from Czechoslovakia. Secondly, Tiso and the Slovak Parliament never found themselves "in a state of war against the Government of the United States." Thirdly, "Slovak separatists" did not "dispatch Slovak as well as German troops, on August 29, 1944, against American personnel and weapons parachuted into Slovakia from Bari, Italy, to aid in the uprising against the Nazi." Fourthly, the implication that President Tiso or the Slovak Government of the independent Slovak Republic killed "American cousins" during the uprising is both vicious and malicious and utterly without foundation. And, finally, by confusing the Slovak banner with the Nazi banner, Mr. Bowler gives evidence of his prejudice and his hostility to Slovak freedom and independence.

Furthermore, Mr. Bowler's unwarranted slur against the American Catholic hierarchy was uncalled for. He should ascertain the facts and apologize for his gross insult.

The great and fabulous democracies of our time were not in a position to stop Hitler in 1938–39, but, according to Bowler, little, defenseless Slovakia, with a population of 3 million and no army, was in a position to do so. What did Dr. Edward Beneš, President of Czechoslovakia, do at the time? He capitulated to Hitler at Munich without even consulting the Czechoslovak Parliament, even though he had a well-equipped army of 2 million men. Then he resigned and fled to London. Who did more for Hitler in 1938?

Monsignor Tiso, like the Slovak apostles, the Sts. Cyril and Methodius, is being persecuted by the enemies of the Slovak nation. Bowler is overwhelmed with sorrow for the nonexistent, fictitious Czechoslovak people, for whom he presumes to speak, but he has absolutely no sympathy for the Slovaks who have sought and fought to free themselves of alien domination for over 1,100 years. What kind of an American and what kind of a Christian is he? To me it is quite obvious that Bowler has been brainwashed.

PHILIP A. HROBAK,
President, The Slovak League of America.
MIDDLETOWN, PA.

My letter was not published: evidence of brainwashing under the guise of the freedom of the press. This is nothing new to us. The American press, generally speaking, never was friendly or even fair with the Slovaks and their centuries-old struggle for freedom and independence. Old man Masaryk's slogan "Truth Prevails" is still in operation, spreading malicious and vicious lies about the Slovaks and their political and religious leaders. With the help of the American press, of course.

P.A.H.

International Payments and Reserves

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, February 25, 1960

Mr. JAVITS. Mr. President, a recent newspaper report on the likelihood of a "major overhaul" of our present system of international payments and reserves attracted much interest. I raised the question with William McChesney Martin, the Chairman of the Board of Governors of the Federal Reserve System, and requested his reaction. His response dated February 19 deserves the consideration of all of us concerned with international fiscal policy.

I find Mr. Martin's opinions reassuring, but it seems clear to me that the keys to the viability of our international financial and commercial position remain expanded foreign trade and the increased productivity of our industrial complex. Reserve policy must conform to these national demands, and it is our job to see that they do, for in the final analysis, the Reserve System was created by the Congress.

I ask unanimous consent that the report in the New York Times of January 31 by Edwin Dale, Jr., and Mr. Martin's letter to me commenting on it be printed in the Appendix of the RECORD.

There being no objection, the article and letter were ordered to be printed in the RECORD, as follows:

WORLD PAYMENTS MAY BE REVISED—TREASURY STUDYING SYSTEM AS EXPERTS CITE PERIL IN GOLD AND DOLLAR RESERVE

(By Edwin L. Dale, Jr.)

WASHINGTON, January 30.—A number of officials and experts in finance have concluded that the present system of international payments and reserves needs a major overhaul to avert serious trouble.

Others believe the present system can continue to work, but even these relative optimists are thinking hard about the problem.

This includes the Treasury. Officials make plain that they are not yet persuaded that anything new is needed. Barring the unlikely event of a crisis of some sort this year, the United States will probably not propose any changes, at least until a new President is elected.

QUESTION IS UNDER STUDY

But studies of the question are underway in the Treasury. This in itself is something new.

Under the present system, which simply grew and was not planned, nations hold their monetary reserves in gold plus dollars (or in a few cases British pounds). A nation's holdings rise and fall with its balance of international payments, which is the difference between the outflow and the inflow of currency. All nations will accept dollars in payment of international bills.

The system rests on the commitment of the United States to give gold in exchange for dollars to any foreign government holding dollars, at the option of the foreign government. Thus dollar holdings are as good as gold, which is why the dollar is the world's reserve currency.

What is the difficulty? Those who believe changes are needed have a fear, amounting to a conviction in some cases, that the present system will lead, possibly soon, to one of three dangerous results.

The first result would be a run on the U.S. gold stock. This is feared as a consequence of continued deficits in the balance of payments, as foreign dollar holdings reach and then surpass the amount of the gold stock. This would be the worst result. It could disrupt the whole world economy.

An elimination of the deficit in the U.S. balance of payments is the second result feared. This would avert a gold crisis, but the consequence would be growing payments difficulties for the rest of the world with a sharp check to world trade. The reason is that it is the only U.S. deficit that has made the rest of the world so liquid—supplied with dollars—under the present system.

A U.S. recession in the near future, which would be allowed to drift into severe unemployment because the Government would be afraid to act vigorously against it, is the last result mentioned. This would come about because antirecession action—chiefly an ag-

gressive, easy-money policy—could bring on the feared run on gold. This country's freedom of action domestically will be limited by the fact that the dollar is a reserve world currency.

VIEWPOINT OF CRITICS

To the critics of the present world monetary system, all of these possible consequences stem from one key feature of the system: The fact that the nations of the world hold their reserves not only in gold but also in somebody else's currency. The somebody else is the United States and, to a lesser extent, Britain.

This has come about almost inevitably because there simply is not enough gold in the world to supply the needs for working capital for international payments. The world as a whole needs more reserves than there is gold, and the needs grow all the time with expanding world trade.

The result is that reserves are held in dollars or pounds. The reserves have grown in recent years, as they had to grow, mainly because the United States has been running a chronic deficit in its balance of payments.

According to the pessimists, the world is now waking up to the consequences of this system. The awakening has come about as world dollar holdings approached the total of the U.S. stock of gold. The potential claims on gold are now nearly equal to the gold stock.

This means, say the critics, that from now on the world under the present system will always be faced with two unpleasant alternatives: a continued U.S.-payments deficit with an ever-increasing threat of a run on gold, or no U.S. deficit with a worsening deficiency of world reserevs.

The International Monetary Fund is something of a buffer against the latter alternative, but an insufficient one in the eyes of the critics.

There are various proposals for changes in the system, ranging from the mild to the radical. The one being most talked about has been made by Prof. Robert Triffin, of Yale University.

Omitting details, his proposal calls for a radical change in the present International Monetary Fund to make it a sort of world central bank, to hold the reserves of all nations, and empowered to create new reserves by its lending. His idea is among those being studied in the Treasury.

The great fear of the pessimist is that nothing will be done to change the present system until there is a crisis of some kind—either a run on U.S. gold or a series of payments emergencies in Western Europe. Either would disrupt trade and could lead to a worldwide depression, it is feared.

I do not believe that these fears are justified.

(1) Is is quite true that a chronic large balance of payments deficit would lead to harmful consequences, both for the international position of the United States and for the working of present international commerical and financial arrangements, which are closely related to the function of the dollar as a world reserve currency. I believe, however, that if we continue to follow correct policies the deficit in our balance of payments will be gradually reduced. Moreover, the experience of the past 12 months has shown that even a large deficit does not lead to "a run on the U.S. gold stock" as long as domestic and foreign holders of dollars realize that the United States is resolved to defend the country's financial stability by pursuing just such policies.

The current expansion of demand abroad and the lowering of foreign barriers against U.S. goods, together with the healthy effects of active international competition upon the design and pricing policies of U.S. producers, are already working in the direction of reducing the deficit in our balance of payments. Monetary and fiscal policies designed to minimize price inflation in the United States have been facilitating this adjustment, and will continue to be an essential condition for successful further adjustment.

(2) The international reserve positions of all major foreign trading nations have improved so much that the achievement of equilibrium in our balance of payments, and the resulting slowing of increases in foreign dollar holdings, need not lead to "growing payments difficulties for the rest of the world." Moreover, the recent increase in the resources of the International Monetary Fund has provided the means for meeting any additional requirements for international reserves that may arise in the foreseeable future.

(3) The international reserve position of the United States is comfortable enough to permit freedom of action in case of a recession. The balance of payments situation in the next recession is not now predictable, because it will depend to a large extent on conditions then existing abroad. A temporary enlargement of the payments deficit, should it occur, need not be a permanent setback to the process of adjustment.

What is needed today is not so much to discuss ways to meet a hypothetical dilemma as to see to it that we continue to follow policies designed to ensure the domestic and international financial equilibrium of the United States, so that the dilemma will not arise.

Since I do not believe that the dangers described in the article are imminent, I do not think that it is necessary at this time for me to discuss the proposed remedies. The Board's staff is currently engaged in studying the relevant problems and proposals, and of course will continue to do so.

Sincerely yours,

WM. MCC. MARTIN, Jr.

BOARD OF GOVERNORS OF THE
FEDERAL RESERVE SYSTEM,
Washington, February 19, 1960.

Hon. JACOB K. JAVITS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR JAVITS: This is in reply to your note of February 12, 1960, in which you request my comments with respect to some problems discussed by Edwin L. Dale, Jr., in the New York Times of January 31.

According to Mr. Dale "a number of officials and experts in finance" fear that the present system of international finance will lead, possibly soon, to one of three dangerous results":

(1) "A run on the U.S. gold stock" if the deficits in our balance of payments continue;

(2) "Growing payments difficulties for the rest of the world" if that deficit is eliminated; or

(3) Infringement of "this country's freedom of action" in case of "a U.S. recession in the near future which would be allowed to drift into severe unemployment."

The Case for the Christian Amendment

EXTENSION OF REMARKS
OF
HON. DENVER D. HARGIS
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. HARGIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of a radio broadcast by the Reverend John Coleman, D.D., Ph. D., prepared for delivery on the Christian Amendment Hour now being carried by some 100 stations in our country. This is one of a series of 13 such programs, obtainable free in leaflet form from the Christian Amendment Movement, 804 Penn Avenue, Pittsburgh, Pa. Dr. Coleman's radio message follows:

This broadcast is on behalf of the Christian Amendment Movement. In the 84th Congress the Christian amendment was introduced in the House of Representatives by five of its Members, in the Senate by one. Three of these men were Republicans, and three were Democrats. All introduced the amendment because they believed in it. They believed that the United States needs the Lord Jesus Christ as a Saviour and Ruler.

The amendment reads:

"SECTION 1. This Nation devoutly recognizes the authority and law of Jesus Christ, Saviour and Ruler of nations, through whom are bestowed the blessings of Almighty God.

"SEC. 2. This amendment shall not be interpreted so as to result in the establishment of any particular ecclesiastical organization, or in the abridgment of the rights of religious freedom, or freedom of speech and press, or of peaceful assemblage.

"SEC. 3. Congress shall have power, in such cases as it may deem proper, to provide a suitable oath or affirmation for citizens whose religious scruples prevent them from giving unqualified allegiance to the Constitution as herein amended."

The subject of this broadcast: "You Might Wisely Support the Christian Amendment, Even if You Do Not Believe Christianity Is True."

Several years ago I was to present the Christian amendment, with the arguments for it, to a college class in political science. Most, if not all, of the students were professing Christians. By the grapevine, I heard that one of them, a good friend of mine, had boasted to his cronies that he was, perhaps for the sake of argument, going to oppose it. I did not know the line he would take, but I looked forward to the debate with considerable interest. A good class discussion is always profitable. He scarcely spoke a word in opposition, and later I learned, again by the grapevine, that when twitted about his silence he answered that I had begun by saying that I was going to assume that Christianity is true, start with that as a major premise; that if any doubted the truth of Christianity they might fight the issue out in the department of religious education; we had no time in a political science class for that debate. The young man had planned to attack Christianity itself; but he said, "If Christianity is true, then the amendment is sound."

There are those in America who do not believe that Christianity is true, who do not believe that there was and is a Lord Jesus Christ who is very God of very God, as the old creed phrased it. Not many of them go so far as the new Soviet Encyclopedia, which denies that Jesus ever lived and declares the whole account of His life and death pure myth. The American unbeliever in general holds that Jesus was merely a man, a good man, it is true, but only a man. He, they say, apparently died on the cross, but did not rise the third day, did not ascend into heaven, is not sitting on the right hand of the Father, has not been given all authority in heaven and on earth, and will not come to judge the world—men and nations—at the last day.

Though we do not agree with them, we do not question the sincerity of those who make these negatives the articles of their faith, or lack of faith. They certainly would not pledge themselves, without qualification, to the Constitution with the Christian amend-

ment in it, and the amendment itself has a provision for them in its last section—that Congress may provide a modified oath. Here in that section:

"Congress shall have power, in such cases as it may deem proper, to provide a suitable oath or affirmation for citizens whose religious scruples prevent them from giving unqualified allegiance to the Constitution as herein amended."

Now I am going to make a strange assertion. There may be, and there should be, among these unbelievers many who might wish to have the Christian amendment added to the Constitution. I am going to repeat that: There may be many among these unbelievers who might wish to have the Christian amendment added to the Constitution.

I have been told of a prominent science professor in an eastern university who was an atheist. He did not believe in any god, but he declared that the woman he married must be a Christian who would rear her children in the church. He would even help support the church. The woman who is a Christian he felt would be a better wife and mother and the children, trained in a Christian home and church, better children. He might have gone further: If Christianity has such a good influence on the home, why not on the community, why not on the Nation? So why not adopt the Christian amendment?

Another illustration: Some years ago Dr. Henry C. Link, a psychiatrist, brought out a book that had gone through several editions: "Return to Religion." Like the science professor just mentioned, Dr. Link was not a believer in orthodox Christianity; frankly said so, though he did not give particulars. But for his mentally disturbed patients he prescribed church attendance. They might not believe in Christianity any more than he did, but he found that this regular contact with Christian teaching helped to clear their minds of fears and worries, to restore their poise, to adjust them to life. With some he even added attendance at the midweek prayer meeting, even though he himself did not believe that God answers prayer. Dr. Link found also that working constantly with the neurotic had a disquieting effect on his own mental processes and decided that what was good for his patients might be good for their doctor, and began to attend church himself, thus maintaining his own equilibrium.

Another illustration: We have over a million alcoholics in America, and several times that number of drinkers who are on their way to becoming alcoholics. An organization, the Alcoholics Anonymous, has had notable success in reclaiming such men and women. The Alcoholics Anonymous make it a major factor in their work to get the man down on his knees in prayer, to persuade him to constant church attendance. Whether or not there is a God who cares for broken men and women, whether or not the worship of this God is ever heard in Heaven, the man's prayers, his worship, his fellowship with Christian people, all seem to, they do, have a profound effect, and that effect is good.

My non-Christian friend, would not the Lord Jesus Christ, brought into your life, brought into your home as a constant guest, bring with Him a healthier, sweeter atmosphere, something that you have felt was lacking and craved?

The Gospels tell of a man who brought his son to Jesus for healing. Jesus said, "All things are possible to him that believeth." The man, humble in his extremity, answered, "Lord, I believe, help Thou mine unbelief." His son was healed. Jesus is the Great Physician for all the world's ills. I say again, is the Great Physician.

In these days when broken homes are increasing so rapidly, in these days when juvenile delinquency is almost constantly on the front page, and when detention homes and reformatories are overcrowded, in these days when juveniles are graduating into adult criminals; in these days when gambling absorbs much more money than our schools; in these days when vice and gross immorality are viewed with an almost amused complacency; in such times as these, we as a people, we as a mighty but humbled Nation, we on our knees should bring our civilization, that is on trial, to the Great Physician, pleading, "Lord, we believe, help Thou our unbelief." And in such a spirit we should adopt the Christian amendment.

Editorial Support for Revision of the Constitution

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, February 25, 1960

Mr. KEATING. Mr. President, two constitutional amendments recently adopted by the Senate have drawn strong editorial endorsement from the Troy Times Record, of Troy, N.Y. In a fine editorial this outstanding newspaper emphasizes the importance of the anti-poll tax and District of Columbia vote amendments in the context of our democratic society.

I am hopeful similar vigorous support from all over the country will help speed action in the other body on these two important changes in the Constitution. I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Troy Times Record, Feb. 4, 1960]

REVISING THE CONSTITUTION

Two subjects that are usually highly controversial went through the Senate this week with a minimum of difficulty. In a revision of the Constitution, the Senate voted to outlaw the poll tax and to grant suffrage to the voteless residents of the District of Columbia.

There was little opposition to the poll tax measure for various reasons. It is outmoded, with but five States still using it. It is no longer very important in the South as a means of barring the Negro from voting. The rabid segregationists have devised newer techniques.

Senator KEATING had no difficulty to get backing for his amendment to permit residents of Washington to vote for President and Vice President, and for Delegates in the House of Representatives. Wiping out of disenfranchisement for Washingtonians has been a delicate matter in the past. Because more than half of the residents of the District of Columbia are Negroes, there has been considerable southern opposition to it. Yet for years most Americans have felt that the residents of this area should have a right to vote. They represent a substantial population and why should anyone be disqualified in a true democracy. It is rather ironical that the people closest to the core of the democratic wheel be barred from having a voice in government.

The Search for New Knowledge About Cancer

EXTENSION OF REMARKS
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mrs. BLITCH. Mr. Speaker, while on a plane from Dallas, Tex., to Atlanta, Ga., a few weeks ago, I was privileged to talk with Katherine Barnwell, a feature writer for the Atlanta Journal and Constitution Magazine. She had been to Ardmore, Okla., to get a story about a cancer research center. On January 10, 1960 the article appeared in the Atlanta Journal-Constitution Sunday Magazine and I was greatly impressed when I read her report of the Ardmore research center. Because of the tremendous toll that cancer takes in the lives of the people of our Nation and the world, it is my belief that this article will lend comfort to many because it reveals the extent of cancer research in an area of which the general public may not be aware.

Miss Barnwell is an experienced reporter of medical events and research programs. Her thorough and expert description of the Ardmore project, which follows, is excellent testimony of that fact:

(By Katherine Barnwell)

On the plains of southern Oklahoma, Indian territory until 1907 and one of the last frontiers of the Old West, is an unusual, ultramodern facility for cancer research.

Here a team of scientists is trying to unravel some of the mysteries of cancer—and of life itself. Far from any big city medical center, they are working in completely equipped laboratories in a million-dollar group of buildings, surrounded by farmlands where cattle graze and grain grows abundantly. The laboratories, located 2 miles east of Ardmore, Okla., are in a section rich with oilfields which still yield vast quantities of "black gold."

Scientists at the research facility, known as the biomedical division of the Samuel Roberts Noble Foundation, are trying to find answers to these questions:

What causes cancer?
How does it grow and spread in the body?
How does it affect the body's organs?
How does it kill?

I visited the Noble laboratories recently and was impressed by the dedication of the scientists there. Their research is fundamental or basic—the slow, arduous, painstaking kind. They are not working with human patients as clinical researchers do. But they are studying what goes on when the individual cancer cell develops in rats and mice, multiplies wildly and destroys body tissue. They are comparing the normal cell—the tiny unit of living matter responsible for health and growth—with the uncontrolled cancer cell.

The scientists are studying the nutrition of both malignant and normal cells, and they have turned up a few clues which they hope will be of value. But they believe more basic knowledge is needed before the key to cancer, the Nation's No. 2 killer, can be found.

"How can we find the cure?" one asked, "when we don't know the cause"?

Although the research labs are about 700 miles from Georgia, they are closely linked with Atlanta. One of the members of the board of trustees of the Noble Foundation is a 31-year-old Oklahoman-turned-Atlantan, Edward Everett Noble of 3201 Lenox Road NE., the man who created the giant Lenox Square Shopping Center on Peachtree Road.

Mr. Noble, now president of Lenox Square, has lived in Georgia for the past 3 years. He is a son of the late Lloyd Noble, a wealthy Oklahoma oilman who founded the Samuel Roberts Noble Foundation for educational, scientific, and religious purposes in 1945 in memory of his father, Lloyd Noble, once a teacher in a one-room school, acquired a large fortune through his oil drilling and producing companies before he died in 1950—but he was always a firm believer in the tenet that wealth should be used for the benefit of mankind. He left the bulk of his estate to the foundation.

"The accumulation of economic wealth and power in itself is not important," Lloyd Noble maintained. "Future generations will assay individuals and organizations strictly on the basis of what they have done with that wealth and power."

Ed Noble said the Noble Foundation, a nonprofit, privately endowed corporation has the controlling interest in Lenox Square—and profits from its ownership will be used for the foundation's program, particularly cancer research. Heretofore, the foundation received most of its funds from two large enterprises—the Noble Drilling Corp. and the Samedan Oil Corp.—but trustees decided several years ago to diversify its investments and assure long-range income for its research program by building a regional shopping center. After a nationwide study of possible sites for the shopping center, Atlanta was selected.

Thus Georgia dollars are helping finance cancer research in Oklahoma—and it is hoped the results will benefit all humanity.

The foundation's current operating budget is $780,000 a year and three-fourths of that amount goes to the biomedical division which conducts the cancer studies. The other fourth is used for an agricultural program.

"One advantage of our independent research program—not dependent on funds from the Government or other sources—is that we have a minimum of redtape," Mr. Noble pointed out. "If one of our scientists gets a new lead, he can change direction and follow it without making a formal application to somebody to get the new project approved."

The Noble group studying cancer includes about 45 people—biochemists, biologists, chemists, bacteriologists, general scientists, and their assistants. One of the laboratory research technicians is Wilbur L. Whittle from Cordele, Ga. He is the son of Mr. and Mrs. Wilbur Z. Whittle of Cordele. Two physicians from Wichita Falls, Tex., visit the laboratories once a week to conduct pathological studies.

Thousands of white rats and mice are used in the research. Malignant tumors can be induced in the rats and mice, and they can be transplanted from one animal to another to insure a continuous supply for experimental work. There's a mouse maternity ward at the Noble Foundation where 50 to 75 animals are born each month. In addition, the foundation buys some 400 mice and 600 to 1,000 rats monthly.

Like people with cancer, rats and mice with malignant tumors often lose their appetites. So the scientists force feed them through tubes to their stomachs. In many experiments, the scientists want the rats to have the same food intake both before and after cancer develops.

When a rat or mouse undergoes surgery for removal of a tumor or some infected organ, rigid aseptic techniques (including ultraviolet lights to destroy airborne bacteria) are used to prevent contamination of the tissues being studied. The scientists in the operating room wear sterile masks, caps, and gowns. In other words, the mice are protected from the men—instead of vice versa.

Dr. Thomas A. McCoy, director of the biomedical division, said the scientists are trying several approaches in their studies of cancer at the cellular level. "We believe one reason we don't have a drug to destroy cancer," he said, "is that we don't know exactly what goes on when the cancer grows."

One approach is the tissue culture of malignant cells in test tubes. Scientists then study the substances required for nutrition of these cancer cells—compared with normal cells.

"We found that many of these tumors require a substance known as asparagine, a component of protein, for growth. In other words, certain types of malignant cells won't grow without this substance. If we could find some chemical antagonist (an agent that would counteract the effects) of asparagine, we might be able to inhibit the growth of certain cancers."

Dr. McCoy said the Noble group is working with a chemical company in Buffalo, N.Y., trying to synthesize an antagonist which would knock out asparagine. Such a chemical would not necessarily be a cancer cure but it would be valuable as a research tool.

In the course of their nutritional studies, scientists were able to induce two new strains or mutuations of cancer cells by a depletion of asparagine. The parent tumor cells required asparagine, but these new variants did not.

"It's a well-known fact that many cases of leukemia respond to drugs for a while so that the patient improves—but then the malignancy becomes immune to the treatment," Dr. McCoy said. "We believe it is possible that a nutritional variant resistant to the drug has been induced. We want to find out how the tumor cell acquires this resistance."

Dr. McCoy said his group of scientists also would like to determine why some tumor cells have an increased ability to synthesize a sugar amine—hexosamine—which is intimately associated with a connective material that holds cells together. Usually tumor cells in a highly specialized organ—such as the brain, heart, or liver—lose part of their important functional capacities. For example, tumor cells in the liver lose their ability to produce urea. But, surprisingly, the cells' ability to produce hexosamine is actually elevated by cancer.

"Why" asked Dr. McCoy. "We don't know, but this is a lead which must be pursued."

In studying the nutrition of cells, the Noble scientists found a difference in the requirements of single cells and those in massive tissue culture. All cells need amino acids, vitamins, salts, sugar, and a fraction of blood serum. But three keto acids not required by a large group of cells are needed for growth by the single cell. Dr. McCoy said this may be important in metastasis, the spread of cancer cells.

The Noble scientists use radioisotopes to study the growth of cancer cells and their reaction to various drug compounds. "We administer a drug to the animal," Dr. McCoy explained, "and we also give him a radioactive substance orally or by injection. By tracing the radioactivty, we can find out what a drug does during the growth process.

"There are several hundred chemical compounds that will inhibit the growth of one experimental cancer or another. But there is no magic bullet which will cure all of the diseases. We are trying to find out the mechanism of action of certain drugs in order to get a better insight into the whole problem."

In these drug-action studies, the living rat is used as a kind of test tube. He is placed in a "metabolic cage" for 8 to 36 hours so that scientists can determine exactly what his body is doing with a drug. They make a chemical check of his breathing—what he inhales and exhales—and his excretion.

"Also, we are trying combinations of drugs," Dr. McCoy said. "For example, if you inject a tumor in a mouse, he may live 12 days. If you give him drug A, he may live 18 days, and if you give him drug B, he may live 14 days. * * * But if you give him both A and B, he may live 45 days or longer."

Scientists at the Noble Foundation are studying the precancerous period of cell growth. They feed rats a chemical or dye for 90 days to induce cancer. Then they give them a regular diet. In about 18 weeks or 120 days, the animals have cancer of the liver. Before the tumor shows up, the scientists can study the enzymatic changes in the precancerous liver. This project is a wonderful tool, giving researchers some idea of what happens when a normal cell becomes a malignant cell.

Another approach is a study of the effects of tumors on the body. How does the cancer affect the body metabolism and the various organs? "Anemia is one of the most common effects of cancer," Dr. McCoy pointed out. "Why does the presence of a tumor cause anemia? Everybody is trying to stop the tumor. If we could alleviate some of its systemic effects, we might be able to stop it from growing."

Dr. McCoy said one of the most popular theories in cancer research right now is the virus theory. "They have never been able to isolate a virus associated with a malignant tumor in man," he said, "but there is no doubt in my mind that many tumors are caused by viruses.

"There is a tremendous effort going on in the virus field. I think they have demonstrated that many experimental tumors probably are viral in origin. If they can isolate the virus, they have a pretty good chance of making an effective vaccine. However, many tumors arise which I don't think could be caused solely by a virus. Skin cancer, for example. The incidence varies with the earth's latitude and the intensity of the rays of the sun. There is much more skin cancer in Georgia and Oklahoma than there is in North Dakota.

"We are not conducting research on viruses here because so many other laboratories are studying the virus theory. We don't want to duplicate their efforts."

A three-man biomedical advisory board serves scientists at the Noble laboratories. Members are G. Burroughs Mider, associate director in charge of research at the National Cancer Institute and former board member of the American Cancer Society; Dr. William J. Darby, chairman of the department of nutrition and biochemistry at Vanderbilt medical school; and Dr. Max S. Dunn, associate dean of the graduate school, UCLA, who has been on the board of directors of the American Cancer Society since 1944. These men visit the laboratories periodically and advise scientists on various projects.

Research information obtained by the Noble group has been published in many national and international scientific journals. They had 17 articles published last year in such periodicals as Cancer Research, Journal of the National Cancer Institute, and Proceedings of the Society of Experimental Biology and Medicine.

Dr. McCoy recently was asked to write an article for the first volume of a series, "World Review of Nutrition and Dietetics," being published in London, England. Editor of the series is Dr. G. H. Bourne of Atlanta, head of the department of anatomy at Emory University.

In his article, Dr. McCoy reviewed research data on the role of nutrition in cancer. He points out that obesity in man has been correlated with a higher incidence of cancer. Citing records of leading insurance companies, he pointed out, "Overweight men (50 pounds or more in the 30–44 age group) showed a subsequent mortality from cancer of 37 per 100,000; normal weight men, 32 per 100,000; and underweight men (25 pounds or more) had a mortality rate of 24 per 100,000."

In summary, Dr. McCoy said it is incorrect to assume that a diet can cause or prevent cancer, but certain dietary conditions may be related with the incidence of cancer.

Much of the equipment used in the Noble laboratories is made in the wood, metal, electronics and glassblowing shop. Those working in the shop not only maintain and repair delicate scientific instruments, but they also manufacture new ones. For example, an apparatus for the extraction of ozone, a highly volatile gas, was built for about $200, whereas it would have cost about $1,000 commercially.

James Johnson, the shop's manager, makes glass instruments of all sizes and shapes to meet the scientists' specifications. "I've been blowing glass about 5 years," he said. "Like playing the piano, it takes a lot of practice. You heat the glass until it starts to turn red and begins to soften. Then you blow to make it the desired shape."

The foundation also has a large dispensary and stockroom, where equipment and supplies are stored, and a research library, where scientists can keep abreast of information published by other cancer researchers around the world.

Directing the work of the Noble Foundation is a seven-member board of trustees. Besides Ed Noble of Atlanta, these include his brother, Sam Noble of Ardmore, Oklahoma; his sister, Mrs. David R. Brown of Oklahoma City, and four longtime business associates of the late Lloyd Noble. One of them is James E. Thompson, president of the foundation.

Mr. Thompson recalled that Lloyd Noble was a man with many facets to his personality and character. He said, "Along with his financial success, he developed the philosophy that no man accomplishes anything worthwhile by himself—only through the help and cooperation of others.

"This foundation," he pointed out, "was a result of his desire to do something with his wealth to help his fellowman."

In the beginning the foundation was primarily concerned with agricultural research. But as scientists studied the relationship between soil fertility and human health, they became increasingly aware of the lack of adequate knowledge about the human cell. Their studies evolved into a comparison between normal and abnormal cells—and into the field of cancer.

Mr. Thompson observed that each of Lloyd Noble's children is independently well off, but they contribute their time to the Noble enterprises so that the giant research program can continue. He explained that a research program requires steady, foreseeable income for sound planning.

One of the men who has worked for the Noble Foundation from the beginning is Ray O. Dyer, director of the agricultural division. "The unique thing about this foundation," Mr. Dyer said, "is the dedication of the people working here. When we think of Lloyd Noble and what he made possible, we begin to hero-worship him. But he wouldn't want that. He wasn't a saint; he was a fighter. As happy as he would be with our program today, he wouldn't be completely satisfied because he was a perfectionist. So we are constantly trying to improve our research programs."

Dr. McCoy is optimistic about the control of cancer in the future, but he would not predict when that will be. "I don't think the answer will be like the polio vaccine," he said. "There are many types of cancer, so I doubt we could get one cure for all types."

The cure for cancer probably won't be found in one laboratory, but it will be the result of research in many laboratories. Scientists at the Noble Foundation are contributing valuable information in the worldwide quest to solve the cancer mystery.

Civil Rights Legislation

EXTENSION OF REMARKS
OF
HON. HOWARD W. CANNON
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Thursday, February 25, 1960

Mr. CANNON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "'Sound' Rights Bill Pledged; What's Gained by Dodging? "published in the Nashville (Tenn.) Tennessean of February 17, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOUND RIGHTS BILL PLEDGED; WHAT'S GAINED BY DODGING?

(By Edward D. Ball, editor)

Having promised to help get sound civil rights legislation passed this year, Senator LYNDON JOHNSON has acted on the assumption that the best way to proceed is to proceed.

The Texan's commitment was generally approved by southern Democrats, though some who look with alarm upon civil rights, in any and all of its aspects, may have had their doubts.

In view of the trouble of prizing any civil rights measure out of the Eastman committee, it was expected all along that Senator JOHNSON would use some minor bill as a vehicle for amendments. And this he has done.

The Texas veteran is giving his party leadership to dispel the idea that it is afraid to let any rights legislation come before the Congress. As a matter of fact the Democrats did not find themselves imposed upon when new legislation was passed in 1957, with Senator JOHNSON in the forefront, after some of the Eisenhower administration's objectionable provisions had been soundly beaten.

Voting rights constitute an issue that calls for reasoned consideration, and strangely enough those who would belabor Senator JOHNSON for recognizing this fact will be found, in many cases, to be hysterical supporters of Vice President NIXON whose advice and consent was sought and given on Attorney General Rogers' referee plan within the Federal judicial system. Such schizophrenia is rampant.

There is no chance that southern elements can keep the issue of civil rights from coming to a vote, and there are many advantages in getting it settled with as little delay as possible.

Not only is Senator JOHNSON wise in trying to get this issue settled soon, he is also being realistic. For he knows full well that there is going to be an adequate rights plank in his party's national platform and that any Democratic candidate who hopes to be elected will subscribe to it.

As things now stand, he is the only man from the South with any chance to win the Democratic nomination. In a sense, he may be taking a calculated risk in doing what he promised last year to do. The discreditable thing, however, would have been failure to live up to that reasonable pledge.

He has not, of course, endorsed the Nixon-Rogers-Eisenhower lack of consideration for southern tradition in handling its own elections, State and National. He does not stand in the way of attacks upon the constitutionality of such a program devised for political advantage in this election year. He has only said, in effect, that since these issues are going to be pressed, the Senate should not run away from the responsibility of giving them the attention they require.

An opportunity will now be given to sift the bad from the good in civil rights amendments, and what could be more democratic?

Senator LYNDON JOHNSON of Texas is not afraid of leadership, in which the Nation has been notably lacking. That, in itself, is a heartening sign.

Pending Applications for Federal Grants Under Federal Water Pollution Control Act

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, February 24, 1960

Mr. MCNAMARA. Mr. President, of all the vetoes which the President has rendered on important and necessary legislation his veto of the water pollution bill probably was the most ill considered.

While piously noting that the rivers and streams of our country are a priceless national asset, his veto message calmly relegates the solution to the immense pollution problems to the local level.

And the President's primary answer to these problems is the calling of another national conference.

Mr. President, there are no facts which can be developed at any such conference that are not already well known.

These facts are that our local communities are finding it impossible to cope with the sewage and pollution problems being brought about by our increasing population, industrialization, and urbanization.

The calling of a national conference on water pollution will not alter the needs in the least.

It simply would be another excuse by the administration to delay and to duck its responsibility for solving a national problem.

In case the President has not been made aware of the scope of the problem—and I gather from his veto message that he obviously has not—there are 558 pending applications for Federal grants under Public Law 660, the Federal Water Pollution Control Act. These are projects in nearly every State and there are an additional 500 applications now in preparation.

I ask unanimous consent that the list of Michigan applications be printed in the Appendix of the RECORD.

I also ask that a telegram on the subject from Gov. G. Mennen Williams, of Michigan, also be printed.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

Backlog of applications for Federal grants under Public Law 660

Applicant	Estimated total project cost	Estimated amount grant requested	Congressional district	Applicant	Estimated total project cost	Estimated amount grant requested	Congressional district
Michigan:				Michigan—Continued			
Lathrup Village	$237,500	$71,250	18	Stephenson	$87,000	$26,100	11

LANSING, MICH.,
Thursday, February 25, 1960.

Hon. PATRICK V. MCNAMARA,
U.S. Senate, Washington, D.C.:

Sentiment here strongly favors overriding President's veto of House bill 3610. This urgently needed legislation has been recommended by the President's Federal Water Pollution Control Advisory Council and also by the State and Interstate Water Control Administrators. This bill will make available to Michigan annually about $2.8 million for the next 5 years to assist local communities in the construction of sewage disposal plants compared to about $1.4 million the State has been receiving. During the next 5 years 85 communities throughout Michigan must construct sewage disposal facilities at a cost of almost $100 million. To date and even with the increased funds under House bill 3610 local communities will still have to bear almost 90 percent of the cost of construction. Congressional hearings held last year revealed that not only Michigan, but the entire Nation is faced with the problem of providing adequate water and sewage facilities to meet present needs brought about by population and industrial growth and urbanization as well as those which are to occur in the future.

G. MENNEN WILLIAMS,
Governor.

Early Action Needed on Amistad (Formerly Diablo) Dam on the Rio Grande; South Texas Chamber of Commerce Approves Action

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, February 25, 1960

Mr. YARBOROUGH. Mr. President, nothing is more important to the growth and development of Texas and the great Southwest than securing adequate and long-lasting sources of water supply.

One of the most vital flood control and water conservation projects now under consideration is the Diablo Dam project on the Rio Grande 9 miles north of Del Rio, Tex., recently renamed Amistad Dam.

Recently the south Texas Chamber of Commerce, an organization with membership covering 52 of Texas's 254 counties, passed a resolution urging early construction of Diablo Dam.

I ask unanimous consent to have printed in the Appendix of the RECORD the resolution of the South Texas Chamber of Commerce entitled: "Diablo Dam."

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Be it know that, whereas the principal objective of the South Texas Chamber of Commerce is the conservation of water, the storage of water and the building of the economic resources of south Texas through the development of adequate and long-lasting sources of water supply; and

Wheras the 1944 International Treaty between the Republic of Mexico and the United States of America agreed upon the construction of three international dams on the Rio Grande River for the purpose of flood control, water conservation, and the preservation of human life and property; and

Whereas the construction of one (Falcon) of the three international dams as provided in the treaty of 1944 between Mexico and the United States has been accomplished, and the results of that construction have materially aided in the development of that area below that dam known as the lower Rio Grande Valley of Texas through the providing of constant supply of water in times of drought and through the impounding of waters which formerly flowed into the Gulf of Mexico and through the harnessing of flood waters which in the year 1954 caused millions of dollars in economic loss in those areas, both in Mexico and Texas above the aforementioned dam, and further would have caused additional millions of dollars in economic loss to the lower Rio Grande Valley of Texas, excluding the loss of life in both areas; and

Whereas the site has been selected for the second dam in the series of three to be located approximately 9 miles north of the city of Del Rio, Tex., near the confluence of the Rio Grande and Devils River, and detailed plans and construction procedures has been agreed upon by both sections of the I.B.W.C. on said site as the most ideal location for Diablo Dam; and

Whereas the International Boundary and Water Commission has completed the feasibility report of Diablo Dam and said feasibility report has been presented at public hearing on the Board of Water Engineers of the State of Texas, said report unquestionably justifies the need and feasibility of the construction of Diablo Dam, and said Board of Water Engineers has approved the feasibility report; and

Whereas the population of the area between that point above the city of Del Rio to that point where the Rio Grande River enters the Gulf of Mexico, both rural and urban, are completely dependent upon the river as a means of life and economy; and

Whereas an urgency exists to prevent a recurrence of another disaster such as that in 1954 by flooding in the Rio Grande which resulted in the loss of many human lives and millions of dollars in property damage, and records show that a devastating flood on the Rio Grande occurs on the average of every 4 years, and whereas there now exists at this date another disastrous flood rendering hardship and great loss to our fellow Texans and Mexican neighbors below Falcon Dam; and

Whereas if said Diablo Dam were constructed it would alleviate and eliminate those dangers as well as stabilize our rapidly diminishing water supply in a recurring drought-stricken area by providing a large storage basin whereby orderly release of stored flood waters would add materially to the agriculture areas along the Rio Grande; and since construction of Falcon Dam, the water level has fluctuated from minimum to maximum, and without construction of other upstream dams, this uncertain situation will continue to prevail forever; however with Diablo, the water in Falcon can be stabilized within limits, and at all times allowance for major floods can be made; and

Whereas the storage basin provided by this dam being approximately twice that of Falcon would create a new source of water by the reduction of water loss due to evaporation and uncontrolled seepage and runoff, and whereas in the October 19, 1958, flood, at $2 per acre-foot, approximately $44 million has been lost, which Diablo Dam could have saved, in addition to flood damages on both the Mexican and United States property adjacent to the Rio Grande (14,000 people homeless as of October 19, 1958, as 7 villages and 80 percent of the land between the levees in the 150 miles between Rio Grande

City, Tex., and a point 10 miles north of Brownsville, Tex., have been inundated by the waters of the Rio Grande); and

Whereas the life of the existing dam known as Falcon would be doubled due to the retarding of the silting action which is annually lessening the economic usefulness of Falcon as a storage basin; and

Whereas the communities of Del Rio, Eagle Pass, Laredo, and Zapata, representing the major population areas located above the originally constructed dam and below the Diablo Dam site have reached a common agreement upon the need for the construction of such dam in order to stabilize the economy of the entire river basin; and

Whereas at the 31st and 32d annual conventions of the South Texas Chamber of Commerce, in session at Corpus Christi, Tex., on October 20, 1957, and Laredo, Tex., on October 20, 1958, adopted and urged earliest possible action on early construction of Diablo Dam: Now, therefore, be it

Resolved, That, on this 12th day of October, 1959, at the 33d annual meeting of the South Texas Chamber of Commerce, its officers and board of directors, its water resources committee and general membership, endorse the earliest possible construction of an international dam and reservoir near Del Rio, Tex.; and an immediate appropriation and authorization for its construction by the U.S. Congress, and in order to stabilize, protect and increase the basic economy of the entire south Texas area, in order to save lives and properties, now and in the future, the South Texas Chamber of Commerce urges every citizen of south Texas to join with us and immediately and urgently wire and write all of our Congressmen, Senators, Gov. Price Daniel, and congressional committees, requesting immediate action and earliest possible construction of Diablo Dam.

J. H. BLACKALLER,
Chairman,
Water Resources Committee.
W. E. COOK,
Acting Chairman,
Diablo Dam Committee.

A Patriot Looks at the Loyalty Oath

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks, I call attention to the editorial which follows. It is the work of Don Raihle, writing in the Wanderer, national Catholic newspaper of Minneapolis. Mr. Raihle takes a definite position in favor of present loyalty oath requirements in the National Defense Education Act. His article follows:

"Caltech tries to make available to students all possible loans from private and public sources. We have adequate private sources of funds for those who prefer not to sign the disclaimer affidavit required for Federal loans."

Background: The foregoing comment was made by President Lee A. DuBridge, of Caltech University in California. He refers to the loyalty oath required of students applying for loans under the National Defense Education Act of 1958. This disclaimer clause was inserted into the Federal-aid bill by South Dakota Senator KARL E. MUNDT when he found out that outright Communists had received Federal grants-in-aid for education through the Atomic Energy Commission in previous years. The liberals and leftwingers, together with the American Civil Liberties Union, have been screaming against that provision ever since.

An attempt to recall the loyalty oath was defeated in a Senate rollcall on July 23, 1959, 49 to 42. Leading the opposition to the loyalty provision were pink-tinged members of the American Association of University Professors and liberals in the Senate led by JOHN F. KENNEDY, who is now an active candidate to become the next President of the United States.

Let's see if this loyalty oath is really bad. This is what it requires of students: (1) To swear allegiance to the U.S. Government; (2) affirm that he does not believe in and is not now a member of and does not support any organization that believes in or teaches the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods. That's all there is to it. Any American citizen with loyal red blood coursing through his veins should be willing to take such an oath every morning before breakfast.

Some schools have publicly opposed the oath and refused to cooperate. These have been listed by Time magazine as being: Bryn Mawr, Haverford, Antioch, Princeton, Reed and Swarthmore. Other schools demanding repeal of the oath provision are: University of Wisconsin, Emory University, Harvard, Yale, Bates, Bowdoin and Colby. Secretary of Health, Education, and Welfare Arthur Flemming (of doubtful cranberry fame) lent his prestige to the antioath movement by also backing repeal of the provision.

Harvard President Nathan M. Pusey and Yale President A. Whitney Griswold teamed up to withdraw from the Federal student loan fund as a final protest against the loyalty oath. Thus, the two universities relinquished almost a half-million dollars that would have allotted to them during 1960.

What these educational protesters seem to be saying, in effect, is that they are more interested in giving aid and comfort to the Communist Party, the American Civil Liberties Union and assorted Reds and Pinks who protest against any and all kind of loyalty oaths than they are in properly educating American youth.

It is not the students who must sign the loyalty-oath disclaimer who are waging this active cold war of anti-Americanism, but, instead, college presidents and professors and their assorted followers of many different hues. Some observers have expressed speculation as to how long it will be before free-economy industrialists and corporations which contribute so heavily to the support of such private institutions as those mentioned above, and who likewise provide scholarships and loans for those schools, question how long this Nation will endure under the prevailing ideology of some of our educational leaders. In the future benefactors may do well to consider whether or not they are acting in their own best interest as well as that of their country.

We can be certain that the concentrated howls against the "loyalty oath" in the National Defense Education Act of 1958 will be heard again shortly in the Halls of Congress. Another effort will be made for its abrogation. If you feel that the "loyalty oath" is good, advisable, and fair to all, you are requested to so write to your Representative in the House and your Senator. Make your wishes known. Your elected officials want to know what your opinions are in matters such as this.

It seems that in today's upside-down thinking that it is at times not only unpopular to be patriotic, but it is actually dangerous. If you act like a patriot, chances are you will be the recipient of snide remarks in some circles. It is about time that we put a stop to such silliness and forcibly assert our patriotism to the United States of America.

International Development Association

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, February 25, 1960

Mr. GORE. Mr. President, praiseworthy editorials and columns concerning IDA—International Development Association—continue to appear. This looms as another constructive achievement in the remarkable career of the junior Senator from Oklahoma, MIKE MONRONEY. The Democratic Party could well take a good, favorable look at him and his record. No finer man or record of public service can be found. I ask unanimous consent that there be printed in the Appendix of the RECORD several articles and editorials, published in various newspapers, as follows:

A Peter Edson column distributed by the Newspaper Enterprise Association, appearing in the Washington Daily News on February 4, 1960.

An editorial from the Norfolk (Va.) Virginian-Pilot, February 4, 1960.

An article by Neal Stanford in the Christian Science Monitor, February 2, 1960.

Because the Senate was not in session when the Governors of the World Bank approved IDA last October, I ask unanimous consent to have printed in the Appendix of the RECORD several earlier articles:

A column by Victor Wilson in the New York Herald Tribune of October 7, 1959.

An editorial from the Tulsa (Okla.) World of Monday, October 5, 1959.

A feature story by Allan Cromley in the Oklahoma City (Okla.) Times of August 27, 1959.

There being no objection, the articles and editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News, Feb. 4, 1960]

IDA IS THE NAME

(By Peter Edson)

"IDA"—a unique, billion-dollar international E-Z money lending institutions, is being organized here without a staff or a home it can call its own. Its full name is International Development Association.

Before IDA can open for business its articles of agreement—just announced by the World Bank—must be ratified by governments subscribing 65 percent of its capital.

For the United States this means a treaty ratified by the Senate and an appropriation by Congress for the U.S. share of the capital fund—$320 million. But if the United States and five other nations—Britain, Canada, France, Germany and Japan—subscribe $650 million before September 15, IDA will be able to open the doors and figuratively pass out carnations to new customers like any other new bank.

IDA's father is Senator A. S. M. MONRONEY, Democrat of Oklahoma. Several years ago he got the idea there should be an interna-

tional bank which could make easier loans, repayable in soft currencies of the world's underdeveloped countries.

IDA's mother—and its guardian angel and boss—will be the World Bank—The International Bank for Reconstruction and Development, to use the full handle.

The World Bank's president, Eugene R. Black, will be IDA's president. The World Bank's governors—finance ministers of its 68 member countries—will be the same, if they all ratify IDA and join up. The same goes for the World Bank's 18 regional executive directors, its other officers and the entire staff. It is by this device that IDA will get by as a big bank without a staff or home of its own.

Best example of what IDA can do that the World Bank can't do is illustrated by the Aswan Dam hassle. In 1955 the World Bank worked out a deal to loan Egypt $200 million as a starter. This was the most the bank thought Egypt could repay, on a sound commercial loan basis. So the bank asked the United States, Britain and a few others to make foreign aid grants of another $200 million to get it going.

Then President Nasser made his arms deal with the Communists. The United States backed out of the Aswan Dam deal. Subsequently Russia moved in and is now financing it.

If a project of this kind were to arise today, World Bank could advance the first $200 million as a repayable loan. Then the bank's officers could put on their other hats as executives of IDA and see if the other $200 million couldn't be advanced in soft currency loans. So IDA will operate as a back window to the World Bank.

Over the past 10 years the World Bank has had to turn down many applications for loans to finance good projects in underdeveloped countries that couldn't finance them. It is expected that many of these applications will be dusted off and resubmitted, along with many new ones. IDA expects to lend about $150 million a year for the next 5 years.

Perhaps the greatest benefit to the United States will be that as IDA's business increases, demands on this country for foreign aid grants may be reduced.

The fact that the World Bank runs the store is a guarantee that it will be well managed. For World Bank is perhaps the most successful of all the international agencies set up at the end of World War II.

[From the Norfolk (Va.) Virginian-Pilot, Feb. 4, 1960]

THE NEW WORLD BANK FOR SMALL CUSTOMERS

The World Bank has announced that the framework of its new affiliate, the International Development Association, has been completed. When the structure is finished, the IDA will be able to reach with its loans underdeveloped nations with which the World Bank itself could not do business.

The United States is now, and always has been, the generous uncle that has supplied the World Bank with much of its working capital. In an important sense the IDA will create a new trade-aid policy for which, again, the United States will do a large share of the underwriting.

The United States will provide $320.9 million in capitalization for the new banking affiliate of the World Bank (the International Bank for Reconstruction and Development), and other industrialized members will put up a total of $442.7 million. There are 68 members of the World Bank, but not all are industrialized nations. Some of them are small underdeveloped nations that are themselves in the market for development loans.

The World Bank makes loans only in hard currencies that are convertible in the world money market. Several years ago Senator A. S. MONRONEY, of Oklahoma, proposed that an affiliate of the World Bank be set up to make loans that could be repaid in local currency. That plan has been approved by the directors of the World Bank and by Congress. It is possible that by next September all 68 members of the World Bank will have ratified the plan and that a new lending policy which the United States sponsored will be in operation.

Some of the small underdeveloped nations that cannot exchange their currencies for dollars, or pounds sterling, in the international market do possess potential resources for industrialization, if they could get the hard currency for the financial foundations. In the files of the World Bank there is abundant proof of this fact.

Russia is eager to aid the underdeveloped nations and to furnish them technical assistance. But there are Moscow strings to that aid, as the underdeveloped nations know. Now small nations most in need of loans to put them in the stream of world trade should soon be able to get them from the IDA with no obligations imposed except those of a banking proposition that looks like a good thing for all parties concerned.

[From the Christian Science Monitor, Feb. 2, 1960]

WORLD BANK PLANS "EASY" LOANS

(By Neal Stanford)

WASHINGTON.—Add IDA to your list of international lending agencies, IDA stands for International Development Association.

The charter for this new lending institution, more or less an appendage of the World Bank, has been approved by the World Bank's directors.

All it now needs is approval by member governments—and contribution of funds in the neighborhood of $1 billion.

The difference between the World Bank and IDA is that the parent organization only makes "safe" loans, principally repayable in "hard" currencies. The new IDA is authorized to make "easy" loans in "soft" currencies.

MONRONEY PUSHED PLAN

The need for IDA became apparent some years ago—but it took some time for the White House to warm up to it. Credit for the arrangement that makes it possible to lend underdeveloped countries sizable sums for development projects goes to Senator A. S. MIKE MONRONEY, Democrat, of Oklahoma.

For some time Senator MONRONEY has urged that the United States shift from a program of aid to one of loans—with particular ways being found to put to use the accumulating Public Law 480 funds (soft currency) the United States has accumulated.

Then last year at the annual meeting of the World Bank's directors, Robert B. Anderson, U.S. Secretary of the Treasury, threw Washington's weight behind the proposal for IDA—and the scheme was assured.

PATTERN BLUEPRINTED

The reason is that the United States is down for about one-third of the total—or $320,290,000. Other industrialized countries—Britain, France, West Germany, Canada, Japan, to mention a few—make their contributions in "hard" currencies; i.e., in gold or freely convertible currencies. Other member countries—such as India, Egypt, etc.—would put up 10 percent of their contributions in gold or convertible currencies and the rest in their own money.

Loans would go for a variety of development projects of the kind the World Bank could not finance—that is, nonrevenue producing. And repayment could be not in hard currencies spent but in soft currencies of the countries borrowing.

In other words, the IDA makes it possible for the members of the World Bank to do what the charter of the World Bank itself does not permit them to do. It is designed to meet the demands of the changing international picture without altering the sound fiscal rules of the World Bank.

Before the IDA can actually open for business at least 45 of the 68 members of the World Bank have to approve, and countries have to subscribe, at least $650 million of the $1 billion.

It is understood President Eisenhower will send the proposal for U.S. participation to Congress in March, in plenty of time for both Houses to approve. Their approval is necessary as funds have to be provided to cover the contribution of the United States.

Under the IDA charter, however, only 23 percent of any nation's subscription has to be paid in the first year of membership, with an additional 19.25 percent in each of the next 4 years. Thus all the United States actually would have to put up this year would be $73,300,000. But that would have to be included in the administration's budget for the fiscal year starting July 1.

FUNDS UNFROZEN NOW?

There is one particular clause in the charter that especially interests the United States, the one permitting member nations to contribute "soft" currencies in addition to its own "hard" currency quotas. This means that the United States will be able to put to use the huge accumulations of Public Law 480 funds, which may total $5 million this year.

These funds are the repayments in soft currencies which underdeveloped countries have made to the United States for U.S. surplus crop shipments. Since these cannot be used by the United States, they constitute a frozen fund that the IDA charter now thaws—at least legally.

With the IDA joining the international lending family, there now are:

The World Bank (International Bank for Reconstruction and Development), a multination group which grants loans repayable in dollars and pounds.

The Export-Import Bank, a U.S. institution, which makes similar loans.

The Development Loan Fund, which is the United States own soft currency lending version of IDA.

The Special United Nations Fund for Economic Development (SUNFED) a U.N.-sponsored organization including Communist members.

The new Inter-American Development Bank, geared only to Latin American needs.

REINS RESERVED FOR BLACK

The management of the IDA would be the same as that of the World Bank. Thus the president of IDA would be Eugene R. Black, an American.

What it amounts to is that the World Bank is opening a new "window" at its elaborate offices in Washington—a "window" where underdeveloped countries might go for help if they cannot meet the more rigid financial requirements of the World Bank itself.

It is not expected that these soft loans will automatically turn into grants—but rather that while borrowing countries will be able to repay them, repayment would be able to be made in the hard currencies spent. The scheme is obviously a means of meeting the needs of the underdeveloped countries without lowering the lending standards of the bank itself.

[From the New York Herald Tribune, Oct. 7, 1959]

THE WORLD LOAN PLAN STORY

(By Victor Wilson)

WASHINGTON.—Though it doesn't happen too often, sometimes the story behind the story of a major international event gets lost in the shuffle here in Washington.

Something like this occurred in the creation of the International Development As-

sociation (IDA) during the meeting here of the 68-nation World Bank and International Monetary Fund.

IDA, with a proposed billion-dollar "kitty," is designed to provide long-term loans at low interest rates to underprivileged countries which want to develop their internal resources. This is practically impossible now under the harder terms of the World Bank.

Though a 2-day debate preceded unanimous adoption of the IDA idea, proposed by the United States, there is no record that the name of the man who dreamed it up was even mentioned.

Let the record show, therefore, the name of Senator ALMER STILLWELL MONRONEY, Democrat, of Oklahoma, who calls himself "Mike." For 3 years MIKE MONRONEY has been preaching, peddling, and pushing IDA.

One result of all this effort was that IDA was called "MIKE'S Piggy Bank" from one end of Washington to the other. But another, and decisive, result was that the idea took hold in important minds—President Eisenhower's, Treasury Secretary Robert B. Anderson's, Secretary of State Christian A. Herter's, and Under Secretary C. Douglas Dillon's.

Perhaps the most decisive action came from the President when, in October 1958, he wrote a letter to Secretary Anderson, proposing that Mr. Anderson place the IDA plan before that fall's meeting of the World Bank at New Delhi, India, for study and future action.

The unanimous vote for IDA here is a tribute to Mr. Anderson's sales ability.

As luck would have it, Senator MONRONEY wasn't even in Washington when his "Piggy Bank" idea won out. He was at Bonn, West Germany, conferring with like-minded Americans and Germans on how to keep world peace.

It was during another Monroney trip—to a meeting of the Interparliamentary Union at Bangkok, Thailand, in November 1956—that Senator MONRONEY decided to go all out for IDA. (He concedes that others had thought earlier along the same lines. The World Bank itself operates on similar lines at a higher level. And Governor Rockefeller proposed a somewhat similar plan when he was an aid to President Eisenhower in 1955.)

During the intermissions of the 1956 Bangkok sessions of the Interparliamentary Union, Senator MONRONEY went out to see Thailand. The Thai, bursting with pride, showed him a $53 million dam on the Chao Phya River, which irrigated 2 million acres, and raised their annual rice production by half a million tons.

Their pride stemmed from the fact that it was their very own project—they had borrowed $18 million from the World Bank, and put up the rest of the money themselves.

Then the Thai took the Senator to inspect an outright American gift project—a $21 million road driven through rank jungle to the Lao border. The road was badly needed, and thoroughly practical. But the Thai were rather shamefaced about it. The gift had offended their pride.

Senator MONRONEY learned that most Oriental peoples feel that gifts or rewards should be expected only for performance of deserving acts by themselves. Thus the Thai custom of purchasing caged birds at the marketplace and freeing them to return to the jungle. The Thais feel that this pleases Buddha, who will then reward them with good fortune.

Said MIKE MONRONEY after this experience: "We have erred in trying to fit the size 12 Marshall plan shoe to a size 5 Asian foot. And, we've used too much of the 'papa fix' approach."

Back in Washington from Bangkok, Senator MONRONEY tried to drum up support for his IDA idea. An important feature was that after a poor country made an IDA loan, it could pay back, at least part, in its own currency, money usually so "soft" it would be virtually worthless in world channels.

But most influential Washingtonians—Democrats and Republicans—thought his idea was the mad scheme of a starry-eyed liberal which would upset the world monetary applecart.

Then, in January, 1958, Messrs. Herter and Dillon, and Eugene R. Black, president of the World Bank, were persuaded to take another look at IDA. Mr. Herter then was Under Secretary and Mr. Dillon a deputy for economic affairs.

Senator MONRONEY meanwhile introduced a resolution to put the Senate on record for IDA. At subsequent Banking Committee hearings, Secretary Anderson said the idea, with some fixing, was feasible. In July 1958, the Senate, by a bipartisan 62 to 25 vote, supported IDA. Then came Mr. Eisenhower's decisionmaking letter to Secretary Anderson.

IDA still is not out of the woods. Its charter must be drafted—it could be watered down—and ratified by member governments. But Senator MONRONEY'S "piggy bank" is off the drafting boards and into the realm of reality. Even he couldn't ask for more.

[From the Tulsa Daily World, Oct. 5, 1959]

MORE UNDERWRITING

Underdeveloped nations will be in line for a financial booster shot now that the World Bank has ordered creation of the International Development Association, to make loans on easy terms to poorer countries.

As usual, the United States will contribute the major share of funds needed to underwrite the new program of benevolence. This Nation has agreed to put in $320 million, although Congress must approve U.S. adherence and provide the money.

U.S. assistance in foreign regional development is not an overnight decision. It has been going on, in one way or another, since the close of World War II.

The three great free world international banking agencies—the International Bank for Reconstruction and Development, the International Finance Corporation, and the International Monetary Fund—agreed that something was missing in their setup—the creation of an agency which would make long-term loans at low rates of interest, which would be at least partly repayable in local currencies. No international agency now makes such so-called "soft loans."

Senator A. S. MIKE MONRONEY, of Oklahoma, took the initiative in mobilizing support for such a development association, proposed originally in 1951 by Nelson Rockefeller, now Governor of New York State. Under MONRONEY'S prodding the Senate last year adopted a resolution urging study of the possibility of creating the new agency. The plan is nonpartisan and has received strong support from President Eisenhower.

The World Bank's affiliate will probably be capitalized at $1 billion. The World Bank reflects a $21 billion financial background.

We don't know how long or how far this helping hand will be extended to the rest of the have-not nations. One good point: the new agency will help distribute to other countries the more hazardous type of foreign aid lending, the burden of which so far has been carried almost entirely by U.S. taxpayers.

[From the Oklahoma City Times, Aug. 27, 1959]

MONRONEY'S BRAIN CHILD IS COMING OF AGE

(By Allan Cromley)

WASHINGTON.—It doesn't bother Mrs. Mike Monroney at all when her husband mumbles in his sleep about someone named "Ida."

Mrs. M. knows that "Ida" is really "IDA," which is an abbreviation for "International Development Association." The Senator has been promoting IDA since 1956, and it appears that his efforts are about to end in international matrimony.

It's reportedly possible that the Board of Directors of the World Bank will perform the ceremony when they meet in the United States September 27–29. Monroney's IDA will then become a subsidiary of the bank and, he hopes, a vital part of the free world's program of assistance to underdeveloped nations."

REPORTER CONVINCED

Although he has a former newspaperman's ability to put complicated subjects in one- and two-sylable words, MONRONEY has found it difficult to introduce his brain child to Washington bureaucrats—to say nothing of the general public.

He introduced this reporter to IDA over about 2½ cups of coffee. It can't be said that the reporter completely understands IDA, but he is convinced that MONRONEY does.

So hold your breath and keep reading. You may gain good conversational material with which to deflate bores at receptions.

LIKE A FARMER

MONRONEY'S IDA is designed for backward countries which would like to get loans from the World Bank but can't pass the credit risk test.

They're like the farmer who goes to the country bank. He wants to buy a good piece of land for $10,000 but can't quite float it at 6 percent over a 20-year period.

So the banker says, "I'll loan you $7,000. Now you go to our trust department and see if they'll take a second mortgage."

The farmer does, and they do—in this manner: The trust department says, "We'll lend you $3,000 at 2 percent over a 40-year period, except that $1,500 of it will be in cash and $1,500 of it will be in wheat, which you can convert to cash."

So the farmer gets his loan and everybody lives happily ever after.

Mike's IDA would be the "trust department" of the World Bank. Let's say India comes in with plans to build a $100 million dam which would obviate its water dispute with Pakistan.

The World Bank agrees to lend $70 million in dollars or other money, such as the pound, with worldwide respectability. These are called "hard" currencies.

The loan will be for 20 or 25 years at 5¼ to 6 percent. Then India goes to IDA and gets a "second mortgage" $30 million loan for 40 years at 2 percent.

However, IDA says, "We can't give it to you all in dollars, or pounds or Mexican pesos. We will, however, lend you $15 million in one of those hard currencies and $15 million in soft money, such Italian lira, Japanese yen, Peruvian pesos, and Brazilian cruzeiros, which we have a lot of and are otherwise worthless.

OTHERWISE IMPOSSIBLE

"Now you go out and see what you can scrounge with the soft currencies. Perhaps you can buy Japanese earth-moving equipment with the yen, Peruvian zinc with the pesos, Brazilian rubber with the cruzeiros, peddle the rubber and zinc to some other country for other needs * * *" etc., etc.

So, India gets the loan, contends MONRONEY, that otherwise would have been impossible.

The IDA, like any bank, would have to be financed to start with. The beginning sum would be $1 billion, of which the United States share would be $350 million. Other hard currency countries would come in for their share.

VIRTUALLY WORTHLESS

In addition, everyone would chip in soft currencies, of which the United States has

accumulated $3.5 billion in its worldwide disposal of surplus commodities.

It's MONRONEY's contention that our dollars would eventually be paid back, with interest, and the "soft" currencies are virtually worthless to us the way things stand now.

When borrowers begin to shop around the world market with currencies they get from IDA, they will feel more like the farmer we talked about and less like someone who has taken a handout, believes MONRONEY. This, he says, is a step toward closer ties between the United States and underdeveloped countries.

BORN IN 1956

Whose idea was IDA, anyhow? Did MIKE just dream it up, or did someone with an ax to grind plant it in his ear?

He thought of the scheme in 1956 during a meeting of the International Parliamentary Union in Bangkok, Thailand, he said.

The Thai had built a $53 million irrigation project with their own funds, supplemented by a $18 million World Bank loan. They were "bursting with pride" over it, but were not so enthusiastic about a $21 million highway financed with U.S. defense support funds.

"My impression was that they felt they had lost face and suffered an implied loss of sovereignty in accepting the highway," MONRONEY says.

REPLY IS QUICK

All well and good, comments his interviewer. But what do you say when someone asks, "What's in all this international folderol for Oklahoma?"

His reply is quick:

"Do Oklahomans want the 67 other member nations of the World Bank to take on a bigger share of the load of helping underdeveloped countries?

"Do Oklahomans want us to make use of the currencies we have received for sale of agricultural surpluses abroad?"

REPUBLICANS PERSUASIVE

"Do Oklahomans want to take the 'papa fix' out of foreign aid, which has caused it to boomerang against the United States?"

MONRONEY has been just as persuasive with the Republican Eisenhower administration. Secretary of the Treasury Robert B. Anderson has done "tireless work" in behalf of IDA, according to MONRONEY. As a member of the World Bank's Board of Governors, Anderson has promised to recommend IDA's adoption.

What Shall We Do With the Telephone Tax?

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. STRATTON. Mr. Speaker, last year Congress adopted legislation to provide for the termination of the telephone excise tax effective June 30 of this year. In his budget message President Eisenhower, however, urged the Congress to rescind this action and to continue the tax for an additional year.

At the same time, in my State of New York, Gov. Nelson Rockefeller has appealed to the President, and also, as I understand it, to Members of Congress, to go through with our decision to abandon this tax so that the State may authorize its reimposition at the State level after June 30 for educational purposes.

Because I believe that members of Congress, particularly those from New York State, may be interested in the reactions of citizens to these proposals by the President and by Governor Rockefeller, under leave to extend my remarks I include an editorial which appeared in the Cherry Valley News, Cherry Valley, N.Y., on January 28, 1960. The editorial follows:

TOSSING THE BALL AROUND

Governor Rockefeller had planned to grab the 10-percent tax on telephones which the Government had voted to drop as an unfair tax and discriminatory one. Rockefeller wanted the revenue to be used as additional aid to New York schools. Today's press carries an announcement Eisenhower plans to keep the tax if he can.

Why in the name of blazes should we users of the telephone be forced to continue payment of what was considered a luxury tax in the first instance? Why in the world would Rockefeller want to load business with another tax, and thereby become the second only State in the Union with such a tax? Rocky has his department of commerce working day and night, spending thousands and thousands of dollars to induce new business to the Empire State, and yet he is willing to make it less economical for business by adding a phone tax.

Already the phone company must take 30 cents out of each dollar paid for service, for taxes. This tax is four to five times more than the taxes on most other things consumers buy. This appears to be most discriminatory, indeed.

Bounce this tax around as you will, Rocky and Ike, but in the end, in fairness to all concerned, we hope you drop the ball and lose it entirely. Taxes are necessary, but don't single out a single utility to extract several millions.

Support Grows for Padre Island National Seashore Project: Houston (Tex.) Democratic Woman's Club Strongly Supports It

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, February 25, 1960

Mr. YARBOROUGH. Mr. President, public approval of the plan to create a massive new national seashore recreation area on Padre Island continues to grow. Seldom has there been such widespread agreement on the need for such a project.

Following recent hearings on the project, which were conducted by the able and distinguished Senator from Utah [Mr. Moss], the Houston (Tex.) Press editors headed one of their stories—"15,000 for, 3 against" the Padre Island project.

Almost daily additional organizations in Texas and across the nation are officially endorsing the Padre Island National Seashore plan. One of the most recent to pass such a resolution is the large and extremely active Houston Democratic Woman's Clubs of Houston, Tex., which has adopted a perceptive resolution.

A story concerning the overwhelming public support for the Padre Island seashore plan appears in the current issue of National Parks magazine.

I ask unanimous consent to have printed in the Appendix of the RECORD, the following:

The article from the February 1960 issue of National Parks magazine, entitled: "Little Opposition at Padre Island Hearing," and, the resolution passed by the Houston Democratic Woman's Clubs on January 21, 1960 headed: "The Need for Padre Island National Seashore."

There being no objection, the article and resolution were ordered to be printed in the RECORD, as follows:

LITTLE OPPOSITION AT PADRE ISLAND HEARING

Flagged in the Houston (Tex.) Press as "15,000 for, 3 against," the December 14 Corpus Christi hearing on the proposed Padre Island National Seashore was apparently the smoothest and speediest hearing on a park proposal seen in a long time. Park Service Director Conrad L. Wirth was quoted as saying "It makes me nervous. It is too easy."

Some 40 witnesses appeared to speak personally in favor of the project, while 100 sent in telegrams, letters, or prepared statements and over 15,000 signed petitions welcoming the new seashore area. The three protests were registered by a landowner and two attorneys for landowners on parts of the 110-mile-long island extending from Corpus Christi to near Brownsville.

Most determined opposition was voiced by David M. Coover, who spoke for the heirs of Albert R. Jones and P. F. Dunn. Coover told Senate subcommittee member FRANK MOSS, of Utah and RALPH YARBOROUGH, of Texas, together with Congressman JOHN YOUNG, of Corpus Christi, that since the two families had never been approached by any agency with a definite plan for a park, they were forced into the position of opposing any plan. The Jones family owns approximately 44,000 acres or one-third of the island and the Dunns own the largest oil and mineral rights which Coover estimated at $75 million. Milder opposition came from Dallas attorney John D. McCall and Padre Beach developer J. L. Tompkins.

Senator YARBOROUGH, whose bill was the basis of the hearing, led off with a vigorous demand for a minimum of 100 miles. Opponent Tompkins urged a restriction to 50 miles of shoreline. The National Park Service felt that 88 miles of the islands 110 were "unspoiled and suitable for preservation." Significant, perhaps, was a statement entered into the record on behalf of Senator LYNDON B. JOHNSON, majority leader of the Senate: "We should not only encourage a park on Padre Island, but by showing the committee the advantages which will accrue to present and future generations by having a large part of Padre preserved in its natural beauty, we should encourage Congress to embark on a general program of shoreline park development * * * Padre Island should set the pace and lead the way."

Clarence Cottam, Director of the Welder Wildlife Foundation and member of the board of trustees of the National Parks Association, presented a statement for NPA (see p. 12 of the July 1959 National Parks magazine) which indicates the association's belief that "Padre Island is of national significance and of a quality suitable for inclusion in the system of reserves administered by the National Park Service." The statement further urged that "the entire island between the present county parks at the north and south ends of the island" together with "the Laguna Madre and the coastal

lands up to the Intracoastal Canal" should be included.

Speaking as an individual, Dr. Cottam also made an eloquent plea for the project as a means of preserving wildlife. Emphasizing its biological significance, he said, "This general section is a most important thoroughfare in continental bird migration and a great many individuals of a surprising number of species winter here. If the area were developed industrially and for homesites or beach cottages, much of its attractiveness for wildlife and the opportunity for study and observation would be materially lessened, if not largely destroyed."

RESOLUTION OF THE HOUSTON (TEX.) DEMOCRATIC WOMEN'S CLUB

"Whereas in this changing world, in which values are increasingly difficult to maintain and preserve, it is essential to uphold the physical as well as spiritual essence of the American way of life; and

"Whereas, with scientific and industrial development and progress steadily altering the characteristics of the world in which we live, it is more and more vital that effective steps be taken to preserve the scenic attributes and beauties of the land that God has given us, without which steps the America we love and hope to pass to future generations will eventually be transformed into a coordinated mass of complicated and impersonal apparatus and machinery, steel, concrete, and chemicals, serving a useful purpose but not gratifying the spirit; and

"Whereas it is our bounden duty as citizens embued with a deep sense of responsibility to bequeath to our children and others who come after us the God-blessed land that was bequeathed to us; and

"Whereas Padre Island, stretching for 117 miles along the Texas gulf coast from Corpus Christi on the north almost to Mexico on the south, the longest island or barrier beach along the shores of the United States, affording the greatest stretch of undeveloped seashore remaining in America, and recognized for more than 20 years as one of the Nation's foremost potential seashore recreation areas, with outstanding and incomparable features and opportunities, of national rather than sectional significance and worth, presents our last chance to add to the national park program and area, for the benefit and pleasure of present and future generations, its natural characteristics and condition making it ideal for development as a protected recreation area, secure in perpetuity: Therefore, be it

"*Resolved*, That the Houston Democratic Women's Club, of Houston, Tex., on behalf of its members as American citizens and itself as an organized public service body, do petition and memorialize the Congress of the United States and officers of appropriate agencies of the executive department in support of all constructive and public-spirited efforts to obtain Padre Island in its entirety for the express and sole purpose of converting it into and maintaining and preserving it as a national park, and officially and formally commit and declare itself in such support in the passing of this resolution, the original whereof, duly signed and attested, being transmitted to U.S. Senator RALPH YARBOROUGH and copies thereof being spread across the permanent records and incorporated in the archives of the club in testimonial thereof."

In witness whereof the undersigned officers of the Houston Democratic Women's Club do subscribe themselves, and cause the seal of the club thereunto to be affixed, this 21st day of January A.D. 1960.

MRS. MARY WELLS,
President.
MRS. NEAL PICKETT,
First Vice President.
CHATTIE SLAYTON,
Secretary.

People's Crusade

EXTENSION OF REMARKS
OF
HON. CHARLES A. BUCKLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. BUCKLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Journal American, dated Monday, February 15, 1960. I wholeheartedly approve of the mayor's protest against the shortchanging of New York City in State aid, and I trust as a result of this editorial a great number of New Yorkers will follow the suggestion and send their personal protest to Governor Rockefeller:

PEOPLE'S CRUSADE

With the fighting spirit that indicates he will accept no bogus compromise, Mayor Wagner has sounded a call to all citizens to join the battle against the shortchanging of New York City in State aid and fiscal home rule.

This is not merely a fight between two branches of government, the Wagner Democratic administration in New York City and the Rockefeller Republican administration in Albany.

This is a fight against a fiscal noose which Republican upstate bosses, scornful of our growing needs, have been drawing tighter and tighter around the city's neck.

It is a fight to give the 8 million or more residents of New York City a fairer share of the taxes they contribute to the State government and which the State, in turn, apportions to all of the cities, towns, and villages.

It is a fight for some degree of fiscal equality, comparable to that granted upstate communities. It is a fight against rigid, obsolete State aid formulas which deprive New York City of a just share of State aid for schools, hospitals, teacher salaries, youth programs, and other human needs.

MAYOR'S CALL FOR ACTION

It is for these reasons that the Journal-American whole-heartedly endorses the Mayor's call for action and makes available its facilities for arousing citizens support. Appended to this editorial is a coupon which we urge our readers to send immediately to Governor Rockefeller as a protest against the continued discrimination against New York City.

The use of the coupons provides a means by which the voice of the people can make itself heard at the top levels of government. The coupons proved tremendously effective in the Journal-American's campaign against a proposed 4-percent local sales tax and also against the inflationary trend in Congress.

With the continued cooperation of Journal-American readers, they can be equally effective in the fight to win New York City equal treatment in State aid.

Let this be a people's crusade.

In an angry attempt to rebut the charges, Governor Rockefeller has accused Mayor Wagner, without using his name, of being "unfair and deceitful in implying that, for political reasons, the State is in any way attempting to shortchange the city." The governor says the proposed $7 million cut in State aid for New York City is dictated by established formulas. Curiously, these same formulas provide a huge windfall for Republican communities outside the city.

Is it not time that these formulas were modernized to reflect present needs in a more honest and realistic manner?

We would like to remind Governor Rockefeller that the State is guilty of an even greater injustice by arrogating to itself certain tax revenue sources which properly belong to the city and for which the city performs virtually all of the services. The Journal-American will list these glaring examples in the days to come.

You, who are required to foot the bills, can do your part in stopping the financial inequities imposed on the city by the upstate bosses. Clip, fill in and mail the following coupon to Gov. Nelson A. Rockefeller, the Capitol, Albany, N.Y.

Dedication of the Southeastern Radiological Laboratory at Montgomery, Ala.

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, February 25, 1960

Mr. HILL. Mr. President, on February 11, Surgeon General Leroy E. Burney dedicated the Southeastern Radiological Health Laboratory at Montgomery, Ala. The laboratory is one of two now established under the direction of the Public Health Service with the purpose of expanding a program to guard the health of our people against ionizing radiation.

The work to be done at Montgomery and at Las Vegas, Nev., will help our Government determine proper standards of measurement and control to protect the present and future generations of Americans from overexposure to radiation of any type, whether natural, industrial, medical or from military testing of nuclear weapons.

One vital purpose of the Montgomery laboratory is to provide assistance to Alabama and to other States in developing their own radiological health program. In order to better carry out all goals under the new program, the Public Health Service will train professional personnel to man key research measurement and control posts across the Nation. The Montgomery center will play a part in training such personnel.

Man has in the last half century let loose in the world forces which we do not yet completely understand. We do not know fully either their potentials or their hazards. The radiological health program which the Public Health Service is now undertaking promises to give us many answers of vital importance to the health and welfare of all Americans.

I ask unanimous consent that the speech made by Dr. Burney in dedicating the laboratory at Montgomery be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SOMETHING NEW HAS BEEN ADDED

(By L. E. Burney, M.D., Surgeon General, Public Health Service, U.S. Department of Health, Education, and Welfare)

Doctor Gill, Colonel Wright, ladies and gentlemen, the dedication of this un-

usual new guardian of the public health, here in Montgomery, is an auspicious occasion. It is auspicious for the Public Health Service, for the State health departments whose leaders are here to help us launch it, and for the American public in general. The last-named may not fully realize, as yet, the significance of such a highly specialized atomic age installation, but that realization will surely come—perhaps soon. Public interest is intense, these days, in nuclear radiation, its hazards, and the swiftly expanding measures that are being taken by the Government for protection of the public against these hazards.

It seems particularly appropriate that this Southeastern Radiological Health Facility should be located in the capital city of Alabama, a State which has traditionally been among the leaders in public health. Alabama has been most fortunate in its State health officers—both my very good friend Dr. Gill and his distinguished predecessors. The State has also been the scene of pioneering work in a variety of public health fields, including milk sanitation, venereal disease control, and the training of public health workers.

This Southeastern Radiological Health Facility, with its sister installation at Las Vegas, Nevada, and a third to be opened in Maryland this summer, will be a key member of a sophisticated intelligence network which will, from now on, keep a watchful eye on the levels of radioactivity, nationwide, in air, water, food, and milk.

The Las Vegas and Montgomery facilities will analyze and test environmental and biological samples collected by Federal, State, and local health officers. The third, in Maryland, will work on health problems arising out of the use of medical and dental X-rays.

Because the training of technicians to high levels of skills in radiological health procedures is one of our most urgent needs, the facilities will train selected State and Federal laboratory workers in the complex instrumentations and techniques of this demanding work.

They will develop equipment for improved laboratory techniques.

They will provide extensive laboratory services to the 50 States, aid in fostering the development and continued expansion of the States' radiological health programs, and help expand the national milk surveillance network from 12 to 60 stations.

They will make important contributions toward determining and refining the standards of measurement and control necessary to protect present and future generations from overexposure to ionizing radiation from any source.

The coordinated activties of these facilities will constitute one major component of the Public Health Service's assistance to the States in the field of radiological health, under the requirements of the massively augmented responsibilities recently assigned to the Service by the President. The importance of this modern-day environmental monitoring is increasing stride by stride with the continually enlarging uses, by industry, medicine, and the military, of radioisotopes, which, natural or man-made, are all sources of radioactivity—that miracle of the spontaneous emission of energy by matter, still only partially understood and partially exploited.

I wish the senior Senator from Alabama, the Honorable LISTER HILL, could be with us today. He would be as gratified to be here, I think, as we would be by his presence, for he could look on the new-born Southeastern Radiological Health Facility with the appreciative eye of a father. It was Senator HILL'S amendment to the Health, Education, and Welfare appropriations bill in the last session of Congress which made possible, among other advances, our programing of the three new radiological-health facilties whose mission it will be to better guard the health of the American people against ionizing radiation from all sources.

It is well known to Alabamians that Senator HILL is the son of one of the South's foremost physicians, the late Dr. L. L. Hill, of Montgomery. And the Senator's decades of creative preoccupation with public health and other forward-looking legislation are well known throughout the country.

Suffice it to say that Senator HILL has long been known as the dean of American health legislation—most recently so described in a New York Times article cited in the CONGRESSIONAL RECORD by Senator LYNDON JOHNSON.

I should like to pay special tribute, also, to another distinguished Alabamian who has made important contributions to the health of the Nation. Congressman KENNETH A. ROBERTS, of Alabama's Fourth Congressional District, as chairman of the Health and Safety Subcommittee of the House Interstate Commerce Committee and as sponsor and active supporter of public health legislation, qualifies as a leader of national stature in the public health field.

Senator HILL stated on the floor of the Senate last year: "Man in the last half century has let loose in the world forces which we do not as yet fully understand. We do not fully know either their potentialities or their hazards."

He was referring, of course, to ionizing radiation, as related to his major concern in life: the public health.

Being in favor of health isn't as easy as it used to be. In the days only recently past, when the public health profession was concerned almost exclusively with the communicable diseases, being in favor of health was as uncomplicated as being opposed to sin. In dealing with microbiological enemies, the ultimate goal is total eradication. Every gain toward that end is a gain for everyone.

But today, we in the public health field face a new kind of challenge, in which total eradication cannot be our goal. Perfectly pure water in our streams and totally undefiled air over our cities are impossible of achievement without completely denying to ourselves the many benefits of our industry and technology. We would not do it even if we could. What we must do, in relation to these modern environmental challenges to health, is to strike a balance which permits maximum development with minimum danger.

In such fields as air pollution and water pollution, attaining such a balance is complicated by the nature of the menace: the accumulation of minute quantities of toxic substances over a long period of time. With radiological health, which is in many ways parallel to these other environmental problems, we must deal not only in terms of lifespans but in terms of generations.

Thus, in our unceasing efforts to create and preserve a safe environment, we have moved from the stark, simple black-and-white world of communicable disease to a new spectrum in which we are confronted with shades of gray. Contaminants of air, water, and food—be they chemical or radiological—are often byproducts of indispensable activities which are inextricably woven into the fabric of our modern civilization. I need hardly add that in the field of ionizing radiations, the stature and perhaps the survival of our Nation is one of the factors which must be weighed in the balance.

Eradicate ionizing radiations? Impossible. Natural radiation, from earth's rocks and from outer space's cosmic rays, is and probably always will be ineradicable. And so, today, is the man-made ionizing radiation that is becoming more and more a part of man's worldwide environment. Nuclear physics' immutable laws decree that this hazardous by-product results from all atomic activities. Therefore our accelerating crusade against the short- and long-range biological ill-effects of inonizing radiation must be directed not toward eradication but toward control.

It is one of the most complex and challenging missions ever to confront the Public Health Service and the entire public health profession. It and the problems connected with it stretch out into the whole foreseeable future. We must call upon all the skill and ingenuity and dogged persistence within our command.

Our past, radiologically speaking, has had its share of problems, too. Health workers became aware of the hazards as well as the great value of radioactivity in the years following the discovery of X-rays by Wilhelm Konrad Roentgen in Germany in 1895. An important development in the history of radiological health, in which the Public Health Service participated, was an investigation of the radium poisoning of clock- and watch-dial painters. In 1940, the Service reported on radium and X-ray hazards in hospitals, and during World War II, research data provided by the Service were taken into account by the Manhattan District when the then secret agency was establishing standards of human tolerance to radiation.

In 1945, the fission bomb literally exploded into the awareness of the general public, and the environmental health problem of ionizing radiation started its swift enlargement. The fusion bomb followed. It may surprise some of you—it surprised me—to learn how many announced nuclear detonations, fission, and fusion, were made by the United States, Great Britain, and Russia from July 1945 through November 1958. The number is 227, as summarized before the Joint Congressional Committee on Atomic Energy last May from data supplied by the Office of Meterological Research of the U.S. Weather Bureau.

Despite this startling statistic, the radiation exposure of the public resulting from international nuclear bomb detonations has, so far, been far outweighed by that from the diagnostic and therapeutic use of X-rays, operation of nuclear reactors and particle accelerators, and the use of radioisotopes by industry. Industry, as you know, has been growing steadily more aware of the versatility, economic implications, and production improvements made possible by using radioisotopes in gaging, radiography, tracing and in countless other ways. And under the heading of industry, we must of course, place the development of nuclear power stations: an infant activity now, which will one day be a colossus.

During this postwar period of rapid development in nuclear technology, the Public Health Service conducted various activities directed toward solving the health problems created by ionizing radiation. These efforts were fused together by the formation, in July 1958, of the Division of Radiological Health within our Bureau of State Services. This action provided a springboard for a dramatic expansion of our operations. The Division's budget request for fiscal year 1961, totaling $6,219,000, represents a 10-fold increase over its appropriated budget for fiscal year 1959.

During August 1959, there were several regulatory developments of great significance to our radiological health efforts.

On the 14th, the President, by Executive Order, established the Federal Radiation Council, to be composed of the Secretaries of Defense; Commerce; Health, Education, and Welfare; and the Chairman of the Atomic Energy Commission. The Council's mission is to deal with the various problems of the Atomic Age, of which that of protecting the public from the hazards of ionizing radiation is one of the most important.

On the 22d, the President designated Secretary Arthur S. Flemming as the current

chairman of the Council. The President further directed, on the 22d, that DHEW "intensify its radiological health efforts and have primary responsibility within the executive branch for the collation, analysis, and interpretation of data on environmental radiation levels, such as natural background, radiography, medical, and industrial use of isotopes and X-rays, and fallout, so that the Secretary of Health, Education, and Welfare may advise the President and the general public."

On August 26, Secretary Flemming assigned to the Public Health Service the grave responsibilities of carrying out this mission, and the Southeastern Radiological Health Facility, opening its doors today, is one of the first generation of technological tools we will be using for that mission.

On September 23, the Federal Radiation Council, which the President had created by Executive order, was written into Public Law 86-373, adding the Secretary of Labor to its roster.

On present appraisal, then, the radiological health activities of the Public Health Service stand buttressed and bulwarked, with extensive projects in operation and underway—and an expanding program for the future on a forced-draft schedule.

All of our activities in the field of radiological health will, of course, be carried on within the classic Federal-State relationship which has been so successful in meeting other challenges to the public health. Ionizing radiations pose a many-dimensional problem demanding the cooperation of many disciplines and groups. I am confident that our Federal-State partnership in health will work efficiently and effectively in this as it has in other fields. This Southeastern Radiological Health Facility is designed and intended as an instrument to strengthen this partnership. It is at the service of the States.

I would like to stress again that the problem posed by ionizing radiation is an environmental-health problem: not only the newest, but also one of the most intricate, we have ever faced. As I said earlier, the pattern is not stark black and white, as in the case of illness versus health. Clues to the courses of action we must take in radiological health come to us with alternatives heavily disguised. Long-range detriments may present themselves to us as highly attractive short-range boons; and the product may not prove worth the price, unless and until we identify and control the threats that may lurk behind the appealing facades.

In short, there are limits to what we can accept as progress, especially in the new age of the atom, and these limits are imposed by the conditions necessary to human well-being. Nor can we wait for exact quantitative knowledge of the biological effects of radiological contamination of the environment. If we wait until we have proved the danger beyond reasonable doubt, or established precise safety boundaries, or observed statistically significant examples of radiologically impaired human health, we shall never catch up.

Rather, corrective radiological-health action for the public safety must be taken whenever reasonable cause, based upon accumulating evidence, is found.

The work of the Southeastern Radiological Health Facility and its sister installations will be directed toward such assistance. They will analyze and interpret environmental levels of radioactivity throughout the United States, contributing significantly to our accumulating knowledge which will enable both the Federal Government and the States to take suitable actions.

Something new has been added to our environment. A new health hazard has developed from a miracle of nature more ancient than our planet, more ancient than the stars, as ancient as the cosmic elements out of which the stars were formed. And something new has been added by man to combat and control this hazard. A whole arsenal of new weapons is, in fact, being added to the many we have used in the past to fight for improved national health. The Southeastern Radiological Health Facility is one of these new weapons, and we dedicate it here today with confidence that it will fulfill its mission well.

I dedicate this Southeastern Radiological Health Facility to serve the people of Alabama, the Eastern States, our whole country, and the world. May the people who work in this laboratory add to our knowledge, and the application of that knowledge, for the benefit of all mankind.

Revenue Law Is Inequitable—Farm Co-ops Escaping Fair Share of Tax Load

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I would like to insert the following editorial from the Chicago Daily News under date of February 19, 1960.

REVENUE LAW IS INEQUITABLE—FARM CO-OPS ESCAPING FAIR SHARE OF TAX LOAD

If a group of people form a corporation to conduct a business, any profits it makes are taxed at a rate up to 52 percent. When the remainder is distributed as dividends it is taxable as income to stockholders.

A group of farmers can form a cooperative to engage in marketing, manufacturing, processing or other business. Its earnings are exempt from taxes. The members may get a certificate noting their share of the profits, but because these certificates have no exactly determinable value, they are not taxable as income. Cash returns are subject to income tax.

One farm cooperative starting with a capital of $30,000 now has a net worth of $40 million. It has absorbed a number of privately owned businesses, unable to survive under the tax disadvantage. Business and industry naturally resent the competitive handicap.

This is the nub of the perennial struggle to revise the Revenue Act which is again being agitated in Congress. Both the need for revenue and the desirability of tax equality are sparking the drive to change the tax status of the co-ops.

Spokesmen for farm groups deny that they want special privileges. What they have done is to take advantage of the law as it stands. To call it a "loophole" is misleading, since the exemption of co-ops was deliberate.

Charles B. Shuman, president of the American Farm Bureau Federation, in effect concedes the discrimination by arguing that the co-ops merely want "to avoid compounding the national error of double taxation which plagues business—and which should be removed."

Mr. Shuman thus contends that corporations should also be exempt from taxation on earnings distributed to stockholders and taxable to them. He agrees that cooperatives' earnings should be taxed, either to the co-op in the year earned, or to the member in the year received, but not both.

Business has taken the same position against double taxation, and undoubtedly would gladly settle for Mr. Shuman's formula as a means of eliminating the present inequality. Even if this were politically possible, which it isn't, the need for revenue would block the change.

A main difficulty is the nature of the patronage dividends returned to members by the co-ops. It could be required that these be of such a nature as to be includible in gross income and thus taxed.

This would still leave undistributed earnings of the co-op untaxed. Men are very ingenious at finding ways to avoid taxes. If a co-op did not distribute any earnings, presumably its shares would increase in value correspondingly, giving the holder, when he finally disposed of them, the tax advantage of a capital gain.

The case for equal treatment of business enterprises is conclusive whether this be achieved by ending the present double taxation of corporate earnings and dividends, or extending it to co-ops. The issue may be too hot for an election year, but the position of the Farm Bureau Federation leaves no doubt where equity lies.

Interesting Editorial Comment on the Clean Elections Bill

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, February 25, 1960

Mr. KEATING. Mr. President, provocative editorial comment in newspapers all across the country has underscored the importance of the clean elections bill which recently passed the Senate. Thoughtful views on this measure were recently set forth by a significant newspaper in Winston-Salem, N.C., the Twin City Sentinel.

In response to this editorial I wrote a letter to the editor of the Sentinel. I ask unanimous consent to have this editorial and my response printed in the Appendix of the RECORD.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

[From the Twin City Sentinel, Jan. 29, 1960]

STATES MUST CONTROL CAMPAIGNS OR FACE CONGRESSIONAL ACTION

The Senate's version of a bill widening and tightening controls over Federal elections—the so-called clean elections bill—includes what amounts to a self-defeating provision.

This is the amendment that applies the law to primaries involving Federal office as well as to general elections.

Indications are the House of Representatives just won't buy that provision. Speaker SAM RAYBURN, reflecting the views of many southern Congressmen, has said, "I don't think the Federal Government ought to get into the regulation of primaries." And Chairman OMAR BURLESON of the House Administration Committee, to which the Senate bill will be referred, has said that while he favors raising campaign spending limits, the amendment on primaries is "an invasion of States rights." Mr. BURLESON is a Texas Democrat.

The reasoning behind the primary amendment was stated by Senator KENNETH KEATING of New York, one of the sponsors: "It is a well-known fact that in roughly one-third of our States today success in a primary is tantamount to election." And he added that in such States primaries are the only important part of the election process, and to permit such elections to proceed without the same Federal regulations which govern elections in other States is both unjust and unfair."

The New York Senator's comments were directed chiefly at the South, where "tantamount to election" is a hackneyed but applicable phase to describe victory in Democratic primaries.

Realism compels acknowledgment that in strong one-party States a corrupt practices act applying only to the general election is of little consequence.

Unless primaries are included, the other desirable features of the bill such as those requiring more detailed reporting of campaign contributions and requiring reports from local and State committees become less meaningful.

To be sure, some States—North Carolina among them—have corrupt practices acts that regulate campaign spending and require reports on contributions. But many States in which the primary is the controlling election do not have them. And in many that do the penalties for violations are too weak to be much of a deterrent.

The States can rightfully lay claim under the Constitution to the right to control election machinery. But when the States neglect their responsibilities and allow abuses to creep in, they play into the hands of those who advocate more and more Federal control of elections. The current movement to impose Federal registrars on districts where voting rights are denied is a good example.

The provision to include State primaries may stymie a clean elections bill this year. But it is bound to come up again. And the best defense against it would be for the Southern States to be able to show that their election house is in good order rather than to stand on principle alone.

FEBRUARY 5, 1960.

Mr. ROBERT F. CAMPBELL,
Editorial Page Editor,
Twin City Sentinel,
Winston-Salem, N.C.

DEAR MR. CAMPBELL: Your editorial of February 2, concerning the inclusion of primaries, and nominating conventions and caucuses in the elections bill which recently passed the Senate, has been read with great interest. You have certainly analyzed correctly the fact that it would have been hypocritical to call this a clean elections bill if we left primaries unscrubbed.

As you point out, applying regulatory procedures to general elections in one-party States is "of little consequence," unless primaries are included. I could not agree with you more strongly that the other laudable features of the bill, such as the reporting requirements, are "less meaningful" if this vital segment of the Federal electoral process is not covered.

I hasten to add that one-party States are not limited to any particular section of the country. For example, there are many congressional districts in our great Northern urban centers or great Midwestern rural areas, where nomination almost certainly means victory when the ballots are counted. Also, I want to emphasize that this amendment was not intended in any way to impute that there actually are irregularities in those areas where victory in the primary or convention or caucus means automatic success on election day. I merely felt that if the bill were to carry out its intent, all phases of the Federal electoral process had to be covered.

While it is certainly to be hoped that efforts will be continued to prevent abuses at all stages of Federal elections, it does not seem to me that such actions completely meet the issue. The statutory and constitutional bases for Federal regulation of Federal elections, including primaries, are clear and in point. If we are to make our democratic system work at its optimum, certain restraints must be imposed—even if they are never invoked—at all levels. That was the purpose and the final effect of the clean elections bill recently approved by the Senate.

Very sincerely yours,

KENNETH B. KEATING.

Federal School Aid

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mrs. ST. GEORGE. Mr. Speaker, the following editorial appeared in the Newburgh-Beacon News of New York, on February 20, 1960.

A very nice point is brought out in this article; namely, Will this Federal aid for education be another step on the long road of penalties for the strong, and robbing thrifty Peter to pay shiftless Paul?

It is also interesting to note that out of 35,000 school districts only 270 could be identified as in need of more classrooms.

So, the next question is, Is the $2 billion in the Senate-passed bill going simply to create another giant bureaucracy which will educate American youth from Washington, D.C.?

The editorial follows:

FEDERAL SCHOOL AID

The flaw in plans to have Uncle Sam help school districts put up new buildings lies in the horrible injustice they all would do to those districts which have faced up to their responsibilities and paid for their buildings, usually by the sale of bonds.

What about these districts? Will they have to continue to pay off their bonds and at the same time cough up to Uncle Sam to pay for the schools which other districts have failed to build?

Secretary of Health, Education, and Welfare Arthur Flemming, who favors Federal aid, has disclosed significant figures obtained in a department survey of State school commissioners.

The 45 States responding could identify only 270 districts (out of 35,000) which have classroom shortages and lack the credit to correct them.

In other words, only 270 districts are actually unable to fill their needs, even under the notoriously strict limitations of some States on debt.

This is far from a $2 billion proposition, as proposed in the Senate-passed school aid bill.

Unless, that is, the Congress is going to reimburse those districts whose taxpayers have shown a readiness to build schools or unless Congress wants to help any district that asks for aid.

Any plan that would penalize those who have accepted their responsibilities should be buried, but deep.

Loyalty Oaths

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Age, February 1960 issue entitled "Loyalty Oaths":

LOYALTY OATHS

The National Defense Education Act of 1959, which authorized loans on liberal terms to needy college students also requires those students taking advantage of this Government generosity to subscribe to two affirmations. First, they must promise that they will bear true allegiance to the United States and will support and defend its Constitution and laws against all enemies. Seecond, they must swear that they do not believe in, and are not members of, and do not support any organization that believes in or teaches, the overthrow of the U.S. Government by force or any other unconstitutional means. This double requirement has been the cause of a great deal of controversy.

A vast majority of our colleges and universities have taken part in the loan program, but a number of the larger private institutions of learning, such as Harvard, Princeton, Yale, Bryn Mawr, Amherst, and Swathmore, have allegedly refused to join. Others have protested the requirements but have participated. The American Association of University Professors and a few other educational groups are reported to have openly and vigorously opposed the use of the affidavit disclaiming membership in or support of any subversive organization. These hold that it restricts "academic freedom" and is an unwarranted interference with freedom of belief. Aside from the claim that the requirement hampers "academic freedom," whatever that may mean, the most frequent objection made seems to be that it singles out a particularly needy and defenseless group for suspicion and discrimination while others not subject to the same requirements receive Federal loans or gifts without any similar demand.

The answer to this objection does not lie in the abandonment of the requirements of the act but rather in a demand that all recipients of public grants or loans be bound in the same manner. Virtually all Government employees must take a loyalty oath before their names can be included on the payroll and none have objected or claimed that they are the victims of discrimination.

It is difficult to find justification for the claim that the requirement interferes with freedom of belief. Applicants for assistance under the provisions of the act are free to choose between pledging their support to the Government that aids them or doing without that aid. The Government makes them an offer under a condition which they may accept or reject; it forces nothing upon them. It is as simple as that. While it may perhaps be true that the affidavit and oath would be of no use in the detection of subversively minded applicants, it could be useful in making the signers liable for perjury if they were found later to have made false statements. This could be cause for cancellation of their privileges.

The American taxpayer, who furnishes the money for carrying out this project, has the right to know how his funds are being spent. He also has the duty to use every means at his disposal to prevent it from being used to promote subversion or assist subversives in any way.

Schenectady County Citizens for Decent Literature Fight Obscenity

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, February 24, 1960

Mr. KEATING. Mr. President, vigorous and imaginative movements are being launched all over the country to combat the scourge of obscene literature. This is a heartwarming response to this great challenge which confronts old and young people alike.

I have noted with particular interest the creation of a Schenectady County Citizens for Decent Literature group. This citizens organization seeks to awaken the community to the evils of pornography and to encourage public officials to enforce existing laws in this field. Among the leaders in this activity are: Mrs. Kenneth Bradt, chairman; Martin D. Gibbons, vice chairman; Mrs. Carl Koble, secretary; Mrs. James Hawkins, treasurer; and Joseph Saccocio, chairman of prominent citizens committee.

Mr. President, I salute these citizens and their associates in Schenectady for the emphatic manner in which they have responded to the threat of filthy literature. It is typical of the fine community spirit of Schenectady. Community efforts, bolstered by modernized Federal laws in this area, will in the long run put the barons of obscenity out of business.

In the hope others will be inspired to follow their example, I ask unanimous consent to have an outline of the objectives of Citizens for Decent Literature printed in the Appendix of the RECORD.

There being no objective, the outline was ordered to be printed in the RECORD, as follows:

CITIZENS FOR DECENT LITERATURE

What it is:

Citizens for Decent Literature is an organized group of citizens of Schenectady County whose objective is to arouse and pursue an effective attack on the sale and distribution of obscene literature and pornographic material. CDL is composed of private citizens, and represents many civic, church, fraternal, educational, and professional organizations interested in a united effort to eliminate obscenity, and thus its effect on our community.

How does CDL accomplish its objectives:

1. Educate all citizens, especially parents, to the evils of this trade and to its magnitude in our community.

2. Encourage public officials to enforce the existent laws on obscene material.

3. Promote plans to develop worthwhile reading habits in our youth.

4. Encourage the distribution and sale of good literature.

CDL does not employ boycott, or censorship. Underlying the entire program is a complete guarantee that no action of CDL will ever infringe upon anyone's freedom of speech or press, nor will it deprive anyone of due process of the law. The Supreme Court has specifically pointed out that obscenity may not parade under the guise of freedom of speech or press. CDL does not say what is obscene, that is left to the courts.

CDL, by making the community aware of the problem, and by encouragement of enforcement of the laws, tries to upgrade the contemporary community standards. This latter point is especially important because of a recent decision of the Supreme Court. Legally, material is obscene when to an average person, applying contemporary community standards, the dominant theme of the material taken as a whole appeals to the prurient interest, i.e., material having a tendency to excite lustful thoughts in the average person in the community.

CDL PLAN OF ATTACK AND ORGANIZATION

First. Prominent citizens of the State and community are given an explanation of the aims and methods of CDL and are asked to lend their names as sponsors to guarantee the dignity and judgment of the group. Most CDL groups list among their sponsors the Governor of the State, Congressmen, businessmen, labor groups, PTA federations, ministerial groups, Catholic bishops, fraternal organizations, and law-enforcement agencies.

Second. A small (about 10 persons) executive committee of devoted persons of outstanding leadership and unquestioned judgment is set up to direct the organization.

Third. A larger group of volunteer workers, mostly parents with growing children, aid in secretarial work—telephoning, interviewing, and any other duties assigned them.

Fourth. A speakers' bureau is set up. This is composed of persons who have read the magazines they condemn; who know the laws in both their strong and weak points; who know the findings of congressional investigating committees on pornography and juvenile delinquency; who have read widely in the psychological implications of a sex-obsessed society; and who are trained speakers armed with magazines and other literature to show to those who have not stopped at a newsstand to examine the material that is available to their children.

Fifth. A file of names of individuals and organizations that have declared their sympathy and support to the aims and methods of CDL is maintained as documentation of public interest in decency. These persons and groups are encouraged to write letters to law enforcement agencies praising them for their efforts in enforcing obscenity statutes and assuring them of support in their efforts.

The Bank of America

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. YOUNGER. Mr. Speaker, one of the finest examples of free enterprise development in California is the history of the Bank of America, which in the short span of 54 years has grown to be the largest bank in the world.

I am pleased to insert in the RECORD a short summary of that history:

BANK OF AMERICA

Since its first day of business in 1904, Bank of America's management has believed in California's future and participated actively in the State's economic life. That this faith has been sound is evident in California's growth as well as that of the bank, whose resources have grown from $285,000 to more than $11.5 billion during the past 56 years.

The bank's activities of the past decade emphasize its traditional desire to be of increasing service to people. In that period, total deposits nearly doubled to $10.6 billion in 7.4 million accounts. At the same time, the bank increased the number of its services from 50 to 59 and the number of its branches throughout California from 525 to 664.

To broaden its scope in world banking, the bank organized Bank of America (International), a wholly-owned subsidiary with home offices in New York. Today parent and subsidiary operate branches and offices in 21 countries throughout the world.

Bank of America has pioneered in bank automation, developing Erma—the electronic recording method of accounting—for automatically processing commercial checking accounts and being the first to use electronic computers for processing real estate and installment loans.

As encouragement to California's youth during the past decade, Bank of America recognized the scholastic and agricultural attainments of more than 50,000 California students by awarding scholarships, cash prizes, and trophies under its High School Achievement Awards, Junior College Business Awards, Future Farmers of America, and 4-H Club programs.

Summing up other activities of this period, the bank participated in bids on nearly 5,000 public bond issues, purchasing 46 percent of them for a total amount of $3.3 billion. It loaned $5.6 billion for construction of 600,000 California homes, and $4.1 billion for purchase of 3.1 million automobiles. It paid $624 million in taxes, $778 million in interest to depositors, and $414 million in dividends to its more than 200,000 stockholders.

Legislative Program of the American Legion Department of New Jersey

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. CANFIELD. Mr. Speaker, the American Legion, Department of New Jersey, today held its 16th annual breakfast in compliment to the New Jersey congressional delegation in the Hotel Congressional, presenting their legislative agenda which is incorporated in the following statements:

STATEMENT OF WILLIAM G. MCKINLEY, NATIONAL EXECUTIVE COMMITTEEMAN, THE AMERICAN LEGION, DEPARTMENT OF NEW JERSEY

Ladies and gentlemen, it seems difficult to realize that we meet this morning at breakfast for the 16th year. Time surely moves on.

The American Legion's rehabilitation program for this session of the Congress will be formally presented to the House Veterans' Affairs Committee on March 1, next. There will be included therein a number of items calling for legislation—most of them amendatory in character. At this time, there is no really major item of legislation developing.

We, therefore, propose to make certain general observations and comments for your information and guidance.

The enactment in the last session of Congress of Public Law 86-211—the pension bill—concerns us much because it is being interpreted far differently than ever was intended. And, mind you, the law is not yet

operative and does not become operative until July 1 of this year.

Nevertheless, our service officers are already deluged with apprehensive inquiries from veterans and widows who either are now receiving pensions or who are eligible or soon will be eligible for pensions. There is considerable misunderstanding concerning this new law and what it proposes to do.

Basically, from our present observation, there is trouble brewing because of inequities, disparagements, and distinctions between those presently on the pension rolls and those who will come on the pension rolls under the new law. Much of this difficulty stems from the new philosophy concerning veterans' pensions that seems to prevail in government thinking on the subject. This is the philosophy of the Bradley report and can be summed up generally as: (1) Most veterans and widows of veterans are cheats and chiselers; (2) practically all such applicants have concealed estates; and (3) the only veteran or widow entitled begrudgingly to a pension should first become a pauper.

The proof of this is the much-lauded sliding scale system of pension awards and the legalistic structure called the corpus of the estate.

Both these structures in the law are designed to catch the chiselers and prevent the wealthy and opulent from imposing on the Government.

What it will cost the Veterans' Administration in future years to superintend pensions as required under the sliding scale and corpus of the estate will certainly be fantastic, considering some 14 or more categories of income limitations and thousands upon thousands of so-called estates involved—each of which must be reviewed each year to be sure that there is no chiseling.

Why all this?

Because the underlying philosophy of this law is to be found in the statement of the Bradley commission that military service in time of war or peace is merely the obligation of citizenship and not considered inherently a basis for government benefits.

This philosophy now being dinned into the ears and minds of all who have to do with veterans' benefits is in contradiction to the historic position taken by the Congress since the Revolutionary War. This historic position may be summed up as follows:

So long as we maintain our Armed Forces, so long as we call them defenders of the country, and so long as we subject them to the necessary disciplines and deprivations which an adequate Military Establishment must demand, we have created for them special obligations, duties, hazards, or responsibilities which set veteran soldiers apart from the role which they play as citizens alone.

All veterans benefits—compensation, pensions, medical care and other privileges—have been based upon this latter concept. If we now at this late date change our thinking to the form of the Bradley concept—then it will not be long when the whole structure of the law and regulation concerning veterans benefits will tumble in upon us and confusion and chaos will prevail.

As we move into the operative area of this new law, greater effort is made to establish a preconceived notion that social security has become an adequate substitute for veterans pensions. This mirrors the long noted antagonism of certain sections of the administrative branch of the Government to veterans pensions—antagonisms first revealed in the biased sections of the first and second Hoover reports and their associated staff studies. All of these fell because they failed to demonstrate any sound basis in logic or in fact.

We question that social security is a substitute for veterans pensions. We ask that proponents demonstrate clearly and factually, that, without damaging the contractual rights of present participants, social security, in its actual working and design is in fact a program that would and does offer to the Nation's veterans—in recognition of their war service—the same security and the same special consideration for special services rendered to the Nation in time of national danger, that the pension program has provided.

The American Legion's advocacy of a pension program has always contended the special nature of the service performed as the basis of a claim for pension. The American Legion has never advocated extension of pensions to the obvious wealthy and opulent veteran fully able to care for himself. We have acknowledged and endeavored to interpret a need factor as a guide.

But in this new law, and in the interpretations now being given to it, need is paupery.

I do not emphasize these ideas so much as concerns this new law which is not yet in full effect—but rather to put you of the Congress on notice in considering future legislation.

I am informed that several new studies are now being conducted into other areas of veterans benefits which carry the theory of paupery into more extensive effect.

New attacks are being formulated against the nonservice connected hospitalization program and, more ominously, an attack upon the low rated compensable service connected disabilities. The general theory is that if this principle of paupery can be made to stick in its application to pensions—it can be successively extended to all other veterans benefits.

There has been introduced in the Senate a bill (S. 1138) to provide readjustment assistance to veterans who serve in the Armed Forces between January 31, 1955, and July 1, 1963. This bill proposes benefits to peacetime veterans.

It is inconsistent for the American Legion to support this legislation. We believe that if the Congress should enact this program it should not be given to the Veterans' Administration as a further task of management and, further, that the costs of such a program should not be charged to the present field of veterans benefits.

We repeat our previously expressed opinion that the Administrator of Veterans' Affairs should be given the same powers to regulate interest rates on GI loans as is enjoyed by the Administrator of the Federal Housing Authority.

Finally, in closing this discussion of veterans' affairs, we most earnestly invite the attention of our Senators to the need for a Veterans' Affairs Committee in the Senate. We urge that they use their good offices to establish such a committee. We believe such a committee would materially aid and dispatch problems in veterans' affairs as they come to the Senate.

STATEMENT OF EDMUND G. LYONS, CHAIRMAN, AMERICANISM COMMITTEE, DEPARTMENT OF NEW JERSEY, VICE CHAIRMAN, NATIONAL AMERICANISM COMMISSION, THE AMERICAN LEGION

Ladies and gentlemen, I realize that time is at a premium and brevity is a necessity; therefore, I will present our legislative requests in the field of Americanism and foreign relations in capsule form.

SUPPORT HOUSE UN-AMERICAN ACTIVITIES COMMITTEE AND THE SENATE INTERNAL SECURITY SUBCOMMITTEE

We are aware of the good work that is being done in the interest of our national security by the House Committee on Un-American Activities and the Senate Internal Security Subcommittee. We urge the Congress to continue these committees and to make available, adequate appropriations for their operations.

SUPPORT FBI AND J. EDGAR HOOVER

Realizing the part played by the Federal Bureau of Investigation and its Director, J. Edgar Hoover, in maintaining a secure nation and alerting our citizens to the dangers that beset us, we speak out against those who are trying to discredit this great organization and its leader. We urge the continued support of our congressional delegation of this great instrumentality of democratic government.

UPHOLD IMMIGRATION AND NATIONALITY ACT OF 1952

The American Legion has always supported the McCarran-Walter Immigration Act and once again we reaffirm our opposition to any legislation that would repeal, weaken, or nullify the Immigration and Nationality Act of 1952.

LOYALTY OATH AND AFFIDAVIT IN NATIONAL DEFENSE EDUCATION ACT

Recently we were shocked when spokesmen of a small number of institutions of higher learning announced that their schools would not participate in the student loan provisions contained in the National Defense Education Act—Public Law 85-864. Mind you, our legislators in Washington saw fit to call this the National Defense Education Act. I am sure in their wisdom they felt this legislation was necessary and in the interest of national defense.

We were heartened when we read in the public press recently that students in 25 colleges had recently organized in defense of the loyalty oath and the accompanying disclaimer and that they planned to spread their organization to colleges all over the country.

We feel sure that the students who would benefit from the loan provisions are not opposed to the Loyalty Act and Affidavit and are ready to stand up and be counted and to proclaim publicly their allegiance to our country and deny association or affiliation with any organization opposed to our form of government.

Much more could be said on this subject; however, in the interest of time, may we urge your opposition to S. 2029.

URGE RETENTION OF CONNALLY AMENDMENT

In 1946 the Connally amendment was added to a measure accepting compulsory jurisdiction of the International Court of Justice. The Connally amendment reserved to the United States the determination of whether a case is of purely domestic nature and thus outside the International Court's jurisdiction.

Recently a great deal has been heard from those in and out of Government about repealing the Connally amendment. Their cry is the World Court would not assert jurisdiction over domestic affairs. If this be true, then the repeal of the amendment would serve no purpose.

With the Connally amendment in force, then the United States has insurance that the Court—no matter how composed—could not interfere in domestic affairs.

The amendment envisioned by Senator Connally should be supported and retained so that America can have the protection we need in our future relations with foreign countries.

CONTINUE POLICY OF NONRECOGNITION OF RED CHINA

The Communist government of Red China continues to demonstrate to the world by her words and deeds that she is not entitled to the respect or confidence of civilized freedom-loving people. We reaffirm our opposition to any attempt to diplomatically recognize the Red Chinese government by the

United States and in addition are unalterably opposed to her admission to the United Nations.

REJECT FEDERAL AID TO EDUCATION

The American Legion advocates that under our system of Government each State is, and should be, vested with complete, sole and final power, authority, direction and control of public education within its borders and accordance with law.

The American Legion is opposed to Federal financing of schools to replace local and State financing. The genius of the American public school has been in its closeness to the people. Our structure of Government in its historic development has placed the authority, responsibility, and control for financing of public education upon the States.

We respectfully request that you support the position of the American Legion in connection with the legislative matters I have discussed with you this morning.

STATEMENT OF WILLIAM C. DOYLE, CHAIRMAN, NATIONAL MILITARY AFFAIRS COMMITTEE, THE AMERICAN LEGION

Ladies and gentlemen, with the interest in National Defense at the present time centering on the missile and space programs and so much conversation on the missible or deterrent gap and in view of the swiftness with which Congress is moving, it is likely that the less dramatic aspects of the national defense program, principally the need for maintaining a balance in defense with adequate conventional forces, backed up by large Ready Reserves, will be given less attention than it deserves. This could work against the best interests of our overall national defense program, and it would seriously affect both the Army, the Army and Air National Guard of the United States, as well as the U.S. Army Reserve. It is imperative, therefore, that action be taken again to impress upon each of you present the important of providing for the continuance of the Army National Guard, the Air National Guard and the Army Reserve at present levels of authorized strength and mobilization readiness as was done by the Congress last year in writing the language into the appropriations legislation.

The fiscal year 1961 national defense budget submitted by the President provides for an Army National Guard strength of only 360,000 and an Army Reserve strength of only 270,000. This marks the third successive year in which the national defense budget seeks a 10 percent reduction in the strength of the Army National Guard and the Army Reserve. A reduction of 10 percent in that strengtht in fiscal year 1961 will necessitate reducing the strength of many units to a point below that which is considered the minimum for the conduct of efficient training. In other words, any forced reduction of strength below existing levels will reduce the combat readiness of Army National Guard and U.S. Army Reserve units. This budget provides for an input into the 6-months training program of the Army National Guard of only 28,000 men.

The Department of the Army favors for fiscal year 1961 maintaining the Army National Guard at its current 400,000 strength and providing sufficient funds for an input of 62,000 nonprior servicemen into the 6-months training program in order to sustain the Army National Guard at the 400,000 strength level.

Reorganization of the Army National Guard in the pentomic structure which has been accomplished during the last year is based upon the strength of 400,000. In order to maintain the Army National Guard at the 400,000 strength level and provide for 62,000 man input into the 6-month training program, it will be necessary to to increase the appropriation for National Guard personnel—Army—by $31,700,000 over the amount of funds requested in the President's budget.

We are again in favor of the Congress writing into legislation on the appropriations that the Army National Guard be mantained at 400,000 strength level, the Air National Guard at a 70,000 strength level, and the U.S. Army Reserve at a 300,000 strength level. If this language is not included in the Act, it could be anticipated that the Department of Defense will be directed to withhold funds which may be voted by the Congress over and above those necessary to support the 360,000 strength and the 270,000 strength requested by the President.

Silent Shipyard Soon To Be Sold

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include an article written by John P. Callahan and appearing in the New York Times of February 21, 1960. His article shows the sharp decline in recent years in the shipbuilding industry of the United States, and of the terrible plight that the shipbuilding industry of our country is now in. Some action should be taken by the present administration to put our country, now in eighth place among the nations of the world, back to the position that it formerly occupied. Furthermore, the shipbuilding industry of our country is an important part of our national defense.

The reason for the decline of our country in the shipbuilding industry should be a matter of survey or investigation by the appropriate committees of the Congress.

The article follows:

SILENT SHIPYARD SOON TO BE SOLD—THREE BIDS MADE FOR INSTALLATION AT VANCOUVER, WASH., A HUB OF THE WAR EFFORT

(By John P. Callahan)

On the north bank of the Columbia River in Vancouver, Wash., the wind blows wild through the giant steel and wood skeletons of a silent shipyard. Its ways, down which great ships went to war, have been empty for years; the echoes of the riveter's gun died with the Axis surrender in the summer of 1945.

The yard, one of four maintained in reserve by the Maritime Administration, is for sale, with the minimum price set at $2,700,000. When bids were opened Wednesday the apparent high bidder was the Steel Construction Co. of Oregon, which offered $3,279,000.

Plans for sale of the Vancouver yard followed the recent decision of the Defense Department that it was no longer needed for defense purposes. Another reserve yard, in Alameda, Calif., has also been declared surplus, but no announcement of its sale has been made.

The two other reserve yards, in Wilmington, N.C., and Richmond, Calif., will continue to be maintained because of their strategic coastal locations.

BUSINESS IN DOLDRUMS

Meanwhile, the shipbuilding industry looks askance at the idea of anyone wanting to buy a shipyard. Few of the 15 major yards throughout the country have any future business to talk about, and most of them complain that there is not enough current business.

Statitsical support for this indutsrywide view appears in the fact that the industry entered 1960 with contracts for the construction of 60 vessels—a drop of 15 below the number of contracts on hand at the beginning of 1959.

Of the 60 ships on order, 31 are scheduled for delivery this year, 22 are expected for completion in 1961 and 7 are planned for completion during 1962.

An ominous note on the outlook for shipbuilding is that December was the third consecutive month in which no new contracts were reported. The United States ranks eighth among the nations with ships under construction.

While shipbuilders see no reason for purchasing Vancouver or any other shipyard, the Maritime Administration points out that it would not necessarily be used for the construction of ships. In its offer of the yard, the agency, a division of the Department of Commerce, says it could be used for ship breakage or as a warehouse depot.

But the Maritime Administration has also specified in its offer that the yard may not be altered in any way that would change it from a shipyard, and that the Federal Government will retain the right to take the yard over for shipbuilding on 30 days' notice in case of a national emergency.

Officials of the Maritime Administration said the proposed sale of the Vancouver reserve shipyard was the climax to a chapter in the Nation's maritime history that began in 1937. In that year, there were 10 shipyards throughout the country capable of building oceangoing vessels. By the end of 1941, there were 40 such yards, strategically located on the three coasts and the Great Lakes.

Department of HEW Admits Need for Health Care of Aged

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. FORAND. Mr. Speaker, in a report submitted to the Committee on Ways and Means, dated April 3, 1959, by the Secretary of Health, Education, and Welfare, dealing with medical care and other problems of the aged, it was admitted that there is general agreement that a problem exists.

The report states:

The rising cost of medical care and particularly of hospital care, over the past decade has been felt by persons of all ages. Older persons have larger than average medical care needs. As a group they use about 2½ times as much general hospital care as the average for persons under the age of 65, and they have special need for long-term institutional care. Their incomes are generally considerably lower than those of the rest of the population, and in many cases are either fixed or declining in amount. They have less opportunity than employed persons to spread the cost burden through health insurance. A larger proportion of the aged than of other persons must turn to public assistance for payment of their medical bills or rely on free care from hospitals and physicians. Because both the number and the proportion of older persons in the population are increasing, a satisfactory solu-

tion to the problem of paying for adequate medical care for the aged will become more rather than less important.

Excerpts from the report follows:

In our society the existence of a problem does not necessarily indicate that action by the Federal Government is desirable. Briefly, the following are some reasons why the Federal Government should act:

1. A decision against Government action at this time would merely postpone an effective solution. Since medical costs are a high-cost, high-risk group for the aged, Government is in a better position than private industry to distribute the cost burden broadly and equitably.

2. A publicly supported program of hospital benefits for the aged could provide more extensive and more adequate protection than has characterized much of the private insurance available to aged persons.

3. The OASDI mechanism provides a ready and equitable method of spreading the risk and cost of hospital care for the aged over the entire working population. A small increase in the present social security taxes would provide immediate protection for those now eligible for benefits. Persons now at work would in turn become entitled to the same protection when they reach retirement age.

SOURCES AND AMOUNT OF INCOME AND ASSETS

1. In June 1958, 1 in every 5 persons 65 and over had a paying job.

2. In both 1956 and 1957 60 percent of all people 65 and over had less than $1,000 in money income. Only 20 percent had more than $2,000.

3. In June 1958 there were 8.8 million persons who were drawing benefits under OASDI—this accounted for 58 percent of all aged persons.

BENEFICIARIES IN THE FUTURE

1. With seven-tenths of our aged population now eligible for benefits it seems reasonable to assume that beneficiaries today are fairly representative of beneficiaries in the years ahead.

2. It is estimated that over three-fourths of the aged population will be eligible for benefits in 1970, and over 80 percent in 1980.

USE OF HOSPITALS FOR HOSPITAL AND MEDICAL CARE BY AGED PERSONS

The success of modern medicine in preventing epidemics and in curing or controlling diseases once usually fatal has brought chronic illness, particularly the illness of old age, to the fore as a health problem. In part because of these new developments, older persons have greater need for hospital and other medical services than younger persons. They may require more elaborate types of care than younger persons and their recovery is likely to be slower.

1. The figures from the National Health Survey reveals that the aged spent at least twice as many days per capita in general hospitals as the population as a whole.

2. Also that acute conditions occur less frequently among the aged and chronic conditions more frequently than among younger persons.

3. Persons who have health insurance enter hospitals more frequently, but have more short-durations than those who are uninsured. Older persons with more serious medical needs, and those who fear the costs postpone getting medical and hospital care until the need is overwhelming.

4. More than 80 percent of all beneficiaries incurring medical costs assumed responsibility themselves for all the medical costs they incurred during the year. (HEW page 28).

TRENDS IN COSTS OF HOSPITAL AND MEDICAL CARE

The medical care component of the Bureau of Labor Statistics' Consumer Price index reflects the rising price trends in the United States.

1. Over the longer period from 1938 to 1958 the "price" of medical care as measured by the Consumer Price Index increased only slightly more than the average for all goods and services—43 percent.

2. However, the price of hospital care rose 300 percent as compared to 105 percent for the entire index.

INSURED AGE GROUP AND ORGANIZED METHODS

1. About 121 million persons—72 percent of the total population—were covered by some form of hospitalization insurance as of the end of 1957.

2. Study by Public Health Service and other groups show that between 36 percent to 39 percent of the aged 65 and over have some type of health insurance (1957).

3. About 24 percent of the aged population or 4 million persons had surgical expense insurance in September 1956.

4. The Census PHS survey found that half of the aged population still in the labor force had hospitalization insurance while only about a third of the aged not in the labor force were insured.

5. The HIP–NORC study showed that of those persons aged 65 and over having health insurance in 1957 about 56 percent first obtained their insurance through a place of employment. (HEW p. 45).

EXISTING VOLUNTARY HEALTH INSURANCE MECHANISMS

1. General categories of medical insurance underwriters can be classified under the following headings: Blue Cross, Blue Shield Surgical Plan, group insurance companies, accident and health companies, and independent plans.

2. The differences of the health insurance coverage of the aged and that of the younger population lie mainly in the area of (1) benefits available, (2) premium costs, (3) sources of financing.

EXTENT OF COVERAGE

1. A program of hospital benefits for persons eligible for old-age survivors, and disability insurance would protect a little over 70 percent of the aged population in 1960. By 1970 it would reach an estimated 76 percent and in 1980 a little over 80 percent of the persons then aged 65 or over.

2. Cost per day of hospital care—the report decided to use as a basis for the projections a cost of $21 a day for the aged and disabled, and $23 a day for younger widows and children as of 1956.

3. The estimated costs of hospital service benefits for persons who will be eligible for OASDI in 1960 are shown in table I, these costs with a 30-day limit would be around $800 million. If the benefit covered 90 days of hospital care in a year, the cost in 1960 would be about $990 million.

4. Long-range costs, it would appear, would run 5 percent of payroll for 60 days up to 1970. The percentage of taxable payroll for the 1960 estimates was 4.2 percent.

5. There is very little experience on which to base an estimate of the cost of a nursing home service benefit, whether such a benefit were limited to skilled nursing home care as a subatitute for hospital care or applied broadly to nursing home care of all types. (HEW p. 83).

METHODS OF PROVIDING HOSPITAL BENEFITS OTHER THAN THROUGH USE OF THE OASDI MECHANISM

1. Stimulation of voluntary health insurance through pooling, reinsurance, regulation, or checkoff of premiums for OASDI beneficiaries.

2. Federal subsidies to private carriers to cover above-average risks or to supplement premiums from persons of low income.

3. Federal grants to the States for medical care for the indigent and medically indigent (HEW, p. 90).

REASONS ADVANCED AS TO WHY THE FEDERAL GOVERNMENT SHOULD NOT TAKE ACTION

1. The proponents of a "wait and see" position feel that more people of the aged class are covered today through some type of health insurance than ever before. They feel that it is reasonable to expect that the proportion of the aged population covered by voluntary insurance will increase.

2. A compulsory program to provide insurance would undercut voluntary efforts to meet the particular need. A decision to initiate a compulsory insurance program would be virtually irreversible.

3. Fear that pressures would develop for extending a hospital benefits program to include other components of the medical care bill.

4. It is difficult to estimate with any accuracy the future cost of medical care.

5. Pressures would also develop for extending insurance against the cost of hospital and other medical care to the working population and their dependents. Workers who were paying social security taxes might object to waiting until they reached retirement age to get such protection.

6. Federal action would result in a diminution of responsiveness to varying individual and local situations and the fear that this type of legislation would lead to a displacement of local and private arrangements by centralized governmental programs.

Pacific Missile Mess

EXTENSION OF REMARKS

OF

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, February 25, 1960

Mr. CHURCH. Mr. President, in the February 15 issue of the New Leader there is published a fine article by the junior Senator from Montana, MIKE MANSFIELD, entitled "Pacific Missile Mess." In it, the assistant majority leader demonstrates, through his usual cool and constructive analysis, the inadequacy of the administration's policy, or lack of policy, with respect to the use of the high seas for the testing of nuclear weapons and missile systems.

The article makes clear that the principle of freedom of the seas, which has been a cornerstone of American foreign policy for longer than the life of the Constitution itself, is involved in these tests. It calls for an urgent effort to obtain international agreement to minimize the risks and provocations incident to them.

I think such an effort should most certainly be made, Mr. President. I ask that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PACIFIC MISSILE MESS

(By MIKE MANSFIELD)

It has been said that any American criticism of the recent Soviet missile tests in the Pacific is akin to the "pot calling the kettle black." The very use of the analogy is tacit recognition that there is something amiss in the way the Pacific is being used for the testing of dangerous scientific and military devices. Black on the American pot, if such

there is, hardly serves as a detergent for the black on the Soviet kettle.

The administration's position on the Soviet tests is to close its eyes to any discoloration on either vessel. It merely holds that since the tests which we have conducted are perfectly valid under our interpretation of international law, we can hardly protest the Russian experiments. In short, what we may do so may they.

This position is undoubtedly in accord with the spirit of Camp David. But can the same be said for the recent Russian tests? Consider for a moment the circumstances in which they have taken place. The Pacific is a vast ocean and the Russians have been looping missiles into its remote northwestern stretches for some time. Indeed, they have been using parts of the Arctic in the same fashion. These earlier Soviet activities, which were scarcely publicized, involved little, if any, interference with international shipping, fishing, or air transport. In short, they took place without causing any worldwide ripples. In that respect they were not too different from our present employment of the Vandenberg missile range, which goes out several thousand miles into the desolate southeast Pacific from California, or the Canaveral range, which extends from Florida into the south Atlantic by arrangement and agreement with most of the nations along the line of fire.

In the recent shoot, however, the Russians chose an impact area astride a region through which pass major American lines of communications with allied nations in the Western Pacific. It is a region of considerable importance to world commerce and Pacific fishing. It is the same region in which some of our earlier nuclear tests were conducted. The Russian test actions began after a brusque 10-day advance announcement which had the effect of putting up a "no trespassing" sign on 27,000 or more square miles of ocean. The impacting of the Soviet missile in the test area was the signal for a worldwide publicity campaign on Soviet prowess in this field.

The recent Russian tests may well have had valid scientific purposes in the sense that they could be forerunners of further explorations of space. Regardless of ultimate scientific objective, however, can there be any doubt as to the immediate political and propaganda purposes of these tests? The manner, place, and timing of the undertaking were clearly a demonstration of advanced Soviet military technology to the entire world, and to Pacific nations—notably Japan—a pointed indicator of a Soviet nuclear missile capacity to cut Pacific supply lines. This, to say the least, was hardly an appropriate prelude to the first summit conference for the purpose of easing international tensions.

Perhaps this Nation would have been in a better position to deal with these disturbing implications of the recent Soviet action had we ourselves given more consideration in the past to the long-range problems involved in any one nation's use of the oceans for military and scientific tests. Some of us in Congress have long been concerned with these tests, despite the fact that every precaution has been taken to safeguard the rights of other nations and prompt consideration has been given to those who were inadvertently injured by them.

As early as 1955, I suggested a summit conference to deal with the single question of international agreement to end dangerous nuclear testing on a multilateral basis. It was not until years later, after Adlai Stevenson was pilloried for a similar advocacy during the 1956 campaign, that the administration came to the point of recognizing even the respectability of such a position. Now it embraces this position. In the same fashion, as early as 1954, the Government was urged to give full recognition to its moral responsibility to the inhabitants of the Marshall Islands who were inconvenienced by the Pacific nuclear test series of that year.

In retrospect, it would appear that fascination with our own scientific achievements has led us to overlook a grave problem to which these achievements, along with those of other nations, are giving rise. There has been building for some years a challenge to one of the oldest and most fundamental doctrines of American foreign policy. Since the beginning of the Republic we have been powerful advocates of the basic concept of free and responsible usage of the high seas by all nations on the basis of equality. We have fought for this principle and we have pressed constantly for the development of international law which would safeguard it. Just recently we signed four conventions on the law of the sea which advance this principle to a new high point of universal acceptance.

Yet these conventions are completely silent on the problem of usage of the sea for scientific and military tests. Nevertheless, when they are not an outright danger to the nationals of other countries these tests can be a source of jeopardy to their equal right to navigate and to fish the high seas. We may well ask why this country has failed to press for recognition of this growing problem and at least the beginning of international action to deal with it. When the conventions were before the Senate Foreign Relations Committee on January 20, 1960, this question was put to Arthur H. Dean, an eminent authority on the law of the sea and this country's principal negotiator at the conferences:

"Mr. Dean, do you not see in the present almost complete national license to use the seas for dangerous and sometimes destructive tests, a possibility of a grave challenge to both of our basic concepts of the law of the sea—that is, to the concept of freedom of the sea and responsible usage of the sea?"

Mr. Dean: "Yes, I do, and that is why I sincerely hope that something along these lines will be done. * * *"

Further conferences at Geneva will consider some of the questions which are posed by nuclear tests. It is not far-fetched, however, to consider what will happen if something is not done soon about all forms of testing on the high seas, missile no less than nuclear. Already the Soviet Union, the United States, and the United Kingdom have staked out large areas of the Pacific at various times and labeled them Mare Nostrum for the duration of test series. Soon other nations will begin to follow suit. There have been protests raised against this practice, particularly by the Japanese, but the protests have gone unheeded.

The fact is that international law on this practice is virtually nonexistent. As we interpret the law, it would now be perfectly legal for the Russians to conduct tests on the high seas within sight of San Francisco or for us to do the equivalent off Vladivostok. To carry the absurdity a step further, suppose by pure coincidence both the United States and Soviet Russia announced at the same time that they were cordoning off the same area of the Pacific at the same time for the purpose of conducting scientific experiments. What then? Who would defer? What of the questions of national prestige which would be involved in the backing down of one side or the other? What of the possibilities of accidents or grave incidents if both decided to test in the identical area?

It is clear that if we have not already reached it, we shall very soon be at a critical point in the matter of use of the high seas for the testing of scientific and military devices. It is no answer to this problem to say, as has been said, that if we do it so can they. One would hope that regardless of the the degree of black on the pots and kettles, the accumulated experience of the postwar years would urge us to take the lead in dealing with the problem. One would hope that the recent Soviet tests might provide such a glaring revelation of the way in which the world is headed in this matter that it will prompt a strong American initiative in our own interests as well as in the interests of all nations.

What is clearly needed is an urgent effort to obtain international agreement not to stop essential scientific testing on the high seas, but to see to it that this practice by any nation is so pursued as to minimize its provocations, and the risks and inconvenience to which it may subject other nations. The challenge of the Soviet missile tests is a challenge to act in order that the Pacific and, indeed, all oceans remain mare omnium rather than a collection of national maria nostra.

California Labor Federation, AFL–CIO Doubles Number of Scholarship Awards

---

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do I am pleased to bring to your attention and to the attention of my other distinguished colleagues a letter dated February 15, 1960, from the secretary-treasurer, Mr. C. J. Haggerty, of the California Labor Federation, AFL–CIO, together with the text of the announcement of the 10th annual scholarship program of the California Labor Federation.

In that announcement you will note the names and residence addresses of the contest winners for the last 9 years, together with the significant beneficial reading material and the committee of judges.

Mr. Speaker, I am sure you and all the Members of this great legislative body join me in complimenting the California Labor Federation, AFL–CIO on this significant, timely, and effective educational program.

CALIFORNIA LABOR FEDERATION,
AFL–CIO.
San Francisco, Calif., February 15, 1960.

Hon. CLYDE DOYLE,
Washington, D.C.

DEAR SIR: I am enclosing a folder announcing the 10th annual scholarship program of the California Labor Federation, AFL–CIO. As you will note, the federation is offering six $500 scholarships to senior high school students in California, in both public and private schools. This represents a doubling of the number of awards offered in previous years.

The contest is a permanent part of the federation's educational program, and is indicative of the historic interest shown by organized labor in advancing the cause of education in this Nation.

Here in California we have long fought for the building of an ever greater school sys-

tem and for proper recognition of the all-important role which our school system must have in a democratic society.

Sincerely yours,

C. J. HAGGERTY,
Secretary-Treasurer.

TENTH ANNUAL CALIFORNIA LABOR FEDERATION, AFL–CIO SCHOLARSHIP AWARD—SIX $500 SCHOLARSHIPS

Six college scholarship awards of $500 each are being offered to senior high school students in California who will be attending college or university during the coming academic year. The awards are being presented by the California Labor Federation, AFL–CIO, to assist outstanding students in obtaining a higher education and to promote a better understanding of the American labor movement.

Three of the six scholarships are being made available in cooperation with the following affiliates of the federation: one offered by the Los Angeles Building and Construction Trades Council; one by the California Legislative Board of the Brotherhood of Railroad Trainmen; one by the Painters District Council 36 of Los Angeles, to be known as the Roderick Mackenzie Scholarship Award.

All awards will be issued in accordance with the rules which follow.

BASIS OF THE AWARDS

1. Senior high school students in public, private, or parochial schools in California who are planning to attend a college or university anywhere in the United States are eligible to compete in the examination. No distinction will be made as to sex, color, or creed. The award may be used to assist the student in any field of knowledge, and is not limited to those interested in labor alone.

2. An award will be made to each of six candidates on the basis of the candidate's score in the special examination and his 4-year high school academic record. A check for $500 will be deposited in the student's name at the college he has chosen.

3. A 2-hour examination will be held on Friday, May 20, 1960, in each high school where applicants have filed. The federation must receive from the principal of the high school, not later than April 18, 1960, the applications of students who will be participating. The federation will then mail out the specified number of examination questions. Following the examination, the papers will be returned to the federation office for grading by competent personnel selected by the committee of judges.

The school records and examination papers of the 50 highest students will be examined personally by the committee of judges which will make the final selection.

4. The aim of the examination is to evaluate the student's knowledge and understanding of labor and industrial problems and his ability to present his information. The student should show his factual knowledge and comprehension of past and present social and economic conditions affecting labor and management.

SAMPLE TEST QUESTIONS

I. What factors contributed to the rapid growth of labor unions during the 1930's? How did these factors influence the form of the growth?

II. Indicate briefly the significance of two of the following events in American labor history:

(a) Haymarket riot.
(b) Pullman strike.
(c) Nineteen hundred and thirty-four west coast maritime strike and San Francisco general strike.

III. Give a brief description of the following:

(a) Union security agreement.
(b) Lockout.
(c) Jurisdictional dispute.

IV. Identify the following five labor personalities of the past and present:

(a) Samuel Gompers.
(b) Walter Reuther.
(c) Eugene V. Debs.
(d) George Meany.
(e) Terence Powderly.

V. Review the role of mediation, conciliation, and arbitration in labor-management relations.

VI. Describe the relationship of local unions to the following:

(a) National or international unions.
(b) AFL–CIO.
(c) State federations of labor.
(d) Local central councils.

SUGGESTED READINGS

Scholarship committee of judges: Frederick A. Brier, Ph. D., assistant professor of economics, University of San Francisco, San Francisco; Leon F. Lee, Ph. D., director, institute of industrial relations, San Jose State College, San Jose; Arthur M. Ross, Ph. D., director, institute of industrial relations, University of California, Berkeley.

CONTEST WINNERS

Nineteen hundred and fifty-nine

Sandra Lee Miller, McCloud High, McCloud.

Allene Margie Downey, Westmoor High, Daly City.

Donald Manka, Live Oak Union High, Morgan Hill.

Nineteen hundred and fifty-eight

John L. Dolan, Hillsdale High, San Mateo.

Barbara Woth, Redlands Senior High, Redlands.

John F. Peterson, St. Ignatius High, San Francisco.

Nineteen hundred and fifty-seven

Estelle Gershgoren, Fairfax Senior High, Los Angeles.

Patricia Jacobsen, Eureka Senior High, Eureka.

Heidi Stohler, Berkeley High, Berkeley.

Nineteen hundred and fifty-six

Rochelle Leiter, North Hollywood High, North Hollywood.

Peggy Bosworth, St. Mary's High, Stockton.

Eldon R. Clingan, Merced Union High, Merced.

Nineteen hundred and fifty-five

Eleanor Rosch, San Fernando High, San Fernando.

Lester O'Shea, Lowell High, San Francisco.

Paul Wadsworth, Westchester High, Los Angeles.

Nineteen hundred and fifty-four

Donna Hardesty, La Jolla High, La Jolla.

Richard Kirk, Christian Brothers High, Sacramento.

William D. Mathewson, Stockton High, Stockton.

Nineteen hundred and fifty-three

Karen Brock, Culver City High, Culver City.

Richard R. Bolton, Monrovia-Duarte High, Monrovia.

Salvadore Pusateri, Willow Glen High, San Jose.

Nineteen hundred and fifty-two

Armen Tashdinian, Sacramento High, Sacramento.

Alex Woycheshin, Christian Brothers High, Sacramento.

William Wittenberg, Susan Dorsey High, Los Angeles.

Nineteen hundred and fifty-one

Carolyn Wood, Willow Glen High, San Jose.

Robert Edwards, Hayward High, Hayward.

Merrill Francis, Woodrow Wilson High, Los Angeles.

Education Committee, California Labor Federation, AFL–CIO: Thomas A. Small, chairman, San Mateo; John A. Despol, San Francisco; Wilbur Fillippini, Santa Barbara; Max J. Osslo, San Diego; Edward Shedlock, West Covina; Pat Somerset, Hollywood.

Agricultural Featherbedding

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. DULSKI. Mr. Speaker, where, in the great crusade for the economic justice and stability of farmers, is the interest of the consumer protected?

One of the legislative findings on the wheat surplus is that such surpluses result in disastrously low prices of wheat and destroy the purchasing power of grain producers for industrial products.

No one seems to concern himself with the poor consumer and taxpayer, who are one and the same and who pay for this whole featherbedding business.

Did it ever occur to anyone that the consumer could also use that same purchasing power to a much greater advantage? And a more reasonable use could be made than buying $10 billion worth of agricultural commodities which he does not need, and that should not have been produced in the first place, and then paying to transport and store this vast surplus now rotting in bins—while throughout the world at least 1 billion people are on the verge of starvation.

Everyone admits that the farm program is an economic monstrosity bordering on a virtual shambles; yet is allowed to rumble along, creaking and groaning

upon the taxpayers' backs, until it will collapse from its own sheer weight.

Family type farms are giving way to industrial type agricultural production, or factories in the fields. In spite of this inevitable trend, we still find the Government making vast sums of money available for the purchase of seeds, fertilizers, lime, trees, or any other farming material. And, in spite of the gigantic size of these farm corporations, we find the Government in the insurance business covering crops destroyed by floods, hail, wind, lightning, or tornado. Taxpayers and consumers are subjected to the same hazards from these acts of nature and would suffer just as greatly if subjected to them, as would a farmer. The only difference is that urban or city folk have to buy their insurance from private corporations with good hard-earned dollars. They are not protected by paternalistic Uncle Sam.

We have spent $22 billion on the farmers during the past quarter of a century with the net result that we have made farmers the wards of the Government under the dole system, which is an accurate description of the farm subsidy.

The time has come for a new farm program which will gradually ease the price-control featherbedding from under the farm economy. Let the farmer produce for the marketplace rather than the Government storage bin so that the economic law of supply and demand can redound to the benefit of both the producer and the consumer of our agricultural bounty.

Paramount (Calif.) Journal, 23d Congressional District Editorializes Lncoln's Justice

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of an editorial in the Paramount Journal, a newspaper published in the important city of Paramount, Calif. This city and newspaper is located in the great 23d district which I represent, this my 14th year, in this great legislative body.

And while our congressional observation of Lincoln's birthday is a few days passed, this editorial was written and published the day previous to February 12, 1960. I commend its reading to each and every colleague.

I know you and all the Members join in congratulating the editor, Mr. Kee Maxwell:

LINCOLN'S JUSTICE
(By W. Kee Maxwell)

One of the strange things about a great life is the variety of angles from which it appeals to various individuals. Go into any public library of average equipment and count the volumes dealing with the life of Lincoln. Every phase of his remarkable career would seem to be covered. One would assume that the mine of Lincolniana had been exhausted. Yet every year brings new books whose theme is this man of humble birth and unpretentious living. Men cannot cease writing and reading about him. Immigrant children from overseas know the story of Lincoln better than the stories of their own national heroes. There is a universality about him that has appeared in no other figure of history since Jesus.

One fundamental trait of Lincoln's greatness was his ingrained sense of justice. It is erroneous to think of true justice as relentless and inflexible; it is a libel on justice to regard it as incompatible with sentiment and mercy. Indeed the very fault of justice as it needs must be administered on an abstract basis and in strict accord with legal forms in its very inflexibility— its incapacity to adapt itself to the case of the individual. Lincoln's justice was not mawkish nor soggy with cheap sentimentality; but it had that element of human sympathy and understanding which enabled him to see both sides of a question at issue and to put himself in the place of the weak and erring.

A true balance in justice requires certain basic characteristics. It is incompatible with the egotism which places self-interest or pride of opinion in the foreground. It requires self-detachment—the ability to stand back and look at even one's own case from the viewpoint of disinterestedness. It requires mental integrity that scorns sophistry and self-deception. It requires, above all, the poise which comes from the domination of the material nature by the spiritual.

Those persons who profess to find parallels between the life of Lincoln and the life of Jesus may note that the recorded instances of eruptive wrath in both lives are extremely limited. They may note further that neither the Great Teachers nor the Great Emancipator is recorded as having indulged in outbursts merely as a resentment against personal outrage or abuse, but that these outbursts were called forth in both lives by outrages and abuses of helpless humanity or vital principles.

In a time when blatant extremists are seeking to expropriate the name of Lincoln as a shelter for excesses against law and government, it is worth while to remember Lincoln's expression of an ideal of social justice:

"Let not him who is houseless pull down the house of another; but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built."

Compare it to the doctrines of envy and class hatred and malicious destructiveness that professed apostles of progress are preaching today. Compare it to the self-seeking of the groups and blocs and factions who are striving to make the government of all the people a means of enriching their particular element at the expense of the whole. Compare it with the dog-in-the-manger policy of the petty ones who regard success as a crime and honest gain as an affront to society.

But Lincoln's admonition applies to other fields than sociology. It is an ideal of sane justice that ought to fit itself to the ethical and moral phases of life as well. It is no greater crime in morals, after all, to tear down another's house than to tear down another's character. It is no more sinister a form of envy that covets a fellow being's possessions than that which begrudges a fellow being's happiness.

Respect for the rights of others is the keynote in this simple but powerful expression of social justice. The right to possess one's house in peace implies the same right to possess one's opinion sand beliefs in peace. And the admonition to recognize and remember the right of the other man as assurance that one's own rights shall be safe from violence applies with the same force to matters of politics and religion and morality.

Justice, like charity, begins at home—its source is the individual himself.

Let us not tear down the other fellow, but build up ourselves.

Life is short enough to keep us busy on the building process alone—if we undertake and execute any decent sort of job.

Voice of Democracy

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. CARNAHAN. Mr. Speaker, it was my pleasure to attend the 13th national award luncheon of the "Voice of Democracy" annual broadcast script-writing contest sponsored by the National Association of Broadcasters, Electronic Industries Association and State associations of broadcasters in cooperation with the Veterans of Foreign Wars at the Statler Hotel, February 24, 1960.

Fifty-one fine high school students were there—one from each of the 50 States and one from the District of Columbia, each State winners.

Four previously selected finalists gave a portion of their winning script and Richard J. (Rick) Smith was announced as the national winner.

The four presentations were heart-warming and give assurance that our schools are doing a commendable job.

Scripts of the four finalists including the national winner follow:

I SPEAK FOR DEMOCRACY

(By Richard J. "Rick" Smith, of Albuquerque, N. Mex., national winner of the 1959-60 Voice of Democracy contest)

Men have come and gone on our earth. They have come and gone, lived and died, and but for a handful, have been forgotten. But for every man who ever lived, there was a dream. A dream so holy and so beautiful that it seemed almost impossible to realize. Men lived and died—but that dream never did die. It lived; and it grew; and it spoke. At first it spoke in a whisper—but now its voice is deafening. Shouts shiny with newness and still tarnished with the shadows of the dark, dim, distant past—but still crying out for the dream as old as life. Men hear it and they feel wings stir on their shoulders. They hear it and they feel shackles fall from their feet. They hear it, and they call it democracy.

The Voice of Democracy cannot be shut out. It cannot be kept from the senses of men by all the barbed-wire barricades in this world, for the voice comes from within, and not from without.

It comes from a man's hands; hands free to write his thoughts as he thinks them.

It comes from a man's lips; lips free to pray to any God by any name.

It comes from a man's eyes; eyes free to read any book or Bible, pamphlet or poster, slogan or signpost that he may wish.

It comes from a man's ears; ears free to listen to anyone else's ideas, unbesmirched by the bigotry of a despot.

It comes from faith; faith in man's eternal dignity, and faith in the land where that dignity is the very foundation of our social order.

It comes from a man's mind. A mind that is free to think and believe and consider; to reason and reject that which is false, and accept that which is truth—the truth that will keep him free.

The voice does not fall upon deaf ears. It brings its message of hope to the hearts of men the world over. Its message of equality and freedom and liberty and democracy knows no boundaries. There are no walls so thick, nor fences so high, nor prisons so deep, that the voice cannot be heard.

You can hear the voice, just listen. You can hear it in every sound that issues up from our crowded, noisy streets. You can hear it in the low, mournful tones of a Negro singing, "Swing low, sweet chariot * * *." You can hear it in the train whistle as it floats out across the Kansas prairie. You can hear it in every bustling, impatient movement in our land, full of the promise and the hope that America offers to anyone to come and take a part to make his own. Yes, you can hear it—the voice that has made us and kept us free.

The grandest thing that men possess is this heritage of liberty. People, all people, are born free; freedom is their birthright. Many times men have died to defend that most precious of rights. Men have died, that their fellows might be free to speak, be free to vote, be free to stand. Free to stand apart or in a crowd, to stand in agreement or in opposition, to stand in support or in defiance; but free to stand. These men knew that to take away these rights was to take away a person's reasons for existing.

Yes, men have lived and men have died—but each one, in living, has built the monument to freedom just a little bit higher. And some day that monument will be high enough that every man on earth can see it, and hear the voice that cries out from every stone in it.

That voice will never be silent because of the very nature of its origin. As long as there are people on earth who desire freedom, as long as there is one place on earth where people are free to vote, read, write, speak, and pray as they choose, the Voice of Democracy will not be stilled.

I SPEAK FOR DEMOCRACY

(By Philip J. Smith, Cordova, Alaska, one of four finalists, 1960)

I speak for democracy—from the bottom of my heart, I speak for the form and the essence of democracy as it is typified and practiced in the United States of America. I speak for the lazy summer afternoons spent fishing for catfish in a broad muddy river. That is part of America. I speak for the squalor and filth of another "catfish"—the Catfish Row that is also part of our America and of our democracy. I speak for the elegance and splendor of Fifth Avenue and the tree-shaded serenity of a country town or an equally tranquil fishing village nestled at the foot of towering mountains in the wintertime—waiting for Christmas. I speak for the happiness of the country doctor who is called out early in the morning to take care of one of his townspeople and the equal happiness of the scientist who has perfected a new lifesaving antibiotic. I speak for the farmer and the fisherman who have their seasonal duties to perform—and the storeowner whose duties are never completed. I speak for a muddy, boggy road leading to a farmer's fields—and for the broad superhighways leading to a different kind of happiness—and sometimes oblivion. I speak for the Congressman who guides his country's destiny, and for the councilman who shapes the future of his town—for the harried business executive—and the humpbacked newsboy who hands him a daily newspaper he doesn't have time to read. I speak for the young toughs on the corners of dirty city streets and for the healthy youths who scamper in the snow and ice of a clean, fresh, star-studded winter eve.

But perhaps you ask why I speak for the unhappiness, the filth, the degradation in America? I speak for it because it, too, is part of America, part of our democracy—a portion of the life we ourselves lead—part of the reason we exist. If we had nothing low and base to overcome in our lives, there would be no reason to alleviate these conditions. Our lives would be pointless, and the ultimate achievement—the achievement of excellence—would go unrewarded. There would be no ideals to uphold, no goals to strive for, and no personal glow of a job well done.

Democracy is humanity in action. The expression of the will of the majority—the amazing willingness with which the minority complies with this will. Democracy is all the imperfections, the perversions, and the degradation to which fallen man is subject. But to a much larger extent—it is the nobility and dignity of the true democracy which towers over our fallen man.

We have established the fact that man is subject to various shortcomings. If he can do nothing about them, he is lost. His life has lost its purpose. In America's democracy, he can do something about his shortcomings. There are no political restrictions on self-development—in fact aid is given those who require and desire it. The individual and his ideals are respected as under no other form of government. Our country doctor, harried businessman, our farmer and fisherman—all are democracy in its truest sense. You too, and I, a mere student, are democracy.

Therefore, I speak for the college student, studying beneath a massive oak on campus or lost in the hysteria of Saturday afternoon's football game. And for the blind saxophonist playing for pennies on a crowded street—and the concert pianist, performing for a crowded hall. For the clear-eyed country lad who grew to be the leader of the greatest nation on earth, and for the wealthy son of a wealthy father who was a bum at the age of 21. I speak for a sleek ballistic missile hurtling skyward, protecting our Nation—and for the two-bit popgun delighting the future scientist—and for the high school teacher delving into the intricacies of nuclear physics with his class—and the young mother teaching her child the equally intricate mechanics of his first words. I speak for democracy—its accomplishments, its present, and its future. I speak with the humility born of inherent pride, for I am of and for America's democracy—as America's democracy is of and for me.

I SPEAK FOR DEMOCRACY

(By Mike Phillips, State of Iowa, one of four finalists, 1960)

I am a student, in a high school, in the midwestern part of America. I, like any other student of this day, am engrossed in the things around me. The recent school exam, and the possibility of victory in the next ball game, are examples of the topics which enter into my conversation, with my friends, every day. Jim's new sportscar, and the complete answer to the latest chemistry experiment, along with a million and one other such things, dominate the verbal exchange between every class.

After school, I have a job working in a retail store. There, I handle money with all the responsibility that that entails, while trying to satisfy customers with the quality of the products which I sell.

My home is nothing extraordinary—except, maybe in the fact that it is a real home: One which is so hard to find in the world today.

My family is, I think, ideal. My parents are good, loving, and God fearing. My brother and sister, both younger than I, are mischievous and playful, but when you really need them, they are always willing to help.

But why, you may ask, am I giving this seemingly irrelevant information in a talk on democracy? The answer is simple. This is my democracy. The fact that I can go to any school and take the courses I want, with nothing to fear, except maybe the ever-watchful parental eye.

The fact that I can express my ideas to my instructor and my classmates without being labeled a "radical" or a "revolutionary" or an "enemy of the state."

The fact that I can work and take on responsibility, on my own initiative, without being considered as just one more of the "masses." These are the reasons why I speak for democracy.

Not long ago, I visited the U.S. Capital for the first time, fulfilling a promise I had made to myself, many years before. Words have not yet been invented that could acurately describe the first moment I saw the dome of the Capitol Building. I remember it as if it were just yesterday.

It was late in the evening and the city of Washington was just falling asleep. I was on a streetcar, with some friends of mine, all of us alive with the excitement of the big city. Gazing out into the darkness, someone pointed to a great light hovering over the treetops. In a very short time, the car stopped and we got off, our eyes still fixed to this strange illumination. Then, coming into a clearing, I saw it, the Capitol of the United States—tall, and stately, with its immaculate dome looking over Washington, and over all America.

An experience, such as this, is not easily forgotten. I have not forgotten it. It made me realize, as I had never realized before, just what democracy really is. As I stood there, almost dumbfounded, in the simple beauty of what I saw, the grasp of patriotism pulled me forward. In the spotlessness, of this, her temple, I saw America's martyrs—their red blood adding to its glow. Supporting her great white dome, now above me, I saw her gigantic pillars—the principles of her existence. As I went forward, my eye caught sight of the three largest and most noticeable of these pillars, freedom, truth, and justice.

Standing by her pillar of freedom, I could hear her proclaim to the world the God-given right of liberty.

Seeing her pillar of truth, I knew the strength of her land, the source of all truth, God.

Moving on, to her pillar of justice, I heard her say, "All men are created equal."

There I realized that without those three great pillars, that temple would surely fall, as have so many temples before, because they lacked them.

This, then, is the framework of the democracy in which I live. Because my Government recognizes that I am an individual, created by a higher power and given certain basic rights which no power can take from me, I am able to live, speak, and worship, in the manner ordained by my conscience.

This is to me the best form of government yet devised by man, because it recognizes the fatherhood of God.

This is why, I speak for democracy.

I SPEAK FOR DEMOCRACY

(By John Forssen, Keene, N.H., one of four finalists, 1960)

I

Where once there was a land of barren rock and stone,
There flourishes now a city from the seeds of freedom grown;
Where once there was the darkest night that hell could e'er create,
There is now the light of freedom that no man shall desecrate;
Where once the lifeless bodies of freedom's champions lay;
There is now—a sacred paradise to commemorate their day.

They came upon this land of ours to have true freedom reign,
To free themselves from stagnant powers and snap the tyrant's chain;
They suffered through a living hell—simply to survive,
And leave us a democracy—very much alive;
They shed their blood on Bunker Hill and many more besides,
To keep this freedom flowing in unrelenting tides.

II

Where once existed false ideas and everlasting fears,
There now exists what truth reveals * * * all men are seen as peers;
Where once there was the weak man attacked by all above,
There is now the strong man tasting freedom's love;
Where once there was the order of the scoundrel potentate,
There is now democracy * * * we all should consecrate.

They built upon this land of ours a state where all are peers,
A state to keep the freemen free and hold the tyrant's fears;
They built a state forever to withstand life's constant blows,
They built a state forever to defeat democracy's foes;
All around us sits the enemy set to pounce upon the prey,
Let it be within our power to forestall the judgment day.

III

Where once there was but one great church attended by all,
There stands now a host of churches answering sinner's call;
Where once the schools were open to only rich and proud,
There are now accommodations for the lowest of the crowd;
Where once a man would spend his time on survival alone,
There is now some time for other things and a family of his own.

They came upon this land of ours to their private faiths profess,
To worship without fear of man, their sins to God confess;
They wanted education free from wealth and class,
So—they made a set of standards needing brains alone to pass;
They wanted time for families and things besides survival,
So they conquered despotic mires and defeated freedom's rival.

IV

Where once the battles for our cause made rivers run with red,
There stands a living monument of freedom by our dead;
Where once the widows sadly wept for families lost in war,
There is naught but gay rejoicing for freedom evermore;
Where once the ravaged souls of men prayed long and hard for death,
There is everlasting springtime from their last eternal breath.

They fought throughout the blackening night to keep our flag unfurled,
They fought throughout the blackening night for freedom o'er the world;
They fought until death claimed them and laid them in the grave,
They gained for us the title "land of the free, home of the brave";
They suffered in the prison camps and on the racks of hell,
And sealed the crack forever that deadened freedom's bell.

For freedom and equality our fathers bravely died,
To keep democracy flowing in an unrelenting tide;
It is our turn now to sacrifice, to fight or lose the cause,
To hold our own forever amidst our human flaws;
Their work is done forever and forever will they sleep,
If we carry on where they left off, their covenant to keep.

I am an American—and for democracy I speak,
Let us carry on where they left off, their covenant to keep.

Wittenberg Endorses Loyalty Oath

EXTENSION OF REMARKS

OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. SCHERER. Mr. Speaker, the impression has been gained because of a rather concentrated propaganda effort that the majority of students and college faculties are oppose to the loyalty oath. The facts are to the contrary.

Wittenberg University from my State is one of the country's fine educational institutions. I am herewith calling to the attention of Members of Congress an article from the Wittenberg University Torch which reveals that a campus poll indicates that a great majority of people at Wittenberg favor the loyalty oath:

CAMPUS ENDORSES LOYALTY OATH IN POLL

(By Gail Baldwin and Bill Schmidt)

"I do solemnly swear (or affirm) that I do not believe in, and am not a member of and do not support any organization that believes in or teaches, the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods."

So is stated the affidavit which students must sign, along with a loyalty oath, when applying for a national defense student loan.

Approximately two-thirds of the Wittenberg student body and the majority of the Wittenberg faculty members have given their approval to this affidavit and oath in a recent poll conducted by Torch staff members. In view of the fact that several schools participating in the national defense student loan program, part of the National Defense Education Act, have withdrawn because of the oath and affidavit, the Torch staff decided to find out how students and faculty on the Wittenberg campus felt about the issue.

One hundred students and 20 faculty members were chosen at random from the new student directory. One student name in every 15 was selected and 1 out of every 6 faculty members was contacted.

SIXTY-SEVEN PERCENT APPROVE

With 90 of the 100 students being contacted, 60, or 67 percent, expressed approval of the provisions required by the oath and affidavit. Students opposed to the provisions numbered 27, or 30 percent. Three students had no opinion on the issue.

The faculty was more evenly divided as 11 of the 20 faculty members interviewed, or 55 percent, said they had favorable reactions toward the provisions of the loyalty oath and affidavit; 7, or 35 percent, were opposed. No opinion was expressed by two of the faculty members.

The National Defense Education Act presently provides loans for needy college and university students in 1,370 schools and institutions. To obtain a loan from one of these colleges or universities, a student must sign both an oath of allegiance to the United States and must also swear that he is not a member of, does not believe in, and does not support any organization that believes in or teaches the overthrow of the U.S. Government.

Eleven universities and colleges, including Antioch, Harvard, Yale, Oberlin, and Swarthmore, have withdrawn from the loan program in protest of the provisions of the oath and affidavit. Wittenberg received $47,695 as its share of the 1959–60 program. There are 104 students at Wittenberg now with national defense student loans, these loans averaging $450 to $500.

IN FAVOR OR OPPOSED

In order to plumb public opinion at Wittenberg regarding the controversial issue, Torch pollsters read the provisions of the program to students and faculty members and then asked them if they were in favor of the provisions of the oath or if they were opposed to it. Those contacted were also asked to give reasons supporting their beliefs. Some of the statements selected from the poll and representing both sides of the loyalty oath question can be found on page 2.

When questioned about the issue, Dean Robert O. Long, dean of students, said: "As my personal opinion, it is our responsibility to make national defense student loans available for those of our students who need and want such assistance. I do not believe that I should dictate that a student should or should not sign a loyalty oath and affidavit—that is a matter for the individual student to decide. Students who do not wish to sign such an oath and affidavit can expect to be helped from other student aid funds to the extent that the size of these funds will permit."

According to Dean Long no Wittenberg student applying for a national defense student loan has refused to accept it on account of the loyalty oath and affidavit.

Recently the president and the administrative members of the Massachusetts Institute of Technology expressed strong personal disapproval of the loyalty oath clause, but gave no official position for the institute. President Stratton said he could not speak for the entire institute community but cited a resolution passed by a committee of the institute last May, which reads as follows:

"*Be it resolved*, That the institute committee feels that the National Defense Education Act should not be accepted or rejected by the administration of this institution on the basis of its loyalty oath provisions. Any qualified student who is willing to abide by the provisions of the act should not be prevented from so doing by action of the administration of his educational institution."

FUNDS SHOULD BE AVAILABLE

This in essence is also the feeling of Dean Long who, although he personally feels there is no reason for the oath, stated it would be "dictatorial" to keep such funds from being available to students who need them.

Typical arguments against the oath and affidavit in the NDSL run much like those of MIT President Stratton, who termed the affidavit an instance of the "distrust of the intellectual," stating that to his knowledge, farmers and businessmen did not have to take similar oaths in obtaining Federal loans. President Stratton said the affidavit was also contrary to our "fundamental rights of free thought and opinion."

Arguments for the provisions of the oath and affidavit include those of Senator DIRKSEN, of Illinois, who said: "What about the boys at West Point? They held up their hands. They do not seem to mind doing it. * * *" And South Carolina's Senator JOHNSTON, a member of the Internal Security Subcommittee, who says the provisions are needed to protect the student, for the Communists "who use the students within the college to further their purpose" will keep away from the known loyal student.

Rural Development

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. DORN of South Carolina. Mr. Speaker, we have an able Governor in South Carolina, the Honorable Ernest F. Hollings. The following are excerpts from his great message to the South Carolina General Assembly on January 12, 1960, in our capital city of Columbia:

This march forward has been in step with our agricultural economy. Mechanization on the farm and the Federal program of soil bank and quota have made able and willing farmers jobless. Rather than complaints, South Carolina has provided solutions. First, we provided 13,386 new jobs in 1959. Next, the rural development program was expanded throughout the State. The Under Secretary of Agriculture, Mr. True D. Morse, who instituted this program in private life, personally visited Columbia and briefed agricultural, industrial and civic leaders. The development board followed up this kickoff with a team in the field which is now coordinating communities into rural development programs. Communities need this program because it puts to work their dormant resources. While restrictions on productivity have caused the farmer to be the first to join the ranks of the underemployed, the worker of modern day industry, with its short hours, finds that he is also underemployed. Many of these workers have taken to farming in their spare time. A new society of farmer-worker is emerging. The rural development program will satisfy the needs of this society and give stability to our industrial program. Other needs of the farmer are being met daily with research and revision. New agricultural products, as the honeydew melon, have been developed, and South Carolina leads the Nation in its percentage increase in beef cattle production.

* * * * *

Now, for our opportunities. To keep pace with our economic and industrial expansion, the research programs of the University of South Carolina and Clemson should be expanded. An economic research center should be instituted at the university, as provided in the budget report. It is intended that this activity be carried on jointly with the State development board. This will furnish established industry expert economic studies and data needed for expansion or development plans. This is an extremely important facet of industrial development. However, another important feature is that it will furnish the basis for a topflight business school at the university. The need for business executives, personnel managers, plant superintendents, is growing every day. While we have excellent schools in architecture, forestry, textiles, chemistry, engineering, and other fields, little emphasis has been placed on a superior business school. We should have this at the university.

In this same vein, I recommend an immediate study by the West committee to report at this session of the general assembly, a program for industrial training. Years ago our total economy was in agriculture and we instituted the finest agricultural research program, with experimental stations and agricultural training in the public schools. This program continues, and should continue. However, the revolution in our economy since World War II, resulting in employment of over half our workers in industry, has not been realized or provided for in our educational system. While all modern day industries readily institute training programs for particular employment, they need as raw material young people who have been grounded in elementary industrial skills. Mr. T. J. Ault, president of Saco-Lowell Shops, emphasized this at the dedication of his research center when he stated, "As I see it, further industrialization of South Carolina requires industrial training programs in the schools of the State to teach youngsters the skills of industry."

We no longer can represent that we are ripe for development when we have no industrial training. Certainly it would be a sham to our people to continue in this fashion because rather than create jobs for them, as is the intent, the industry that locates will be required to bring their employees as well, only to the detriment of our own people.

A yearly average of 24 tourists a day is the equivalent to our economy of a new industry with a $100,000 annual payroll. Tremendous growth in tourist travel is predicted because of greater leisure, higher personal incomes, and speedier transportation. This business benefits every phase of our economy but statewide we have been missing the boat. I commend an accelerated travel promotion program under the development board to attract additional tourist income.

Our forests, which bring an annual revenue of $300 million, are producing only half of what they are capable of producing. I recommend planting some 45,500 acres of State-owned lands now worthlessly idle. This program could be financed on the proceeds from the planting. In addition to the commercial value, reforestation will develop our wildlife resources. Our vital wildlife assets must be nurtured and conserved.

More and more each year I am convinced the greatest natural resource we have is water. It is important to all segments of our people and economy. Since we have an abundance, there has been no need for regulation. However, experience indicates that when the need arises, it is too late to regulate without extreme hardship. Ordinary foresight could be exercised by this legislature in instituting a fair and firm water policy. In order to facilitate this, the director of the water pollution control authority has been designated to hold hearings and make recommendation to the general assembly so that a good water policy can be adopted.

In Support of Peacetime GI Legislation

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. ROOSEVELT. Mr. Speaker, presently the House Committee on Veterans' Affairs is holding hearings and considering peacetime GI legislation. I believe the committee should be commended for holding hearings early in this session, and I am pleased that this opportunity has been offered to me to express my views in the matter.

On February 23, I submitted a statement in support of a program that will aid and assure, among other things, higher education and vocational training opportunities for many young men who are now serving in our Armed Forces during peacetime.

My statement follows:

STATEMENT OF HON. JAMES ROOSEVELT SUBMITTED TO COMMITTEE ON VETERANS' AFFAIRS, FEBRUARY 23, 1960

Mr. Chairman and members of the committee, it is most gratifying that you have chosen to consider early in this session an inquiry into peacetime GI legislation.

I appreciate the opportunity to go on record in favor of a program that will aid and assure, among other things, higher education and vocational training opportunities for many young men who are serving in our Armed Forces during peacetime.

I do not believe the basic issue is one of offering educational aid to wartime veterans vis-a-vis peacetime veterans. Rather, I believe it is one involving the question: Should we or should we not have a comprehensive approach and a single standard in dealing with the education of young men who serve in our Armed Forces? This question is equally valid applied to other aspects, namely, vocational rehabilitation and guarantee and direct loan assistance for the purchase of homes.

If one concludes that there should be a uniform or single standard in dealing with veterans, then it follows that support should be given to enacting legislation to cover our young men who have been drafted or have voluntarily enlisted for military service.

There is another overriding consideration. While this committee cannot concern itself with the entire area of what should be done to develop a sound, a comprehensive and a needed national blueprint to achieve optimum use of manpower through education, I believe it important to stress such a national approach. To the degree that we assure greater educational opportunities—to that degree do we assure greater national advance and security. Additionally, and of paramount importance, the opening of such opportunities assures a meaningful measure of greater self-dignity and happiness to the individual who wishes to broaden his horizon. Thus, every approach to this problem is another step forward in resolving today's need to act positively in offsetting the Soviet challenge in education and to perfect our democratic concept that an enlightened people will be a free people.

It is my firm conviction that the peacetime veteran who would participate under a peacetime GI bill, if enacted, would contribute materially to and be an active citizen of his community, State, and Nation. Such results would more than repay the investment in his education.

The facts, I believe, bear this out if one is to evaluate the results of the World War II GI bill and the Korean GI bill. There is no reason why such favorable results would not likewise be forthcoming if we offer educational opportunities to post-Korean veterans.

In this connection I would like to make reference to a press release issued on June 22, 1954, by the Veterans' Administration. Issued on the 10th anniversary of the World War II bill, this release underscored some salient facts, and I quote:

"Through the GI bill, World War II veterans have become the best educated group of people in the history of the United States.

"Because of their training, they have raised their income level to the point where they now are paying an extra billion dollars a year in income taxes to Uncle Sam.

"At this rate, GI-bill-trained veterans alone will pay off the entire $15 billion cost of the GI education and training program within the next 15 years."

During the hearings in the other body, conducted by the Subcommittee on Veterans' Affairs, a spokesman for the Veterans' Administration stressed the national values which derive from the veterans' readjustment training programs. He stated the programs, in addition to assisting Korean and World War II veterans in making satisfactory adjustment to civilian life, "also raised the educational level and technical proficiency of the Nation by imparting greater knowledge and skill to millions of veterans. Thereby, the Nation has been placed in a better position to cope with the difficult and challenging problems facing it."

The VA spokesman also testified to the excellent record of Korean veterans and noted that: "A comparison with World War II trainees discloses that a greater proportion of the Korean trainees have taken courses in the scientific fields or other fields which require the most extensive training and knowledge."

With facts and figures available on this subject—and not just from the aforementioned agency—there is no doubt in my mind that this worthy record will be continued by post-Korean veterans if the opportunity is afforded them.

In view of this, it is difficult for me to understand—both from the viewpoint of national policy and economic considerations—why the administration looks with disfavor on a peacetime GI bill. Proclamations which I have heard in recent days by Administration's spokesmen declare that we are not nor will we be "second best"—these proclamations mean very little if the Administration's position does not, in fact, reflect its lofty pronouncements.

The committee is, of course, apprised of the department reports and the reasoning and position contained therein. However, I do wish to make note of a certain observation made by the Secretary of Health, Education, and Welfare. In opposing such legislation, and in pointing out that the "Bureau of the Budget advises that enactment of these bills would not be in accord with the program of the President," Mr. Fleming makes the observation that "we believe that broad Federal programs in the field of education should be broadly conceived to serve the needs of all our young men and women and to strengthen education in the national interest."

I heartily concur in this concept. To say this is what you are for, however, and then to oppose any workable effort to progress in achieving a declared goal is merely playing with words in order to skirt the issue and to rationalize one's opposition.

Approval of a program for post-Korean veterans would be another advance in this overall objective to which Mr. Fleming has referred. No one supporting it would claim, I am sure, that it is the perfect answer to a broad national problem and challenge, but certainly it can help to minimize further the educational problems we do face.

Mr. Chairman, to the dollar-minded administration there seems to be no connection between balancing the human budget and the national budget. This disasssociation cannot overtake our thinking, for if it does, then we, as a nation, and as representatives of a culture, are headed for trouble we can ill afford.

The times demand of our Nation, through its leadership, new answers based on new and provocative world challenges. How we act on the resolution of these challenges will determine whether or not we are a first-rate or second-rate power. Words alone will not determine the outcome.

Mr. Chairman, I have every confidence that you and the members of the committee will consider the pending legislation with the seriousness you have given to other measures also affecting our national stature and interests.

Reflections While Standing Before the Lincoln Memorial

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. BOWLES. Mr. Speaker, the quiet majesty of the Lincoln Memorial has inspired countless thousands of people from all over the world, who come to gaze silently at the magnificent Daniel French figure of Lincoln and to read the immortal words of the Gettysburg Address and the second inaugural.

One's first visit to the Lincoln Memorial is a powerfully impressive experience; one's thoughts and reflections at such a time are not easily reduced to words.

In a nationwide contest for essays on the theme, "Reflections While Standing Before the Lincoln Memorial," conducted recently by Broadcast Music, Inc., in cooperation with the American Association for State and Local History, and in association with This Week magazine, Miss Nancy A. Potter, of Voluntown, Conn., received first prize in the nonprofessional writer category. Judges of the contest include such public figures as Mrs. Eleanor Roosevelt; Dr. Ralph Bunche, Under Secretary of the United Nations; President Allan Nevins of the Society of American Historians; the author and Pulitzer Prize winning poet, Mark van Doren; and the able and distinguished gentleman from Iowa [Mr. SCHWENGEL].

In this centennial year of Abraham Lincoln's election, I am proud to call to the attention of my colleagues Miss Potter's prize-winning essay:

REFLECTIONS WHILE STANDING BEFORE THE LINCOLN MEMORIAL

(By Nancy A. Potter)

Every day of the year, Americans make pilgrimages here, alone and in groups, school children and retired businessmen, scientists and politicians, farmers and steelworkers, soldiers and sailors, housewives and diplomats. We come with separate purposes and thoughts, but finally all of us measure our time against yours, trying to learn what you would think of our century and our way of life.

Parts of our worlds coincide. Across the years we can share many things: The smell of white pine and freshly turned sod, of growing corn and harvested apples; the touch of rough bark, the thin pages of a loved book, and the hardness of workworn hands; the taste of cold spring water and sun-drenched plums. Lilacs go on blooming in the same dooryards, and the thrush sings the same song. Spring awakens the country we love with the same freshets in the hills and blossoming trees in the valleys; we linger through slow rich summers and golden autumns, and we chill with the tightening of winter.

Our personal joys and sorrows are echoes of yours too. We love the weariness that follows honest labor, the release of holidays, the size and variety of our country, and the freedom to move about it and to come back home again. We like to recite the fables of the land, to boast of regional heroes, to champion one State over the others, but we are faithful to the entire Nation. We share most of your fears and concerns. Like you, we have dreaded the sound of marching feet, the scars and pain of war, but, like you, we hated persecution and slavery more. Like you, we have loved the quiet years of peace, but like you, we have despised intolerance enough to fight well when freedom and rights were lost. Like you, we have been unhappy with dissension and weary of tedious argument, but we realize that both are sometimes the necessary behavior of a democracy.

We come here to tell you of the changes in our patterns of life and to contrast our values with yours. There are new States and larger cities, greater harvests and bigger machines, more leisure and greater speed. We have harnessed the power or rivers, mastered the elements in the earth, and crossed the reaches of the sky. We pride ourselves on having mixed the best of the Old World together to gain a vigorous culture. We have assured ourselves longer and generally healthier lives, built ourselves larger houses and great universities, and guaranteed greater material security to our citizens. Our assurance is doubled by the abundance of resources and our belief in our way of life. The scenes from this daily life are those we wish we could share with you.

You would understand the spread of personalities across our continent and the vitality of a still-growing nation. You would delight in our mixing of backgrounds, our continual scrutiny of our Government, our educational opportunities, our role in international politics. You would worry about some of the difficulties that still stand in the way of our being a perfect republic. You would hope that the sensitivity of our hearts might match our increased technical skills and our knowledge of the material world. You would hope that somehow we might have become better people as a result of our physical progress. You might believe that we would have been able to destroy all human fears in order that we might spend ourselves upon higher concerns, but instead we have often exchanged the old fears for new ones. We find ourselves constantly struggling to fulfill responsibilities thrust upon us by the progress it is impossible to deny.

Our speed and growth have diminished the forests and plains you knew into a tidy patchwork of alfalfa fields and towns and factories, all linked by concrete bands which we cross to visit the mountains, the coasts, and the ranch lands. News travels among us with the speed of wind, but answers to

our problems sometimes come more slowly. We are aware of new situations, people, and places, but these are only variations of the ones that concerned you. Many of us are richer materially than you could have dreamed we would be. We have traveled more miles on what seems to be a smaller world, but it is doubtful that we can match your comprehension of the human heart. The years have magnified your abilities and clarified your singular importance to us.

That is the reason why we have come to this place. We need to measure our decisions against yours and in our short reflection here remember your life, work, and manner. Here random lines from your addresses ring through our minds, and vignettes from your life pass before our eyes, for yours is the most familiar of all American stories. In schoolbooks and legends and memory we trace your career from New Salem to the White House, from Bull Run to Gettysburg, through the 56 years from a winter day in a Kentucky clearing to a spring evening in Ford's Theater. There are the tales of the honest storekeeper, the thorough surveyor, the gaunt young lawyer, the trusted Congressman, the thoughtful husband, and the suffering President. The youngest schoolchild knows the details of your biography, and the newest citizen has a strong impression of your personality. To every American for a century your name has summoned up a series of pictures which are the same no matter where we live or how old we are.

We see you patient in the general confusion, thoughtful of the smallest detail, and always sensitive to the destiny of a united nation you had to leave at the moment of its rebirth.

We see you solicitous with the soldiers and the widows and kind to the weak and unfortunate, gentle with the stubborn and willful. Yet beneath this simple goodness and this homely charm lay a sturdy and lasting courage and a strength that helped the country torn apart come together again into a seamless whole. We have always drawn a double picture of you from the stories of the private man and the legends of the great American. We try to learn from the pattern of your life your virtues, your gentle self-reliance, and your dignified patience. We tell our children of your nobility and bring them here to see a statue, but, more than that, to feel a presence.

When sometimes we worry that we are in danger of losing the directness, clarity, and honesty which you practiced, we seek your counsel here and hope for your sympathy. It is fitting that this quiet place should exist in the heart of our Nation and that here we may thoughtfully pause to reflect upon the debt we owe to you and the virtues we may still learn from your life. We hope for more statesmen with your conscience and devotion to the whole country. Often we hope for the perspective of intelligent wit which you used to reduce the monumental fears of the minute to reasonable proportions. We wish for the quiet humility which still could vow that the possession of right would provide the means to establish it firmly.

You gave us the unsated need to establish justice and honesty where we can. Where we fail and your shadow stretches far beyond ours, our humility reaches toward it. One hundred and fifty years after Tom and Nancy Lincoln's son was born in Hardin County, we dedicate ourselves to his unfinished work.

Agricultural Featherbedding

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. DULSKI. Mr. Speaker, the further one plods into the jungle of agricultural featherbedding, the more perplexing and amazing the subject becomes.

For example, in looking over a list of crop price support loans, I note an amount of $1,216,699.80 based upon 7,326 bales of pledged cotton produced by Delta & Pine Land Co. The amazing part of this item on the list is that the Delta & Pine Land Co. is a British-owned corporation with farming operations in the State of Mississippi. Items such as this make one wonder as to whether we ought to reevaluate our definition of just what is a "farmer." I further wonder where the obligation of a U.S. taxpayer to a foreign corporation starts and ends, and I conclude from this that a large number of corporations are getting a free ride on the protection of investment capital by hiding behind the overalls, and using the label of "farmer" to tap the public tills for their own profit gains.

A perplexing paradox that begs for an explanation in this agricultural mess is the deep concern for the well-being of farmers and their families, and the alleged impending economic misery of this particular group. Yet, on the other hand, I find an almost complete lack of concern for the economic misery of the 3 million agricultural workers, who are excluded from almost all beneficial legislation provided for other workers. These substandard conditions are fostered, protected, and promoted by the very same farmers who demand that the taxpayers provide them with the economic security that they themselves are unwilling to provide to their workers.

AMA Opposition to H.R. 4700 Not Based on Merit

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. FORAND. Mr. Speaker, it is generally known that the American Medical Association has opposed my bill, H.R. 4700, which provides insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old-age and survivors insurance benefits.

Under our form of Government opposition is encouraged to bring a problem into proper perspective and to eliminate any impassioned appeal beyond reason or practicability. I cannot, in good conscience, say that the AMA is acting bona fide in its pressure, propaganda, and distortions.

Immediately after the 1958 hearing on this measure the AMA hired a public relations firm to work for the defeat of the Forand bill. A questionnaire was sent to physicians in every congressional district. Why? I believe that anyone who has read the AMA propaganda and now reads the questionnaire will readily find the answer to my question.

Here is the questionnaire:

1. Who is the person or persons in each ward or county in the congressional district who is most influential with the Congressman? List names, addresses, and business or profession of each.

2. Who is the physician who knows and can work with each of the above?

3. Who are the four or five men in the Congressman's district who really influence him? List their names, addresses, and business or profession.

4. Who are the principal contributors to his campaign?

5. What contacts does the medical profession have with officers or leaders of such organizations as Blue Cross-Blue Shield,

dentists, hospital boards of directors, chambers of commerce, Farm Bureau, and Grange? Who are the doctors who can talk to these leaders?

6. Who is the Congressman's personal physician? At home? In Washington?

7. What contacts does the medical profession have or who knows the Congressman's top secretariat on his Washington staff?

8. What are the Congressman's hobbies? Favorite charity? Boards, organizations, church?

9. What newspapers in the district supported him in his last campaign? What is their present attitude toward him?

10. What contacts does the medical profession have with any or all of these newspapers? Either directly with the editors or through other influential citizens or advertisers?

11. How big a factor is labor in the district?

12. Do any of the local labor organizations deviate from the national labor organizations and for what reason?

13. How big a factor are "old folks" in the district?

14. What contacts has organized medicine or individual physicians made with the Congressman?

15. What was his general attitude?

New York City Administration Backs $1.25 Minimum

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. ZELENKO. Mr. Speaker, it is apparent that unless the Congress enacts legislation raising the minimum wage to $1.25 per hour, millions of our marginal earning citizens will become a permanently depressed and distressed class. Our failure to act at once on this vital matter will have serious consequences. Under the leadership of Mayor Wagner in my own city of New York, the administration, cognizant of this problem, has begun discussions to spur the State and Federal Governments into action.

A most significant report on the statements made in the city council appeared in the New York Times of February 19, 1960. The article follows:

ONE DOLLAR AND TWENTY-FIVE CENTS MINIMUM PAY IS BACKED BY CITY—MAYOR AND DUMPSON URGE RISE IN UNITED STATES-STATE FLOOR

(By Stanley Levey)

A Federal-State minimum wage of $1.25 an hour would save New York at least $1 million a year in welfare costs, Welfare Commissioner James R. Dumpson said yesterday.

His estimate was given at the opening session of a city council hearing on the causes of low wages in many local industries. Mayor Wagner and James McFadden, first deputy commissioner of labor, also gave their views at the hearing.

All three placed the Wagner administration behind an increase in the present minimums. Under Federal law employers in interstate commerce must pay not less than $1 an hour. There is no present State minimum, but Governor Rockefeller has called for a $1-rate and the retention of minimum wage orders in 10 industries.

The commissioner said that under a schedule prepared last June by his department, it was estimated that the weekly net income needed for a family of two was $52. For a family of three $63 a week would be required, and so on up to an income of $161 for a family of 12.

Mr. Dumpson explained that a rise in the minimum wage to $1.25 an hour would mean weekly pay of $50 for many workers instead of $40. But even this higher wage, he declared, "would be $2 lower than the amount required for a family of two; $13 less than that required by a family of three and $24 less than the sum required by a family of four."

The commissioner said that at present 250,000 persons in 70,000 families of two or more were receiving assistance from the city. He figured that for every person on assistance there were three persons not on assistance whose incomes were below public assistance standards.

Mr. Dumpson said that the heaviest weight of low wages fell on Negroes and Puerto Ricans. He added that of 61,138 persons receiving home relief, 27,084, or 44.3 percent, were in families whose wages were being supplemented by the department.

Raising the minimum wage would directly affect these persons, Mr. Dumpson said. Grants to these families would be reduced by the amount of additional wages coming in, thus cutting welfare costs.

PLAN HELD CONSTRUCTIVE

"Here," he said, "is a constructive way to reduce public welfare expenditures."

Mayor Wagner declared that unless the gap were closed between rising living costs and established wage minimums, "we are going to face the spectre of a permanent depressed class in this country—a class of workers, who though they are employed, are chained to a standard of living that consistently falls behind the standards enjoyed by the great bulk of American workers."

Mr. McFadden, speaking on behalf of Labor Commissioner Harold A. Felix, disclosed that the Bureau of Labor Statistics of the Federal Department of Labor would conduct, at the mayor's request, a study of low wages in three major New York industries. He did not say what they were.

All three witnesses were asked by Stanley M. Isaacs, the council's only Republican, whether they favored having minimum wage laws apply to employees of nonprofit agencies, such as voluntary hospitals. The three said they did.

Another council hearing is scheduled for next Tuesday. Earl Brown, Democrat of Manhattan, is chairman of the investigation.

Slovak Home for the Aged

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. MADDEN. Mr. Speaker, legislation, no doubt, will be considered in this session of Congress to expand social security and provide medical and hospital care for our needy pioneer citizens.

Mr. John C. Sciranka, of the American Slovak Journal, has forwarded an article to me from his paper recounting the outstanding accomplishment of the First Catholic Slovak Ladies Union of America in constructing a million dollar home for the aged in the Cleveland Catholic Diocese. This charity is a magnificent contribution to the American way of life without costing the taxpayers one cent.

The Most Reverend Andrew G. Grutka, first bishop of the Gary, Ind., diocese, was elected honorary president of the union at their recent convention at Atlantic City last September. Mrs. Helen Kocan, of Whiting, Ind., is supreme president of the union, having served in this capacity since 1933. Mrs. Anna K. Hruskovich also of Whiting, Ind., has been supreme trustee of the union for many years. They, along with other officials of this union have given generously of their time and services toward the many charities and contributions this organization has made to its membership and the country in general since the union's organization almost 70 years ago.

The article follows:

[From the American Slovak Journal, Feb. 12, 1960]

MILLION DOLLAR HOME FOR AGED OF FIRST CATHOLIC SLOVAK LADIES UNION

(By John C. Sciranka)

On Saturday, January 2, 1960, a noteworthy event took place without much fanfare at Beachwood, quiet suburb of Cleveland, Ohio, where Auxiliary Bishop John J. Krol, of the Cleveland Catholic diocese dedicated a new $1 million Villa Sancta Anna Home for the Aged, built by the First Catholic Slovak Ladies Union, a fraternal organization, which was founded in 1892.

The day of the dedication was selected so close to the New Years for the reason that it was on January 1, 1892, when Mrs. Anna Hurban, Slovak woman pioneer in the field of fraternalism gathered around her the first women in Cleveland, Ohio, where they founded the first branch of this union, which now has a membership of 90,000 and assets close to $30 million.

The first nine Slovak women who founded this, now the largest Slovak women's fraternal organization in the world, went into history although they did not make much fanfare of their action just like their humble followers 68 years later. Their names are preserved for posterity and they were paid due homage and tribute on the above-mentioned day of the dedication of this $1 million institution, which is a credit to American fraternalism in general and Slovak fraternalism in particular. The first nine women were: Anna Hurban, Elizabeth Degro, Mary Onda, Margaret Ruzinsky, Elizabeth Pesta, Mary Mihalcik, Barbara Susa, Mary Sabovik, and Mary Sotak.

Mrs. Anna Hurban, who spearheaded the first society, sought the aid and guidance of Rev. Stephen Furdek, who was then a prolific writer, poet, and organizer. It is no wonder that on August 10, 1892, the first convention was called to St. Ladislaus Parish hall in Cleveland, Ohio, with women delegates from six organized lodges in five States, namely: Cleveland, Ohio; Minneapolis, Minn.; Pittsburgh, Pa.; Johnstown, Pa.; Terre Haute, Ind., and Yonkers, N.Y.

Besides Father Furdek, well known organizers like Father John Martvon, Father E. E. Gelhoff, and Father Raymond Wider encouraged the pioneers to continue in their worthwhile undertaking.

The 6 lodges were represented by 15 women delegates. George Onda, first president of the First Catholic Slovak Union, now with 102,000 membership in United States and Canada, which was organized in 1890, was at this first women's convention to give help and advice.

Mrs. Ilona Ratkovic, of Pittsburgh, Pa., was elected first supreme president and Rev. John Martvon, who later labored for over 60 years in Johnstown, Pa., and lived to be 96, was chosen as first spiritual director.

The organization prides itself with being the first one among the Slovak fraternals which organized and maintains its Junior Order, which was founded in 1905 at the national convention in Bridgeport, Conn. The late Reverend John Stas of Scranton Diocese and Mrs. Anna Strunak of Cleveland, Ohio, are given credit for organizing the first youth branches.

Since its inception in 1892 it had the following women as supreme presidents: Ilona Ratkovic, Pittsburgh, Pa.; Anna Vojna-Strunak, Cleveland, Ohio; Rozalia Hozeny, Yonkers, N.Y.; Pauline Doerl, Baltimore, Md.; Anna Ondrej, Cleveland, Ohio, who headed the organization for 17 years, and Frances J. Jakabcin of Reading, Pa., was responsible for many modern reforms. She was president from 1920 until her death in the spring of 1933. Since that year the organization is headed by Mrs. Helen Kocan of Whiting, Ind., who proved to be a very outstanding leader, able administrator, and remarkable organizer.

The organization had very capable supreme secretaries; namely, Mrs. Anna Strunak, Mrs. Mary Slifka of Youngstown, Ohio, the late Mrs. Mary E. Grega of Cleveland, Ohio, and presently Mrs. Susanna Matuscak of Cleveland, Ohio, who has held this responsible position since 1940. The Junior Order was administered most ably by such capable officers as Mrs. Anna B. Russell, Mrs. Susanna Matusçak and presently by Mrs. Frances L. Mizenko, formerly of Perth Amboy, N.J.

The late Reverend John M. Liscinsky of Cleveland, Ohio, was the first editor of their official organ Zenska Jednota (Ladies Union), which was founded on January 1, 1914. He was succeeded by Mrs. Anna Husek, Rev. Ivan Kramoris, OSB., and Rev. George Luba, OSB., who is editor since 1931.

Rt. Rev. Msgr. Victor Blahunka, first American monsignor of Slovak origin who died recently in Chicago, Ill., was the organization's supreme chaplain after the pioneering years, followed by Rt. Rev. Msgr. Stephen J. Kocis of Youngstown, Ohio, and Rev. Michael Tondra of Campbell, Ohio, who has held the position since 1933.

The organization named the new $1 million Villa Sancta Anna for its aged in honor of its foundress, Mrs. Anna Hurban and its patroness St. Anna, mother of the Blessed Virgin Mary.

Mrs. Hurban was a humble person, who was born in the town of Gbely, Slovakia, known as the Tulsa of her native country on account of its rich oilfields. Her centennial birthday was observed on Sunday, July 22, 1956, at Villa San Bernardo, the mother house of Slovak Vincentian Sisters, Bedford, Ohio, where the supreme officers and members decided to build the modern home for their aged.

The new three-floor home has accommodations for 75 residents and 9 sisters, the Daughters of St. Francis from Lacona, Ill. The community was founded in Slovakia. Soon after World War II, and before the Communists enslaved Slovako, 16 sisters received permission to come to the United States of America. They established a mother house in Chicago, which since has been moved to Lacona, Ill. The Slovak nuns, trained nurses, operate institutions for children, as well as a hospital in Mountain View, Mo. The order's U.S. superior is Rev. Mother Boleslava. Superior at the Sancta Anna home is Sister Milada.

It accepts guests from among the aged of the Cleveland diocese and aged members of the organization or their relatives.

It is one of the few old folks' homes in the country with accommodations for married couples. Six 2-bed rooms, each with private bath, have been designed for occupancy by husband and wife. Other rooms, now intended for use of men or women, can be used for couples if the demand is great enough.

Guests' rooms, with built-in dressers and closets, are finished in different colors to provide a homelike rather than institutional atmosphere.

The structure's central facilities—dining room, kitchen, heating equipment—have been designed to service future additions which will increase its capacity to 300. The chapel, designed by John W. Winterich and associates, seats 100. It has seven stained-glass windows, six of them depicting events in the lives of St. Ann and the Blessed Mother; the other, in the sanctuary, symbolizes the Holy Trinity.

The main altar is of Botticino and Portoro marble imported from Italy, and the rear sanctuary wall is finished in an imported Venetian mosaic.

The brick and limestone structure was designed by Architect Stephen E. Butzko. It is set back 500 feet from Chagrin Boulevard, on 35 acres of lawns, fields, and wooded areas. The structure has 53,346 square feet of floor space. Besides central service facilities, the ground floor houses a clinic and infirmary for four patients requiring short-time care; pharmacy, library, recreation room, and barbershop. On the first floor are administrative offices, directors' meeting room, chapel, and quarters for three employees who will live at the home, and rooms for guests. The second floor has more guestrooms, a lounge, and gameroom, and balcony opened onto the chapel for those confined to wheelchairs. Oak-paneled solariums, built for all-weather use, are on each end of the first and second floors. The home has a large hospital-type elevator. The third floor has the sisters' quarters. Dunbar Construction built this $1 million modern home.

Indeed, the organization is to be complimented for erecting such a wonderful structure for its members and friends, where it will continue to perpetuate the ideals of this fine fraternal union which was founded by nine Slovak women in Cleveland, Ohio, and has grown into a 90,000 membership—and no doubt it will continue to grow, for fraternalism never failed its members and our American public. The committee, headed by Mrs. Helen Kocan, Rev. Michael Tondra, Mrs. Susana Matuscak, Miss Anna Yasso, and Mrs. Frances L. Mizenko, supreme officers who guided the building of this modern home, are to be complimented for their excellent taste in architecture and design. May it continue to serve the present and future generations and inspire them always to remember the generosity and benevolence of its founders and successors.

Nixon or Not

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I wish to include the opening statement by Ralph de Toledano, taking the affirmative on the question of "NIXON or Not" on the National Review Forum debate broadcast from New York, December 3, 1959, as follows:

The question, "NIXON or not," is of course a loaded one. I am not quite certain, however, whether the gun is pointed at me or at my opponent. For to say "No" to NIXON at this time is a declaration of advocacy which can give aid and comfort only to the liberals.

I hope not to be merely an advocate tonight—but an analyst. In this I am somewhat handicapped by having first-hand knowledge of the man and the issues under discussion, as well as direct experience as an observer of what is laughingly called practical politics. That's a glib word—politics—and one which few people bother to understand. Politics has been called the art of the possible, but it is far more than that. If I may offer a further definition, politics is ideology in context. And it is with this in mind that I inted to approach the question, "NIXON or not."

Let me first take up the negative aspects of the question. There are several reasons proposed why RICHARD NIXON cannot, or should not, be the Republican presidential candidate in 1960.

One: It is charged that Mr. NIXON can't win. This theory is one advanced by Mr. NIXON's Democratic opponents, who always show touching solicitude for the Republican Party as every election draws near. The simple fact remains that as of now, Vice President NIXON shows more strength with the voters than any candidate of either party—by any test available short of the ballot box. This does not mean that the Vice President is a shoo-in, but certainly it cannot be taken as evidence of popular weakness.

The second argument: That NIXON will win. I do not say this in jest. The possibility that the NIXON forces will win nomination and election for their candidate seems to have struck terror in the hearts of certain Republican conservatives who have elevated masochism to a political principle. The late Senator Robert A. Taft has posthumously taken all responsibility for his defeat at the 1952 Republican convention. But I think it is demonstrable that what contributed substantially to his defeat was the cozy little death-wish of so many of his followers. It was often said that Republican conservatives felt that it was better to lose with Taft than to win with Eisenhower. I submit that what many of them wanted was to lose—period.

The third negative aspect—that NIXON is too liberal. The primary basis for this charge is Mr. NIXON's stand on civil rights. Now, the Vice President feels no need for apologizing here, nor will I do so for him. It follows both morally and politically that if one believes in the fatherhood of God, one cannot ignore the brotherhood of man. If these are general terms, the Constitution of the United States has implemented them in the 14th amendment which forbids the States to "make or enforce any law which shall abridge the privileges or immunities of citizens of of the United States * * * nor to deny any person within its jurisdiction to equal protection of the laws." Perhaps it is too liberal, for some conservatives, to grant the privileges of education, voting, housing, economic opportunity, and decent treatment to men because of their religion or the color of their skins. If this is so, then Mr. NIXON will have to do without this kind of conservative support. But I propose to these so-called conservatives the question recently asked of Governor Faubus at a dinner party: "Governor, what will you do, once you have entered the Pearly Gates, if you discover that God is not white?"

The fourth argument used is that Mr. NIXON is too conservative. This is one which, I am sure, my opponent tonight will not make. But it has been raised by others and requires exploration. Let's look at the record.

Mr. NIXON helped write the Taft-Hartley Act. He has maintained an intransigently anti-Communist position. He believes that it is far better to have a tax structure which encourages venture capital, stimulates productivity, and creates jobs, than one whose aim is simply to "soak the rich." To exacerbate private industry in order to soothe the carbuncles of Karl Marx, Americans for Democratic Action, or Mr. Walter Reuther is—Mr. NIXON would assure us—bad economics and bad politices. The billion-dollar public works program urged by many Democrats and some Republicans during the last recession—a program calculated to put a deficit in every pot and a post office in every garage—was opposed both publicly and within the administration by the Vice President. Mr. NIXON believed that the economy could best be aided by a tax cut—if drastic aid became, in fact, imperative. These positions are neither too conservative nor too liberal. They simply make sense.

There is one last negative point which I should take up, if only because it must plague my opponent. Politics are not lived in a vacuum. Ideology, to paraphrase Edmund Burke, must inhere in some sensible object. Therefore, a negative to the question, "NIXON or not" is meaningless until a rag, a bone, and a hank of hair has been found for it to inhabit. Will my keen and passionate opponent suggest an alternative? Does he favor Governor Rockefeller? Senator Kennedy? Senator Lyndon Johnson? Mr. Adlai Stevenson, Mayor J. Bracken Lee? Senator Thurmond? Or does he propose that we all join him in some political never-never land where to be ag'in is an end in itself?

Now let me take up briefly the positive points in Mr. NIXON's favor.

Though the Vice President cannot carry his supporters on what "National Review" has called a solid gold bandwagon, or what has been elsewhere described as a gilded steamroller, the Nixon vehicle is jet propelled by the keenest political mind, the most penetrating understanding of the political process, and the widest knowledge or contemporary government possessed by any of our political figures. It is a truism in Washington that Mr. NIXON is the best informed man there today. But it can be argued—and convincingly—that intellectual equipment and practical knowledge, when not coupled to a sound philosophy, are useless.

I am willing to accept this hypothesis—and then to apply it to the most critical subject to be considered—Mr. NIXON's foreign policy posture.

Last September, the day before Premier Khrushchev arrived in Washington, Vice President NIXON outlined some of his views in a speech before the ADA—ADA, let me hasten to add, in this case standing for American Dental Association.

"There are those," said Mr. NIXON, "who see this visit itself, clearly apart from any results which might flow from it, as being the opening of a new era of sweetness and light, and as indicating a basic change in the attitudes and policies of the Communist leaders. This kind of thinking"—and I am still quoting Mr. NIXON—"is incredibly naive and completely fails to take into account the character of both the man who is visiting us and the ideology which he represents. The differences between the free world and the Communist world are not the result of misunderstanding; they are the product of a deliberate Soviet policy of expanding Communist influence and domination by every possible means in all parts of the world." End of quote.

Of Premier Khrushchev, Mr. NIXON said: "I found that in private conversation * * * he was a cold, calculating, tough-minded advocate of his point of view. * * * He does not need to be convinced that the Government and people of the United States want peace. On the other hand, the danger is that he may believe that we want peace so much that we will pay any price to get it, including surrender at the conference table." End of quote.

These words were uttered by the Vice President at a time when the State Department—and much of the Nation's press—was admonishing us not to be beastly to the Soviets. The remarks so infuriated Premier Khrushchev that he urged President Eisenhower to get rid of Mr. NIXON. Those views continue to be Mr. NIXON's, now that many of the major candidates edge toward joyful and unconfined appeasement. It is also a sad fact that Vice President NIXON is perhaps the only contender for the Presidency who categorically opposes the recognition of Red China. The others have shifted guardedly from statements that the American people should develop tolerance toward Asia's Murder, Inc.—to semiovert suggestions that the time has come to clutch Mao Tse-tung to our bosoms.

The most ominous formulation of the new appeasement can be found in a book tastefully entitled "America the Vincible." The author, Emmet John Hughes, has removed his hat from the White House rack and now hangs it in Governor Rockefeller's mansion. Mr. Hughes looks longingly to the day when the "hard" policies of the Dulles team have been replaced by a flexibility which will allow an understanding with Red China, a withdrawal of American bases in Europe, and the destruction of our defensive alliances.

Because Vice President NIXON is one of the few men in official Washington who has a thorough knowledge of Communist strategy and tactics, he has favored policies which, paradoxically, are suspect to the more doctrinaire conservatives. For example, he concurred with the administration in its decision to invite Premier Khrushchev to the United States. Now it is my belief, after an admittedly brief stay in the Soviet Union, that if we could get Cyrus Eaton to finance visits here by several thousand Soviet subjects each year we would be advancing the cause of freedom and peace. And it would do many Americans considerable good to see for themselves the incredible drabness of Russian cities, the joylessness of Soviet life, and the pathetic manifestations of youthful revolt which crop up. It was Mr. NIXON's belief that, no matter how tightly Premier Khrushchev shut his eyes to America, he would still cheat a little and peek a little. Mr. NIXON was right—and I believe Nikita will never be the same. He knows, if we don't, that all those luniks are phonies, but he has seen the American standard of living.

There was, moreover, one other vital factor in Mr. NIXON's thinking:

Whatever may come to replace it, the cold war as we have known it since 1946 is over. The conflict between East and West, between communism and the open society, is destined to take another form in the years to come. There is a new grouping of forces taking place, creating an atmosphere of even greater peril to the world. During this era of transition many things can happen—not the least of which is nuclear war. Now there are many in this audience who have talked blithely of a "showdown" with the Soviet Union, of the unquestioned might of our Strategic Air Command, and of the Soviet hoax of stockpiled Russian ICBM's with nuclear warheads. I myself am guilty of such talk. But it is the Vice President's view—and on sober reconsideration my own—that all-out war today is unthinkable. We must stand firm, but we cannot invite Armageddon. As a consequence, it is Mr. NIXON's position that it is better to debate than to obliterate. Not Soviet arms, but Soviet propaganda, have pushed the Communists ahead. If we have not convinced the world of our moral, political, and social superiority over the Communists, the fault is our own. The outcry against the Khrushchev visit came, let us face it, from people who do not know how to counter Soviet words. Mr. NIXON does.

However, if it is the opinion of this audience that "preventive" war and nuclear holocaust are the only answers to the Soviet challenge—and I know my opponent believes this—then Vice President NIXON will have to do without such support.

As I have said, the question, "Nixon or not," presupposes alternatives. Both in Moscow and at home, the Vice President has demonstrated his belief that to talk to the Soviets does not mean surrender to them. There is strength and strength. Of the candidates my opponent may propose, who has been so forcefully on record for increasing American military strength? On May 6, 1950, just before the outbreak of the Korean war, Mr. NIXON—then a Congressman—warned:

"There is ample evidence that Soviet Russia is directing a great percentage of its resources toward the development of new, modern weapons of warfare * * * We cannot, in the interest of security, afford to lag behind (them) in weapon research and development." For those who have forgotten, 1950 was the year in which the United States was spending all of $21 million—$21 million—on the procurement and production of guided missiles, as compared to the $3 billion we are spending today. And the Vice President has urged still greater efforts on our part, even as he has warned that our entire knowledge of Soviet space achievements comes strictly from Soviet sources—unchecked by American scientists who, sadly, are predisposed to believe what they are told by the Kremlin.

Of the entire galaxy of Presidential hopefuls, there is not one who can claim a more consistent record on defense than Mr. NIXON. Among the candidates that my opponent will presumably propose, there are those who would cut the military budget to the point where missiles would suffer, those who would favor scuttling one branch or another of the service, and still others who believe with the poet Horace that virtue is its own defense.

I do not say that RICHARD NIXON is some sort of political Sir Galahad, that he in infallibly on the side of the angels, or that conservatives should agree with him on every issue. Politics is ideology in context—and there were many conservatives who disagreed violently with Senator Taft's defense of Communist teachers.

I do say that a President will be elected in 1960, and that it is the responsibility of all conservatives to throw their support to the man whose record on domestic and foreign policy issues is the soundest. This is a decision for each conservative to make, and I would presume if I attempted to force any commitment. If my opponent offers an alalternative candidate who more straightly walks the razor's edge of conservatism, then it is your right and duty to follow him. But of the alternative answer to the question is ideology in a vacuum, then conscience and good sense should make your choice plain.

What Private Power Companies Are Doing With Their Federal Subsidies

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. EVINS. Mr. Speaker, under unanimous consent I have previously inserted in the RECORD a listing of the sub-

sidies the private power companies have received in the form of tax reductions under the accelerated amortization program.

The question occurs, what is happening to this accumulated income tax subsidy? Well, many power companies are now distributing these income tax reserves to their stockholders in the form of dividends and, believe it or not, these dividends are tax free. As a matter of fact several power companies are paying all of their dividends from this income tax reserve fund and, therefore, their dividends are 100 percent tax free. The stocks of these companies are, of course, greatly enhanced in value, especially to those in higher income tax brackets who would like to decrease their own income taxes; and brokers in utility stocks have been quick to point out this advantage to possible purchasers. For example, in the December 3, 1959, issue of Public Utilities Fortnightly the reader is advised:

It appears likely that the dividends on California-Oregon Power will remain fully tax free in 1959 and 1960, but after 1960 the percentage may decline and it is uncertain whether any part of the dividends will be free of income tax after 1960 when accelerated amortization will run out * * * and; Pacific Power & Light preferred and common dividends * * * will probably remain fully tax free for about 5 years, due to accelerated amortization in connection with the company's large hydro projects.

I insert here a list of some eight power companies whose dividends are entirely or almost entirely tax free because they are paid out of the income tax deferral reserve funds. These eight private power companies paid out $72,548,754 in tax free dividends to their stockholders in 1958 and presumably about an equal amount in 1959. It is quite likely that most of the stock was held by stockholders subject to income tax rates of 50 percent or more. Thus, having originally reduced the taxes of the power company by some $150 million in those 2 years the rapid amortization program may now provide a further reduction of anywhere from $50 to $75 million in taxes to the fortunate stockholder of these companies. Thus, we see how subsidies proliferate other subsidies.

Company	Dividends declared 1958	Percent tax-free	Amount tax-free
California Oregon Power	$3,663,202	100	$3,663,202
Detroit Edison	25,543,546	100	25,543,546
Pacific Power & Light	8,403,585	100	8,403,585
California Electric Power	3,600,971	79	2,844,767
Hartford Electric Light	5,035,046	78	3,927,336
Niagara Mohawk Power	26,650,562	77	20,409,283
Portland General Electric	4,230,000	78	3,299,400
Washington Water Power	5,008,579	89	4,457,635
Total	82,135,491		72,548,754

The above are by no means the only private utilities who are paying out these income-tax windfalls to their stockholders. Only a few weeks ago the Federal Power Commission supplied a list of 23 power companies "whose 1959 common dividends may be fully or partially exempt from a Federal income tax," which I append below with an estimate of the percentage of their dividends that will be tax free.

Company	Percent dividends tax-free, 1959
California Electric Power	62
California Oregon Power	100
Central Louisiana Electric	56
Central Maine Power	41
Connecticut Light & Power	30 or 35
Detroit Edison	37
Gulf States Utilities	36
Hartford Electric Light	60
Idaho Power	45
Interstate Power	8
Maine Public Service	13
Niagara Mohawk Power	67
Oklahoma Gas & Electric	30
Pacific Gas & Electric	30
Pacific Power & Light	100
Portland General Electric	100
Public Service of Indiana	50
Public Service of New Hampshire	40
Southwestern Public Service	14
Union Electric	50
Utah Power & Light	19
Virginia Electric & Power	10
Washington Water Power	55

The Federal Power Commission has approved these bookkeeping reserves of income tax deferrals and their distribution to stockholders in dividends. Not all private utilities want to treat this tax subsidy in this way. The Niagara Mohawk Power Co., indeed, is presently in a little trouble with the Federal Power Commission in regard to these tax savings. Niagara Mohawk listed their tax reduction as income and credited it to unrestricted earned surplus. This, of course, was a very frank admission that these tax savings would constitute a windfall and would never have to be repaid. By doing this Niagara Mohawk increased the equity of the common stockholders and this, of course would make it possible for it to ask for higher rates in order to provide for the usual return on the total equity invested in the company. If this were allowed, the tax savings provided by this gigantic subsidy would be used to increase the power rates to the customer and thus he would in effect be paying those taxes, or a portion of them, all over again.

The Federal Power Commission was not unanimous in its ruling on the treatment of these tax savings by the private power company. Commissioner William R. Connole protested the decision of the Commission and I insert herein a report of his protest given in a speech before the Electric Consumers Information Committee on June 9, 1959, in Washington, D.C., as reported in News for Electric Consumers:

JUNE 12, 1959.

FPC COMMISSIONER SAYS UTILITIES SHOULD PASS TAX SAVINGS ON TO CONSUMERS

"I see no reason for permitting utilities to charge you and me for costs which will never be paid," said Commissioner William R. Connole, of the Federal Power Commission, recently.

Predicting that State regulatory commissions will swing away from the misuse of liberalized depreciation, Connole declared that "enlightened electric utilities have done what they should do without being told" on this issue.

Connole spoke at an ECIC luncheon meeting June 9 in Washington, D.C., on the subject of liberalized depreciation under section 167 of the Internal Revenue Code of 1954. This section permits companies to write off more of the cost of a plant in the early years of its life for tax purposes. The result is a lower tax bill for the company.

But while using liberalized depreciation for tax purposes, some utilities have used normal depreciation—and consequently normal taxes—in listing costs for ratemaking purposes before State regulatory commissions. Some 17 or 18 State commissions have permitted this double standard, with this result:

Consumers pay rates based on the utility's normal tax bill. But the utility, using liberalized depreciation, pays only part of the tax money it collects from consumers. The utility keeps the remainder of tax money for its own use, a subsidy.

Consumer groups have long urged that the tax saving which the utility enjoys under liberalized depreciation should be passed on to the consumer—the one who pays the tax bill—in the form of lower rates. About five State commissions have recently agreed with this view. The issue is pending in other States.

The private electric companies are divided on the issue. At a recent meeting of the National Conference of Electric and Gas Utility Accountants in Chicago, opinions ranged from keeping the tax savings for the company only to sharing them with consumers. In the middle, some companies espoused compromise, while others urged outright repeal of section 167.

One company agreeing with consumers and Connole on this issue is the Hartford Electric Light Co. Said John B. Madigan of this firm at the industry meeting:

"Management has an obligation to keep all operating costs as low as possible. Certainly this obligation should extend to the area of one of our largest items of expense, namely, taxes." Madigan noted that his company cut its tax bill by 14 percent in 1957 and 30 percent in 1958 by using liberalized depreciation, and then asked:

"If it were possible to effect a saving as large as this in any of the other categories of expense, would we hesitate to do so? If a regulatory commission treats us fairly in most respects, as ours happens to do, we cannot object if they believe that these tax reductions should be used for the benefit of the customer."

In endorsing this position at the ECIC meeting, Connole pointed out that "enlightened electric utilities" pass the savings on to the customers "primarily because there is nothing more embarrassing than huge amounts of reserves in the company's balance sheets. And when they follow the practice of liberalized depreciation, reserves will accumulate unless they are written off in lower rates to the customer."

Connole countered the prime argument used by commissions and utilities in favor of the double standard—namely, that at sometime in the future, at the end of the writeoff period, the company will have to pay more taxes. This just isn't so, said Connole.

"Liberalized depreciation is a tax reduction, not a tax referral."

He explained that by its very nature an electric utility is an expanding dynamic business. Even if it just replaces what it wears out, without adding a single new customer or new foot of line (which is virtually impossible), its tax liability will always be less at the end than at the beginning of its operation.

Connole concluded: "There is no need, therefore, to deduct from reserve for taxes. Although the tax liability will be forever reduced for the companies, those favoring normalization (keeping the tax savings themselves) say that they want to set up a tax reserve.

"I see no reason for permitting utilities to charge you and me for costs which will never be paid."

Furthermore, not all States are going along with the theory of the private power companies that the stockholders rather than the customers ought to benefit from this very generous Federal subsidy. The public utilities commission of several States are taking the position that these tax savings should be passed on to the consumer in the form of lower power rates.

We note in many magazines the expensive advertising by the private power companies charging that public power is subsidized. These charges are always made in the vaguest and most general terms and never substantiated in dollar and cent figures for a very simple reason—because there is no substantiation for this charge. But, as the figures in regard to these tax reductions indicate, the private power companies themselves are cashing in on one of the most generous subsidies any group has ever received from any government.

The Honorable Richard J. Daley, Chicago's Man of the Year

EXTENSION OF REMARKS
OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. PUCINSKI. Mr. Speaker, Sunday evening I had the pleasure of being toastmaster at a banquet in Chicago sponsored by the Chicago Polish Daily News, at which Mayor Richard J. Daley was named Chicago's Man of the Year.

I am calling the attention of my colleagues to this great honor bestowed upon Mayor Daley because in recent weeks the national press has extensively reported the tragic situation which developed among an infinitesimal segment of Chicago's police force and has reflected adversely on the reputation of that great city.

In choosing Mayor Daley as its Man of the Year at a time when a great effort was being made to carrect the abuses within Chicago's police department, the Polish Daily News joined the other metropolitan newspapers of Chicago in professing a deep understanding of the entire situation.

Selection of Mayor Daley for this distinguished award last Sunday demonstrates how profound a respect the people of Chicago have for Mayor Daley's unprecedented contributions toward making our Midwest metropolis the greatest city in the world. The distinction bestowed upon Mayor Daley at the same time demonstrates that his unyielding dedication to the principles of good government, his devotion to duty, and his bold program of saving Chicago from dangerous deterioration caused by slums, a malady which today is afflicting all great American cities, totally eclipses the criticism which has beset one department of his otherwise successful administration.

Mayor Daley's decisive program of action in Chicago during his last 5 years as mayor has indeed attracted the attention of city administrators throughout the world. While he has devoted his greatest effort toward rebuilding his own Chicago during this period, Mayor Daley's name has become an inspiration for urban administrators throughout America. I know of no single individual who has a more profound grasp of the varied problems which confront our Nation's urban communities, in which 73 percent of America's population now lives, than Mayor Daley. It is understandable, therefore, why, despite the adverse publicity about one segment of the Chicago community, the mayor of that great city should have been selected as Chicago's Man of the Year.

The good judgment of the Polish Daily News was corroborated last Monday when Mayor Daley announced the appointment of Dean Orlando W. Wilson as Chicago's new superintendent of police. Dean Wilson has directed the criminology school of the University of California in Berkeley and will bring to Chicago a vast background of experience in police administration.

When the police scandal was disclosed in Chicago and was reported by the press throughout America and the world, Mayor Daley moved swiftly, decisively; and proclaimed an unyielding determination to correct the situation with a program which would give Chicago the best police department in the world. The press of Chicago has reacted to the mayor's selection of Dean Wilson by lavishing the mayor with high praise for his selection.

It gives me great pleasure, for the benefit of my colleagues who have been following the Chicago situation during the past few weeks, to include in my remarks an editorial from the Chicago Sun-Times of Februry 24, 1960. I am also including an editorial from Chicago's American of February 19, which clearly demonstrates the high regard the people of Chicago have for Mayor Daley. Finally, I am including an article published on February 21 in Chicago's American which illustrates the high respect the businessmen of Chicago have for Mayor Daley.

I trust that those who would be quick to degrade the great city of Chicago, more on its past and ancient history than on the latest development, will today reflect on the indisputable fact that great things are happening in Chicago and that its Mayor, Richard J. Daley, is determined to make good his pledges to make this Midwest metropolis the greatest city in the world.

Mr. Speaker, I am also enclosing the remarks made by the Rev. Peter Fiolek, C.R., chairman of Sunday's Man of the Year banquet as the opened the program. I believe Reverend Fiolek's words reflect the high regard all of us in Chicago have for Mayor Daley:

Very Reverend Father Provincial, Reverend Fathers, Hon. Richard J. Daley, mayor of Chicago and Man of the Year, distinguished guests and friends, it's wonderful to have faith and more wonderful to know that it was not in vain.

When the selecting committee of our newspaper nominated the chief executive of Chicago as the recipient of the Truth and Charity Award, at that very moment ominous clouds of scandal were casting shadows on our city. Like the proverbial influence of the moon they gloomed the judgments of some who wagged their heads.

WE BELIEVED

But we believed, that the greater number of our people, that the greater number of Chicagoans were of nobler stature and capable of honest thinking. We were even willing to bet on the success of this evening, and won through your cooperation.

So, it's an exceptional pleasure for me as chairman of the Dziennik Chicagoski's Man of the Year banquet, to bid welcome to this imposing gathering. God bless you and love you all.

We are indeed pleased and humbly grateful that you chose so willingly to join us in honoring the mayor of Chicago. By your enthusistic response, by your cooperation, by your letters and words of encouragement you confirmed our belief and gave evidence that this year's award fell upon one who richly deserves it.

AT RIGHT HOUR

And it came at the right hour. It would be the lowest ingratitude on the part of Chicagoans if in an hour of darkness they were to be blinded, never to see the many bright days when under his dynamic leadership, his sincerity to duty, his honesty of purpose Chicago gloried and throbbed with good living.

This very aspect is brought home with an emotional impact in Allen Drury's current bestseller "Advise and Consent," a story of the pressures and forces, the counterpressures and counterforces which dominate the political life of the Nation's Capital but which are true in every big city.

The essence of "Advise and Consent" lies in the feeling that the vision of greatness will somehow be attained by the greatness of men and faith in God.

TRUTH AND CHARITY

Ideals of human beings so often come in conflict with the ambitions of human beings; the glorious visions of human beings so often come in conflict with the baser desires of human beings and yet through some magnificient providence of Almighty God, the ambitions and desires so often end up serving the purposes of the visions and ideals.

All you need is the truth and charity, and these qualities our mayor possesses in blessed degree. I think we're all happy to be a part of this evening, so let's be about the business.

It's my privilege now to present the toastmaster of the evening. So from the Nation's Capital to the Nation's greatest city we call upon a Member of Congress, a native Chicagoan.

Mr. Speaker, the articles follow:

[From the Chicago Sun-Times, Feb. 24, 1960]

THE MAN

Orlando W. Wilson's selection as Chicago's superintendent of police was page 1 news in the New York Times, the Herald Tribune, and other leading newspapers around the country. As this city's police scandals have been a focus of national interest in these past weeks, so now the man with the new broom and the new job are going to be watched by the whole country. We don't doubt that shrewd bookmakers are calculating the odds: the character and ability of the man against the size of the job. Can he do it?

Orlando W. Wilson looks like a good bet to us, and we congratulate Mayor Daley and

his five-man selection committee on the choice. It should bother no one that Wilson was himself a member of the committee. He was put there because he knew his business; he was nominated as superintendent for the same reason.

Neither should anyone be concerned at the proposal to pay Wilson $30,000 a year for the job. One factor in lifting the Chicago school board out of the muck of scandal-ridden politics was the decision to hike the superintendent's salary (now $40,000). The top police job is not less important.

Like any other man who could have been chosen, Wilson, on his record, has his strong and weak points. In our judgment the strong outnumber the weak.

He is one of the Nation's top experts on police administration—a quality of prime value as he faces the job of restructuring the police department.

As an expert consultant to many big-city police departments he is a seasoned troubleshooter; he knows where to look for the causes of inefficiency and corruption and what it takes to cure them.

Wilson's practical experience as a police chief has been limited to small and middle-sized cities; his longest span as chief was 11 years in Wichita, Kans. It's a long jump from Wichita to Chicago, and it's a long jump from the ivory tower of a university dean (Wilson's present job) to the street-level rough-and-tumble of the Chicago police department. Wilson himself has acknowledged this with a humility that springs, we should judge, from a levelheaded assessment of what he calls "the greatest challenge confronting law enforcement in the United States today, perhaps the world." At least he's not underestimating the job.

At 59, Wilson does not plan to make a career out of the superintendent's job. He has agreed to devote 3 years to reorganizing the department, taking it out of politics, and getting it onto a basis to serve the people of Chicago instead of the whims and business interests of the "bosses." If he can do this the way will be open to make the department's top job once more the reward for outstanding service within the department. We believe that Wilson will give Chicago that kind of department if he has the kind of support he needs—the kind of support discussed in the editorial below.

[From the Chicago American, Feb. 9, 1960]

PILING ALL THE BLAME ON DALEY

It's time to apply a little objective good sense to this police scandal. It's a disgraceful one, but not unique; all big cities have police scandals, and they all involve collaboration between policemen and criminals.

But this one has produced a hysterical campaign designed to hold Mayor Richard J. Daley personally responsible for the scandal, and this is so obviously unjustifiable that we want to inject some facts into the discussion.

We very seldom use page 1 for the presentation of editorials. We use it today because we consider it important to Chicago's future to end the hypocritical effort of many Chicagoans to shift full responsibility for the scandal to one man. The creation of moral conditions in Chicago that made this scandal possible is everybody's responsibility—including this newspaper's. We accept our part of it. That's why we're publishing this editorial.

Blaming Daley for the fact that certain policemen secretly went over to the side of the criminal enemy is a good deal like blaming George Washington for Benedict Arnold.

The thing that has happened is plain: The police department, commanded by Timothy J. O'Connor, a man who didn't steal but was neither as alert as he could have been in keeping check on those who might steal nor as energetic as he should have been in enforcing high standards of conduct, slid into a state of slack discipline.

In this lax atmosphere, honest cops stayed honest because of their consciences, but cops who weren't honest (and never should have been cops), finding that nobody in authority was paying much attention to what they did, obeyed their instincts. Some became protectors of burglars for a share of the loot. Some went into the practice of burglary themselves.

Naturally the conspirators made every effort to conceal this betrayal from everybody, including Mayor Daley.

Could he have prevented it?

It is reasonable to say that, as mayor, he is responsible for the police department. But he does not personally manage the police department; that is a job he has to delegate to someone else. Clearly, he made a mistake in entrusting it for so long to the honest but ineffectual O'Connor.

But this was an error in judgment. It was not a failure of the personal integrity for which Daley has been distinguished throughout his life.

Because we believed in his integrity, we supported Daley in his campaign for mayor in 1955. Chicago's American was the only daily newspaper that endorsed him.

In March 1955, we said editorially that we favored the election of Daley because he had an unbroken record of exceptional public service as a legislator, as Governor Stevenson's director of revenue, county clerk, and as leader of the Democratic organization.

We said: "It is our conclusion that in Chicago's interest Richard J. Daley should be elected mayor."

In March, 1959, we said editorially: "Now 4 years have passed and Mayor Daley's performance has more than justified our 1955 judgment that he was the right man for the office."

So we said Daley should be reelected, and the other three Chicago dailies, which had opposed him in 1955, joined in supporting him this time.

The mayor is still advancing with the vast and complex project of rescuing Chicago from the rot that has beset all great cities in America: The deterioration of inner areas while more and more people abandon their neighborhoods and retreat to the suburbs.

Under Mayor Daley's leadership, Chicago's fight against obsolescence has been so largely won that informed people have stopped talking about the inevitably of decentralization. They see now, through Chicago's example, that cities can recreate themseles.

Leading that kind of movement is a task for a man whose mind and heart are set on making a better life for people. Daley's success as leader of this miracle of regeneration has been made possible by his dedication to the idea of building the finest metropolitan community humanity has ever seen.

Can you believe for a minute that such a man would be conniving with dishonest political schemers to corrupt the police force?

We can't and don't.

If we had reason to think he had lost the integrity that has guided him through his life, we would be using this space to tell you so. But we can't imagine such a change in his character, and we don't think anyone can honestly imagine it.

Daley now has made a swift, sound, and practical start toward rebuilding the police department. He has appointed a board of five highly informed and able men to select a new commissioner of police.

The next thing to be done is to make sure that the new commissioner and all his subordinates shall be set free from the influence and interference of politicians. Daley already has told his five-man committee that the next commissioner will have a free hand in running the department.

Captains must be sent where the commissioner thinks they can do the most good in protecting the public.

Promotions must be made under a system that will provide civil service examinations at regular and frequent intervals. That will call for reorganization of the civil service commission's procedures.

Candidates for appointment as policemen must be thoroughly examined for moral fitness.

In bringing about these changes Daley will find his dual position as Democratic Party leader and as mayor no hindrance, but a substantial help. A good many people, mostly politicians with partisan motives, have declared Daley should resign as Democratic leader.

As we have said before, when you have an honest mayor and an honest party leader embodied in the same man, the public is especially well served. There is no crippling struggle over policies between the leader and the public official.

In taking politics out of the police department, Daley the party leader will be in a particularly strong position to make politicians understand why, as mayor, he must keep the police force absolutely free to function without interference from anybody.

The sooner the mayor tells the public his plans for bringing about reforms in the police force the better it will be, we think. The people of Chicago want to be assured that the police department not only will be cleaned up, but that the strongest possible measures will be taken to see that it stays clean. We don't see any reason why Mayor Daley shouldn't announce, even before the new commissioner is found and appointed, what he intends to do to accomplish these things.

We are absolutely confident that he will accomplish them.

[From the Chicago American, Feb. 21, 1960]

SCANDAL HYSTERIA EDITORIAL PRAISED

Chicago business leaders today said they agree with the editorial published in Chicago's American, Friday, which said that "a hysterical campaign" to blame Mayor Daley for the police scandal is unjustified.

Comments included:

Joel Goldblatt, president, Goldblatt Bros., Inc.: "I gave three cheers when I read the editorial. It expresses my beliefs. Many people are too fast to knock when something goes wrong and too slow to praise constructive actions. No business has a smaller percentage of wrong people than the Chicago Police Department. Chicago, with Mayor Daley's leadership, will emerge from these disclosures a better city."

OPEN TO CRITICISM

Elmer T. Stevens, chairman Charles A. Stevens & Co., and chairman of a civic committee which developed a reorganization plan for the police department in 1933: "I agree with the editorial. Any attempt to make a whipping boy out of Mayor Daley is unfair, unwise, and unfortunate.

"Of course, he is open to criticism. He should have known of the situation some time ago. No one knows this better than the mayor himself, and no one is in a better position to solve the police problem than Mayor Daley is right now.

"The situation is so bad and so revealed that an opportunity of a lifetime confronts the mayor.

"I am confident of his integrity. I believe he has the necessary know-how. He, more than anyone I know, can make what seems

to be a disaster into one of the brightest spots in Chicago history."

Col. Henry Crown, chairman Material Service Corp., division of General Dynamics, Inc.: "I agree with your editorial. It should be kept in mind that unfortunately dishonesty creeps up in many places, even in a corporation. No director would think of blaming the president if an office boy turned up as a thief.

"The city has a great many departments and employs about 43,000 persons. In such a large number of persons you're bound to find some incompetents and some dishonest people.

"I thoroughly disagreed with Aaron Kohn when he said that 90 percent of the police are dishonest or incompetent. I think it was an irresponsible statement."

John T. Pirie, Jr., chairman and chief executive officer, Carson Pire Scott & Co.: "Your editorial is the most constructive statement yet issued. I am in thorough accord with the ideas and sentiments expressed. I am sick and tired of people who criticize and do not come up with constructive suggestions.

"As I have pointed out to Mayor Daley, it is easy to criticize. I am looking for people to help in this crisis. The editorial is extremely timely."

Meyer Kestnbaum, president Hart, Schaffner & Marx: "It is inevitable, it seems, that the chief executive is held responsible. But blanket condemnation is very unfair. "However, Mayor Daley has a very real responsibility to find a remedy.

"Hysterical denunciation is not justified and wouldn't do any good. Besides, this is the time when responsible citizens should take an interest and help work out a program.

"There should be no political condemnation, but a calm and sane approach to a solution.

"Citizens expect a constructive solution. And if this requires a separation of police from politics, then the citizens have a right to get such a separation.

"This is the mayor's responsibility, and it is incumbent upon him to see that it is done.

"It is very important that interest in this scandal does not die down. I am 100 percent in agreement with your editorial, but there is room for a further editorial pointing up the responsibility for seeing the job through.

NOT REASONABLE

General Robert E. Wood, a director of Sears Roebuck & Co.: "I agree with your editorial. If it is not reasonable to put the blame on Mayor Daley."

Willis Gale, chairman, Commonwealth Edison Co.: "I could not agree more wholeheartedly. Mayor Daley has said he will solve this problem. In other matters he has proved himself a man who gets results.

"I am in favor of giving him a chance to do so in this case. Citizens should continue their active interest, but their approach should be constructive."

Arthur Rubloff, president, Arthur Rubloff & Co.: "Your editorial is very good. How anyone can blame Mayor Daley for this scandal escapes me. The mayor will make a cleanup his main job. He's conscientious. We must give him the opportunity to work it out.

"The situation is something he has inherited. It was going on long before Mayor Daley came into office. The big question is, 'Why didn't someone do something about this before?'

"There is nothing that has bothered the mayor more than this police scandal, and he will give his best to give Chicago the fine police force it is entitled to."

The Panama Canal and the United States of America

EXTENSION OF REMARKS
OF
HON. FRANK CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. CHELF. Mr. Speaker, one of the Nation's best known editors and a recognized authority on foreign affairs, William R. Mathews of the Arizona Daily Star at Tucson, Ariz., has written a penetrating editorial regarding the course of action for the United States in the Panama situation. Its insight should be helpful to the Congress and the administration in protecting our stake in the Panama Canal.

The editorial follows:

THE PANAMA CANAL AND THE UNITED STATES OF AMERICA

Should the Government of the United States entrust 1 of its vital arteries of national defense to an inter-American police force of 100 men and a possible inter-American committee?

A report prepared at Northwestern University for a Senate Foreign Relations Subcommittee on American Republics Affairs makes such a recommendation and much more. It suggests giving the nations of our hemisphere a say in the administration of the canal now owned and controlled by our country. It goes as far as to suggest inter-American institutions as a court of international justice and an international university. In particular it wants to regionalize the canal administration by putting persons connected with the Organization of American States on the board of directors, and selling stock to various American nations, and would make the Organization of American States an advisory commission.

This report bears every evidence of being made by some sincere college professors, and some lawyers who have full confidence that international differences can be solved by finding the right legal formula. As such it ignores numerous fundamental facts.

The Organization of American States already has shown its impotency. It did nothing while Fidel Castro of Cuba was trying by military invasions to set off a series of armed revolutions in various Central American countries. It has done nothing to command the respect of the American people. Castro has defied it openly.

This proposal overlooks entirely the fact that the various nations of Latin America do not get along as amicably as many suppose. They barely work as a unit. They are intensely jealous of their own sovereignties. For anyone to assume that Panama would approve of such a plan, ignores the fact that Panama would probably be even more resentful of a group of Latin American States taking over on something that she sees as her own sovereignty.

The same fundamental difficulty would remain. The plan amounts to suggesting that the United States of America shift something that is her own responsibility to a powerless committee. That kind of evasive conduct on a matter of vital defense of our country does not do credit to the people of our country. Our people are not that slippery and cowardly.

Instead of seeking to evade our necessary responsibility we should assume it with new vigor and without any apologies. We should let Panama know that we are there to stay, that behind the few troops we have there is all of the might and power of our country, and that we will not brook any interference in the administration or operation of the canal.

Once we stop bowing to continual political blackmail, the chances are there will be less trouble with Panama. If, to the contrary, we continue to be meek and apologetic of our position there, there will be endless trouble. Sweet reasonableness is too often considered an invitation to continue troubles, which can always be found.

Panama should have the right to share in the prosperity of the canal. Such arrangements should not be hard to negotiate, but we should not propose for one second to lessen the responsibility we have assumed there for more than a half century.

Estonian Independence Day

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. ROOSEVELT. Mr. Speaker, the year 1918 saw the end of the bloodiest and costliest war known until that time. Belligerents and neutrals alike were glad to see the human carnage stop and they all welcomed the return of peace. To some peoples 1918 ushered in a new era; it brought them a prize for which they had been fighting for generations and even for centuries. In that year they regained their national independence, and the Estonians were among them.

These people had settled in their historic land long before the beginning of modern times. There, in the northernmost outpost of Europe, they led a quiet and contented, but strenuous and hardy life. They were one of the smallest ethnic groups in Europe, and they succeeded in maintaining their national identity and freedom. Then in 1710 they were subjected to Russia's oppressive czars. For more than two centuries they endured that detested regime, but they always wanted their freedom and were prepared to fight for it. Toward the end of the First World War, when the czarist regime in Russia was overthrown, they felt free and on February 24 proclaimed their independence.

That was exactly 42 years ago, and today, unfortunately, independent Estonia is no more. After the happy and joyful two decades of interwar years, the country was one of the early casualties of the last war and the unhappy Estonians were its victims. Since then, for 20 years, these sturdy Estonians have been suffering under Communist tyrants, but they still cherish, ever fervently, their freedom and independence. Their friends in the free world observe their Independence Day, and pray for their deliverance from Communist totalitarian tyranny.

Jefferson-Jackson Day Dinner

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. ABBITT. Mr. Speaker, on Friday night, February 19, the Democrats of Virginia held their annual Jefferson-Jackson Day dinner. The Honorable WILLIAM JENNINGS BRYAN DORN, Member of the U.S. House of Representatives from South Carolina, was the speaker of the occasion.

Congressman DORN is one of the outstanding Members of this House and is one of the great orators of the Nation. He delivered a magnificent address, and, under leave to extend my remarks, I include it herewith:

ADDRESS OF CONGRESSMAN WILLIAM JENNINGS BRYAN DORN, DEMOCRAT, OF SOUTH CAROLINA, AT THE ANNUAL STATEWIDE VIRGINIA JEFFERSON-JACKSON DAY DINNER, RICHMOND, VA.

"Democratic institutions exist by reason of their virtue. If ever they fall, it will be when we have forgotten the past, become indifferent to the present, and utterly reckless as to the future."

These words of a great American, spoken many years ago, epitomize the spirit of this magnificent occasion.

Mr. Chairman, as Democrats, we gather tonight in this critical hour in the history of our Democratic Party. Our party is at the crossroads. We either unite and move forward to a November victory or we flounder in defeat on the plane of agitation.

Governor Almond, Senators BYRD and ROBERTSON, Congressman SMITH, my colleagues in the Congress, and my fellow Jeffersonian Democrats, it is thrilling to see this vast assembly of Virginia Democrats. You have more than 1,200 Democrats filling every space in this great hall and adjoining rooms. This is testimony of your fidelity to and faith in the Democratic Party of Jefferson and Jackson.

Congratulations, Mr. Chairman, Mr. Secretary, and all of you. You have made this occasion one of the most outstanding in the history of the great Commonwealth of Virginia, the mother of Presidents. I see here as everywhere evidence of that superb school in political leadership—that great institution, our national House of Representatives.

It was my honor to serve in the House of Representatives with your distinguished Gov. Lindsay Almond, with your great former Gov. Tom Stanley, and with your able Senator WILLIS ROBERTSON. It is now an exceptional privilege to serve under the wise counsel of your former Gov. William Tuck.

Judge SMITH, the dean of your delegation, is our leader in the great fight we are now waging to save the United States and its constitutional form of government. We honor, admire, revere, and love Judge SMITH.

Senator BYRD, patriotic Americans everywhere are grateful to you for your magnificent efforts to preserve the economy of our beloved country. I am proud that my grandmother was Betty Byrd, whose people came to historic Edgefield County, S.C., from Virginia following the Revolution. In tribute to her and to you, I have named one of my daughters "Byrd."

Mr. Chairman, I dedicate my remarks to your Democratic congressional delegation. There is not a more loyal, patriotic, capable, and devoted delegation in the Congress of the United States.

In the early history of our country, as now, there were those who believed in a powerful central government. There were those then, as now, who worshipped at the shrine of Federal power. It would have been easy for Thomas Jefferson the aristocrat, easy for Jefferson the classical scholar, to become a political conformist and drift with the Federal tide. Jefferson was a man of principle who had great ideals and faith in the people. Jefferson was humble, honest, and considerate of the opinions of others. Jefferson was a student of people. He believed in the dignity of the individual. He believed in the individual's ability to govern himself at the local and State level. Thomas Jefferson believed "The least governed are the best governed." Jefferson's philosophy was one of special privileges to none, but equal opportunity to all. Thomas Jefferson abhorred sectionalism.

Thomas Jefferson's idealogy was pitted against that of the Federalist. A heated political campaign developed for the Presidency in 1800. Jefferson became the target of hatred, vilification, and false rumor. Even the election was deadlocked and thrown into the House of Representatives. There a bitter battle raged against the philosophy of Jefferson.

When finally elected by the House and inaugurated, Jefferson, as President, did not follow a policy of vindictiveness, factionalism, or sectionalism. He used his influence and prestige to promote unity, harmony, and the general welfare. He never forgot the man on the frontier, the citizen in the log cabins nor the little shopkeeper and the small businessman. He never lost faith in the men at the grass roots. Under his quiet, unassuming leadership, the United States became a Federal Republic of sovereign, indestructible States. Under his guidance, jealousy between the former colonies disappeared and a great Nation emerged—a Nation respected throughout the world. He inaugurated a period of unprecedented prosperity, internal improvements, and trade and commerce. The Nation grew in population and wealth. It became a vastly expanded territory with Jefferson's Louisiana Purchase.

Jefferson launched our great Democratic Party as the party of the people. He led the people to a better understanding of themselves and their role in a democratic society. Jefferson educated the people to their duties and responsibilities. He led them to realize they were a part of America. They began to look upon the Government as their agent—created and supported by themselves. They became self-reliant and independent. They had confidence in themselves and local institutions. They became accustomed under Jefferson to a minimum of Federal Government. They revolted against the very thought of Washington paternalism.

The firm foundation upon which the Democratic Party was launched and built by Jefferson carried it through the administrations of James Madison, the father of the Constitution, and James Monroe, author of the Monroe Doctrine.

After Monroe, the Democratic Party entered a period of complacency, indifference, and partisan wrangling. The first product of Jefferson's philosophy emerged upon the national scene in 1828. Andrew Jackson was living proof of Jefferson's belief in equal opportunity. Andrew Jackson was the first to prove a log cabin frontier boy could go to the Presidency of the United States without the aid of powerful political machines and monopolistic wealth. Old Hickory, a native of the Carolina hill country and son of Tennessee, breathed vitality and courage into the Democratic Party. He attacked the evils of the day with alacrity and decision. He demonstrated the people's ability to think for themselves. Jackson was the first "typical American."

The people Jefferson and Jackson loved and led were often cold, hungry, and poor. Jefferson and Jackson gave these people hope and dignity. They pointed out to them the road to success and even fame. These frontiersmen came to know and to love liberty, to cherish freedom. They became the rank and file of our Democratic Party. They struggled to preserve opportunity. They looked to tomorrow with optimism and hope for their children. They knew they were a part of America's progress and our Nation's march to a world power. They added morale to our armies in time of war. They fought for the right to go from "rags to riches."

The Democratic Party was firmly launched by Jefferson and Jackson as the party of the people. The Democratic Party became a symbol of States rights and individual freedom. Through lean dark years, it could always be revived again by a return to the principles of Jefferson and Jackson. Grover Cleveland, William Jennings Bryan, and Woodrow Wilson revived and rallied the party time and again to the old standards.

The Democratic Party has traditionally championed opportunity, sound currency, a minimum of government, a balanced budget, and the Bill of Rights. Jeffersonian Democrats became liberals because they believed in the liberties of our people. In the South today, we are the true liberals. We believe in individual liberty, States rights, and local government. Jeffersonian Democrats became a symbol against centralized bureaucracy, excessive taxation, and stark Federal power. As long as the Democratic Party upheld these basic and fundamental principles, it grew stronger and stronger through the years. It withstood the frontal assaults of other great political parties and political combinations. The Democratic Party would go down in defeat, but, on principle, it would arise again. It would meet its enemies in open conflict and go on again to victory as it did in 1932. This was because the Democratic Party adhered strongly to the sound doctrines of Jefferson and Jackson. Principles never change. They are the same yesterday, today, and forever.

In the overwhelming Democratic victories of 1932 and 1936, we adhered to the philosophy of Jefferson and Jackson. The platform was one of sound money, States rights, balanced budget, reduced Government spending, and reduction in Government bureaucracy. On this platform, the Democratic Party was victorious. We were united on principle. We rejected political expediency; but oh, my friends, in these latter years we have fallen upon evil days. There is a division in our great party. There are those who would usurp the title of liberal and under it parade the infamous idealogy of national socialism and fascism. This division in our party has been caused by those who seek special privileges—privileges of the few as against the people; by those seeking gains they have not earned—selfish interests and personal power at the expense of liberty.

The National Chairman of our great party has become the tool of these special interests, these pressure groups, these Machiavellian exponents of Federal dictatorship. Were Jefferson and Jackson alive today, they would flatly reject such a philosophy. They would oppose the powerful political machines with bloc voters, political slush funds, and ward bosses. They would be shocked to see some so-called Democrats controlled like sheep and cattle by pressure groups for the personal gain and greater glory of their leaders. This philosophy is not the philosophy of Jefferson, but of Mussolini. It is not the philosophy of Jackson, but more like the philosophy of Hitler and Lenin. This national socialist clique is dedicated to a wel-

fare state. They believe all planning and thinking for the American people can best be done in Washington. They are conformists who are trying to brainwash the rank and file to their conformity. They have no confidence in the people's ability to govern themselves at the local and State level. They advocate every measure which will further regiment our people and destroy the rights of the States and local gocernments.

These powerful sources behind the National Chairman are seeking to divide and conquer. They have left the party of Jefferson and Jackson. They do not believe in Jeffersonian Democracy. They have adopted demagogy, intimidation, vindictiveness, and sectional discrimination. Their real purpose is to form a splinter party—to create a third party, a national socialist labor party.

The late Congressman Vito Marcantonio outlined this plan to me many times. He said that we want all of you Jeffersonian Democrats and conservatives in one party, while us leftists and believers in Federal socialism should be in another party. Someday our party will come to power and America will be launched into complete socialism with only one political party. This is the goal and objective of those using our national chairman. They have no hope of victory this year. They hope to promote another 4 years of the present administration. Then, the time will be right for them to launch America into socialism.

Prime Minister Winston Churchill warned me about the danger of a conservative and a liberal party. After a liberal administration there is nothing a conservative administration can do to restore free enterprise. It is simply too late. The Prime Minister warned that there must be strong conservative elements in both political parties.

With a united Democratic Party we can win the Presidency this year. We can win with the platform of 1932 and a candidate pledged to that platform. We can win with a candidate pledged to the principles of Jefferson and Jackson. We can only win with a united party and united effort in a common cause.

The Jeffersonian Democrats are willing to meet in the middle of the road on the basic fundamental principles and issues. We in the South are not asking all elements of the party to join us on the right. We only ask the national chairman to meet us halfway. We will never abandon our convictions and go all the way to the left. We do believe there is room in the middle. There is a common meeting ground. There are mutual objectives.

The South is going to Los Angeles in good faith. We are not going to run out or back out before the firing starts. We are going to be there and fight openly for the principles of Jefferson and Jackson. We will seek to nominate candidates pledged to the philosophy of Jefferson and Jackson. We do not expect to be thrown out nor do we intend to throw anybody else out. The South will be heard from when the platform is written. We will oppose vindictive planks in the platform. We will oppose the platform being written by pressure groups, racketeers, or those claiming to speak for minorities. We are going to reject and oppose sectional discrimination. We will fight for harmony, unity, and a middle of the road platform. If radical and fascist elements gain control at the convention and throw certain Southern States out of the party, we will meet that tragedy when it arises with plans already formulated. We are determined to preserve the party of Jefferson and Jackson. We are determined to make every effort to preserve the freedoms of our country.

Eight of our first 12 Presidents were from the South. Since the election of Zachary Taylor in 1848, no Southern leader has even been nominated for the Presidency by either major political party. The South has been discriminated against for more than 100 years by the Democratic Party in its choice of presidential candidates. President Harry Truman in his "Memoirs" in volume 2, page 494, said, "DICK RUSSELL * * * had the ability, integrity, and honesty. He was one of the best informed men in the Senate * * * Senator RUSSELL was always able to present any problem in a clear and straightforward manner. * * * I believe that if RUSSELL had been from Indiana or Missouri or Kentucky, he may very well have been the President of the United States.

It is difficult for Jeffersonian Democrats to believe that real Democrats anywhere could vote against a southern nominee because of a place of residence. This attitude is undemocratic and even un-American. The South has never been guilty of such rank discrimination. The South was solid in its support of Grover Cleveland, John W. Davis, and Franklin Roosevelt of New York. It was solid in its support of William Jennings Bryan, a native of Illinois and resident of Nebraska. The South has time and again supported men like Woodrow Wilson from New Jersey, Jim Cox from Ohio, and Al Smith from New York. The South and the border State of Missouri gave Adlai Stevenson, of Illinois, his only electoral votes. Those in the Democratic Party who would run out because of a Southern nominee are guilty of demagogery, discrimination, and prejudice. They do not belong in the same company with Jefferson and Jackson. The charge that a Southern Democrat could not be elected is a smokescreen to prevent one from being nominated. This year, a southern Democrat is our only hope for victory. With a middle-of-the-road platform and the solid South behind him, such a candidate would win millions of independent voters and conservative Republicans. He could be elected. We cannot win with fancy jokes and five-syllable words. The Democratic Party cannot win with the 1952 and 1956 platforms of agitation and prejudices—platforms forced on the party by pseudo-liberals and pressure groups. If we nominate a radical or egghead liberal with the same phony platform, our nominee again will be defeated. This socialist clique in our party was overwhelmingly rejected by the American people in 1952 and 1956.

If the Democratic Party is to survive, it must continue to champion the rights of the people. Yes, it must oppose monopoly and exploitation. It must oppose selfish interests and privileges to the few. The selfish interests are no longer just Wall Street and business monopoly. Selfish interests today are those gangsters and despots who exploit labor—those ruthless agitators who for personal gain exploit minorities. The special interest of today is big government. The Nation is threatened by bureaucracy, inflation, Government spending, and centralized power.

The once sovereign citizen is being crushed today by burdensome taxation, confiscation, and loss of freedom by big government. Inflation has wiped out the lifetime savings of our people. Social security cannot pay the house rent. Unemployment insurance and bank savings have depreciated causing hardship among the aged and the poor. Inflation has destroyed the purchasing power of the dollar. Our people live in constant fear of Federal gestapo. They spend anxious days and sleepless nights worrying about the tax collector. They often pay the Government more than they should through fear and complicated tax forms. The Democratic Party must meet this challenge. The Democratic Party should champion the cause of sound money, a balanced budget, and economy. We must give the people of America tax relief, tax revision, and simplified tax forms. We must make it possible for our aged and crippled to face the future with confidence and serenity. The small businesman must be freed from unbearable taxes, Goverment regulation, and red tape. I might remind my fellow Democrats that liberty in Germany was lost because of inflation. In 1923, the German housewife carried a basket of paper money to buy one loaf of bread. America is on that road today. We are on the road to bankruptcy, dictatorship, and a collapse of our economy. If William Jennings Bryan were alive today, he would be saying, "Do not crucify mankind on a cross of inflation. Do not bear down upon labor this crown of unbearable taxation."

The national leaders of both parties are in a cold war with each other. They have shocked the American people with promises to spend more. They only offer more fiscal irresponsibility and inflation. While this hayride to the left continues, the international situation is deteriorating. Our national defense is inadequate. Our highly touted bipartisan foreign policy has become one of censorship, spending, empire building, and failure. The Communists continue their fantastic gains.

The Democratic platform of 1960 should be positive. It should be forthright. It should put first things first. The greatest single issue before the American people today is one of survival. The Communist menace overshadows all others. It is a threat to the United States militarily, through subversion and through economic war. The Kremlin believes the United States will destroy itself by excessive spending and inflation. The American people are alarmed by this administration's apparent confidence in Khrushchev. This administration seems to forget that Khrushchev is a murderer, a ruthless killer of innocent people and is dedicated to world conquest. The great J. Edgar Hoover testified a few days ago before a Senate committee that the Community Party in America, aided by the recent visit of Soviet Premier Nikita Khrushchev, is now "more powerful, more unified, and even more of a menace to our Republic * * * the recent visit of Khrushchev has done much to create an atmosphere favorable to communism among Americans."

Khrushchev is being permitted to establish a base in Cuba, 90 miles from our coastline. His agents have incited riots in the Panama Canal Zone, threatening this vital link with Western commerce. The Communists have infiltrated Venezuela, thus threatening the all important Caribbean from the north and the south.

The Democratic platform must offer to the American people a clear-cut and forthright foreign policy. We must reject appeasement and compromise. We must meet the Communist threat with the courage of Andrew Jackson. We cannot coexist with those sworn to bury us. We must warn our people of the utter hopelessness of summit meetings with those responsible for the crimes in Hungary, Poland, and East Germany. We must remember the pathetic Chamberlain and Daladier at Munich.

Our Democratic platform should call for the best defense in the world with a new world strategy geared to the missile age. If we are to survive, we must retain control of the skies and conquer space. Until the missile gap is closed, of course, our strategic air command should be partly airborne at all times. This is elemental and plain commonsense. Had our fleet at Pearl Harbor been seaborne, this disaster would have been averted. Billions can be saved in our national defense program by a consolidation of our missile program, a consolidation of our various air forces and a common supply system.

The Democratic platform must offer hope to industry and labor from excessive unfair foreign imports. We must return to the trade concepts of Cordell Hull. The trade program of Cordell Hull has been malad-

ministered and sabotaged. We have lost our favorable trade balance through a flood of unfair imports from low-wage countries. Many of these countries have no wage and hour legislation. Some use child and even prison labor. Free trade is impossible with nations having no social security, no unemployment insurance, and wage scales as low as ten cents per hour. These imports can undermine our wage and hour legislation passed during Democratic administrations. It can undermine social security and our child labor laws. It is creating vast unemployment and could well wreck the economy of the United States. Russian automobiles are being permitted to enter the United States. Textile mills are being built in Russia with American money, setting the stage for a flood of Communist goods made with Siberian slave labor. We must, as Democrats, meet this threat head on, establish a trade policy that is truly reciprocal and save the American worker and American farmer from slave competition.

The Democratic party platform must promise to eliminate waste and extravagance in foreign aid. We must reduce foreign aid. We owe more money than all of the rest of the world combined. Our gold reserves have poured abroad. We are in a precarious fiscal position. While creating inflation at home, high taxes and an ever increasing national debt, we are building up competition abroad with our own workers and farmers.

The Democratic platform should contain a plank to free our farm families from Government control and depressing prices caused by these stupendous surpluses. The cattle farmer is relatively prosperous only because of a minimum of Government controls. Our farmers are forced to plant less and less while surpluses grow larger and larger. The family-sized farm must be preserved. Rural people have always furnished balance and stability to representative government. The Declaration of Independence, the Constitution, and the Bill of Rights were largely products of rural philosophy.

The Democratic platform must deal with the stupendous annual interest on the national debt, the national debt itself, and a balanced budget. We must offer some encouragement to the youth of our country by reducing the national mortgage on his future.

The Democratic Party platform must offer tax revision on a fair and equitable basis. We can offer a tax revision that will encourage incentive, initiative and the willingness of businessmen to take a chance, employ more workers as well as expand and grow.

The Democratic Party can offer to every American the prospect of a raise in salary through sound money and curbed inflation.

The Democratic Party must reaffirm its faith in our capitalistic system of free enterprise. We must reaffirm our faith in the opportunity system that gave to America the highest standard of living ever known to man. We must guarantee to business less Government interference.

The Democratic Party, as always, must uphold constitutional government, States' rights and individual liberty. We must protect our people from an ever more powerful Executive, and over zealous Supreme Court and now a World Court. Even minorities who constantly run to Washington cannot find in the Executive, in the Attorney General or a Federal Gestapo the fullest measure of protection or equal consideration. They cannot find in concentrated Federal power the avenue to more freedom and opportunity. This can only come through the philosophy of Thomas Jefferson and Andrew Jackson, States' rights and free local government. Centralized power can and will become the machine of intimidation, persecution, and liquidation of minorities. It can never become so on a nationwide basis as long as we have sovereign States and free local government.

With a candidate pledged to Jeffersonian democracy and this platform, we can win. Only 51 percent of the American people eligible to vote cast their ballots in the presidential election of 1948; only 60 percent in 1956. With this platform, the unemployed glass workers, the chemical workers, and the coal miners of West Virginia and Pennsylvania will go to the polls. The textile workers and shopkeepers of New England will have an incentive to vote. The curtailed autoworkers of Michigan, Indiana, and Illinois will take heart. Millions of farmers and small businessmen in the West and Midwest will vote for the first time in many years. They will vote Democratic. The housewife will be out on election day to protect her family from cheap money. The Democratic Party cannot win with a me too platform. We must and can give the American people a clear-cut choice. We can win with the 45 million people who did not vote in 1956 because they had no choice.

One of the most glorious chapters in the history of our Republic was written by the magnificent Commonwealth of Virginia. The story of the Declaration of Independence, the Constitution, and the Bill of Rights is largely a Virginia story. Four of our first five Presidents were nurtured by the soil and environment of the Old Dominion. Four of the five greatest military commanders in the history of the Western World were Virginians. We cannot imagine the American Republic without Patrick Henry, George Washington, and George Mason. Your Thomas Jefferson, the founder of our great Democratic Party, is revered and loved by the whole free world. The visitors to our Nation's Capital from the remote places of this earth pause at the beautiful Jefferson Memorial to pay homage to the memory of a Virginian dedicated to freedom. Millions from throughout the world read in hushed silence, "I have sworn upon the altar of God, eternal hostility against every form of tyranny over the mind of man."

Citation to Milton S. Kronheim, Sr.

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, February 25, 1960

Mr. DODD. Mr. President, last night, the National Conference of Christians and Jews bestowed upon Milton S. Kronheim, Sr., its annual brotherhood award.

Mr. Kronheim is a kind human being, who has never hesitated in lending a helping hand to any person or cause in need. He is constantly furthering the cause of brotherhood among mankind, and this country today is a better place in which to live because of men like Milton Kronheim.

I can think of no one more deserving of this award, and I ask unanimous consent that the citation given to Mr. Kronheim by the National Conference of Christians and Jews be printed in the Appendix of the RECORD.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

CITATION

The National Conference of Christians and Jews acclaims for his devotion to national and community service in the field of interreligious and intercultural concern Milton S. Kronheim, Sr. a man who anticipates a need and acts upon it without waiting to be summoned; a man who quietly and without ostentation seeks opportunities to serve and assist his fellow men; a man who has implemented a dream by sponsoring Interfaith Day in the National Capital area; a man of humility, of honor, an outstanding citizen of his community, his Nation, and the world, who by his deeds has brought closer the realization of the brotherhood of man under the fatherhood of God.

Suwannee River Regional Library

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. MATTHEWS. Mr. Speaker, I believe that libraries are one of the greatest blessings of humanity. If men are to remain free, they must read. They must also be able to discriminate between truth and error. I am very pleased with the great progress we are making in the Eighth District of Florida in the development of our libraries, made possible by the Library Service Act passed in 1956. In this connection I am pleased to enclose an article entitled "Suwannee River Regional Library," by the director of the Florida State Library, Verna Nistendirk, from Florida State University, Tallahassee, Fla.

The article follows:

SUWANNEE RIVER REGIONAL LIBRARY
(By Verna Nistendirk)

Dreams do come true, especially in the Suwannee River Regional Library area. When the Library Services Act was passed in 1956, the small Suwannee County Library interpreted LSA to mean "Let Suwannee advance." The county library could not meet the requirements of the State plan for a grant because it had only $6,312.75 income, the yield of one-half mill of the nonexempt tax valuation, and a population of 17,500. So the library board approached the Women's Club at Mayo, county seat of adjoining Lafayette County. With their help, the county commission agreed to appropriate one-half mill, only $1,182, to establish library service in little Lafayette County, population 3,400. This was October 1957.

By January 1958, the two county library boards had formed Suwannee River Regional Library, with $28,204 in funds. Of this amount, $9,595 came from local funds and $18,629 from grant funds. But their problems were not over. No qualified librarian could be found. A consultant from the State library was loaned to them to administer the region until a librarian was employed. The 3,100 book collection rapidly grew to some 10,000 titles, some loaned from the State library. A bookmobile was ordered and put on the road. By September, each of the counties had appropriated money for the next year's operation and a librarian, Henry J. Blasick, was on duty. The second and final year of the grant was about to begin.

The headquarters library at Live Oak and the community libraries at Mayo and Branford were attractive with fresh green paint and new furniture. They were air conditioned and on the shelves were brightly jacketed books. Personnel on the small green bookmobile and in the branches were

alert and friendly. The people from all over the county responded to the good service. Residents ranging from the county commissioners to the schoolchildren talked about books and libraries.

On December 2, 1958, a select group of citizens representing key organizations and officials from six adjoining counties were invited to Live Oak to talk about library service. The State senator, county officials and library board members and staff as well as State library personnel explained the program to the visitors from the five counties that responded. At the close of the program those counties were issued an invitation to join the region if they were interested.

The response was immediate. The bookmobile visited all these counties; the librarian, board members, and the public library consultant from the State library talked to groups all over the counties. On February 14, 1959, Gilchrist County voted to join the regional library system and to provide funds for its support. In March, Hamilton County officially moved to join the region. During the first week of May, Taylor, Columbia, and Madison Counties joined in that order.

These north Florida counties are not unusual. They are tobacco-farming, pulpwood-producing counties with some furniture manufacturing and other small industries in the towns. No town had a population of over 10,000 and there are no wealthy residents. There is a new junior college in Madison but no other college or university in the area which has a total population of 75,695. All except Taylor County are on the beautiful Suwannee River. The region reaches from the Georgia State line to the Gulf of Mexico, roughly 90 miles north and south and about the same distance east and west. Traffic is no great problem on most of the excellent roads.

Gilchrist, Hamilton and Lafayette Counties had no public library of any sort within their boundaries. Columbia and Taylor Counties had very small popular-donation Woman's Club libraries with no visible support. Madison County Commission provided less than $1,000 per annum to be divided among the two small libraries at Madison and Greenville in that county. Only Suwannee had made real effort toward library support previously.

The next stop was to organize the region and get ready for service at the beginning of the new fiscal year on October 1, 1959. Each county had a five-member board. The 35 members are the full regional library board. They meet quarterly, rotating their meetings from one place to another. Normal attendance is 23 to 25 persons. Matters of policy and all-over procedure are of concern to this group. Details for any county are taken up on the county level and any county board may meet on call. The regional librarian attends all county meetings as well as regional meetings. The assistant librarian serves as secretary to the board.

The seven county boards sign a regional library contract and each county signs an individual contract with the State library board when it receives its rural development grant funds. The regional board employs the head librarian. They approve his employment of the rest of the staff. Each county board helps with decisions on bookmobile stops, publicity and public relations to acquaint the area with the library and with plans for raising the budget, promoting State aid and raising the caliber of service.

On July 1, a trained assistant librarian was employed. A second bookmobile was ordered and many more books were processed to prepare for the new service area.

Suwannee and Lafayette Counties had completed their rural development grant periods but each would receive a small bonus for bringing other counties into the program. Altogether, for 1959–60, the local libraries would provide $36,094 and the rural development grants would bring $38,997 to the area.

Actually, each county provides more than the equivalent of one-half mill. The city of Trenton built a lovely new red brick building to specifications to house the Gilchrist County Library. Madison and Mayo use discarded jails but they are freshly painted and there is attractive furnishings. Lake City in Columbia County was once police headquarters and a floor covering display room. It has been completely remodeled with donated work by interested citizens. When all the donated paint was not exactly the same color, they poured it all together and the exterior turned out to be a lovely medium green. The Hamilton County Library in Jasper was once a department store warehouse. The owner donated air conditioning and the city of Jasper pays the rent. Interested citizens provided furniture and drapes. The Woman's Club building in Perry houses the Taylor County Library. The communities pay for all utilities and have often made other nice gifts. By next summer, all nine community libraries will be air conditioned.

October 1959, was a big month for the region with formal library openings at Trenton, Perry and Jasper. Lake City Library was opened a little later. There are 9 community libraries and 2 bookmobiles with 127 stops serving the 7 counties. The headquarters at Live Oak is open 50 hours weekly, Perry and Lake City are open 40 hours, Mayo 24 hours, Madison, Jasper, Trenton and Branford are open 20 hours weekly and little Greenville's station is open 10 hours. All have access to telephone service for reference and renewals.

From a small collection of 3,100 books in 1957, the region now has 23,500 books of which about 3,000 were the gift of the Miami Public Library. These are good titles no longer used at Miami's branches or gifts which are duplicated in sufficient quantity in their collection. The Suwannee region has approximately 4,500 books on loan from the State library. Between 7,500 and 8,500 books are in circulation from the various outlets at all times.

Most of the current book budget of $13,271 has been expended and the region has far too few books. Many basic titles are not available with this small sum. Demands range from scholarly to the most ephemeral. Even with the constant use of interlibrary loans, all demands are not met. The Dorothy Canfield Fisher Award is just like manna from heaven. Reference materials, duplications of good titles, and some needed new material will be purchased. Every book will be well used. Most popular material will be rotated from library to library on a quarterly basis.

Don't Drink the Water

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Salt Lake City Tribune of February 16, 1960:

DON'T DRINK THE WATER

A recent warning of widespread stream pollution in Wyoming by an official of that State's health department should be heeded by other States in the region.

Sanitary Engineer David Green said that the tourist industry, second richest in Wyoming, was in danger of being destroyed by failure to safeguard the health of visitors.

While the number of persons using campgrounds is growing fantastically, only a few of the 55 roadside picnic areas, municipal and private campgrounds, and 145 Federal camp areas in Wyoming are supplied with safe water, Green warned.

While the ordinary person would not think of using water from a stream running through an urban area, many tourists mistakenly believe that the clear sparkling water in mountain streams is safe, he said. In many cases it is diluted sewage, the sanitary engineer warned.

The large number of campers using the scenic areas with insufficient sanitary facilities is contributing to the disease problem, Green said.

"Don't drink the water" signs are being placed in several of Wyoming's vacation areas, but clearly this is not enough. Alleviation of stream polution, more sanitary facilities, and a larger staff of sanitarians are needed.

Some of the States with the richest potential in expanded tourist business may be "killing the goose that lays the golden eggs" by failing to cope with pollution.

For the Record

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column of Ed Sullivan entitled "For the Record" New York Daily News, February 19, 1960:

FOR THE RECORD

(By Ed Sullivan)

Marines died at Iwo Jima and Guadalcanal for the common good of Americans.

For the common good, Air Force kids under Doolittle died over Japan. Navy men died in many oceans.

In World War II, 291,557 American youngsters died and in the Korean war, 33,629 died—all for the common good.

You wonder if Hollywood producers Stanley Kramer and Otto Preminger aren't so bemused by individual rights that they've forgotten the larger goal of the common good.

Hollywood writers Dalton Trumbo and Nedrick Young were well within their individual American rights in seeking refuge in the fifth amendment, which wisely was designed to protect each of us from testifying without a lawyer, without the right to confront accusers in open court and without the right of cross-examination. Lacking the protection of the fifth amendment, individuals might say something that easily could incriminate or degrade them.

But in the clear and present danger to our country that is posed by Russia, the common good becomes the issue of greater importance. Individual rights become subordinate to the common good.

Stanley Kramer, of course, is well within his rights in engaging Nedrick Young. Just as Otto Preminger is well within his rights in employing Dalton Trumbo.

Equally the American Legion is well within its rights in directing the attention of Americans to the fact that these two writers

refused to answer questions of the House committee that called them before it. The American Legion is well within its rights in proposing to call further attention to the issue and to discourage attendance at the pictures in which these writers are involved by peacefully picketing theaters where these pictures will be shown.

Kramer says that he will vigorously fight against picketing.

Well, the American Legion can go back to May 12, 1948, when I played the Roxy Theater as the companion stage show to Director William H. Wellman's "The Iron Curtain."

We were picketed by Commie sympathizers for 4 weeks because this picture, starring Dana Andrews and Gene Tierney with June Havoc, Edna Best and Nicholas Joy in support, dramatized the spy network established by the Russian Embassy in Ottawa, spreading all over Canada. Kate Cameron, in reviewing the Roxy attraction, called attention to the screaming, jeering Commie picketeers.

The night before we opened, the Commies held a mass meeting at Madison Square Garden and marched from the Garden to the Roxy and staged a tremendous demonstration. For the 4 weeks we played there, the Commies continued their noisy opposition.

At that time, I heard no voice out of Hollywood protesting the right of Commie sympathizers to picket us. Certainly I heard no sound of protest from Stanley Kramer or Otto Preminger.

To refresh memories, let me point out that the Commie opposition was so violently vocal that the Roxy Theater could not persuade any headliner to appear on the stage. So I agreed to the date.

During our Roxy run, the doorman at the adjacent Taft Hotel, a big rawboned Irishman by the name of Ryan, pointed out to the police that many of the Commie picketers around the theater were employees at the Taft Hotel.

The Commies, by exerting pressure on the hotel management through Commie dominated hotel unions, forced the hotel to discharge the doorman Ryan.

This column exposed the story of Ryan's discharge. Immediately, bellboys and personnel from other hotels rushed to Ryan's aid by picketing the Taft. Their ranks were swelled by American Legion and Catholic War Veteran picketeers.

The Hotel Taft reengaged Ryan. So picketing often is in the common good.

Medical Progress: A Look Ahead

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include a speech which I delivered at the Beth Israel Hospital dinner at the Statler-Hilton Hotel, Boston, Mass., on November 29, 1959:

MEDICAL PROGRESS: A LOOK AHEAD

It is a genuine pleasure to join with you this evening as you reflect upon the many accomplishments of the last half century and look ahead to the challenges of the future. Beth Israel's record has been one of inspired service and steady growth since the early dispensary days of the Mount Sinai Hospital which led to the creation of this outstanding teaching institution. I have long been aware of the vital role of such institutions, and I heartily congratulate Beth Israel upon its long and distinguished service.

During the past score of Beth Israel Hospital's 30 years of progressive teaching, research, and healing activities at this site, I, too, have been deeply concerned with the serious matter of building our Nation's United States, where health issues have alprivilege to serve in the Congress of the United States, where health issues have always been my primary concern. After these many years of close association with medical scientists and educators, as well as with those who determine Federal policy, I welcome opportunities such as this to look ahead toward further medical progress.

Foremost in the advances of the last few decades of life-saving progress in medicine has been the application of research findings from the medical and biological sciences. This period has been the most fruitful one that the world has ever seen with respect to scientific achievement, and we are indeed fortunate to be living in these times. As a layman, I cannot presume to discuss specific details of medical research. However, without enumerating the thousands of developments including antibiotics, heart surgery and all the methods and materials for diagnosing, treating, and preventing disease, I wish to express my profound appreciation of them.

I am particularly pleased with the part that hospitals such as this have played in bringing health benefits to the public. Research training for our young doctors in real hospital situations, with real patients and with the supervision of senior physicians has proved itself, as you all know, a keystone in the whole national health picture. Our ablest medical investigators and practitioners continue to come from this background. The Nation looks to your institution and others like it for both the development of our physician potentials and the evaluation and application of new research findings.

Because of my interest in medical and health research, I am aware, as I'm sure you are, that this is the shining hope of the human race for a healthier, happier future. In my role as chairman of the House subcommittee receiving the testimony of medical scientists in connection with appropriations for the Department of Health, Education, and Welfare, I do a sizable amount of "homework" myself, reading over the testimony and the reports that sketch the progress of research and its probable application to practice.

From this "homework," I gather that our medical researchers now think that we can look forward perhaps—and I know that they stress the perhaps—to such advances as the following:

1. Solution to the present question of whether some or many human cancers are caused by viruses, with all that this implies for possible prevention or treatment.

2. Better, or perhaps complete, understanding of the artery disease which medical men call atherosclerosis. From such understanding would come methods that physicians could advise for prevention or treatment of this major cause of death.

3. Better drugs or other means for treating high blood pressure, resulting from an understanding of its cause and, with this understanding, development even of a rational method for its prevention.

4. More and better vaccines for control or prevention of infectious diseases, including tuberculosis and the common cold.

5. New knowledge in the field of mental and emotional disease, not only of environmental factors concerning or causing mental illness, but also of the role of drugs and, most importantly, of the chemistry and physiology of the brain.

Perhaps from advances in this last area will come the most striking changes in the practice of medicine. I have been told that physicians in the future—and I hope it will not be a too distant future—will be applying much new knowledge in the field of mental health to both individual patients and to community groups. Through such an approach we—you as physicians and supporters and I as a legislator—may be able to help in achieving a more intelligent social environment, so that each of our younger and our older citizens can better make his total contribution to his community and his nation.

A major concern of everyone in the health professions today, and an even greater concern for the years ahead, is the growing proportion of elder citizens in our population. We have much to learn about the basic processes of aging, to say nothing of our joint responsibilities to this group which the increasing longevity brought by medical progress assures that most of us will join. As many of you may know, the bill which I introduced and sponsored for a White House Conference on Aging became law last year. With careful groundwork throughout all the States paving the way, the Conference is scheduled for January 1961. I know that this audience will need no urging to consider and to act upon the recommendations of this important meeting when they are promulgated, and I hope that they will represent a real platform for progress against the aging problem.

I know that you here today look forward especially to such future advances, as I do, and I can assure you that as our scientists show us, through their research, the way to improve the health of individuals and of communities, I as a legislator, stand ready to help in every appropriate way to implement the improvements. Furthermore, I am confident that your staff is keeping closely tuned to the scientific pulse, eager to relay the very latest research results from the laboratories to medical practice.

Now, let me talk a few minutes about some of my hopes in the broader area of world health—the area of international medical research. Probably some of you here this evening have studied or worked abroad. Certainly many of you, while students, interns, and residents, established friendships with men and women who, students or interns then, are now your colleagues in medicine in other lands. Such associations have undoubtedly shown you what a strong common bond medical science forms between world powers.

This summer, I was fortunate enough to attend the World Health Assembly with some of these dedicated health workers from all over the world. As in several previous assemblies, I was one of the official delegates and, as before, the meeting was an encouraging one to all those who have high hopes for medical progress and its role as an aid to world peace.

A major concern of the Assembly this year was the advancement of medical research. In my opinion, no subject could be more important, or more timely, for deliberation by the Assembly.

On my way to and from Geneva I visited medical and health workers in London, Dublin, and Rome. Everywhere I went, I found these men and women in agreement with me on the importance of expanding medical research. They feel, as I do, that expanding research and disease control around the world is one—perhaps the one—truly global effort in which all nations can and will join as real partners.

As I visited various healthworkers, and talked with others at Geneva, I gained fresh, firsthand knowledge of some of the health problems of the world, some of the potentials, some of the programs and their costs. These matters may be familiar to

you. Yet, perhaps, the pace of modern business and the demands of daily practice have prevented you from keeping fully informed of worldwide—as well as our own—needs for research, for more trained medical manpower, for health facilities, and for better education and information dissemination. I can assure you that the needs are many and great, but, equally, I am certain that we are entering a new era of greater interest than we have ever seen, on the part of more people everywhere, in doing something really progressive to meet these needs.

World interest and participation in medical research is at a high level, a fact which is reassuring because our total current medical knowledge has been derived from all quarters of the globe. You know better than I that the roots of most great medical discoveries lie in scientific findings contributed by many investigators over the course of many years of work.

An all-important segment of any medical research program is that of clinical investigation. It is common knowledge that careful observations at the bedside and in the clinic—such as the men and women in general and special practice and in hospital practice make every day—have often pointed the way to important advances in the control of disease. This hospital has done a good share of this kind of work and I'm certain that it will multiply such activities in the coming years.

In today's newer hospital facilities we can observe several significant trends in addition to research orientition. City hospitals are moving toward the suburbs—and it has been predicted that probably most of them will be in or beyond the suburbs within 50 years. Closely related to this movement is the trend of hospital architecture toward more spacious and appealing, even motel-type, accommodations, intended to foster more personalized care.

Along with the blessings of increased medical knowledge, we must expect that only the larger hospitals will be able to offer the full range of expensive diagnostic and treatment services and equipment. Each such major institution may be affiliated with a number of smaller hospitals, clinics, and community centers which might perform their supporting functions more effectively in an integrated health care structure of this kind.

Many communities are approaching this kind of medical care organization today, I understand. To all communities, I would recommend that they look ahead 5 to 10 years, or more, to assess their anticipated population growth and the extent of their expected resources and every other foreseeable, related factor. Now is the proper time for community leaders to determine how their present institutions may contribute to future medical care, and what must be done to offer the latest discoveries of medical science to the community.

Increased medical services will most certainly be accompanied by increased costs. Since hospitals must compete in today's labor market for medical care personnel, wages must rise. The necessity for more tests, personalized care, and more complicated equipment can only mean higher costs. A few factors will help to offset increased costs, but experience shows that costs will inevitably go up.

Integrated care planning should reduce costs by eliminating duplication of complicated equipment. Then, too, a concerted effort to shorten patient stay at the hospital will help to ease individual burdens. Increased outpatient service would also result in reduced burdens plus more effective use of available space, but obviously such measures cannot overcome manifold economic pressures.

However, I don't believe that there is any likelihood of a swing to socialized medicine. Present trends suggest that a vast extension and stabilization of prepaid medical and hospital care plans of various kinds will absorb much of the cost to the consumer. Most Americans still have a strong independent nature characterized by the desire to pay their just debts, and there are bound to be solutions to the problem of adequate medical care for all if we all will work hard enough together to find them.

In complex medical financial problems of national scope, the Federal Government will take action, as it has in the past. We are all well aware of the appropriations which have been made in the interest of national health and which have been continually, rightfully, and needfully on the upswing. I can assure you that we in Congress are making every effort to see that the taxpayer's dollars will be appropirated and spent only when they are urgently needed and only where they can do the most good for the advancement of the people's health.

In a moment, I would like to mention some of the current pressing medical problems which are being deliberated in many places today, and which influence any looking to the future. First, however, I want to set forth a few of the basic, general considerations which I follow in judging between the many competing needs for Federal funds:

1. The most vital factor in the strength of a State or nation is the general health of the people. Poor health can sap the nation's strength and undermine its productivity.

2. Medical science needs to learn much more about the basic laws of human health and illness. We must have more medical research in order to increase our healing resources.

3. Much of the medical knowledge which is already in our hands is not being applied as widely as it should to fight disease and relieve suffering.

4. Money wisely spent on health is by far the greatest bargain anywhere in the economy.

These are among the truths which I hold uppermost in my mind in presenting national medical issues to the Congress and the President. During the past year these principles led me to call attention to problems which seriously threaten to impair the progress of medical science * * * and its application as well. If you will allow me to quote from a letter I wrote to the President this summer, it will highlight, I believe, the medical manpower problem's practical contents and those closely related problems affecting our hopes for the future progress of medicine: the needed research and teaching facilities and the current care needs of our people which compete for our tax dollars.

My opening paragraph to the President read as follows: "The Nation is facing a shortage of 3,000 physicians and 4,000 dentists over the next 10-year period. This prospect imperils the maintenance of our present health standards and precludes the expansion demanded by our growing and changing population. It will deny needed improvement in the level, quality, and distribution of the Nation's health and medical care services."

I went on to explain in some detail that these estimates were based on highly predictable population trends and the ration of physicians and dentists to population. I also pointed out that the medical schools admitted that they could do but little about increasing the current rate of graduates.

The President's reply to my letter stated that this problem required still more investigation to substantiate what I believed to be well-supported estimates of the needs. Naturally, I was more than pleased when, just a few days ago, eminent consultants reported similar findings.

The report of the Consultant Group on Medical Education to the Surgeon General of the Public Health Service concluded that probably the greatest immediate obstacle to expanding the Nationu's medical education capacity is the problem of financing needed physical facilities, particularly those for teaching as contrasted to research and hospital construction which have been federally aided, as you know, quite substantially.

Thus we see that right now, in the face of aroused awareness of the continuing need for more research and research facilities, we must consider the practical need to staff our laboratories of the future as well as to increase our future supply of practitioners and teachers. Medical knoweldge has progressed tremendously in the last few years, but to be realistic we should liken present-day understanding of health and disease to an iceberg, the true dimensions of which are still hidden from our view.

Now, as we pay tribute to those who foresaw the need for this institution at the turn of the century, and those who underwrote its start as a teaching institution 30 years ago, we too must plan for the future. We must look ahead with the full appreciation of the past roles of voluntary organizations and federally supported agencies, knowing that both are essential to medical progress in this country.

Teaching hospitals like this are the essential places to which the medical graduate looks for the final refinements of his education, much as the telescope mirror looks to the polishing rouge to make it effective in focusing on our environment. These training grounds for our budding medical scientists and practitioners have a fundamental responsibility to increase their capabilities. As the population growth soars, your leaders must anticipate the needs and devise effective means to expand, but they may also anticipate greater Federal endorsement in accordance with the trends of increased medical appropriations in recent years.

It is time to seek out the means for the needed expansion, and I'm sure that this audience can be as resourceful, if not more so, as the Beth Israel leaders were in the early thirties.

It is time, too, to be reexamining the hospital's position in relation to the other health facilities in the city. How much larger can it and should it grow? What additional functions it can undertake and what services might better be done elsewhere are questions which I'm sure you answer every year. I only urge that these answers be derived in proper perspective to your overall community health organization.

Finally, since you have such a vital interest in the graduates of the Nation's medical schools, it is time to consider your own roles, both as a teaching unit and as individuals, in fostering basic medical education.

These are just a few thoughts to bear in mind as you look ahead to ever greater medical achievements. I'm sure you will have many more ideas.

The road ahead may not be an easy one. No doubt it will take more of the persistence, knowledge, patience, and hard work that paved the way to accomplishment in the past. But, with your continued vigor and enthusiasm, I promise that the results will surpass your highest expectations.

Further Concentration in the Food Industry Noted in Article by Ed Wimmer

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. PATMAN. Mr. Speaker, Mr. Ed Wimmer, of Cincinnati, is known and recognized throughout the United States as an outstanding advocate of small business. His efforts in this direction are unrelenting. They are especially effective for they reflect his wide knowledge and understanding of the problems facing the millions of small business concerns striving to maintain their competitive strength despite the high degree of concentration resulting from increased mergers and corporate acquisitions.

Ed Wimmer, who is vice president of the National Federation of Independent Business, writes a column each week for the Cincinnati Enquirer. Recently, he wrote about the plans of one of the large national chains to expand its operations, to buy out a number of existing retail stores. I ask unanimous consent that his article which appeared in the February 8, 1960, issue of the Cincinnati Enquirer, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATIONAL TEA TO INVADE OHIO VALLEY: CONGRESS STUDIES TREND

(By Ed Wimmer)

The National Tea Co., billion-dollar food chain headquartered in Canada, has announced plans to invade the Cincinnati and Dayton, Ohio, market. Says an official of the company:

"We may acquire existing outlets or open new markets."

Giant National Tea was acquired by Garfield Weston & Associates in 1955, which tied the chain to George Weston Ltd., Toronto, distributor of many food products throughout Canada, which, in turn, operated Weston Biscuit Co. with seven plants in the United States. The Southern Biscuit Co., Richmond, Va., American Biscuit & Cracker Co., Tacoma, Wash., Loblaw Groceterias with 150 stores in Ontario; Loblaw, Inc., with 146 stores in New York, Pennsylvania, and Ohio; the Council Oaks chain with 87 supers plus other small chains in Tenessee and Mizsissippi, plus H. A. Smith Wholesale Grocery Co., Detroit, Mich.

Announcement of new invasions by officials of this huge conglomerate followed closely on the heels of a Federal indictment charging National Tea with monopolistic practices similar to those brought against several other chains. It also comes at a time when various congressional committees are studying means to halt or unscramble the biggest combines in all retail fields, among which are three bills by JAMES ROOSEVELT, which seek to:

"Amend the Federal Trade Commission Act to prohibit vertical integration in the food industry; amend Packers and Stockyards Act to get the chains out of the meatpacking business and keep packers out of the retail business, and amend section 7 of the Clayton Act to require notification of any merger involving a company worth more than $10 million."

A subcommittee headed by ROOSEVELT held hearings in numerous areas last year, and members expressed considerable alarm over trends to monopoly in the chainstore field. Figures were given out which showed the three biggest chains in control of "30 percent of all retail food sales in the United States, with three chains accounting for 47 percent of food sales by chains." In most of the largest cities a handful of giants were in virtual control, and their greed for more stores, factories, and other enterprises is without parallel in American history.

Certainly, no community is bettered and the whole country is greatly harmed by such trends. Students over the United States no longer look to the retail field for opportunities to become independent, accountable citizens. Furthermore, all student polls show a growing belief that all big businesses and banks should be taken over by the Government, many saying their chances of becoming a "free, creative, moral, individual personality" are too slim with monopolistic trends what they are.

It was America's most illustrous historian, Charles Beard, who proposed a system of "domestic cartels, operated by a planning commission controlled by labor, industry, and Government" George Romney, American Motors president, says that such controls are just around the corner if the Bigs are not broken up, and press opinion all over the United States is swinging to this view.

Every time a chain buys another chain, an advertiser disappears. Brokers, wholesalers, salesmen, advertising men—everyone—is harmed, and fewer employers mean more power built up in bigger unions, giving collectivistic trends in agriculture, finance, and government, another spurt.

A policy statement of the Committee For Economic Development sets forth that "no free society can survive on any foundation other than one which guarantees a maximum of individual enterprise, and a minimum of power in the hands of the few."

Here you have the key to a program of decentralization that could unlock the greatest period of spiritual, economic, and political regeneration in the history of the world.

Boys Town Jerusalem

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. ZELENKO. Mr. Speaker, I take pride in bringing to the attention of the Congress a report of the progress of a most worthy project, Boys Town of Jerusalem. This undertaking, which has done much to foster our good relations with the State of Israel, has been nurtured and maintained by the voluntary contributions and efforts of a dedicated group of Americans whose purpose is not only to guide young Israeli boys on the path of education and democratic ideals, but to foster by example, such a spirit throughout the world. At its fifth annual fundraising dinner, it honored Henry L. Schenk, one of New York's leading philanthropists. The organization is under the guidance of Ira Guilden, president; Samuel M. Elowsky, chairman of the board; and vice presidents, Max Abrams, Mortimer Edelstein, Samuel Herskowitz, Alexander P. Hirsch, Henry Hirsch, Morris Kavy, Marvin Kratter, Samuel S. Schneierson, and Isaac Sholom.

The address of the evening was delivered by Dr. Buell G. Gallagher, president of the City College of New York. Dr. Gallagher's talk is of such national significance that I herewith place it into the RECORD:

It is a great honor to be permitted to stand here tonight to pay tribute to a man, an institution, and a nation. And because the man is a distinguished leader in business and philanthropy like Henry L. Schenk, the institution is Boys Town Jerusalem, and the nation is Israel, this honor is for me a personal pleasure as well.

And this personal pleasure, coupled as it is with warm congratulations to those who provide the funds for the upbuilding of Boys Town Jerusalem, ought to give to my words tonight a special quality of appreciation and meaning. Indeed, that had been my intention, as I thought about what I should say tonight. But in the weeks which have intervened between the day of my acceptance of the invitation to speak and this night of my appearance, other concerns have crowded in upon us. Tonight we see the bright picture of educational philanthropy against the somber backdrop of recent events. My words of warmth and congratulation must, therefore, be spoken with a heart that is heavy and a spirit not untroubled.

Fourteen years after the brutal inhumanities of nazism had been halted, and 12 years after Israel became a free nation, the ugliness of anti-Semitism reappears and the uneasy peace of the Near East teeters uncertainly. This fifth annual dinner of Boys Town Jerusalem convenes under a gathering cloud of worldwide proportions, a cloud which has not yet shut out the sun, but one in which the gathering storm is forecast.

There are those who would dismiss recent events with a shrug, insisting that there is no organized pattern to indicate a world conspiracy. They are probably correct in asserting that there is not at this moment a worldwide organized conspiracy, but they are wrong in shrugging off what is happening. For if there is no organized movement, then we are witnessing something far more sinister and dangerous, the recrudescence of bigotry and hatred and inhumanity, without an organization to call it forth. Swastikas painted on a German synagog have been matched by paint daubers and window breakers and cemetery desecraters in England and Italy and the United States of America. Not only in Cologne, but also in Brooklyn. Not only in London, but also on Staten Island. Not only in Rome, but also in Manhattan. And in Atlanta and Chicago and the Bronx and Queensboro. If nobody organized it, and all these things only happened by spontaneous imitation, then the truth is that the world is peopled by a humanity which everywhere carries within its breast the dark sentiments of hatred, contempt, and bigotry.

To be sure, there have been abortive attempts by older teenagers to set themselves up as junior-size Hitlers. Here in New York City, every arrest connected with the vandalizing of religious edifices has been of persons not yet in their majority. It might be said by some that this is only a form of juvenile delinquency. It is delinquency, all right; and its identified practitioners are juveniles—but it is no innocent passing fad like rock and roll. It is not just another hula hoop craze. It is the crazy contagion of vicious example. And when a judge characterized it as treason, an offense punishable by death, he was technically outside the law but actually well within the spirit and meaning of it. For this is the contagion

which sent 6 million emaciated bodies to the ovens. This is the contagion which kills the body and poisons the spirit of man. It is a contagion far older than the Black Plague of the Middle Ages, far more destructive in its ultimate potential, far more to be feared.

This is the disease with which Hitler infected a desperate Germany; and in the fevered flush of that sickness a whole continent was laid waste.

This is the sickness with which the lords of the Kremlin have infected the people of the Soviets; and in the sullen obstinance of that disease, Jewish culture has been smothered.

This is the nauseous malady with which the white citizens councils infect America; and that is what put the bullet-riddled body of a Negro truckdriver into the muddy waters of a Mississippi river.

This is the curious pathological state of mind which will not let Jew and gentile live in the same housing development, which sets black against white in the mutual destruction of homes, which says the U.S. Supreme Court has gone communistic when it outlaws segregation in the Nation's schools, which permits the U.S. Government to follow the path of expediency rather than of principle as it allows discrimination against Israel to fix this Nation's policy in awarding naval contracts and to control the assignment of our forces overseas.

It is all very well to jail young hoodlums caught as swastika painters and Hitler-apers; but these actions mean little to the forces of anti-Semitism as long as they can rest secure in the knowledge that the United States of America acquiesces in the discriminatory practices of its own Armed Forces and permits its own Navy to flout the principles of justice and equity.

Now, this resurgence of anti-Semitism and its accompanying racism, comes at a peculiarly difficult moment of world history. And these difficulties have, as one of their principle foci, the complex of countries in the Middle East. Recall what has happened. Following the armistice in 1948, even though tensions remained high and angry words were spoken, actual conflict decreased. Border clashes became less frequent. For half a dozen years, little Israel held her own against her surrounding enemies and labored mightily to build herself. Then something happened. The calculating forces of communism began deliberately to exploit the negative potential of the Near East. Arms and propaganda were poured into that troubled part of the world. Tonight we have no way of knowing whether tomorrow's sun will light a world at peace or a world at war.

And since we know, on the public record, that it is Communist arms and money and propaganda which have given new strength to the anti-Semitism of the Near East, there are those who believe that there is something more than coincidence in the fact that anti-Semitism which is known to be present in Soviet Russia has not expressed itself in East Germany while it has again broken out in West Germany. It may be that this is the real manifestation of germ warfare—to plant the infectious virus of bigotry and hatred, and strike down the minds and spirits of men while preserving their bodies for future exploitation.

Talk about genocide, the killing of whole races of men. This is far worse. It is psychocide, the murdering of men's minds and the slaughter of their spirits.

Thus it comes about that on this night of February 10, 14 years after the end of Hitlerism, as we gather to do honor to an educational effort in Israel, we do so under a black cloud which carries in its belly the poisonous fallout of man's inhumanity to man. It is not for us tonight to assess the blame and point the accusing finger. History and the god of history will take care of that. It is rather for us to look to ourselves and our own Nation, knowing that we, too, stand under the judgment of God.

If, then, we remember these things, we are permitted to consider with real satisfaction the things which, in God's name and spirit, men are doing constructively during these critical days. We are permitted to take deep satisfaction in the growing strength and increasing stability of Israel. We are permitted to look with pleasure on efforts such as Boys Town Jerusalem.

When I was in Israel 2 years ago, Max Dushkin, an old City College graduate who was building the Israeli educational system, acknowledged to me that the greatest weakness was not at the university level nor at the primary school level—it was in between these two, at the high school level. And it is precisely at this intermediate level that Boys Town Jerusalem makes its contribution. Be assured that the work is needed. And be assured, also, that if the work of this school is brought to the levels of achievement which are already described in the dreams of its founders and the labors of its builders, Israel will be strengthened in her efforts to help not only herself but many of the newer nations as well. Already the technicians and scientists and traders have gone out from Israel to nations like Ghana and Burma, and to countries like Nigeria not yet emerged into full freedom, carrying to these sister peoples the benefits of Israel's experience and the wealth of her intellectual and moral zeal.

And this is as it should be:

For out of Zion shall go forth the law,
And the word of the Lord from Jerusalem.
salem.
And He shall judge among the nations,
And shall rebuke many peoples.
And they shall beat their swords into plough-
shares
And their spears into pruning hooks;
Nation shall not lift up sword against nation;
Neither shall they learn war any more.

The Garret, N.J., Mountain Reservation

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, February 25, 1960

Mr. WILLIAMS of New Jersey. Mr. President, New Jersey has many beautiful and interesting areas in unexpected places. An article in the March 1960 edition of the Ford Times tells about one of which Passaic County residents can well be proud.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GARRET MOUNTAIN RESERVATION—TWENTY MINUTES FROM BROADWAY

(By Arthur J. Barbour)

A scant 12 miles or about 20 minutes' driving time from Times Square, almost in the shadow of New York City's skyscrapers, is Garret Mountain Reservation, a green oasis in the asphalt desert of the northern Jersey industrial community. This 575-acre mountaintop park lies on the boundary of the city of Paterson, N.J., which is itself distinguished as the Nation's first industrial center, envisioned by Alexander Hamilton.

Looming on the eastern slope of Garret Mountain is a pretentious brownstone and granite structure known as Lambert Castle. Built in 1892 by Catholina Lambert, a millionaire silk manufacturer of Paterson, the castle with its parapets and balconies seems mutely to relate the rags-to-riches and back again story of its builder. From the battlements of the castle and from the adjacent 70-foot-high observation tower which stands some 500 feet above sea level spreads a sweeping view that takes in the New York skyline and New York Harbor to the south, and the ascending ridges of Ramapos and Watchungs to the north and west.

Lambert lived for 30 years in the picturesque castle which he had constructed primarily to house a fabulous art collection amassed during his climb to the top of the social and economic heights. When the strike-ridden silk industry began to decline, however, Lambert's fortune declined with it, and before his death in 1923 he was forced to sell his art treasures at public auction. In 1928 Lambert Castle was taken over by the Passaic County Park Commission which restored it and now maintains it along with the spacious surroundings.

In addition to housing the offices of the Park Commission, the spacious drawing rooms and salons of the ornate castle serve as the headquarters and museum of the Passaic County Historical Society. The museum is open to the public without charge, and visitors to the historic park may also climb the observation tower for the spectacular view it offers. Long ago this mountaintop provided a perfect lookout for the Leni Lenape Indians in the days when they roamed the region, and later it served the same purpose for scouts of Washington's Continental Army.

The southern end of Garret Mountain, an area referred to as the Notch Roads, boasts a colorful historical background dating back to Colonial days. During the Revolution a signal and lookout station was maintained at the most southerly point from which the lower bay in New York Harbor, Sandy Hook, Amboy, and Newark were visible. From here a guard on duty at the Acquackanonk (Passaic) Bridge could be signaled. During World War II, because of its position overlooking land that encompassed nearly 12 million homes, a point at the northerly end of the mountain became the site of antiaircraft installations, one of the major defense points of New York City.

The main artery through this section is the Rifle Camp Road—a name that sparks the imagination. The reference dates from Revolutionary times when a group of soldiers encamped under the command of Major Parr were equipped not with the older style 4 foot musket having a straight smooth bore but with a shorter gun or rifle whose bore was spiralled; thus the area was called "Rifle Camp." The modern black macadam road, which in those days was hardly more than a cow pasture lane, weaves and bounds over rough, rugged mountain terrain, twisting and lacing its way through rich, earth-colored masses of buffalo grass, broken at intervals with black volcaniclike rock structures jutting skyward.

Deep into these formations left by the glacial tide, mines for extracting traprock and sandstone have been gouged out, leaving immense amphitheaters with sheer walls of solid rock. Some of the quarries have long since been abandoned, and nature already has begun to heal the wounds, creating with erosion and plantlife small wonderlands of intrigue and mystery. Throughout the various quarries geodes of amethysts and other crystalline cores have been unearthed by amateur seekers of semiprecious gems.

Recently traprock from the quarries was used in the construction of a superhighway leading into Pennsylvania which in places supersedes the almost obscured bed of the

Morris Canal, a main artery of New Jersey in the 1830's. This canal connected the Delaware and Lehigh Rivers with the Passaic River and the sea at Newark Bay.

The highlands of Garret Mountain with their variety of blossoming trees and wildflowers indigenous to the region lend themselves to many kinds of recreational activity. The hiker finds it easy, yet invigorating, to keep to the pleasant woodland trails, and the horseback rider can enjoy a stimulating ride along scenic bridle paths. Barbour's Pond calls to the fisherman from early spring to late fall and to the ice skating devotee during the winter months. In this season the slopes of the mountain are a great attraction to skiers and tobogganers. Throughout the summer the broad lawns, studded with cool pines and accented intermittently with white birch, provide a perfect background for evening picnics, with young children running freely. Fireplaces in four picnic groves are available for cookouts.

These are the attractions of Garret Mountain Reservation. Next time you find yourself in Times Square, think of this lovely green mountaintop just a 20-minute drive away.

Two Rails Seek ICA Approval for Barge Deal

EXTENSION OF REMARKS

OF

HON. JOHN C. KLUCZYNSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article in the February 21 issue of the Chicago Sunday Tribune under the byline of Nick Poulos:

TRANSPORT DIVERSITY STIRS TWO-FRONT BATTLE—TWO RAILS SEEK ICC APPROVAL FOR BARGE DEAL

(By Nick Poulos)

Hearings on a railroad case which could prove to be a major turning point in the history of American transportation will be opened by the Interstate Commerce Commission March 15 in Washington.

At issue is a request by the Illinois Central and Southern Pacific railroads that they be permitted to buy the John I. Hay Co., Chicago barge line, for $9 million and operate it in competition with other inland waterway carriers.

Seven barge lines and the American Trucking Association have announced they will make a strong fight against the proposal. Their main argument in opposition will be that granting of such a request would lead to the creation of a railroad monopoly over inland waters transportation.

CONGRESS ACTION POSSIBLE

There is the possibility, however, that Congress in its next session will enact laws permitting railroads and truck, barge, and air lines to engage in other forms of transportation at their own discretion.

The ICC presently has the authority to permit a railroad to control a bargeline and to coordinate services, but the governing regulations are quite restrictive. There is no corporate rail-barge operation of any consequence in the country today.

The Illinois Central and Southern Pacific have at least a fair chance of being granted permission to acquire the Hay Co., mainly because of the sympathetic climate the railroad industry presently enjoys.

What is the transportation relationship between the Hay Co. and the two railroads which seek to buy and operate it?

TWO THOUSAND FIVE HUNDRED MILES OF ROUTES

The Hay Co.'s barge operations extend over more than 2,500 miles, principally on the Mississippi and Illinois Rivers and the Gulf Intracoastal Waterway. These water routes connect Chicago, Milwaukee, and Gary on the north and New Orleans, Houston, and Brownsville, Tex., on the south.

A glance at a map of mid-America shows that the Hay Co. serves the same general area as the two petitioning rail systems. With a fleet of 6 towboats and 90 barges, the Hay Co. is one of the 10 largest barge operators on the inland and coastal waterways.

The Illinois Central and Southern Pacific view their proposed purchase of the bargeline as an investment.

MILLIONS FOR EXPANSION

The two railroads plan to spend millions of dollars to expand the Hay fleet to provide more frequent sailings and additional equipment for the benefit of users of the water carrier service.

They contend the barge industry does not have the financial means to meet the growing requirements of waterway traffic and that the water route improvements being made at the most of millions of dollars should be utilized to their fullest for the benefit of the public.

The Illinois Central and Southern Pacific said they will set up through rail-water and truck-water rates. They have been unwilling to do this in the past because "there are limits beyond which the railroads are unable to go in prerate adjustments and improvements in service."

TO SEEK NEW INDUSTRIES

Plans also include inducing new industries, for whom water transportation provides an inherent advantage, to locate along the Hay Co.'s route.

The petitioners assert their purchase of the barge line would increase competition along the waterways and that the inherent advantages of each mode of transportation would be preserved. The new Hay operation would be under the jurisdiction of the ICC.

There is not the slightest validity to the argument that permitting railroads to engage in other transportation operations will lead to a monopoly, the two roads assert.

They argue that water carriers are protected by certificates of operating authority and that effective protection against monopoly is afforded by the antitrust laws and public policy.

Dumb Politics

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an editorial appearing in the Detroit Times of February 18, 1960:

DUMB POLITICS

Michigan again is being made a political pigskin, kicked around in a mire of slurs by politicians who apparently believe it clever to besmear the whole State in order to daub mud on their selected targets.

The newest assault is by a recalcitrant minority of Republican Senators in Washington who brand Michigan a "privileged sanctuary" for union hoodlums—a kind of no-law-land from which emerge miscreants to prey upon adjoining States.

Such attack is rightly interpreted as a "get Reuther" effort by a few of the Senate labor rackets committee who have been unable to pin misdeeds upon the UAW–CIO president.

Indirectly, the mud pies are aimed at Governor Williams and the Democratic Party. They have the same noxious odor that abounded in the smear-Michigan attack, originating last year within the State, against our tax structure and labor standards.

Williams and Senator HART, among others, have arisen in flaming protest against this new assault from Washington.

Their ire is understandable. But as a matter of practical politics, the Democratic protesters might do better if they gave our assailants all the rope they want—with the proverbial result.

Only the day before the mud was slung from Washington, Vice President NIXON visited Michigan and made a hugely popular appearance. Most people he met liked him and the things he said, regardless of individual politics.

With the kind of spirit both sides can applaud, he promised a fight to make this State GOP in the next election.

Closely associated with the Vice-Presidential party was Paul D. Bagwell, a liberal Republican who was candidate for Governor in 1958 and who, even in losing, brought new support to his party.

As of Monday, things were looking up for Michigan Republicans, longtime losers in the election booths.

We doubt if the shrewdest Democrats could have contrived a scheme to diminish the gains of NIXON's visit as neatly as that furnished free and postpaid from Washington.

Once more a few Republican reactionaries have identified their party with a smear-Michigan campaign.

Once more the Democrats grab the fumbled ball.

It's an old story.

When kicking a political football, watch out for the way it bounces.

The Christian Amendment Movement—The Question of Union of Church and State

EXTENSION OF REMARKS

OF

HON. L. H. FOUNTAIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. FOUNTAIN. Mr. Speaker, pursuant to permission granted, and upon request of a representative of the Christian Amendment Movement, I am inserting into the Appendix of the RECORD the fifth of a series of thought-provoking radio messages delivered by the Reverend John Coleman, D.D., Ph. D.:

When the relation of church and state is under discussion, the thoughts of American students of history go back to Roger Williams, founder of the colony of Rhode Island. Williams was a brilliant young Englishman, educated at Cambridge University. He was not in agreement with the English established church and fled to Massachusetts to escape persecution. There he disagreed with the Massachusetts established church

and campaigned for its abolition. He again avoided arrest by flight.

With some of his followers he went to what is now Rhode Island, purchased land from the Indians, and built what was in later years to become the city of Providence. Williams gave that name to the little settlement in honor of the God who he believed had cared for him and his companions. In Providence all denominations were free to carry on their own worship and none were supported by the government.

Because of this many have supposed that Roger Williams wanted a government that was secular, one that ignored the whole question of religion. This is far from the truth. Immediately upon fixing their abode, the settlers subscribed to the following compact or constitution:

"We, whose names are underwritten, do hereby solemnly, in the presence of Jehovah, incorporate ourselves into a body politic; and as He shall help, will submit our persons, lives and estates unto our Lord Jesus Christ, the king of kings and the lord of lords, and to all those perfect and absolute laws of His given us in His holy word of truth."

This sounds like the first section of the Christian amendment. I will repeat it:

"This Nation devoutly recognizes the authority and law of Jesus Christ, Saviour and Ruler of nations, through whom are bestowed the blessings of Almighty God."

The second section of the amendment has been added to make sure that there will be no misunderstanding on this matter of church and state, to give assurance that the religious and other liberties of man, whether Christian or non-Christian, will not be interfered with because of this amendment. This second section reads:

"This amendment shall not be interpreted so as to result in the establishment of any particular ecclesiastical organization, or in the abridgment of the rights of religious freedom, or freedom of speech and press, or of peaceful assemblage."

What is an established church? It is the kind we had in some of the colonies, and they still have in Western Europe. An established church is one for which the government pays the bills, makes the laws and appoints the officers. All these features are found today in Great Britain: For example, when the bishops wished to bring in a new prayerbook, they had to request permission of the British Parliament, and the Parliament, under the leadership of David Lloyd George, the Prime Minister, who was himself a Welsh Baptist, refused the permission.

No, the Christian amendment does not propose the establishment of any church. It definitely declares against it. If adopted, so long as the Christian amendment stands, no church in America will have its expenses paid by the Government, its laws made by Congress, or its officers appointed by some political authority. Under the amendment church and state will be legally separate, neither controlling the other, but both under the Lord Jesus Christ, both seeking to obey His will. Thus each would strengthen the other. Two men marching in step make marching easier for both of them; the church and state marching in step would both be more effective. Neither would be in control over the other, but the popular mind would not be confused by one pulling one way, and the other pulling contrariwise.

It is this issue of an established church that contributed largely to the state of mind that led the Constitutional Convention to give us a Constitution that recognizes neither God nor His Son, the Lord Jesus Christ. In several of the States the issue of an established church was a burning one. In Virginia, where the Episcopal Church had been established by law, the legislature, in 1775, passed a bill to suspend the payment of the Episcopal clergy by the colony, and 2 years later voted to end such payments. There were some, like Patrick Henry, who wanted to have two established churches, the Presbyterian and the Episcopal. Complete religious freedom was not achieved by law in Virginia until 1786, just a year before the Constitutional Convention. So the question was in the air.

In Connecticut the established church continued on a township basis until 1818, and in Massachusetts until 1833. In these States the people determined by vote from what denomination their presiding clergyman would come. This was possible under the National Constitution because the first amendment, forbidding an established church, applied only to the National Government. It begins: "Congress shall make no law respecting an establishment of religion." It was not until the adoption of the 14th amendment that the prohibition of an established church was made to apply to individual States.

This agitation concerning an established church created a nonreligious bias in the Convention that drew up the Constitution. The Convention did not begin its first meeting with prayer, or any subsequent meeting, this despite the fact that Benjamin Franklin at one point made a most eloquent plea for prayer. Alexander Hamilton opposed Franklin's motion, saying that to have prayer would lead the people to think that they were not getting along very well at their task. Then after some discussion someone made a motion to adjourn and it was carried. The motion for prayer was never voted on. Franklin sadly notes in his diary that few of the members were interested in his proposal.

The Convention, and the Constitution which it produced, were alike secular. Secular means "without God." Certainly there were other factors that brought about this tragic situation, but the problem of an established church had its part. Men were so accustomed to identifying the Christian religion with an established church that, when they were breaking the connection between the church and the state, apparently they thought this must involve the omission of all religious acknowledgments such as were found in the charters of most of the Colonies, of some of the States, and, to a degree, in the Declaration of Independence. They did not seem to realize fully that the State might have a relation to the Lord independent of any and all churches, such as the poet Dante visioned centuries ago, such as Roger Williams and William Penn put into practice. It is this relationship that the Christian amendment affirms.

The issue of an established church is now of the long ago, but its influence remains in the great defect of our National Constitution, the lack of a confession of faith in the Lord Jesus Christ, the national Saviour and Ruler, through whom are bestowed the blessings of Almighty God. Let me repeat: The Christian amendment carefully guards against the revival of the issue of church and state and the problem of an established church. The church and the state are to be the earthly arms of the Lord Jesus who is head over all things. Neither arm is to control the other, both are to obey the head.

The Problems of Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, February 25, 1960

Mr. WILLIAMS of New Jersey. Mr. President, we read much these days about juvenile delinquency and the problems it causes throughout the world. Recently we took action here to create a Federal program which would help local authorities deal with local conditions.

There are many ways to attack the question, and prevention is certainly the best way. But we must also consider rehabilitation of those who have offended. In New Jersey we are particularly fortunate in having a pioneering pilot institution to deal with this aspect of the problem. An editorial in the Bergen Evening Record, Hackensack, N.J., of February 2 describes recent progress at this station.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE CAN HAVE AS MUCH REHABILITATION AS WE LIKE

The success of the Highfields experiment and its broad values in establishing productive techniques have never been in doubt. But reassuringly corroborative is the report that over a period of 2 to 3 years 77 percent of the delinquents released from the Hopewell institution have successfully adjusted to the life of their community.

The Highfields experiment, involving as it does a concentrated form of group psychiatry, some individual therapy, and other forms of individual attention in a minimum-security environment, is an expensive program as budgets go. Yet clearly Highfields shows that by such treatment and cash outlay a boy can be readjusted before he gets into a position of having to be reclaimed. The State Home for Boys at Jamesburg is no conventional penal institution, and is in its way a progressive adaptation of prison attitude and care; it is not an inexpensive operation. But the Jamesburg record of conduct during detention and after release cannot compare with the Highfields statistics.

Demonstrated is that we do at last have an effective program. Existing is a going plan of reclamation limited to a population of 20 boys. It works. There are many questions left, but they are not up to Highfields to answer.

Fargo, N. Dak., Designated All-America City

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. SHORT. Mr. Speaker, I would like to call to the attention of the House the fact that Fargo, N. Dak., has been selected an All-America City in a contest jointly sponsored by the National Municipal League and Look magazine. Fargo was one of nearly 100 cities to enter in the competition and one of 11 winners. The field was gradually narrowed to 22 finalists, who then presented their cases orally to a jury of experts. Foreman of that jury was Dr. George H. Gallup, director of the American Institute of Public Opinion.

Mr. Speaker, under leave to extend my remarks, I am proud to include the following account of Fargo's unusual efforts to solve major community problems. This summary appears in the current—March 1—issue of Look magazine:

FARGO, N. DAK.

This northern plains city of 50,000 was saddled with problems. It had a 50-year-old city hall built when the population was only 13,000. Its residential districts were becoming slums. Then civic-minded residents formed a citizens for city planning organization to work for improvements. Over strong opposition, they won approval for a major bond issue to provide the needed funds. Now, on the site of a 17-acre slum area, a new civic center is rising. Already completed are a modern city hall and an auditorium. Other public buildings will follow. Displaced families from the slum area have been relocated without resorting to public housing, and the State's first urban-renewal project has moved into the final stages.

Modernizing a city is expensive. The tax bill of a man with a $15,000 house is around $325 a year. Yet citizens of Fargo have made voluntary contributions to a school for retarded children, another for teaching deaf children, and similar community enterprises. In addition, hundreds of women volunteers give many hours a week to social work. Fargo is a town whose community spirit is so ablaze that there are 8,000 paid-up members of the PTA for a school population of 7,776.

Private Power Companies Cashing in on Their Share of $15 Billion Federal Subsidies From Rapid Amortization

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. EVINS. Mr. Speaker, it will be recalled that during World War II the Congress passed legislation to provide accelerated amortization of defense plants. When we were faced with the great war emergency we needed tremendous expansion in manufacturing plants capable of building the arms and armaments needed for our defense. Private industry was understandably reluctant to make these very large investments in defense plants because in many cases they were highly specialized and would have little usefulness for civilian production.

The rapid amortization program provided that the cost of a defense plant could be amortized over a 5-year period instead of over its longtime useful life as then provided by income tax laws. The rapid amortization was, of course, deductible as a business expense for income tax purposes, and thus this program reduced the taxes of defense industries. In effect, the cost of the new defense plants was largely met by the Federal Government in the form of reduced taxes.

Now certainly this program was well justified in the case of aircraft, ordnance and other highly specialized defense plants of little or no use for civilian goods. A few accelerated amortization certificates had been granted to public utilities during the war and during the Korean emergency where an expansion of power was imperative to serve a critical defense industry, such as the Atomic Energy Commission. But shortly after this administration came into office, the Office of Defense Mobilization began to issue accelerated amortization certificates for ordinary expansion of power facilities and within the next few years practically every power company in the country benefited from these accelerated amortization certificates. The Office of Defense Mobilization issued some 22,000 certificates granting over $30 billion in rapid amortization to all industries. The electric power utilities received fewer than 5 percent of these certificates but they were allowed $3 billion worth of 10 percent of the total accelerated amortization.

This program of accelerated amortization has cost some $15 billion in lost taxes of which the private power companies alone have accounted for $1½ billion. As a result of this program the private power industry became possibly the greatest beneficiary of a Federal subsidy that was ever enjoyed by any nondefense industry.

It will also be recalled that many of us objected strenuously to this generous subsidy for the private utilities and one of the most constructive achievements of the 85th Congress was the repeal of that portion of the law which had permitted the granting of rapid amortization certificates to private power companies.

When we debated this matter in considering the repealing legislation we, of necessity, spoke in terms of estimates of tax losses and some spokesmen of the private utilities denied that this represented a subsidy and that the companies would benefit from it. But today we do not need to estimate or to guess—we now have on the record the facts from the books of the power companies themselves regarding the way this unprecedented subsidy has operated for the benefit of the private power companies and particularly their stockholders.

Keep in mind that the rates charged by private power companies include a portion which will be paid in taxes to the local and Federal governments. Actually private power companies are not taxpayers they are tax collectors. In substance and under the terms of the rate structures approved by State and Federal regulatory agencies, the consumers of a utility pay the taxes in their power bills and the utility in turn transmits the taxes to the local and Federal governments. Now let us see what has been happening under the accelerated amortization program. The private utilities have been collecting the same taxes from their customers that they did before or that they would collect without rapid amortization. But, they paid far less in taxes to the Federal Government than they collected from their customers. To account for this excess of taxes they have collected from their customers most private utilities have set up what they call "accumulated income tax deferral reserves." These deferral reserves represent the actual tax savings of the power companies. As of December 31, 1958, the latest figures available from the Federal Power Commission, the private power companies have now accumulated some $700 million in these accumulated income tax deferral reserves. In other words as of January 1, 1959, they had already received some $700 million of subsidies in the form of reduced taxes. This is only the beginning. Although the accelerated amortization has been repealed the private power companies will continue to enjoy the benefits of these subsidies for some years to come and eventually the subsidy will amount to a total of $1½ billion. I insert herein a list supplied by the Federal Power Commission of the private electric utility companies with their accumulated amortization reserves as of December 31, 1958. From this list you can see how much tax reduction your power company has admitted receiving as of January 1, 1959.

Accumulated income tax deferrals arising through the accelerated amortization of emergency facilities and the use of rapid depreciation methods permitted under sections 168 and 167, respectively, of the 1954 Internal Revenue Code

ELECTRIC UTILITY COMPANIES, BALANCE AS OF DEC. 31, 1958

Seventy-fifth Birthday of Fleet Adm. Chester W. Nimitz

EXTENSION OF REMARKS

OF

HON. CARL VINSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. VINSON. Mr. Speaker, yesterday, February 24, Fleet Adm. Chester W. Nimitz was honored throughout this country and in many overseas areas on the occasion of his 75th birthday. Fleet Admiral Nimitz began his brilliant naval career 59 years ago when he was appointed to the U.S. Naval Academy from the 12th Congressional District in Texas in 1901. His actions in the Pacific during World War II will live in history forever.

Fleet Admiral Nimitz was ordered to duty as commander in chief, Pacific Fleet, with the rank of admiral effective December 31, 1941. He was presented the Distinguished Service Medal by the President, awarded in the name of Congress, with the following citation:

For exceptionally meritorious service to the Government of the United States in a duty of great responsibility as commander in chief of the Pacific Fleet since December 31, 1941. At the most critical period of the present war in the Pacific he assumed command in that area and, despite the losses at Pearl Harbor and the tragic shortage of vessels, planes and supplies, organized his forces and carried on defensive warfare which halted the Japanese advance. As rapidly as ships, personnel and material became available, he shifted from defensive to offensive warfare and, by his brilliant leadership an outstanding skill as a strategist, enabled the units under his command to defeat the enemy in the Coral Sea, off Midway, and in the Solomon Islands; and to capture and occupy the Gilbert and Marshall Islands.

He was also awarded the Distinguished Service Medal by the Navy Department, for "Exceptionally meritorious service as commander in chief, U.S. Pacific Fleet." The citation states that—

His conduct of the operations of the Pacific Fleet, resulting in successful actions against the enemy in the Coral Sea and off Midway Island was characterized by unfailing judgment and sound decision, completed with skill and vigor.

On October 7, 1943 he was redesignated commander in chief, Pacific Fleet and Pacific Ocean areas. By act of Congress, approved December 14, 1944, the grade of fleet admiral of the U.S. Navy—the highest grade in the Navy—was established, and on the next day the President nominated and, with the advice and consent of the Senate, appointed Admiral Nimitz to that rank.

In September 1944 Fleet Admiral Nimitz was one of the signers for the United States when Japan formally signed the surrender terms aboard the battleship *Missouri* in Tokyo bay.

On October 5, 1945, which had been officially designated as Nimitz Day here in Washington, Admiral Nimitz was presented a Gold Star in lieu of the third Distinguished Service Medal by the President "for exceptionally meritorious service as commander in chief, U.S. Pacific Fleet and Pacific Ocean areas, from June 1944 to August 1945." The citation further states:

Initiating the final phase in the battle for victory in the Pacific, he attacked the Marianas, invading Saipan, inflicting a decisive defeat on the Japanese Fleet in the First Battle of the Philippines and capturing Guam and Tinian. In vital continuing operations, his fleet forces isolated the enemy-held bastions of the Central and Eastern Carolines. With reconnaissance of the main beaches on Leyte effected, approach channels cleared and opposition neutralized in joint operations to reoccupy the Philippines, the challenge by powerful task forces of the Japanese Fleet resulted in a historic victory in the three-phased battle for Leyte Gulf. Accelerating the intensity of aerial offensive by pressure exerted at every hostile strongpoint, Fleet Admiral Nimitz culminated long-range strategy by successful amphibious assault on Iwo Jima and Okinawa—finally placed representative forces of the U.S. Navy in the harbor of Tokyo for the formal capitulation of the Japanese Empire. He demonstrated the highest qualities of a naval officer and rendered services of the greatest distinction to his country.

On November 23 1945, his nomination to be Chief of Naval Operations was con-

firmed by the Senate. He hauled down his flag at Pearl Harbor, where he had hoisted it in December 1941 on board the submarine *Grayling*, in a harbor littered with wreckage of American warships, and on December 15, 1945, relieved Fleet Admiral Ernest J. King as Chief of Naval Operations.

On December 15, 1947, he was detached as Chief of Naval Operations and ordered to San Francisco for duty as directed by the Secretary of the Navy. Since then he has acted as Special Assistant to the Secretary in the Western Sea Frontier, and serves in an advisory capacity, assisting in other matters pertaining to the Navy when called upon to do so.

Fleet Admiral Nimitz has truly brought honor and distinction to his country. It gives me great pleasure to add my most sincere congratulations to Admiral Nimitz on the occasion of his 75th birthday.

Anniversary of Estonian Independence

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. BENTLEY. Mr. Speaker, it is my privilege to call to the attention of the House that yesterday, February 24, marks the 42d anniversary of the Declaration of Independence of the Republic of Estonia.

It does indeed seem cynical that when so many new nations are recognizing independence and self-determination throughout the world that those countries of Eastern Europe which were once independent still remain in captivity. Among this number Estonia, of course, must be included and, with her Baltic neighbors of Latvia and Lithuania, she does not even have the fiction of independence as do the other captive nations. Indeed the history of these three small Baltic countries constitutes one of the most flagrant and outrageous violations of international agreement on the part of the Soviet Union that the world has ever seen. Ever since these three countries were absorbed by the Soviet Union, Communist policy has dictated the eradication of any vestiges of nationalism and is attempting to completely absorb them into the U.S.S.R.

It is, nevertheless, heartening to realize that the people of Estonia still retain their burning desire for freedom and independence in spite of the tortures and slavery which they have undergone now for nearly 20 years. This display of courage on their part, however, must continually be nurtured by evidence of interest in their behalf on the part of the free world and above all by the United States of America who is rightly regarded as the guardian of hope for their ultimate freedom. That is why expressions of interest on our part, in addition to commemorative meetings on this solemn occasion, will help to remind the captive peoples, including the Estonians, that they will never be forgotten in the hearts and minds of freemen everywhere.

I trust we will all join in observing this national holiday of Estonia and in once again expressing the hope that the day will soon come when these brave people will be able to observe their own national holiday in a free land. Meanwhile, our Government rightly pursues the policy of refusing to recognize the forced annexation of Estonia and are continuing to recognize the representatives of its government in exile. This is the policy to which we should all continue to give our undivided support.

Private Voluntary Insurance and H.R. 4700

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. FORAND. Mr. Speaker, almost the complete insurance industry along with the American Medical Association has taken up the cry of "socialism," "governmentation," and many other words they use to create an image of a monster—H.R. 4700. The truth is that private insurers are not insuring the aged for medical, surgical, and hospitalization. The one fact they admit is that this group is a high-cost, high-risk group, which has been completely avoided until very recently.

The argument is made that private insurance companies have made great strides in the voluntary health contracts. It is true that more people today are able to buy better health insurance than at any previous time. However, these policies are usually offered to that segment of the population under the age of 65 or even 60. The cost for a reasonable plan for the aged would be higher than the average person on a pension could afford.

The coverage offered our aged population on policies in existence today is limited to a benefit rate that would have been proper or feasible back in 1940. These policies are in an experimental stage, and the natural conservatism of the industry is holding the benefits down to a minimum. The possibility always exists that, when it is found financially unwise to issue this type of policy, the companies will decline to renew, under their so-called cancellation clause.

The following three policies are the best the insurance industry has to offer the aged today. In reading through these policies ask yourself this question, Is this policy adequate for our aged today?

INSURANCE COMPANY A

Hospital: $10 per day for a maximum of 60 days.

Nursing home: $5 per day for 55 days. (Benefits payable under hospital and nursing home shall not exceed the combined total of 60 days for any one period of confinement.)

Renewal agreement: Company may refuse to renew when renewal is declined on all policies of this form.

Additional benefits: Such things as X-ray, oxygen, operating room, etc. The company will pay 80 percent of all cost over $100 with a maximum of $1,000.

Surgical: Governed by rate schedule; $225 maximum.

Cost: $8.50 per person, per month; annual, $102.

Policy: Form 4HSO; limited to persons over 65 years of age.

INSURANCE COMPANY B

Hospital: $10 per day for a maximum of 31 days.

Surgical: Governed by rate schedule; $200 maximum.

Additional expenses: Miscellaneous hospital expenses; maximum of $100.

Renewal agreement: Company may cancel if it cancels all within the State.

Cost: $6.50 per person, per month; annual, $78.

Policy: 65 plus policy (form No. OA 37).

INSURANCE COMPANY C

Hospital: $12 per day up to 200 days maximum of $2,400.

Surgical: Governed by rate schedule; $300 maximum.

Nurse: If accidental injury requires special nurse while in hospital, this policy pays up to $10 a day, up to 5 days, for any one accident.

Additional expenses: Certain of these expenses have no limit such as surgical dressings, iron lung, hypos. Others carry a maximum of from $10 to $30.

First-aid benefits: Accidents not requiring hospitalization, up to $10.

Renewal agreement: Company cannot cancel policy but may change premium rates.

Cost: $7.30 per person, per month; annual, $81.10.

Policy: LAHO–120; hospital and surgical expense policy; 65 years of age and over.

Rocky Mountain Farmers Support Additives Amendment

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. DELANEY. Mr. Speaker, attempts are being made to create the impression that farmers in general are opposed to the Food Additives Amendment of 1958, and, in particular, to Secretary Flemming's enforcement of it. Editorials in farm journals have misrepresented the amendment in an attempt to mislead and confuse their readers and various trade papers read by farmers have joined the cabal.

It is heartening, therefore, to know that the American farmer retains his independence of judgment and is not easily fooled by the propaganda of those industries which would place financial gain above the protection of the public health.

The following letter from the assistant to the president of the Rocky Mountain Farmers Union and the resolution adopted by the union show that at least

one segment of our farm population has not been influenced by this propaganda:

ROCKY MOUNTAIN FARMERS UNION,
Denver, Colo., February 15, 1960.

Hon. JAMES J. DELANEY,
Congressman, New York, House Office Building, Washington, D.C.

DEAR CONGRESSMAN DELANEY: At the 51st annual convention of the Rocky Mountain Farmers Union in Denver, Colo. on February 3, 1960, a strong resolution was passed in support of the principles of the Delaney amendment to the pure food and drug law.

The resolution had the unanimous support of all delegates representing 18,750 farm and ranch families of Colorado and Wyoming.

Farm folks are deeply concerned with the growing problem of moving pure food to consumers without having it endangered with chemical additives or preservatives that have not been proven entirely safe for human consumption.

The resolution follows:

FOOD PROCESSING AND CHEMICAL ADDITIVES

Due to the increased use of chemicals in processing and insecticides, we insist that it is in the general public interest that the burden of proof of the nontoxicity of such products be placed directly on the manufacturers of same. In effect, the Pure Food and Drug Administration now has only ex post facto power. It should be given authority to prevent the marketing of such products unless they are certified as safe.

This same approach should be used on food products which contain additives. The public should be assured that products containing additives are safe and nontoxic, just as farmers should be assured that products purchased to benefit their crops or livestock are not harmful to the eventual consumer of those products.

If the Government agency responsible requires more funds or personnel to do this, we urge the Congress to provide the funds for this purpose.

Sincerely,

GEO. L. BICKEL,
Assistant to the President, Rocky Mountain Farmers Union.

Jim Bond: Super Dallas Citizen

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, February 25, 1960

Mr. JOHNSON of Texas. Mr. President, in Dallas, Tex., the Linz Award is bestowed each year upon a citizen who has distinguished himself in civic endeavor in that great city. The award for 1959 has just been made. It went to a man named James H. Bond.

Mr. Bond is a Federal Government employee. He is a living refutation of the charge we sometimes hear that Government employees isolate themselves from the life of the community.

An editorial in the Dallas Times Herald sums up better than I possibly could the scope of Jim Bond's contribution to the Dallas community. I ask unanimous consent that this editorial, paying deserved tribute to a man who works unselfishly for his fellow men, be placed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JIM BOND: SUPER DALLAS CITIZEN

When people think of Jim Bond, as the 1959 Linz Award winner is known to his thousands of admiring friends, they think of a warmhearted champion of the crippled, the blind, the sick, the troubled, the poor.

James H. Bond's main job is being regional director of the U.S. Department of Health, Education, and Welfare. But here his service to his fellow beings only begins. He has been a leader or worker in virtually every volunteer health, welfare, and civic program that has been undertaken in Dallas in the past 20 years.

Even a partial listing of Jim Bond's accomplishments causes ordinary mortals to gasp in amazement. He is immediate past president of the Dallas Council of Social Agencies, a board member of the Greater Dallas Planning Council. He is associated with humanity-serving organizations ranging from the National Association for Prevention of Blindness and the American Cancer Society to the National Association for Mental Health, National Multiple Sclerosis Society and the Dallas Committee for "Employ the Handicapped."

Specifically, Mr. Bond was cited for his efforts last year in putting into action a Dallas County youth study. But his other accomplishments, somehow packed into busy days and weeks, are in such diverse areas as the Boy Scouts, Dallas Television Education Foundation, and the committee for rehabilitating West Dallas.

The Linz Award judging panel faced a tough task of selecting one from a large number of worthy nominees. But Dallas has no abler or more useful citizen than Jim Bond. The Times Herald, cosponsor with Linz Jewelists of the annual award, adds its congratulations to the many others that are showering upon Mr. Bond and his family.

Keep Slim and Trim on a Potato Diet

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. McINTIRE. Mr. Speaker, hanging in my office is a large, colorful poster which depicts a lithe and smiling lady who holds a generous serving of Irish potatoes and offers us this advice: "Here's how I keep trim and slim."

There is an acre of truth in this counsel, and, in fact, I offer the following article from the February 20 issue of the Packer to prove that our poster pal is one who really "knows her potatoes":

GROW THIN ON DIET FEATURING HALF POUND OF POTATOES A DAY

NEW BRUNSWICK, N.J., February 19.—Whatever else they may learn at Douglass College this year, 12 girls will not soon forget that they can eat a diet featuring a half pound of potatoes a day and grow thin.

They know because they did it.

The girls were volunteers in an 8-week demonstration conducted by the Douglass home economics department and financed by 11 State and national organizations of potato growers.

Growers and Rutgers nutritionists have been concerned of late because figure-conscious consumers have been shunning the vitamin-and-mineral-rich spud on the grounds that it's fattening. They don't mind the public's being figure conscious but they don't like the potato to get the blame for the bulges.

IT'S THE GRAVY

It's a known fact that it's the gravy that runs up the calorie count, they keep saying.

To prove their point, the nutritionists called for plump volunteers among Douglass students, girls who would be willing to stick to a diet in agreement with the traditional Douglass-honor-system spirit.

Response was tremendous, but one by one the group was whittled down to an even dozen young women whose excess weight ranged from 15 to 100 pounds.

Eligible dieters had to be at least 10 percent overweight, and they had to agree to eat everything set before them and nothing else, except for occasional snacks of celery and carrots.

One girl didn't like eggs and another never ate pork, so they were dropped. Invitations to college house parties eliminated others. One of the final 12 turned down a weekend invitation to another college in favor of the diet table.

Dr. Miriam K. Brush, of the Douglass home economics department, who was in charge of the project, reports that when the girls sat down to their first low-calorie meal in the department's research laboratory, their weights ranged from 128 to 228 pounds.

When they weighed in at the end of 8 weeks, the girls had lost an average of 14 pounds each. One was 25 pounds lighter.

Girls who have not yet scaled down to their ideal weights plan to continue with low-calorie foods selected from meals in the college dining hall.

SATISFYING AND FILLING

"The girls say they found the potatoes satisfying and filling," Dr. Brush reports. "Potatoes were served in many different ways to give variety to the menu, and dishes often included butter borrowed from some other part of the meal."

She said the demonstration also proves that a reducing diet can be inexpensive, similar to what most families eat anyway, and need not include special sweeteners or exotic foods.

Girls started the day with 4 ounces of orange juice, two-thirds cup of cooked or dry cereal, one slice of bread, a half pat of butter, 6 ounces of skim milk and black coffee.

TYPICAL LUNCH

Typical lunch consisted of potato salad made of one-half cup of potatoes, three strips of carrots, one medium egg, lettuce, celery, and one tablespoon low-fat mayonnaise per portion; one slice of bread, one-half pat butter, 6 ounces of skim milk, and medium serving of grapes.

Typical dinner: One-half cup boned chicken, one medium-size potato, one-half cup green beans, one slice of bread, one-half pat butter, 6 ounces of skim milk, and four halves of apricots.

"WE TOLD YOU SO"

A day's calorie count ran between 1,150 and 1,300 calories, depending upon the size of the girl. Results after 8 weeks were 12 prettier, healthier, and happier girls, and a Nation of potato growers who can say, "We told you so."

Red River Valley potato growers of Minnesota and North Dakota cooperated in the diet study by contributing funds to finance the project.

Dr. Grayson Kirk Urges Removal of Disclaimer Provision From Defense Education Act

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. ZELENKO. Mr. Speaker, the National Defense Education Act is a most important and far-reaching law. However, there is contained therein a section which in my opinion must be deleted at once if the beneficial and progressive purposes of the legislation are not to be vitiated. I refer to what is known as the disclaimer provision.

Dr. Grayson Kirk, president of Columbia University, located in the district which I have the honor to represent, has urged the immediate repeal of this section. Dr. Kirk's views are shared almost unanimously by leading educators representing their institutions of learning throughout the country. We should and must heed his knowledgeable statements. I submit herewith a significant article which he wrote in the Graduate Faculties Newsletter of Columbia University in May 1959. The article follows:

LOYALTY, SECURITY, AND COMMONSENSE

Title X of the Defense Education Act contains one provision that has aroused widespread comment—and much criticism—from educators throughout the country. The text is as follows: "No part of any funds appropriated or otherwise made available for expenditure under authority of this Act shall be used to make payments or loans to any individual unless such individual (1) has executed and filed with the Commissioner an affidavit that he does not believe in, and is not a member of and does not support any organization that believes in or teaches, the overthrow of the United States Government by force or violence or by any illegal or unconstitutional methods, and (2) has taken and subscribed to an oath or affirmation in the following form: 'I do solemnly swear (or affirm) that I will bear true faith and allegiance to the United States of America and will support and defend the Constitution and laws of the United States against all its enemies, foreign and domestic.'"

The second part of this provision is merely the standard oath of allegiance. It is much like the oath required by the State of New York of all faculty members in all colleges and universities in the State. In itself, it cannot be regarded as objectionable because it is no more than a public declaration of an obligation that is incumbent upon all citizens.

Although objection has been made to the entire oath provision of the new Federal act, the chief criticism—for reasons that will be indicated presently—has been directed toward the first part. This is a disclaimer of any belief in, as well as membership in, any organization that advocates the forcible overthrow of our Government. Many a citizen reading this requirement might regard it merely as a declaration to which no loyal American could or should object. Such an individual might, therefore, be perplexed over the fact that it has provoked such an uproar—and by persons whose loyalty is beyond suspicion. What are the reasons for this barrage of criticism?

PRACTICAL CONSIDERATIONS

First of all, members of the teaching profession object because they are aware, as all citizens should be, of the utter futility of such oaths. Does any rational individual believe that a person who is either philosophically committed to, or a member of, any organization advocating violent revolution would hesitate for a moment to perjure himself by taking such an oath? It is absurd to believe that such an oath requirement would actually screen out any subversive person. Since this oath is directed toward adherents of communism, and since everyone is familiar with the Communist principle that ends justify means, then the oath is meaningless because all such persons would cheerfully take any oath no matter the degree to which it might be an actual falsification of the truth.

Therefore, such an oath is useless as a practical measure. Actually, it is even worse than useless because through perjury an individual might gain a dangerous immunity from investigation of his activities simply because he had taken the oath. A false sense of security is perhaps the most perilous of all putative assets a country can have.

PHILOSOPHIC IMPLICATIONS

Philosophically, the provision requiring a negative statement of belief is objectionable because loyalty is in itself a product of positive, even passionate, belief. It is not merely the residue after negative eliminations have been made. While no loyal citizen, in or out of the teaching profession, will support the violent overthrow of our Government, such a person may quite properly insist that all efforts to limit freedom of thought, as distinct from action, are inherently dangerous to freedom. Social control over the placing of any belief into action is permissible and, on occasion, necessary. Social control over the mere holding of an intellectual belief is not. The first amendment to the Constitution implies this position clearly. The most serious breach of our defense against communism will have been made when we decide that we can defend ourselves only if we undertake to limit freedom of thought.

Thus it may be concluded that these oath requirements are of no value as a practical screening device. We may also conclude that they are open to grave philosophical objections because they violate the inner essence and meaning of loyalty. Our young people who are preparing for a career in teaching and research should not be told at the outset that we do not trust them, that we do not have confidence in them. Our society is built upon confidence with respect to all our citizens. Coercion of ideas is both futile and, in the long run, dangerous.

Hawaii's Territorial Sea

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. INOUYE. Mr. Speaker, with the admission of Hawaii to statehood, a new concept of the territorial sea came into being. For the first time in history our Nation finds itself faced, not only with broad areas of international waters separating the States, but separating parts of a State. Dr. G. Etzel Pearcy, geographer, Department of State, has prepared a thought-provoking article entitled, "Hawaii's Territorial Sea," which is printed in the November 1959 issue of the Professional Geographer. Mr. Speaker, I ask consent to have Dr. Pearcy's article included in the CONGRESSIONAL RECORD:

HAWAII'S TERRITORIAL SEA

(By G. Etzel Pearcy, Department of State)

The territorial sea of the new State of Hawaii comprises 3,069 square miles of water, an area about five-eighths as great as the land surfaces which it encloses. These statistics take into account an offshore zone of sovereign waters 3 miles in breadth as traditionally recognized by the United States. Actual measurement is effected by constructing a line which at all points is 3 miles distant from a normal baseline extending along the coast at the low water mark.[1]

Before the territorial sea of Hawaii could be plotted it was necessary to determine precisely which islands make up the State. The new State and the old territory are not coextensive; some of the more widely dispersed isles and atolls have been excluded from the State. The language of the act establishing Hawaii as our 50th State is only partially definitive in delineating the area:

"The State of Hawaii shall consist of all the islands, together with their appurtenant reefs and territorial waters, included in the Territory of Hawaii on the date of enactment of this act, except the atoll known as Palmyra Island, together with its appurtenant reefs and territorial waters, but said State shall not be deemed to include the Midway Islands, Johnston Island, Sand Island (offshore from Johnston Island), or Kingman Reef, together wtih their appurtenant reefs and territorial waters."[2]

No identification of what would comprise the "Territory of Hawaii on the day of the enactment" is provided in the above statement.

A recent search through official documentation, facilitated by conversations and communications with Washington and Honolulu agencies, has yielded what appears to be a sharp delineation of the State.[3] Put in somewhat simple terms, Hawaii, except for Midway, is made up of the chain of islands extending in a general ESE–WNW direction. Our new State extends for about 10 degrees of latitude north of 19° N. and about 23 degrees of longtitude west of the 155° W. Even Texas does not span so many parallels and meridians. Eight major islands—most easterly of the chain—account for 99.72 percent of the land surface of the State of Hawaii. The Leeward Islands, as the western part of the chain is termed, have a land area estimated to total no more than 14 (nautical) square miles.

Several scattered islands lying generally to the south and west of Honolulu, such as Kingman Reef and Johnston Island were never firmly established as being or not being part of the territory of Hawaii. Sources, including legal opinions handed down since 1893, were frequently contradictory. Fortunately for the sake of clarity four of these southerly islands under question have been eliminated by the act establishing the State of Hawaii. It is doubtful that other of the outlying islands were ever seriously construed as belonging to the territory—Jarvis, Howland, Christmas, Malden, and others to the south of the main chain.

Another problem has been reference to a number of shoals, reefs, and banks as being in the Hawaiian group. For example, Dowsett Reef appears in lists as officially belonging to the city and county of Honolulu.[4] However, no land area can be identified, as the reef is awash in places and is nearly al-

Footnotes at end of speech.

ways covered by breakers. Without the existence of a low water mark for cartographic reference there can be no territorial sea established. Moreover, it follows that such an area could not fall within the sovereignty of any State unless it chanced to lie within the territorial waters of a body of land possessing sovereign status in its own right. Five other areas of shoals and reefs described in conjunction with early voyages fall into the same category, including three very difficult to locate, if, indeed, they exist at all.

Territorial waters of the State of Hawaii

Islands	Area [1] (nautical square miles)	Baseline (nautical miles)	Area of territorial sea (nautical square miles)
Hawaii	3,032.0	260.50	762.23
Maui and Kahoolawe	582.0	152.00	506.97
Maui	548.8	----------	----------
Kahoolawe	34.0	----------	----------
Oahu	454.0	107.50	366.25
Kauai	418.0	82.75	274.31
Molokai	196.0	85.50	286.52
Lanai	106.0	42.00	157.27
Niihau	54.0	40.00	154.49
Laysan	2.3	4.50	37.12
Kure	.6	3.00	33.77
Nihoa	.6	2.75	33.48
Lisianski	.6	2.75	32.72
Necker	.5	1.75	31.41
Kaula	----------	1.75	48.84
Pearl and Hermes Reef	----------	----------	133.41
French Frigate Shoals	----------	----------	154.08
Gardner Pinnacles	----------	----------	28.27
Maro Reef	----------	----------	28.27

[1] Area for 5 of the smaller islands or groups of islands not available or inconsequential.

With but few exceptions each island or cluster of rocky islets and atolls in Hawaii has its own territorial sea, separated one from another by areas of high seas. Each of the 17 islands or groups of islands listed in the accompanying table is surrounded by an independent area of territorial waters except Pearl and Hermes Reef, which has two such areas. In this low-lying island group there are individual islands sufficiently far apart to prevent the territorial waters from coalescing. In contrast Maui and Kahoolawe have a common territorial sea because they lie within 6 miles of one another. Situated between these two islands the small rocky islet of Molokini adds slightly to the area of the territorial sea by virtue of its own baseline from which to measure.

The arrangement of the 8 main islands of the Hawaiian Archipelago is such that 9 channels separate them one from another. Examples are Alenuihaha Channel between Hawaii and Maui, and Kaiwi Channel between Oahu and Molokai. Since only Maui and Kahoolawe are within 6 miles of each other, 8 of the channels are sufficiently wide to span the zones of territorial waters on either side and be traversed by areas of high seas. In some instances these narrows between territorial seas are less than 2 miles in width. The one of greatest breadth, Kauai Channel, lies between the islands of Kauai and Oahu where the high seas have a minimum extent of 57 miles.

Contrary to the situation found in most archipelagos, the principal islands are relatively free from small fringing or outlying islands. Except for Molokini, as mentioned above, only an occasional rocky islet lies offshore, and that only a matter of yards, or at most fractions of a mile. They do not add appreciably to the area of the territorial sea, and in no case do they extend U.S. sovereignty into interisland channels. Two examples are Mokuania and Mokumanu Islands off the northern coast of Oahu. Measuring the territorial seas of the Aleutian Islands, the Philippines, or the Fiji Islands is much more complicated than around the eastern Hawaiian chain.

West of the main group the Leeward Islands are not only much smaller in area but far more widely scattered. They stretch for more than 1,100 miles along the main axis of the archipelago whereas the 8 main islands cover a distance of but 350 miles. As a result, water expanse between the tiny islands or groups of islands are much broader, averaging 110 miles if, for the sake of illustration, Midway (U.S. sovereignty) is included. These stretches of water between relatively insignificant islands are without names, hardly to be considered as channels.

Palmyra Island, 870 miles distant from the nearest point of the main chain of the Hawaiian Islands, was not accepted as a part of the new State. Had it been otherwise, a stretch of 864 miles of high seas would separate two component parts of the State of Hawaii. Belonging to the city and county of Honolulu by virtue of the Land Registration Act of the Territory of Hawaii, 1925, Palmyra made Honolulu the most extensive city in the world, even exceeding Los Angeles. Recognition of this farflung municipality, county, and territory presumably could not be condoned as feasible for statehood, though future incorporation of Palmyra into Hawaii is not an impossibility.

One of the arguments against statehood for Hawaii reflected the noncontiguity of sovereign territory from one island to another. The existence of high seas between islands (and their territorial seas) was construed to imply a weakness in defense. However, concrete evidence on how the cleavages in sovereignty imperils our security was never brought forward. The same type of situation exists off the coast of California, Florida, and Rhode Island where offshore islands lie more than 6 miles from the mainland and have their own territorial seas, which in turn are surrounded by high seas.

Measurement of the territorial sea around small islands brings about land-water ratios far different than for measurement along a mainland coast, or even along the coast of a large island. It is safe to generalize that the smaller the island, the greater the proportion of territorial water to land surface. Examples of a geometrical nature abound in the Hawaiian Islands wherein size and shape set a pattern of offshore sovereignty highly disproportionate to the land area from which it is measured. Assuming an island to be circular it must cover a surface of 165 square miles to have a territorial sea of equal area. If larger, the island would exceed its territorial sea in size; if smaller the territorial sea would be greater. Gardner Pinnacles, two rocks in the Leeward Islands projecting above low water with an area of only a few square yards, have a territorial sea encompassing 28.27 square miles (or slightly more). This figure is nothing more than pi r^2 with $r = 3$ miles. Given a scattered group of such rocks and the exaggeration may be multiplied many times. In the case of French Frigate Shoals, a crescent-shaped series of atolls, a total land area of only a few acres, has a territorial sea of 154 square miles.

The larger the island the smaller the proportion of sovereign waters offshore, but even Molokai with its 196 square miles has a territorial sea of 286 square miles. In this instance the extenuated shape of the island adds to the area of its territorial waters. Largest of the islands, Hawaii, exceeds its territorial sea in area by a ratio of about 4 to 1. To carry the principle even farther, the relation of continental United States (excluding Alaska) to its territorial sea is 131 to 1.

Nevertheless, to return to the basic issue in the face of such fancy geometric examples, every point along the shores of Hawaii is exactly 3 miles from the high seas, and a vessel must steam (or sail) through just that much sovereign water to reach terra firma—or the outer limit of internal waters.

If the breadth of the territorial sea were to be extended to 6 miles by international law, land-water ratios among the Hawaiian Islands would be even more out of balance. A circular island would have to cover a surface of 660 square miles to be equal in area to its territorial sea, rather than 165 square miles as in the case of a 3-mile territorial sea. In the fragmented Leeward Islands even the smallest rock or atoll could have a territorial sea no smaller than 113 square miles. Thus, the sovereign waters around Gardner Pinnacles would be multiplied fourfold. Further, the islands of Maui, Molokai, Lansi, and Kahoolawe would possess a common territorial sea, leaving four open (high seas) channels separating the main Hawaiian Islands, whereas with a 3-mile territorial sea there are eight. It also follows that a 12-mile territorial sea would further increase the proportion of offshore sovereign waters to land areas. No island could have a territorial sea smaller than 452 square miles—4 times larger than that of a 6-mile and 16 times larger than a 3-mile territorial sea.

---

[1] For detailed discussion of the principles of determining the extent the territorial sea in accordance with international law see: G. Etzel Pearcy, "Geographic Aspects of the Law of the Sea," annals, AAG, vol. IX (March 1959), pp. 1–23.

[2] Hearings before the Subcommittee on Territorial and Insular Affairs of the Committee on Interior and Insular Affairs, House of Representatives, 85th Cong., 1st sess. on H.R. 29, U.S. Government Printing Office, Washington, D.C., 1957.

[3] Especially valuable help in defining Hawaii as a State was given to the author by Dr. John L. Taylor, Consultant on Territorial Affairs, Committee on Interior and Insular Affairs, House of Representatives.

Report From a Farmer

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. THOMPSON of Texas. Mr. Speaker, as the Congress approaches its tremendous task of rewriting agricultural legislation it might be well to read the comments of a constituent of mine who is in the rice business in Matagorda County, Tex. He is Billy Halfen of Collegeport. It may be that some of his facts and figures are subject to question but certainly his thinking is perfectly clear. He knows what he wants and I suspect that there are many farmers who will agree with him. The letter which appeared first in the Bay City Tribune follows:

To the EDITOR:

I wish to make this report in rebuttal of Secretary Benson's report to the Congress and trust that the gentlemen will do me the same honor of listening to this report.

The Secretary reports to the Nation and to the Congress that all is rosy in the realms of agriculture. I, as a grassroots, down-to-earth, dirt-scratching, dirt farmer wish to report on matters as I really find them. As one who has had to suffer for the mistakes made for me, plus the ones I make myself, I wish to report that things are not so rosy.

Let us review the things that this administration set out to do for the farmer. First, the President was not satisfied with 90 percent of parity for farmers but felt they should have 100 percent (a thing that all farmers were in accord with—whatever parity is). What the farmers got, in about 7 years of slow death, was about 50 percent of parity. Now, if you are supposed to get 100 percent of something, whether you know what it is or not, you feel cheated if you only get 50 percent of it.

We got this 50 percent of parity after being assured that if we took acreage cuts (amounting to 50 percent in my case) to hold down production, the Government would hold parity price at a high level on the balance of our acreage. You can begin to see the squeeze we are in. First our overall income was cut 50 percent by reduction in acreage. Then the price we were supposed to get for the balance of our acreage was cut to approximately 62 percent of parity. The administration's program has broken the American farmer from an honest, hardworking, God-fearing individual to a second-rate non-bill-paying, disillusioned citizen worth, as our Government feels, only 50 percent parity. Needless to say, no one likes to be regarded as only half a citizen by his neighbors, or to be regarded as a statistic by his Government.

Our woes are directly attached to the low parity price supports. These prices are, in effect, a ceiling rather than a floor price, the price which a legitimate buyer will not exceed but uses as a target to see how much he can undercut the support prices. He knows that if he fails to buy from the farmer he can always pick it up from the CCC in a few months time at support price or less. The Government could at least protect us in the marketplaces by making the buyers pay the costs of storage and handling of such commodities. The Government should raise the support prices to a high level, as they said they would, or take off controls entirely. They should adopt the policy that, "If we can't help, we won't hinder."

Mr. Eisenhower is right when he warns of public indignation, but most of it is mistakenly directed at the farmer rather than at the present administration which is responsible for the situation. I, for one, say that the Government has a dollars worth of goods for every dollar it has loaned the farmers. The farmer himself has cost nothing. The cost to the taxpayers has been from the mismanagement of the various farm programs and the personnel used to mismanage them. The Department of Agriculture is a vast octopus that reaches from Washington to every county in every State. It is a gigantic bloc of votes for whichever party is in power. There seems to be no chance of ever voting out controls. The people who control the farmers are more numerous than the farmers. Mr. Eisenhower says, in his agricultural report, that our plight is due to a number or years of Federal interference, and he is perfectly right.

Farmers are in the position of being unjustly penalized and criticized for doing their jobs and doing them well. We were asked to do such a job during the last war. People were very proud that we could feed the world and, in reality, it is the only thing that we have proven good. Our stockpile of food seems to me a blessing and one which every other country in the world would like to have. The thing which all the hungry nations of the world are fighting for is food, and this is something we have. Hunger is the primary motivating force behind atom bombs and rockets and all other weapons. Since it apepars that we have lost the arms race, it may be that we should try to win the food war, a war in which the much-criticized farmer will play an important part. The present administration spends some $40 billion a year for defense and we seriously doubt that we can defend ourselves. There is no doubt that we can feed ourselves and therefore we think that some of the criticism should be transferred from the farmers to the defenders of our country. No one ever thinks to question the professional soldier or rocketeer as to whether they are doing a good job or whether they are doing it as economically as possible, or as to whether it is more necessary than the growing of food. I suggest that there is more than one way to die and starving to death is one of them. We should be thankful that starvation is not one of our immediate problems as it is in half the world.

The money put into agricultural products is not wasted or lost. What we have is a vast grocery store in reserve, its food or fiber still usable. On the other hand, the subsidies put into the aircraft industry are stacked up in junk depots all over the country, practically a total loss. We have all seen the enormous waste of material and manpower of the Army, Navy, and Air Force. We see the waste of money and the costly bungling and stumbling of our Government. The fact that it costs $1 million a year to run one Texas Senator's office is evidence to me that we are not getting our money's worth. I have been unable to find $1 million worth of legislation with his name attached to it.

Here are a couple of things that the Government can do to help the farmer:

1. Raise parity prices to 100 percent or take off controls and stand back out of the way to let the farmer do what he can to help himself, a thing which he is powerless to do with the strangulatory controls now on him. Remember that a farmer was never a problem to anyone until the Government began to help him.

2. Quit telling the taxpayer how much money the farmer is costing him and put the blame where it belongs. Let them know what Government control of farming is costing and explain to them why Government controls are necessary from the Government's standpoint instead of from the farmers'.

3. Take the control of agriculture away from the State Department and let us sell our crops where and when we can instead of letting the State Department use our commodities as a political football as they have done in the past.

I have no answers for agriculture as a whole but I feel that these things would help me in the business of raising rice and would once again make it a profitable business and one that I can be proud of.

This report is not meant to be a parody on the President's report nor on Secretary Benson's. I feel that once in a great while Congress should hear from someone actively engaged in agriculture so as not to lose touch with the common farmer.

I wish to thank you for listening to the reading of this report and for your consideration of the same.

Yours very truly,

BILLY HALFEN.

COLLEGEPORT.

Pollution Problem No. 4: Water Development Needs Boost in Georgia

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Atlanta Journal of December 30, 1959.

The article follows:

POLLUTION PROBLEM NO. 4: WATER DEVELOPMENT NEEDS BOOST IN GEORGIA

(By Luke Greene)

Georgia has much on the debit side when it comes to an overall program for the conservation and protection of one of its most valuable resources—water..

In fact, the State's policies, laws, and organizations relating to thfs important commodity are somewhat limp.

DEDICATED WORK

Such a statement is certainly not intended to reflect on the dedicated work of those individuals and agencies that have tried to do their best with the limitations imposed on them.

Because of overall growth in population, expansion of industry, and the trend toward heavy concentrations of people and industry, it's important that we reappraise our acts and attitudes on stream pollution and the many other aspects of water conservation.

There's a need for gathering up the loose ends and making sure that we get maximum benefit from our efforts to eliminate pollution and protect our sources of water.

Through the years the main burden of regulating water has just naturally fallen on the State department of health.

This came about largely because in the early days there was great concern about the spread of disease germs through drinking water. Typhoid was a great scourge and cleaning up the water became one means of attacking it.

As time passed typhoid became less of a problem. But the regulation of water remained primarily a health function.

And it remains so today.

A few years ago Georgia set up a water laws revision commission. Its study resulted in passage of the Georgia Water Quality Control Act which serves as Georgia's principal guide as far as water supervision and control are concerned.

This act created a water-quality council, consisting of the heads of several State departments as ex officio members and a representative from each of several fields, such as municipal government, soil conservation, and the pulp and paper industry.

This council is responsible to the State board of health, a policymaking body with primary interest in the field of health.

The State department of health also has a water-quality division, consisting of three men who devote their full time to carrying out provisions of the law, mainly through technical assistance and education.

In its annual report the division describes its missions and objectives in rather broad terms. Maintaining a high quality of water and keeping surface streams in good condition seem to be the two main jobs.

But its limitations are reflected in this paragraph of the annual report:

"That the objectives of the program are being attained is attested by the absence of actual or suspected waterborne disease over a long period of years from the 635 water supplies of Georgia."

The Water Quality Control Act represents a bundle of compromises. Many think it falls far short of the job that needs to be done in Georgia.

Some effort was made in the last general assembly to firm up the water situation but the bill now rests in committee.

GOVERNMENT INTEREST

Other State government interest in water is concentrated mainly in the game and fish commission, which seeks more and better fishing, and the department of mines, mining and geology, which assembles basic water data.

To do the whole job properly, some think the State should have a water resources commission, possibly with tighter laws to prevent pollution.

Other States have such commissions that are proving effective in promoting all phases of water development, and seeing that conservation is more than an idealistic byword.

Georgia, facing as it does a great industrial future, shouldn't allow itself to fall behind in this field.

Eisenhower Appointee Endorses H.R. 4700

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. FORAND. Mr. Speaker, among the witnesses appearing before the Ways and Means Committee last July in support of my bill, H.R. 4700, was Mr. Charles I. Schottland.

Mr. Schottland was Commissioner of Social Security from July 1954 to December 1958, having been appointed to that position by President Eisenhower. He resigned from that office to become dean of the Florence Heller Graduate School for Advanced Studies in Social Welfare at Brandeis University. Prior to that time Mr. Schottland was director of the California Department of Social Welfare.

Because of his wide experience and background in the field of social welfare his testimony on the question of health insurance is, I believe, worthy of the most serious consideration.

So that all members may have the benefit of his views I include a summary of his testimony as a part of my remarks. It follows:

SUMMARY OF TESTIMONY OF CHARLES I. SCHOTTLAND, FORMERLY COMMISSIONER OF SOCIAL SECURITY, PRESENTED TO THE COMMITTEE ON WAYS AND MEANS, HOUSE OF REPRESENTATIVES, WASHINGTON, D.C., JULY 14, 1959

The problem: The problem of medical care for the aged stems from three factors. First, the number of aged in the United States is increasing rapidly. Every day there is a net increase of approximately 1,000 persons over 65 years of age. Second, the 15½ million persons over 65 have the usual diseases of age and senility—diseases which are long in duration and frequently require expensive medical care in hospitals and nursing homes. Third, the aged by and large do not have the income to pay for medical care. In 1956 and 1957, three-fifths of all persons 65 and over had less than $1,000 in money income. Almost one-half of the total income of the aged in the United States comes from income maintenance programs, primarily social security and other public programs. A study in 1957 indicated that among aged couples, 52 percent had medical bills of more than $200 a year. The problem, therefore, is clear—the aged in the United States do not have sufficient income to meet the mounting costs of hospitalization or other long-term medical care.

The solution: The United States has developed one of the highest standards of medical care in the world, but medical care in the United States is just like any other commodity—it is available to those who have the purchase price. Since many aged do not have the funds with which to purchase medical care, they are denied access to such care.

The traditional method of paying for medical care, namely, that of payment through the individual's resources, will not take care of the rank and file of the aged. Voluntary organizations and private hospitals cannot foot the bill for the 15½ million aged, nor should the aged be forced to go on public relief merely because they cannot afford medical care.

Voluntary insurance has made tremendous progress in the United States through voluntary prepayment plans. However, voluntary insurance cannot finance, without extremely higher premiums, the many millions already aged and receiving medical care.

Social insurance: It seems to me that the solution of this problem is clear. We have developed in the United States a method of insuring against widespread social risks. We have insured against industrial accident through workmen's compensation; we have insured against old age through old-age, survivor's and disability insurance; we have insured against total and permanent disability through this system and we have insured against the contingency of death of the wage earner. We have also insured against the contingency of unemployment through unemployment insurance. In four States of the Union, we have insured against temporary disability or sickness. All of these have been done through the mechanism of social insurance.

The social security program has become thoroughly accepted by the rank and file of the people of this country as it has by the rank and file of the people of practically every western industrialized country in the world. It is a sound method of insuring against certain risks and it is in the tradition of American values in that it provides for saving during a person's working and productive years so that when the contingency insured against arises, the person will be able to take care of his problems.

The Forand bill (H.R. 4700) sets forth a program based upon this principle of social insurance. I believe the principle embodied within this bill is sound. Here is an opportunity through a relatively small payroll tax (a tax which I believe the American people are willing to pay) to finance the program contemplated.

Conclusion: In my experience I have run across numerous tragedies among the aged because of the high cost of medical care. I have seen persons who saved for their old age, who owned their homes and had substantial assets, reduced to destitution because of prolonged illness; I have seen persons go on relief who had always been self-supporting until they reached their seventies and eighties and medical costs forced them to seek public assistance. I do not believe that a society such as ours, conscious of its medical needs, cannot afford good medical care without such hardship and humiliation. In the distant past men frequently resigned themselves to such a situation. But today our people have made the discovery that there is a way to insure against various social risks; namely through the device of social insurance—a device that is now keeping millions of Americans from the hardships and poverty which otherwise would have come because of unemployment, old age, death of the wage earner, disability or industrial accidents. The problems of medical care for the aged are national problems in which all citizens have an interest. The Congress has it in its power to make a contribution to the solution of the financial aspects of these problems through H.R. 4700. This bill utilizes the machinery of social insurance which has proved successful and which has been administered soundly, efficiently, and economically in connection with old-age, survivor's and disability insurance. In other democratic and free countries, the extension of this principle to medical care has been found successful. It does not involve any fundamental change in the physician-patient relationship. It would be the beginning of a solution to this very vexing problem, and I respectfully express the hope that the members of this committee, after due deliberation and the weighing of all of the testimony and evidence, will give to this approach to the solution of the medical care problems of the aged, the same favorable consideration which they have given to other social insurance programs which have originated in this committee of the Congress.

Economic Development in Italy

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. FINO. Mr. Speaker, last September, at the gracious invitation of the Italian Government, several Congressmen of Italian origin visited Italy. As the result of our visit we were able to see with our own eyes the great industrial, economic, and social progress Italy has made since World War II.

Included in our visit was the new World Trade Center-Permindex in Rome. The Honorable Ferenc Nagy, the president of the center, addressed our group. Because of the interesting points made by Mr. Nagy in his speech, I am including its text in the Appendix of the RECORD. I am certain that all of the Members of this Congress will find it interesting reading.

The address follows:

ADDRESS BY FERENC NAGY

Congressman FINO, distinguished Member of the American Congress, ladies and gentlemen, kindly permit me to extend the heartfelt greetings of the World Trade Center and the Permindex Co. to you, Members of Congress of Italian descent, as well as to your families. You, the Members of Congress of Italian descent, have come to Italy to visit your relatives here on the one hand, and on the other hand to acquire knowledge and experiences about those developments which have taken place since you or your parents have left Italy. Upon your return to the United States you may be justifiably proud of the development which has occurred in Italy during the last decades, but especially that which has occurred since the Second World War. Italy has become an exceptionally important factor in the European Community, and the economic development which has taken place in Italy is especially noteworthy. As you have had the occasion to observe, Italy has developed into a great industrial power. The older industrial concerns are carrying on their activities at a greatly increased and expanded pace; in addition scores of new businesses have been organized to strengthen the economy and industry of Italy, all of which has increased the standard of living for the Italian people.

The international commerce of Italy does not lag behind that of other European countries, and I am firmly convinced that the organization which we have founded and

brought to Italy—the World Trade Center-Permindex—will in a large degree, contribute to making Italy one of the most important centers of world commerce.

During the course of the diversified program in which you participated during your visit to Italy, you are now the honored guests of the World Trade Center-Permindex, and as its president I want to extend our heartfelt greetings to you. Now that you have visited our wonderful exhibition buildings, which cannot be matched anywhere in the world, allow me now, here at the dinner table, to outline for you the program and aims of the World Trade Center-Permindex.

The World Trade Center was established in Rome in order to promote international commerce. You can justifiably wonder why there was any necessity for establishing another trade center. If one pays close attention to the development of international economic life, several very interesting conclusions can be reached. The first is that industrial production all over the world is growing day by day. Innumerable factors force world industry to increase its products. One such factor is that investments in industry are ever increasing; another factor is that technical advances and knowledge present new and newer discoveries to industry; while a third factor is that we find industry employing new production methods; for example, that of automation. These factors taken all together force world industry to increase its production. However, it is natural and worth while to increase industrial production only if industry can profitably sell its products on the world markets. It is regrettable that world markets are not growing in the proportion to the growth of industrial production; and present commercial methods are not completely adequate for immediately finding new world markets for the growing number of products, or for placing these products into new world markets.

That is, while automation promotes the increase in industrial production, we cannot see a similar automation in international commerce. A characteristic, but at the same time sad symptoms of international economic life, is the fact that while in certain industrial countries overproduction creates recessions from time to time, which in turn causes unemployment and a business decline, in other parts of the world, but especially in the so-called underdeveloped countries, hundreds of millions would like to share in the blessings of industrial production, and raise their living standards, as well as becoming consumers of the industrial products of the world.

If we do not apply new and modern methods in international commerce in order to distribute the products of world industry into all parts of the world, the situation in the future can well become more serious. Nowadays there is ever-increasing mention in international politics of disarmament. We do not know when a partial or a possible total disarmament will become a reality. But if we assume that in the coming years the great powers will succeed in agreeing to even a partial program, this will result in world industry manufacturing, instead of armaments, capital, and consumer goods. Production of these goods will increase supplies to such an extent that, without a corresponding increase in markets, this could well create a serious economic world crisis. For this reason, we feel that new methods, modern, dynamic methods are necessary in international commerce in order to properly regulate the great questions of supply and the lack of demand in world industry.

In general, the World Trade Center-Permindex is known to international public opinion as another industrial exhibition, which differs from other exhibitions only by the fact while those are temporary, this exhibition plans to become a permanent one. We do not want to add to the number of exhibitions. We are organizing the World Trade Center in order to aid international commerce by using new and dynamic methods, through sources which extend all over the world. We want to carry on our activities permanently, but we can do this only if, in addition to the Trade Center, we can organize a permanent show window for world industry, a permanent exhibition where world industry will have the opportunity of presenting those new products which it wants to introduce into other parts of the world. This is why a permanent industrial world exhibition is necessary.

Obtaining the exhibitors is only one part of our activities. The major part of our energies will be expended in trying to insure purchasers for products which will be shown at our exhibition. For this reason we are in touch not only with the Western countries, where we are gaining the participation of export-import companies, the purchasing commissions of various governments, of buyers for the large department stores, and the trading companies, but we have also expanded our activities to include the so-called developing areas, since it is our firm conviction that in the coming years the mass consumers for the industrial products of the world will be those who have been shut away so long in underdeveloped areas from becoming possible consumers of the industrial products of the world. We have connections with practically every country in Asia, as well as the African countries, not only those countries which have already begun their lives as independent nations, but with those nations which will achieve nationhood and independence in the near future. We want to bring together these countries so that they can effect their business transactions for their countries through the exhibition in Rome.

We are well aware that our goal is a very ambitious one. We know that we have planned a monumental program, but we also know that we are living in times when such programs are necessary.

Naturally an effective, worldwide international commercial activity can only be carried on if we are completely informed about the economic situation all over the world, and if we bravely face those problems which constantly present themselves in present international economic life.

We must know how long world industry can exist on the present markets. We must know the methods which must be used for expanding the world market in order to increase the consumers of industrial products by hundreds and hundreds of millions. We must know to what degree we can proceed with the industrialization of the so-called underdeveloped countries without causing an economic recession. We must know how to solve those financial difficulties which, in many instances, create barriers in international commerce between individual countries. In order to analyze all these questions on the highest possible plane, it is our plan to organize an Economic World Council, consisting of outstanding experts in the world, a council which would convene from time to time to analyze the great problems of interantional economic life, and which would advise us in the making of decisions for planning our work program.

One of the distinguished members of your group posed the question to me while we were inspecting the buildings: How could this group of American lawmakers aid the World Trade Center-Permindex in its task of strengthening international commerce to become most effective? I believe, gentlemen, that you could best help us by convincing American economic circles, industry and commerce alike, to participate in the commercial activities and the exhibition of the World Trade Center and Permindex in Rome. American industry is more reluctant to turn to foreign markets than the industry of the Western European countries, or even the industry of Japan. The American market is a local market, which so far has served as a suitable basis not only for continuing its activities but for expanding its industrial plants. But American industry must understand that this situation can not last forever. Even the American markets have a point of saturation. American industry will be increasingly forced to export part of its production. And we, here in Rome, believe that we are presenting first-class possibilities to American industry for offering its industrial products from a central location to consumers in every part of the world. You, whose constituents are in part Americans of Italian descent, represent chiefly the industrial areas. You doubtless have connections not only with the workers but also with the local industrial concerns. I believe that any encouraging word on your part to American industry would be a great help not only to our organization in realizing its aims, but would also further the economic life of America.

I again extend the sincere, heartfelt greetings of our organization and thank you for visiting the World Trade Center-Permindex.

Connally Amendment

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. DORN of South Carolina. Mr. Speaker, Dean Clarence Manion is one of the greatest Americans of our time. His statement before the Committee on Foreign Relations of the U.S. Senate is superb and timely. I urge every Member of this great body to study earnestly this excellent statement by Dean Manion.

STATEMENT OF DEAN CLARENCE MANION ON BEHALF OF FOR AMERICA, BEFORE THE COMMITTEE ON FOREIGN RELATIONS, U.S. SENATE, CONCERNING SENATE RESOLUTION 94, WEDNESDAY, FEBRUARY 17, 1960

Mr. Chairman and members of the committee, my name is Clarence Manion. I am a practicing lawyer of South Bend, Ind., a member of the St. Joseph County Bar Association, the Indiana State Bar Association, and of the American Bar Association.

For 25 years, I was professor of Constitutional Law as the University of Notre Dame and for 11 years, I was dean of the Notre Dame College of Law.

I am appearing here today and submitting this statement on behalf of "For America," a national committee for political action of which I am vice chairman.

In my judgment and in the judgment of the people I represent here, it would be a grave mistake for the U.S. Senate to approve of the pending Senate Resolution 94, and thus repeal and delete the so-called Connally reservation that was added to our acceptance of the compulsory jurisdiction of the International Court of Justice.

We believe, in other words, that it is critically important now for the United States to continue to determine for itself what matters are essentially within the domestic jurisdiction of this country. We do

not believe that the International Court should be permitted to decide that question by itself.

I have read much of the testimony that has been presented to this committee in opposition to Senate Resolution 94 and I subscribe to practically everything that has been said against the resolution by these witnesses. This is particularly true of the testimony given here by Robert H. Kelley, of Houston, Tex.; by George Montgomery, Jr., of New York City; and the statements submitted respectively by Frank E. Holman and Alfred J. Schweppe of Seattle, Wash.; and the statement submitted by Emilio S. Iglesias, representing the American Legion.

Deliberately therefore, I shall attempt to refrain from repeating the factual statements and able arguments of these distinguished lawyers. I do this to conserve the time of this honorable committee and to direct the mainstream of my own brief testimony to the clarification of certain misrepresentations that are expressed in or easily implied from statements made here and elsewhere by those who favor the adoption of Senate Resolution 94.

THE ATTITUDE OF THE AMERICAN BAR ASSOCIATION

First of all, the attitude of the American Bar Association has effectively, been misrepresented by some of those who favor the repeal of the Connally reservation. The American Bar Association has taken no official action on pending Senate Resolution 94 which was introduced by Senator HUMPHREY in 1959. I submit that in view of the record, it is misrepresentation to cite the action taken on this same subject by the house of delegates of the American Bar Association in 1947, as equivalent to the attitude of the American Bar Association today.

Since 1947, the house of delegates of the American Bar Association has gone on record at least five times with expressions and resolutions at variance with its World Court resolution of 1947. By resolution in January 1949, the house of delegates of the American Bar Association urged the U.S. Senate not to ratify the pending Genocide Convention until a full study of the impact of that convention upon the domestic jurisdiction of American courts and upon the constitutional rights of American citizens could be made.

In September 1949, the house of delegates officially resolved that the Genocide Convention should not be ratified by the United States. The debate on this resolution showed clearly that the September 1949 resolution was a clear remonstrance against the possible invasion of American rights and of the domestic jurisdiction of the United States by international bodies that were then being spawned by the new United Nations Organization.

In February 1952, the house of delegates of the American Bar Association proposed that th Constitution of the United States be amended in order to protect private rights, States rights, and the internal affairs of the country from possible interference and invasion by the provisions of treaties betwen this country and foreign nations.

In September of 1952, the same house of delegates extended its resolution of February 1952, by urging that the proposed constitutional amendment include protection against executive agreements as well as treaties. This succession of actions by the house of delegates of the American Bar Association shows a rapid and complete change of its official attitude from one of faith and confidence in the new international organizations in 1947 to a position of official apprehension and emphatic distrust in 1952.

The internationalists were greatly disturbed by this series of official actions and they made a determined drive within the bar association to have the organization reverse itself in its 1953 national convention at Boston. To assist the internationalists in this effort, Secretary of State Dulles addressed the 1953 Boston convention and stressed his opinion that the constitutional amendment then known as the Bricker amendment, which the association had urged as a protection against treaties and executive agreements, would have a calamitous effect on the conduct of our foreign relations.

While Mr. Dulles' speech was still reverberating, a resolution was introduced to put the convention on record upholding the contention of the Secretary of State and condemning the Bricker amendment. That resolution was defeated by a majority of nearly 4 to 1.

This recital of events from the official records of the American Bar Association is made here now to show that if there is such a thing as the principle of "repeal by implication" in statutory construction (and every lawyer knows that there is such a principle), then the vote of confidence in international organizations generally, and in the International Court of Justice particularly, which was passed by the American Bar Association in 1947, has been officially, emphatically, and repetitiously repealed in the intervening years.

It is true that prominent members of the American Bar Association are now and have always been opposed to the Connally reservation. Nevertheless, for the past 12 years, the internationalist counsel of these lawyers has been consistently and officially rejected by the American Bar Association as a whole, and it is gross misrepresentation now to attribute the eccentric views of these individuals to the organized bar of the United States.

As Mr. Holman has already pointed out to the committee, the proponents of world government are militantly on the march again both within and without the American Bar Association, but it would be a mistake for the Senate of the United States to conclude that these internationalists have already convinced the American people that they should gamble with the sovereignty of the United States. Whenever they have a chance to vote on the subject, both the lawyers and the people of this country have and will always vote overwhelmingly to preserve our American independence from foreign intervention.

THE ATTITUDE OF VICE PRESIDENT NIXON ON SENATE RESOLUTION 94

The debate over Senate Resolution 94 has likewise developed confusion that could, in fact, be misrepresentation of the views of Vice President NIXON on the subject of the Connally reservation.

It is true that in New York City last April 13, the Vice President voiced with approval a prediction that the Eisenhower administration would soon make recommendations for a closer relationship between the United States and the International Court of Justice. That prediction came to life when President Eisenhower recommended adoption of Senate Resolution 94 in his state of the Union message to Congress in January of this year. However, in the meantime, Vice President NIXON had made another speech, this time in Chicago (October 5, 1959), in which he said this: "There are some who suggest that the only answer (to use of force or threats of force as a means of settling differences between nations) is that nations should agree to submit all their differences to some new, all-powerful world tribunal. However well intentioned such proposals may be, they are completely unrealistic in the present world context. As the distinguished Washington correspondent, Arthur Krock, said to me recently, great powers will submit details to arbitration, but never their basic interests." Then after an interval, the Vice President continued: "The United States should affirmatively explore ways in which its controversies with other nations can be submitted to and decided by the International Court of Justice at the Hague."

Is this a recommendation for the repeal of the Connally reservation? Or does the Vice President's agreement with Mr. Krock's statement, namely, that great powers will never submit their basic interests to arbitration, mean that we should reserve the right to judge for ourselves not merely domestic questions but all matters, domestic and international, which involve our basic interests, such as for instance, our basic interest in the Panana Canal, the Monroe Doctrine, our expensive military bases in all parts of the world, and so forth?

The general misunderstanding of the Vice President's position on the question of our relationship to the World Court was evidenced by another distinguished Washington correspondent last Sunday, February 14, (Chicago Sun-Times, February 14) when Walter Lippmann wrote: "The Senate Foreign Relations Committee has been holding hearings on a resolution which, curiously and remarkably enough, was introduced by Senator HUBERT HUMPHREY and has the ardent support of Vice President NIXON. This, as Mr. K. might say, is an instance where a shrimp has whistled." Is this a misrepresentation of the Vice President's attitude on the Connally reservation?

In view of his present and prospective responsibilities in the premises, the confusion about Mr. NIXON'S position on this proposal should be clarified by an unequivocal statement for the information of the country and for the records of this committee.

THE CONNALLY RESERVATION IS NOT A SELF-JUDGING PROVISION

An even more important misrepresentation of the Connally reservation is the frequently repeated charge that it is a self-judging provision. In this connection, we are solemnly charged to remember Sir Edward Coke's maxim that "no man should be judge in his own cause," and told that in the Connally reservation the United States is reserving the right to judge its own case. This is a grave misrepresentation of fact. The resolution of our adherence to the compulsory jurisdiction of the International Court repeats the jurisdictional competence of the Court word for word, as set forth in paragraph 2, article 36, of the statute of the International Court of Justice with this proviso added:

"That such declaration shall not apply to (a) disputes, the solution of which the parties shall entrust to other tribunals * * * (b) disputes with regard to matters which are essentially within the domestic jurisdiction of the United States."

That is the language of the resolution before the addition of the Connally reservation. Thus it is the uncontested part of our resolution of adherence that withholds from the jurisdiction of the International Court all disputes involving domestic questions. Please observe too, that the uncontested part of our resolution of adherence, significantly excludes the following language from article 36 of the Court statute:

(6) "In the event of a dispute as to whether the Court has jurisdiction, the matter shall be settled by the decision of the Court."

This exclusion was deliberately made in and by the Foreign Relations Committee of the Senate before Senator Connally proposed his reservation which is now the subject of the Humphrey resolution. I submit therefore, that if there is any substance to the charge of self-judgment, the offense was not committed by the Connally reservation. It was committed by the Senate when that body deliberately knocked out the section of the World Court statute above quoted, which spells out the right of the International

Court to decide for itself all jurisdictional disputes of every kind and character.

Thus the Connally reservation was merely a positive restatement of what was already declared; namely, that, as far as the United States is concerned, the International Court should not have the right to settle any dispute about the Court's jurisdiction in any case. The Connally reservation merely underscored that Senate declaration with specific reference to matters essentially within the domestic jurisdiction of this country. If the advocates of the Humphrey resolution are sincere in their professed effort to purge the resolution of what they call its self-judging characteristics, then they must do more than repeal the Connally reservation. They must go further and move to reinstate the significantly deleted paragraph 6 of article 36 of the Court statute.

One does not "judge his own case" when he denies the jurisdiction of a particular court to try that case.

In fact and in truth, however, the United States is not attempting to "judge itself" or "decide its own cause" when it withholds from this International Court the right to be the final arbiter of its own jurisdiction. There is no court in our entire judicial system that has such a sweeping prerogative. By the Constitution of the United States, the original jurisdiction of our own Supreme Court is restricted to two types of cases and any or all of its appellate jurisdiction may be withdrawn from it at any time by the Congress. An omnicompetent court with self-determined jurisdiction over all things and everybody under all circumstances would be the very definition of tyranny. In our concept of law and justice there is no branch of government—executive, legislative, or judicial—that has the right to define the limits of its own jurisdiction. There is certainly no reason why we should confer upon an alien body powers that we deny to our own legal institutions.

A litigant does not "judge his own case" when he challenges the jurisdictional right of a particular court to sit in judgment on a particular lawsuit. Such a plea to the jurisdiction is always in order in all stages and areas of our jurisprudence. Coke's maxim is violated only when one is a plaintiff or a defendant and judge in the same lawsuit.

The statute of the International Court itself plainly states that submission to its jurisdiction may be made conditionally, unconditionally, or not at all (art. 36, par. 3).

BAD WORDS FOR GOOD CAUSES AND VICE VERSA

The misrepresentation of the Connally reservation as a self-judging declaration is an effective application of the tactical formula which condemns a good cause with a bad word. This formula also works in reverse. That happens when a bad cause is beautified with the attribution of a pious phrase.

AT PRESENT THERE IS NO SUCH THING AS WORLD LAW

This brings me to the final and most fundamental of all the misrepresentations advanced by the proponents of Senate Resolution 94. Secretary Herter told this committee in substance that the Connally reservation is obstructing the attainment of a "working rule of law in the world," which would displace the "rule of force." In his commendatory letter to Senator HUMPHREY last November 19, President Eisenhower likewise linked the repeal of the Connally reservation with the President's expressed hope for "the rule of law in the world." Systematically for the past 2 years the melodic phrase "world peace through world law" has been made to resound throughout the country as the bright alternative to our selfish addiction to the Connally reservation. There has been righteous and repetitious assurance that a peaceful and legally ordered world will surely follow upon our trustful and unqualified submission to the International Court of Justice. The cold light of stark reality shows that all such promising prediction is sheer fantasy.

In the presently deranged state of mankind there is little prospect for world peace and there is no such thing as world law. Under present conditions, therefore, an unconstitutional submission of our disputes with other governments to the International Court of Justice would only serve to betray our own vital National interests and give immeasurable aid and comfort to our vicious, ruthless and implacable Communist enemies.

In his testimony before this committee, Secretary Herter quoted the late Secretary Dulles as follows:

"We in the United States have had from the very beginning of our history insisted that there is a rule of law which is above the rule of man—Thus since its inception our Nation has been dedicated to the principle that man, in his relationship with other men should be governed by moral or natural law."

That is self-evident truth. The moral, natural law proclaimed in our Declaration of Independence has been codified in and projected through our American constitutional system. Here in America therefore, as Mr. Dulles implied, government is man's agent for the protection of God's gifts. Its unique federated powers are limited to the service of human rights and its processes and decrees are enforced with moral as well as legal sanctions. This is what Americans understand as "law."

On the international plane such law loses its legal enforcing arm. An international Court cannot send a sheriff to levy an execution against the property of a sovereign state. Neither could it order the arrest of a criminal nation without starting a war which it is the very purpose of an International Court to avoid.

On the international plane, since legal sanctions are impossible, moral sanctions are imperative. Such moral sanctions are the only hope for what we call "International Law" because on the international level, law must depend solely upon international morality for its preservation and enforcement.

In how much of the world today is morality and the natural, moral law recognized as the motivation of governmental action? One-third of the earth's surface and much more of the world's population is now ruthlessly tyrannized by a self appointed materialistic hierarchy of professional Atheists who deny the existence of morality and worship the iron rule of force, deceit and conspiracy.

This cult of cruel conscienceless coercion continuously threatens violence against all mankind. It is from this entrenched conspiracy that shooting war may be expected to proceed at any moment that is propitious for its purpose and it is because of this materialistic plunderbund that the whole world trembles fearfully on the brink of nuclear destruction. This is the frightening war potential from which the "world peace through world law" advocates now derive their popular emotional appeal. We are asked to give the International Court unreserved jurisdiction over all of our American affairs because of the good influential example that this surrender will provide for the cause of world peace. Although the Communist plunderbund has refused to submit itself to any part of the jurisdiction of the International Court, it has nevertheless placed two of its judges, so called, on the 15 judge International Court, where they are now ready and eager to sit in judgment upon the right of the United States to retain its naval base at Guantanamo, Cuba, to keep the American flag flying in the Panama Canal Zone and to protect its expensive ring of military bases in half a hundred countries of the world. Prima facie at least, there are international questions subject now without the repeal of the Connally reservation to the judgment of the International Court where we have one judge and the Communists have two judges. The Humphrey resolution would add to these present exposures such subjects as immigration, tariffs and the immunity of Soviet spies now inside of our country.

THE ISSUE IS SELF-PRESERVATION

Senate Resolution 94 is more than a proposal for the elimination of a reservation in a treaty. Senate Resolution 94 calls, in effect, for the surrender of our sovereignty. There is no law to govern the decisions of the International Court of Justice with respect to the scope of its own jurisdiction or anything else.

When and if Senate Resolution 94 is passed, any country on earth can hail us before the bar of this tribunal for any reason whatsoever and we will be powerless to resist the Court's assumption of jurisdiction in such a case. In the presently precarious state of our National Security, now is certainly not the time to expand the right of our deadly enemies to pentrate our vital defenses under color of law.

Let us face it: Neither peace nor law is possible for a world that is locked in a death struggle between freedom and Communism. We can think about "world peace through world law" only after the diabolical menace of the Communist conspiracy has been swept from the face of the earth. In the meantime, we will have all that we can do to preserve this country and its freedom-protecting constitutional system from complete destruction. This is no time to let down our guard. Senate Resolution 94 should be defeated.

Resolutions Adopted at the Corn Belt Livestock Feeders Association

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. JENSEN. Mr. Speaker, on February 10 and 11, 1960, the Corn Belt Livestock Feeders Association met in their annual convention in Kansas City, Mo.

At that meeting resolutions were adopted of great importance, and if adhered to will bring untold benefits to our grain and livestock producers in every section of the United States, and hence to all the people over the long pull.

Mr. Speaker, I desire to call special attention to resolution No. 2—"Incentive Payments on Hogs"—which is a clear-cut statement in unrelentless opposition to such bills as have been introduced in Congress. I commend the association for adopting these well-considered, forthright resolutions, and which were submitted to me by Mr. Clark A. Brockman, for which I am most grateful.

Mr. Speaker, it is hoped the respective committees of Congress will take heed and act in harmony with these resolutions, and at an early date.

Mr. Brockman's letter and the resolutions follow:

CLARINDA, IOWA, *February 16, 1960.*

DEAR MR. JENSEN: Enclosed find recently adopted resolutions of The Corn Belt Live Stock Feeders Association. This name has now been changed to National due to the expanded feeder area that now exists.

While there was no resolution passed in regard to it, there was quite a bit of discussion, and it was general opinion that, the chainstores today have entirely too great an influence on the price of livestock.

It was general opinion that the packer consent decree should be modified to permit the large packers to open retail outlets.

The livestock interests would especially like to see enabling legislation to permit a checkoff on the live animals for promotion and advertising.

They do not look very kindly on the proposed Iowa checkoff, as they wish to join in a national effort along this line, and also have a voice in choosing the men to administer it.

There are already in existence beef, hog, and sheep councils on a national scale.

Very truly yours,

CLARK A. BROCKMAN.

RESOLUTIONS ADOPTED BY CORN BELT LIVESTOCK FEEDERS ASSOCIATION, KANSAS CITY, MO.

RESOLUTION 1. LIVESTOCK LOSS PREVENTION

Whereas the association has previously resolved in favor of an industry program that would reduce losses in livestock, meat and livestock products from bruises, diseases, parasites, and other factors; and

Since losses to the industry from these factors and conditions still involve millions of dollars annually: Therefore be it

Resolved, That we reaffirm our support of Livestock Conservation, Inc., under its realinement and do everything possible to assist it in its program of livestock loss prevention.

RESOLUTION 2. INCENTIVE PAYMENTS ON HOGS

Whereas there are bills in the U.S. Congress which would provide for incentive payments to hog producers under certain conditions, more particularly when the price of live hogs is below a given price per hundredweight and provided that producers sell their hogs for slaughter at weights from 175 pounds to 190 pounds; and

Whereas since such a program, while possibly bringing temporary relief on occasion, would stimulate rather than discourage pork production, would set the stage for artificial price-production relationships from which the industry might never recover, and might eventually lead to the establishment of production controls thereby creating an unhealthy situation; and

Whereas since the sale of hogs at the weights specified would be undesirable, impractical, and uneconomical: Therefore be it

Resolved, That the Corn Belt Livestock Feeders Association continue its unrelentless opposition to the bills under consideration and any other measures of a similar nature that would make incentive payments or subsidy payments to livestock feeders and producers, and threaten the freedom of operation of the entire livestock industry.

RESOLUTION 3. PACKERS CONSENT DECREE

Whereas three of the four large packing companies now bound by the restrictions of the consent decree of 1921 are now seeking modification of this decree; and

Whereas since we believe that the consent decree is discriminatory against the packers affected because all other packers are not restricted from entering other lines of business, if they choose: Therefore be it

Resolved, That the association approves the attempt of the three packing companies to modify the consent decree and instructs its officers to render any possible assistance to the packers involved.

RESOLUTION 4. PURCHASERS BOND

Whereas it is not now required that all purchasers of slaughter livestock be bonded so payment for the livestock they purchase is guaranteed; and

Whereas since there have been notable instances where purchasers of slaughter livestock have suddenly gone out of business in such a way as to make it impossible for order-buying agencies and selling agencies to collect amounts due them thus causing them to sustain huge losses; and

Whereas since order buying agencies and selling agencies so injured could find it impossible to continue operating thereby affecting outlets for finished livestock: Therefore, be it

Resolved, That the association recommends a regulation to the Packers and Stockyards Administration requiring all purchasers of slaughter livestock to furnish sufficient bond to cover their normal purchases.

RESOLUTION 5. PAYMENT FOR LIVESTOCK

In recent months there have been instances where individual packers have delayed in their payments for livestock purchases at some markets, even though rules of trading may require payment to the selling agency by noon the next day; and

Whereas should this situation be allowed to continue and payment requirements are relaxed, selling agencies might eventually be forced to delay their remittances to shippers, which would mean that feeders could eventually be in the position of partially or even completely financing some packing operations: Therefore, be it

Resolved, That the Corn Belt Livestock Feeders Association is in favor of a regulation that requires all purchasers of slaughter livestock to make payment within 24 hours for all such livestock purchased at all points.

RESOLUTION 6. THE PENCIL SHRINK PRIVILEGE

Whereas the Packers and Stockyards Administration has considered imposing a regulation that would eliminate the privilege of using a "pencil shrink" in livestock transactions and would require that all trading take place on actual weights of livestock; and

Whereas though we are aware of certain beneficial aspects of such a regulation, it nevertheless would render it impossible in many cases for buyers of feeder cattle to obtain the shrink in weight to which they are justly entitled; and

Whereas since this practice has long been established and appears to be generally acceptable in the trade: Therefore, be it

Resolved, That the association oppose any regulation that would prohibit the use of a "pencil shrink," and that the association prevail on the Department not to impose it.

RESOLUTION 7. LABELING OF FOREIGN MEAT AND MEAT PRODUCTS

Whereas though all meats and meat products offered for importation into the United States are inspected by an agency of the Federal Government as carefully as is possible to insure the wholesomeness of the products and protect the health of the Nation; and

Whereas since it is deemed highly desirable and necessary to not only inspect the meat from animals slaughtered domestically, but also to examine the nonedible portions and organs at the time of slaughter for the purpose of being absolutely certain that the meat and products are safe for human consumption; and

Whereas since foreign meat and meat products are not processed under equally rigid inspection at time of slaughter, and we believe that the American people are entitled to every measure of precaution in connection with the food they consume including notice that there may be some difference in inspection procedures with respect to meat from domestic slaughter and meat from foreign slaughter: Therefore be it

Resolved, That the association favors a requirement that all meat and meat products processed from foreign slaughter, and domestic products containing meat or meat products from foreign slaughter, be clearly stamped or the package labeled at the time of sale to American consumers giving notice that they are, or contain meat and/or meat products, of foreign origin.

RESOLUTION 8. QUOTAS ON IMPORTS OF MEAT, MEAT PRODUCTS, AND LIVESTOCK

Whereas the association recognizes the necessity of some trade between countries, and realizes that the United States is exporting certain quantities of meat and meat products, and further realizes that imports of larger quantities of meat, meat products, and livestock under certain conditions of production in this country may not be injurious to our domestic industry; and

Whereas since imports of meat, meat products, and livestock have risen sharply in the past 2 years and it is indicated that imports of these products will continue at levels higher than previous percentages of domestic production, even though our domestic production is increasing and our price levels have declined: Therefore be it

Resolved, That the association is in favor of flexible quotas on imports of meat, meat products, and livestock based on domestic supply and domestic prices; and be it further

Resolved, That the association urge the U.S. Tariff Commission to institute an investigation immediately under the escape clause, section 7, of the Trade Agreements Act of 1951, as amended, to officially determine whether present rates of imports are injurious, or threaten to cause injury, to the domestic industry.

RESOLUTION 9. MIDWESTERN REGIONAL BEEF COUNCIL

Whereas the Corn Belt Livestock Feeders Association has previously endorsed and supported a program of meat promotion to be financed by a voluntary deduction from the proceeds of livestock sold and is still attempting to inaugurate an advertising and promotion program for red meats in line with the policies and requirements set out in resolutions of past years; and

Whereas since it appears that a beef promotion program would be best facilitated by the operation of a midwestern regional beef council rather than through individual beef councils in each State: Therefore be it

Resolved, That the association generally approve the objectives of the midwestern beef council and urges its members to actively support it; and be it further

Resolved, That the association instruct its officers to continue efforts to draft the mechanics of a deduction program in a manner that is harmonious with the National Livestock and Meat Board and to seek enabling legislation to permit the deduction provided it is necessary.

Our First President

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. FLOOD. Mr. Speaker, in times of grave crisis such as the United States

faces in the world today, our leaders would do well to look back to the founders of our Nation for examples to emulate, particularly that great Virginian, George Washington.

Though there is little new that can be added to what is already known about the achievements of that illustrious statesman, it is always refreshing to read thoughtful editorials citing Washington as a standard for appraising aspiring men for high office.

One such editorial in the February 20, 1960, issue of the Tablet, Brooklyn, N.Y., emphasized Washington as a yardstick for this purpose.

The editorial follows:

OUR FIRST PRESIDENT

On Monday, February 22, our Nation celebrates the birthday of our first President. In this year of decision when, once again, the American electorate will select a Chief Executive, the ideals and the virtues of the man who was "first in war, first in peace and first in the hearts of his countrymen" need careful remembering.

George Washington was, first, last and always, an American. He had a high concept of the destiny of the American Republic as a harbor of hope, of freedom and of opportunity from the storms of tyranny which swept the world. His public addresses and his last farewell to his Countrymen breathed a spirit of Americanism which insisted that our first concern should always be the integrity, the security and the welfare of our Nation. He warned against foreign entanglements and their debilitating effect on the strength of our Republic. He was convinced that a strong United States, physically, morally, culturally, politically free and rugged, would always be and remain the shining hope of the oppressed peoples of the world. How far we have wandered from this concept of our first President is all too obvious today. Certainly with Senate Resolution 94, placing our sovereignty on the bargaining block and permitting international groups to pass judgment on what belongs solely to the American people, shows how far we have departed from the teachings of the Father of our Country. There is crying need to go back to the fundamental Americanism of George Washington.

Our first President was a man who believed in Almighty God. He was humble enough to get down on his knees and pray in the hour of need. His was more than a political lipservice to religion and to the name of God. In the face of the threat of militant atheism, our Republic needs men who, like Washington, live their belief in God and know the power and the strength that come from humble reliance on the providence of Almighty God in sincere and humble prayer.

George Washington spoke the truth. He was no dissembler. He did not deal in doubletalk. He spoke his mind freely and frankly. He was not concerned with political advantage. His countrymen knew just where he stood on every issue. He was not given to name calling for mudslinging. He held every American's right to speak and to express an honest opinion as sacred and worthy of respect. He would have had nothing but contempt for campaign oratory. His word was his bond. He did not give a pledge lightly.

The dedication to our Republic is as necessary today as it was in Washington's time. We need men of Washington's integrity to make that dedication effective in a lying, loose-tongued, double-crossing, cynical political atmosphere.

George Washington was a man of great dignity. There was nothing cheap, common, or mediocre about him, either in his private or public life. He held the office of Chief Executive to be one which demanded by its nature the reverential respect of all citizens. He lived with a consciousness of the dignity and of the personal integrity which the highest office in the land required of its occupant. Both because of the office itself and because of the world leadership which goes with this office now, we need a return to the dignity and the integrity of George Washington.

During this year when several leading citizens will offer themselves as candidates for the office of Chief Executive of our Nation, voters can do no better than to remember our first President and to use his character, his ideals, and his virtues as a yardstick by which to appraise the men for whom they may be asked to vote.

Education for Migratory Workers

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, February 25, 1960

Mr. WILLIAMS of New Jersey. Mr. President, on January 20 joined by Senators MORSE, RANDOLPH, NEUBERGER, and YARBOROUGH, I introduced two bills to help improve the educational opportunities for our Nation's migratory workers and their children. I now ask unanimous consent that Senators CLARK, MURRAY, MCCARTHY, and HUMPHREY be listed as additional cosponsors of these two measures.

Mr. President, I am very gratified that these bills have gained the support of the distinguished Senators I have mentioned, and I sincerely hope that, despite the short session anticipated, there will be time to give consideration to this vital area of concern.

I hope too, that the statement made with respect to the consequence of the hearings held so far by the Subcommittee on Migratory Labor, by Dr. Donald Thomas of the University of Wisconsin, will also hold true for these bills—that they will serve a remedial function rather than just a therapeutic one.

It is, perhaps, hard to grasp the actual human impact on the individual migrant child who is deprived of an adequate educational opportunity, or, conversely, who is treated to an educational experience not expected or hoped for.

As Secretary of Labor James P. Mitchell said just a year ago:

Look beyond the screen of statistics at the child behind in school, in poor health, housed in a coop, whose father works for 131 days a year for 50 cents per hour. That child hasn't much of a chance to develop his talents, to be useful to himself or his country. This is the ugliest kind of human waste.

I am sure the Members of this body will be interested in a look behind the screen of statistics at the benefits achieved from the good educational systems for migrant children that have been started in a few areas across the country.

Recently I received a letter from the superintendent of schools, Mr. Brautigam, in Dowagiac, Mich., reporting on the experimental school established there for the migrant children, which included the impressions of a teacher who had participated in the program.

Here was a teacher who had come face to face with the problem of educating migrant children and who discovered that there wasn't a "nicer group of children to work with. For the most, they were smart children, eager to learn, appreciative, and loved books. Somewhere they have either learned good work habits in school or just that eager to learn."

That the children did indeed appreciate their educational opportunity can be seen in a heartwarming letter written to the teacher by a migrant child, Mary Ann Castilleja. "You are still the goodest teacher I've had and you all ways will be," she writes.

In reading over the hearings held in the Midwest last fall, I came across another report, written by Mrs. George Cnudde, chairman of the Bay County Farm Bureau Citizenship Committee in Michigan, which describes the operation of a 5 weeks' demonstration summer school there. Mrs. Cnudde was much impressed by how anxious migrant children are to learn, and how very anxious their parents are to have them attend school to get an education that most of them did not have.

Mr. President, I ask unanimous consent that the two letters I mentioned, together with the statement by Mrs. Cnudde, be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

LETTER FROM TEACHER

I consider the experience and knowledge gained from teaching the migrant children who attended the Hill School, both valuable and gratifying.

It took great courage that first day to face the challenge of a mixture of children in nationality and geographical locations.

I have never found a nicer group of children to work with. For the most, they were smart children, eager to learn, appreciative, and loved books. Somewhere they have either learned good work habits in school or just that eager to learn.

They thoroughly enjoy getting together in September, away from their so-called homes and the fields—this, perhaps, their reason for being so attentive in their school work. Many were constantly reading or looking at books. The school was very well supplied with many interesting books for them. They also enjoyed more than most children the clay, games, puzzles, bats and balls, to which they had free access.

From their conversation it was very evident they were happy with the opportunity to go to such a school and also to be able to ride to and from school in the bus.

There were many problems, too. Most families were large ones, especially the Mexican families, who took great care of each other, showing a natural family tie. The Arkansas children were great fighters among themselves, with sisters and brothers, for their own rights and supremacy. The differences in the parentage was apparent. Another problem developing was the lunch and food. During the peak of the grape and apple season, all had adequate lunches. As that neared the end, some were not having enough or any lunch at all. Those who had more than they wanted shared with them. It was still not enough lunch.

From this large group, I learned from the children, only one mother was dissatisfied with the migrant school. She wished for other and different associations than migrant children for her three daughters. However, the little girls were happy. When asked, they said, "We like it but mother doesn't."

We are very fortunate the families move to warmer climates during these winter months. A huge problem of food and clothing would develop.

Somewhere these parents should learn to spend their money in the right direction. When some of the children needed a lunch, they would appear without one, wearing a new, frilly, net petticoat under a shabby dress on an empty stomach, or a pair of lovely white galoshes on a sunny, dry day knowing they were headed for warmer climates.

It was a lonesome time the last of October at the little school, when they began to leave. We had worked together, learned more about each other, I had become very fond of those children, realizing there was much to be done for them. They left suddenly without much warning, especially the Mexican families, taking quite a group at a time. They leave early to avoid cold weather problems.

I sincerely feel it was a successful 2 months for these children. I am convinced in many ways that they liked it, also from the letters I have received from them. They write they are very anxious to return to the "best little school of all."

NOVEMBER 17, 1959.

DEAR MRS. WALSH: Just a few lines to say that I am missing you all a lot. I hope you all still remember me. I hope you all are well just the same as we are thanks to God Our Lord. I have started school already but I don't like it as much as I liked that school over there. Sammy Ramirez and all the others are over here already and from Al down, they started school. Al, Adam, Zeke, and Charles said hi and of course me, Connie, Paul, and Ruban. Ruban hasn't started school over here because they don't admit him yet, until he is 7 years old. So he always asks us when are we going to Michigan so he can go to school. Demitrias family are over in Emlay City. Say hi to Mr. Clough for me if he knows who I am. I hope we get to go to the same school; of course you know which school I'm talking about Hill school. I hope you all are having fun over there because we are having lots of fun over here. We got here safe and so did the Ramirez, Sammy's parents. We have a little black dog and he is a mean one. We named him Fatso because he is real fat and sometimes we call him tub of lard. My teacher over here is Miss Price and every day she buys a can of candy from Laura a girl that I knew for $1 but you didn't buy us any but you are still the goodest teacher I've had and you always will be. Well I guess that's all for now. By-by, hope you get to come over here where it's warm. Goodby.

Your friend and yours truly,

MARY ANN CASTILLEJA.

ELOISE, FLA.

STATEMENT BY MRS. CNUDDE

What is different about this school is the fact that it teaches only the children of migrant workers who come to Bay County with their parents to help in the fields. It was the only school held in the State of Michigan this year. There were 57 children enrolled. This school was financed through the National Labor Committee plus a contribution from the Essexville PTA. They had two teachers, one of Spanish descent, plus two teenage girls who donated their time. A special bus picked up and returned the children.

The parents of these children are very anxious to have their children attend this school and get the opportunity to get an education that most of them did not have. The migrant child's education is sadly neglected for many reasons. He moves so often that he would have to go to three or four schools a year; his clothing is inadequate; his language handicaps him and puts a barrier between him, the teacher, and other children. He feels unwanted because of his color or because his home is so poor. And so he grows up with a second- or third-grade education and has little opportunity to better his lot in life.

I was privileged to attend this school on three different occasions. The morning started like any other school with a salute to the flag, a prayer and singing America, lunch, reading, writing, Spanish, arithmetic, government, health, music, and art.

Teachers, Mrs. Irene Burns and Mrs. Cristine Manker, gave me an opportunity to help with these children when I was there. I have never seen children so anxious to learn. When they needed help with their work they either raised their hands or came to me so quietly that they did not disturb the other children.

A very delicious and nutritious meal was served at noon with members of the different PTA's helping the cook.

The children were delighted to have their picture taken, so I have a good supply of colored slides that I hope members of the Farm Bureau Citizenship Committee will get a chance to show to their groups.

The children are so warm and lovable that it is very easy to get emotionally involved. The second time I visited the school they started calling me the nice lady who took pictures. One youngster came up to me and gave me a little paper bag that she had made in art class to hold her crayons, saying something to me in Spanish.

One of the other children said, "She wants the nice lady to have this as a present."

I'll cherish it always.

School lasted 5 weeks and during that time three family nights were held. The parents and older brothers and sisters were invited to come to the school and see the work of the children. They were then entertained with movies, singing, and dancing. Later a lunch was served by the members of the Farm Bureau Citizenship Committee with 44 cakes and over 400 cookies donated by farm women.

Mr. WILLIAMS of New Jersey. Mr. President, a number of schools similar to those described are just now beginning to spring up in several States across the country, and last year at least four States took encouraging official action to promote the education of the migrant children.

In Oregon, $50,000 was appropriated to set up a pilot program for the education of such children. Ohio passed permanent legislation to establish standards and regulations for educating migrant children and appropriated $175,000 to reimburse the local school boards for the cost of providing this education for the next 2 years. New York put its heretofore experimental summer school program for migrant children on a permanent basis and appropriated additional funds. And, in my own State of New Jersey $25,000 was included in the budget of the migrant labor board for the State's migrant education program.

In addition, a number of valuable studies are underway to determine the best methods for dealing with the special educational problems borne by these children as they follow the crops from State to State. Colorado has a 3-year study underway, financed in part by the U.S. Office of Education. There is also an interesting Texas-Wisconsin study project in progress to find a feasible way of determining the educational needs of each child while the child is still in his home district, and transmitting that information to another State, so that the schools in Wisconsin, for example, can have a suitable educational program ready when the child arrives.

I would also like to mention a special migrant education demonstration program that has been started in New Jersey by the National Child Labor Committee, in conjunction with the department of labor and industry.

This program was initiated in January of last year to develop methods for providing the best schooling possible for the migrant children which would also serve as a model and stimulus to other States with the same problem.

A survey is being conducted to determine vital statistics on such matters as the number of school-age migrant children who are actually enrolled, the total number of migrant children or potential enrollment, their location, the degree of educational lag and nature of their educational needs, the local schools affected, and the prevailing enrollment and attendance practices in the State.

There is an auspicious note in the fact that the advisory committee that has been established for the project, represents 18 educational, grower, labor, religious, social welfare, civic, and governmental groups.

It will be extremely helpful to have specific illustrative facts on these migrant children to complement the generalized information now available.

For example, the National Child Labor Committee has found that more than 50 percent of the estimated 100,000 school-age migrant children are from 1 to 4 years behind in school by the time they reach the age of 14.

Testimony received from the hearings held so far show how serious the problem is, both with respect to actual attendance and the degree of grade retardation.

A study of migrant workers in Oregon in 1958, for instance, found that of about 800 children under 12 who accompanied their parents, 27 percent were working rather than going to school. Among the 14- and 15-year-olds, the percentage jumped to 40.

A nine-county survey in Ohio found that 51 percent of the migrant children attending school were in grades below normal for their ages.

The National Council of Agricultural Life and Labor conducted field research in four areas in Florida, Virginia, Illinois, and Texas, and found that one-eighth of the migrant children did not enter school until after their eighth birthday. One-third more did not enter school until they were 9 years old or over. The degree of backwardness for 75 percent of the children after their ninth year in school was from 1 to 5 years.

In Michigan, Dr. John F. Thaden, professor emeritus of Michigan State University, testified that 75 percent of the migrant children in Bay County, Mich., were in grades 1 to 6 years behind normal, according to a study made in 1954

by the Michigan Department of Public Instruction.

In Wisconsin, Dr. Thomas stated that in the 1951–52 school year, it was found that nearly twice as many migrant children were not enrolled in school as were.

I think these studies demonstrate very conclusively that a serious educational problem exists for these children. And, I think it is equally, as the mid-American conference on migratory labor concluded not too long ago in recommending a program of Federal assistance, that "the influx of large numbers of children in some school districts places an unusually heavy burden on school budgets."

As Governor Meyner of New Jersey so well said, in his statement to the subcommittee:

Local school districts, which usually have overcrowding difficulties of their own, are hard put to accomodate this influx of migrant children.

"In addition, the local schools may not be able to provide the unique educational services required by children who may be slow learners or misfits because of their unfortunate economic and social backgrounds.

The cycle of the migrant's work season is such that a child may lose time from both ends of the normal school semester. Because of the interstate character of the problem, Federal assistance for educational facilities for migratory workers in various States is obviously essential.

The Aged Can Afford To Pay Their Own Medical Bills, Says the AMA

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. FORAND. Mr. Speaker, the AMA News, official newspaper of the American Medical Association, in a recent article again took up the cry in opposing H.R. 4700, a bill I introduced that would provide medical and hospital insurance to America's retired workers.

Since the introduction of this measure this newspaper has concerned itself with more of FORAND than it has with matters of medicine. With the testimony of the Secretary of the Department of Health, Education, and Welfare still reverberating in the Ways and Means Committee room, concerning the plight of the aged and their inability to meet their medical costs, the AMA released a study which attempts to prove that more than 90 percent of those persons over 65 can afford to meet medical bills of $500.

Along with many others, the industrial union department of the AFL–CIO has disputed the statistics of this research group.

I submit for the RECORD an article that appeared in the February issue of the I.U.D. Bulletin. It follows:

FORAND BILL PRIMARY TARGET OF AMA PROPAGANDA WAR

The American Medical Association is back at its old stand opposing legislation that would make the Nation's health a matter of congressional concern. Just as the AMA rallied its forces to defeat former President Truman's national health program, it is now fighting to block enactment of the proposed Forand bill.

If passed, the Forand bill would provide medical and hospital insurance to America's retired workers.

To the AMA such objectives are synonymous with socialized medicine, a war cry that effectively blocked Truman's program. While the association has not come up with any proposals of its own to provide better care for the Nation's elderly, it is determined to fight any suggestion that—it believes—will eventually lead to Government intervention in the field of medicine and limitations on a patient's freedom to deal with the doctor of his choice.

It is this freedom of choice that is the cornerstone of the AMA's basic philosophy. Translated into economic terms, this freedom means the right of the doctor to charge fees on the open market, select the patients he desires to treat, and reject those unable to pay the bills.

Although the Forand bill provides for the freedom of choice between retired workers and doctors cooperating with the program, the AMA is convinced that any Federal legislation dealing with health insurance is "only a foot in the door."

To buttress its case against the Forand bill, the association has started a campaign aimed at providing that the vast majority of social security recipients can well afford to pay their own medical health costs.

Using a study released by the National Opinion Research Center of the University of Chicago, the AMA News attempts to prove that better than 90 percent of those persons over 65 can afford to meet a medical bill of $500.

Closer study of the University of Chicago survey indicated that the News was guilty of twisting the facts to strengthen its own position. While the survey did report that only 9.6 percent of those interviewed knew of no way to finance a $500 medical bill, another 8.2 percent said they would get the funds from public assistance or charities, 14.6 percent said they would have to rely on children or other relatives, 7.2 percent said they would have to mortgage their homes or other property, and 40.2 percent reported that they would be forced to dip into life savings.

The AMA News also failed to point out that the survey did not cover older people in hospitals, county homes, and other institutions or that more than half the 1,734 persons interviewed owned real estate.

Another statement contained in the survey, but ignored by the association, asserted that the yearly money income of persons 65 years and over "is less than any other segment of the adult population," averaging $1,390 annually.

Loyalty Oath

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. DORN of South Carolina. Mr. Speaker, something is wrong with any educator, student, or citizen who would object to taking a loyalty oath to the United States. I took an oath of allegiance when sworn in the Army, the National Guard, and when I took office here in this House. I wish we could take the oath again every day. It does us all good to pledge allegiance to the flag—the more often the better.

Mr. Speaker, patriotic students all over the United States are coming to the defense of the loyalty oath. The following letter from Donald Brand, a student, appeared in the Daily Texan, the University of Texas student newspaper:

[From the Daily Texan, Feb. 5, 1960]

LOYALTY OATH

To the EDITOR:

New moves are expected in Congress soon to repeal that part of the national defense education program which calls for affidavits from applicants for Federal aid stating that they do not believe in, belong to, or support any organizaiton which teaches illegal overthrow of the Government. (Public Law 85–864, title 10, Miscellaneous Provisions, section 1001, subsection F.)

"The provision has brought protests from many leading colleges, universities, and religious groups. And it has caused 20 colleges—including some of the Nation's best-known ones—to boycott the program." (From the San Antonio Light, Sunday, Jan. 31, 1960.)

Because we do not believe that these protests represent the opinion of the great majority of American college students, merely the voice of an articulate minority, and because we do not believe that it represent the voice of Texas students, in any case, we would like to see the following paragraph put into a petition and circulated, by some student organization, perhaps, on the University of Texas campus or its environs: Texans are not afraid to sign loyalty affidavits.

If I were applying for a Federal subsidy to continue my educatoin, I would have no objection to signing the affidavit stating that I do not believe in, belong to, or support any organization which teaches illegal overthrow of the Government. I realize that education is the little leaven that leavens the whole lump and therefore it is very important that a student applying for Federal aid be able to reassure the American taxpayer that his money will not be used against him.

I realize, also, that there will be considerable prestige value attached to these grants-in-aid, as with any scholarships, and again the American taxpayer has the right to rest assured that he is not opening the way for enemies of our domestic system to penetrate into highly sensitive research areas.

I can see no valid reason why anyone, except a person fearful of perjury proceedings, should find it embarrassing to give this reassurance; in fact I, as a Texan student and loyal American would be proud to be able to do so.

There is a need for action immediately. The time is very short.

DONALD D. BRAND.

The Exploration of Space for Peaceful Purposes

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 25, 1960

Mr. CRAMER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a speech made by Maj. Gen. L. I. Davis, Assistant Deputy Chief of Staff, Development, U.S.

Air Force, at the dedication of the Electronics Communications Building in St. Petersburg, Fla., January 28, 1960.

I hope that each Member of the House will take a few minutes to read General Davis' remarks concerning the exploration of space for peaceful purposes, in that it is a very fine factual review of our present missile status and significantly indicates the possibility of a substantial breakthrough in the very near future.

General Davis' remarks follow:

REMARKS BY MAJ. GEN. L. I. DAVIS, ASSISTANT DEPUTY CHIEF OF STAFF, USAF DEVELOPMENT, AT THE DEDICATION FOR ECI BUILDING, ST. PETERSBURG, FLA., JANUARY 28, 1960

Mr. Godsey, Congressman CRAMER, ladies and gentlemen, it is an honor to be asked to speak to you today—to help you dedicate this new building. The management of Electronic Communications, the board of directors and Mr. Godsey should be congratulated on their decision to make this investment. It is a vote of confidence in the future of the defense electronics business.

The rapid growth of ECI is a tribute to the ability of the scientists and engineers that this management has been able to assemble. Certainly St. Petersburg is becoming known as an important part of the electronics industry in the South. Maybe the lovely climate of Florida has something to do with it. I am particularly pleased and honored to be asked to speak to you at this time, January 1960. Everyone has something to say on most any subject this month—defense, the space race, military posture and deterrence—you name it and you can find columns on the subject in the Washington papers.

In all seriousness, this is an excellent opportunity to emphasize a couple of viewpoints which have become clear and well established in the past year. Everyone recognizes the rapid growth and advances of technology—it has even been called an "explosion." Sputniks and satellites have headlined this progress. Naturally, we associate these devices with big rocket engines and great advances in propulsion technology. However, electronics is an art and science has paced this progress. It makes possible the automatic controls, tracking radars, television, and above all the telemetry that takes the pulse of the performance of the experimental rockets and tells the engineer how to correct the design deficiencies.

As to electronics and the space age, it seems to me that they are as inseparable as ham and eggs. Electronics are essential to space operations; and, in turn, space offers a real challenge in terms of size, power requirements and reliability; as well as the unknown problems so interesting to the scientist and engineer.

Before we go too far into the fascinating business of space, I should clarify the interest of the military. The President has clearly stated that it is our national policy to explore space for peaceful purposes. The Congress has wisely created the National Aeronautics and Space Administration, and charged this nonmilitary organization with the exploration job. The same act—the legislation known as the Space Act—clearly reserves to the Defense Department those aspects of operations in space which affect the security of the United States.

We cannot exclude space from our defense considerations. We are already in it in a very important fashion with our IRBM and ICBM weapons. And certainly, the Russian rocket which transmitted television pictures of the far side of the moon could relay back to the U.S.S.R. information of places not so distant. Whether or not such information has military usefulness depends upon progress in electronics—so we are right back again on the importance of dynamic progress in electronics to our defense position.

Early in this talk I mentioned viewpoints which are becoming clear from the discussions on defense matters. The President of the United States in his state of the Union message to the Congress stated "We now live in a divided world of uneasy equilibrium, with our side committed to its own protection, and against aggression by the other. With both sides of this divided world in possession of unbelievably destructive weapons, mankind approaches a state where mutual annihilation becomes a possibility. No other fact of today's world equals this in importance—it colors everything we say, plan or do."

Certainly this is a clear and powerful statement of the problem facing us today. The phrase "uneasy equilibrium" recognizes that modern weapons—ICBM's with nuclear warheads—do not add stability; the so-called nuclear stalemate is a balance such as a man achieves standing on a log—not the positive stability of a pendulum, or the balance a man achieves on ice skates. The latter analogy is better—it implies the idea of moving on—making progress as a part of keeping your balance.

Dr. Bernard Brodie in "Strategy in the Missile Age," emphasizes that modern weapons do not add to the stability. On the contrary, they furnish to a potential aggressor the exact type of destructive weapon that enables him to take advantage of surprise, and to do overwhelming damage with the first salvo.

One aspect of this uneasy equilibrium is the unsymmetrical intelligence and warning situation. A potential aggressor knows the location of our ICBM bases and is forewarned of any actions we may take. We can read in the newspapers the location of our new missile sites and the popular hobby of photography makes the gathering of information a very casual matter.

On the other hand, the Iron Curtain is no venetian blind—it is difficult to obtain similar information about Russian sites and preparation. At the same time, the strategic warning time that enabled us to prepare and to mobilize and win World War II has disappeared. Modern weapons have characteristics that make the initial attack almost a matter of pushing a button. Strategic warning time has disappeared as a factor that can be considered in defense planning.

Inasmuch as technology has brought us to this position, it certainly has a responsibility to find a solution which contributes to lasting peace. A great opportunity to contribute; and perhaps to restore a measure of stability to the defense picture, lies in the military use of aerospace for communication and warning purposes. Before expanding on this theme let's look at some films of our initial probing of the fringe of space.

(Film clips shown: (a) Atlas, first operational launch; Tital launch; Discoverer V launch; (b) motion pictures of earth taken from Atlas nose cone at 700 miles altitude; (c) parachute jump from above 96 percent of atmosphere (75,000 feet); (d) flight test of the X–15 research aircraft.)

It is obvious that our interest in space is not idle curiosity: we certainly are not considering space operations merely for the adventure of going there. The USAF uses the term aerospace to emphasize the continuum that exists from the atmosphere, in which we now operate, to those immediate regions of space that have military significance. As you saw in the film, we have been probing this frontier for years. You also saw some indication of the very reliable operation of our intercontinental missiles. The successful flights of the last 16 production Atlases, and the President's announcement of the accuracy figure of less than 2 miles C.E.P., are evidence of our progress.

Despite all this progress we must keep our thinking straight about using space for defense purposes. We must differentiate between exploration for scientific purposes and use for practical military operations. There are obvious necessary conditions that have to be met for both cases.

First: we must have the proper propulsion—a thrust to weight ratio greater than one, and high specific impulse—efficient fuel and engines which will accomplish the change in momentum necessary to go into orbit. We must have accurate guidance and control; and a communications means to transmit information to and from our space vehicle.

These are necessary conditions for both scientific and military space operations, but they are not sufficient. For practical military operations we must have great reliability and low cost.

Let us use Midas, the proposed attack alarm satellite, as an example. It is an early warning system—if you can call 15 or 20 minutes early warning. Midas satellites using infrared sensors will detect the flames of enemy ICBM rockets as they are launched; and broadcast an alarm. Naturally, we would have to have several in orbit at the same time; and the electronic detection and communication system would have to be very reliable. The electronic payload would have to operate, unattended, for many months.

For a practical military system, great progress must be made in reducing cost and increasing reliability. Present satellites cost about a thousand dollars per pound of payload in orbit. For practical reasons this must be reduced. The degree of improvement necessary is about the same as we have experienced in air transportation. Costs per ton-mile have decreased a hundred times between the first flights of the Wright brothers and the flights of modern passenger airliners.

From a reliability viewpoint, we must make our payload packages as reliable as our telephone systems—perhaps as much so as the electronics part of our transatlantic cables. This may call for two orders of magnitude improvement in mean time to failure—say 100 times as reliable.

The first Midas research and development launchings will begin very soon; the payload will be boosted into orbit by the Atlas.

Another aerospace system is Samos. This is a reconnaissance satellite. It will provide information vital for our defense; obtainable by no other means.

These devices use electronics packages of great sophistication. The problems of space and weight; of power requirements versus power availability; of communication over vast distances; of reliability, are many. The engineers here at Electronic Communications and other engineers in this area—in the plants of Minneapolis-Honeywell, General Electric, Sperry-Rand—are working on them. I am sure that they will find solutions.

While these scientists and engineers are conquering the technical problems; military planners are thinking, and weighing the impact of this new regime of military operations on defense strategy.

We are very conscious that there are necessary conditions to be satisfied in a defense product sense as well as the technical goals of specific impulse, accurate guidance, and reliability.

These new systems must serve a useful military purpose. They must fulfill a role which no other weapon system can accomplish or, if there is a competitor, they must be more efficient on a cost-effectiveness basis. In addition, they must have characteristics which cannot be countered by direct or indirect means. By indirect, I include the case where the enemy can render our counterweapon ineffective by merely building more attacking weapons at lower cost.

As soon as our scientists and engineers have solved some remaining design problems; and industry such as you have here in St. Petersburg has produced reasonable quantities of parts of systems such as Midas and Samos, military operations in space will be practical. At that time the unsymmetrical intelligence situation will be made more equal. We hope that such systems will add stability to the defense picture—make less uneasy the uneasy equilibrium of which the President spoke.

When will this happen? Well, I would like to close with a prediction: It probably will be much sooner than you think.

I believe this; because I believe we are on the verge of a breakthrough into military space operations of considerable magnitude and significance. I base this opinion on two considerations: First, analogy, or history. There are many historical examples. The A and H bombs are examples of a breakthrough. The airplane itself is a breakthrough. Supersonic flight was believed impossible a few years ago; now college students of supersonic aerodynamics needle their professors by saying, "This stuff is easy. What were you old fuddy duds worried about?"

The second consideration is the engineering problem itself. I believe that operation in space is easier than operations in the atmosphere. Once we have reliable power with the proper characteristics in terms of thrust to weight ratio and specific impulse, the rest comes easy.

Look at the aerodynamic problem. To fly faster and faster, at constant altitude in the atmosphere, is nearly impossible. Temperature and stresses become infinitely great. But to leave the atmosphere and fly in the vacuum of space—no problem—even aluminum can stand the temperature and stresses. From a guidance and control standpoint there are no disturbing influences. You have precise spatial orientation from the fixed stars, undimmed by atmosphere.

Of course, there is the probability of encountering meteorites of significant size, but that is much less likely than the probability that an airplane will fall on anyone of you here in Florida.

Radiation is another problem. Shielding will help, but the heavy particles and the unpredictable bursts of radiation from the sun are serious hazards. Consequently, manned military space operations of any duration will await greater knowledge of the environment. It will follow military operations using remotely controlled automatic devices.

In short, from an engineering viewpoint, I view operations in space as operation in a vacuum—stresses and strains and energy perturbations get vanishingly small. And in addition, we have data on 99 percent of excursion from our present operating regime to that of the region of interest.

In short, gentlemen, I predict that 10 years from now we will say: "Military space operations are practical—in fact easier than operating in the atmosphere. What were we waiting for in 1960? There was no bogeyman in the bell jar."

Thank you.

Adult Education

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. SIKES. Mr. Speaker, I rise to call the attention of the House to a great event which took place a few days ago in Atlantic City. It was the annual convention of the American Association of School Administrators, comprising nearly 23,000 school superintendents, administrators, and other educational leaders of our Nation. There were many things said and done at this meeting in which I am sure you will be interested, both individually and collectively, because of our present concern for education as a matter of public responsibility.

But I wish to call your attention especially to one phase of education that came in for considerable discussion at this convention. It was adult education. And I call it to your attention because of its importance today and in the days immediately ahead in preparing us for, and keeping us abreast of the rapidly accelerating changes that are taking place in our Nation and throughout the world.

Dr. Thomas Bailey, superintendent of Public Instruction of the State of Florida, made a speech on this subject during the convention at a small preconvention meeting sponsored by the U.S. Office of Education. The address was so outstanding that the officials of the association requested him to repeat it to the entire convention.

We in Florida are very proud of Tom Bailey. His outstanding leadership in the field of education has attracted attention to his work throughout the Nation. We are very proud of the recognition given him at this meeting.

Mr. Speaker, I have read this address and I consider it so full of facts and suggestions that are relevant to the urgent problems that our Nation faces today that I believe every Member of the Congress would benefit by reading it. I therefore under unanimous consent insert Dr. Bailey's address in the CONGRESSIONAL RECORD, as follows:

THE SCHOOL ADMINISTRATOR'S RESPONSIBILITY FOR PROVIDING AN ADEQUATE PROGRAM OF ADULT EDUCATION

(By Thomas D. Bailey, State Superintendent of Public Instruction of Florida)

In her recent article, "A Redefinition of Education," Margaret Mead poses the question:

"Is it not possible that an educational system that was designed to teach what was known to little children and to a selected few young men may not fit a world in which the most important factors in everyone's life are those that are not yet, but soon will be know?" [1]

Dr. Mead, in raising this question, is making the point that our great problem in education is related to the fantastic change in the rate of change in our society, and this, she says, is what necessitates a break with the past—a change from the "vertical" to a "lateral" transmission of knowledge.

Her point is significant, and worthy of our consideration.

All of us, I am sure, have realized that we are living in a period of transition—a period of rapid change. We hear this and we see evidences of it on every hand. Yet, how much are we really influenced by it in the application of our daily efforts? How diligently have we in education sought to understand the scope and magnitude of the unparalleled wave of scientific and technological change which is sweeping our Nation, and how much effort have we made to bring into a clear focus its implications for education?

To help us in considering this matter of the change in the rate of change, I should like to use an illustration given recently by Walter Shaw at a conference on technical education held in Florida. Suppose we say that mankind has had 50,000 years of recorded history. In order to bring this into a comprehensible span of time, let's compress the 50,000 years into 50 years which represents the lifetime of many of us here. If we accept this scale, then you stopped being cavemen about 10 years ago. Five years ago, pictorial writing was invented. Two years ago, Christianity was born. Fifteen months ago, we had the first printing press in western Europe. Ten days ago, electricity was put into practical use. Yesterday, the airplane flew for the first time in the morning, and radio was invented last night. Television came into being this afternoon, and the commercial jet was invented since I started talking.

Now, speed is a good indicator of technological growth, so let's take the speed that a man can travel as an index of our technological progress. How fast could a man travel 50,000 years ago? His top speed was probably as fast as a horse could take him. And the top speed of a horse was the fastest way man could travel right up to the year 1829.

In the year 1829, however, the tempo of things picked up a little. A contest took place in England that year between a steam locomotive and a man on a racehorse. And for the first time in 49,870 years man moved faster in a machine of his own making than he had previously been able to by natural means.

Then in 1910 the U.S. Army let a contract for the building of our first military airplane. The only specification in the contract was that it be able to fly at least 40 miles per hour. Upon its completion it actually flew 42 miles per hour.

In 1925 the winner of the Indianapolis Speedway race exceeded 100 miles per hour. Toward the end of World War II, 25 years later, 470 miles per hour was such a fantastic flying speed that it was kept top secret for months.

Then something happened. For almost 40,000 years man had virtually crawled about this earth with comparatively little change of speed, but now he suddenly "exploded." In 1945 he broke the sound barrier, and within 12 years he had space machines in operation that were traveling at 18,000 miles per hour. His speed graph had suddenly taken a right-angle turn. It was just that sudden. If we traced the history of events in other fields, whether it be missiles or medicine, we would find a high degree of correlation between them and the curve we just mentioned.

Yes; 1945 was the year. That was the year of the big change—the year progress exploded—that was the year that the change in the rate of change really occurred. That was the year somebody threw away the world we used to live in—the world in which we were born, reared, and educated. Our "old" world has literally ceased to exist. Science is rapidly reshaping our entire lives. Automation has created a new technology. Millions of jobs in business and industry which for generations have remained essentially unchanged have suddenly changed completely overnight. Thousands of new kinds of jobs are being created, and thousands of others are being eliminated altogether. And for the vast majority of all of these substantially higher education and training are required. The uneducated and unskilled worker is disappearing from the scene.

When I started to school, the number of common laborers in the American labor force exceeded professional workers by almost 3 to 1. Today the situation is practically

Footnotes at end of speech.

reversed—with more than twice as many professional workers as laborers. By 1975, we are told, only 4 percent of our total labor force will be unskilled laborers. During this same period, craftsmen, operatives, managerial, sales, and clerical positions have increased substantially, both in number and percent of total labor force represented.[3]

The new technology has brought with it phenomenal increases in the volume of things produced. During the period of my lifetime, the total value of all production in the United States has more than doubled, and we are told that by the year 2000 it will have quadrupled. For each living man, woman, and child in the United States in the year 2000, this means an average income of $5,000—or $20,000 for a family of four. For the years immediately ahead, a 24-hour, 4-day workweek is now being forecast.

Not only has the increase in volume of production been amazing, but the kinds of things being produced is equally astonishing. A good example of this is the record of the International Business Machines Corp. According to its 1958 annual report, 61 percent of the total income of that corporation during the preceding year was from products that were unheard of 5 years earlier.

Yes, this is the age in which we live. It is truly an age of change—an age in which people will not live their lives in the world into which they were born, nor will they die in the world in which they matured. Someone commented to me recently that ours is the first generation of parents in recorded history who cannot, with reasonable certainty, tell our children what the future will be like for them as adults.

Now, we could talk of many implications for education which seem to grow out of this, but owing to the limitations of time I shall discuss only one—the one which, to me, seems to stand out above all others. This is the fact that in the age we are entering, no one's education can ever be considered complete. This simply cannot be—things will be happening too fast. Recorded knowledge upon which everyday decisions must be based will change too rapidly for this to be possible. Under such circumstances, systematic, continuing education will be required for everyone who hopes to fulfill his responsibilities and perform a useful role in the community and in society. This is the most important—the most compelling implication I see in the changing character of our society.

Our earlier concepts which regarded adult education as performing strictly a remedial function for those who had little or no formal education can no longer be valid. In these times, adult education must serve both the educated and the undereducated. As a matter of fact, upon those whose responsibilities are the heaviest will fall the greatest necessity for continued learning. The job of the teacher will be particularly difficult and demanding, for instance, for seldom will he be able, as in times past, to teach what was learned years ago. Instead, he will more often be required to teach what was learned yesterday, for only this will be useful and valid.

Robert Blakely has said that the individual whose education in the modern world is not continuous will be a dangerous individual. I want to underscore that. I firmly believe that in the years ahead, any individual, regardless of college degrees or status in life, who has not pursued a continuous education in the broad sense will be a dangerous individual. Moreover, those who occupy positions of leadership and public responsibility will, without continuous education, be the most dangerous of all—more so even than the totally illiterate individual—for the consequences of their decisions and their actions, based upon obsolete knowledge, will affect a far greater number of people.

What I am saying, then, is that in the years ahead, on a scale never before required, continuous education will be the common denominator for everyone's needs. By all odds it will be the greatest single resource for meeting the challenge of the space age. Not only will more education be required, but a new kind of education as well—new in organization, in content, and method. It will have to be organized to serve all age groups in ways and at times when learning for each group is most essential and meaningful. The content of what is taught will be influenced not only by the rapid and extensive changes in substantive knowledge, but also by the increasing sophistication of students of all ages in a variety of fields resulting from the influence of the mass media, particularly television, on their lives.

Community schools must, in truth and in fact, become schools for the community. They must serve the whole community—day and night—winter and summer. They must at last become the "uncommon schools" that Henry David Thoreau[3] proclaimed the need for more than a century ago.

Education for all is a tremendous challenge —a big order, if you please. And it is an urgent one. More urgent, I am afraid, than most of us realize. Geared intimately with it is the prospect (or question) of our very survival as a nation. It is indeed a challenge from which we in public education cannot escape, for the very magnitude of the task is such that the network of community public schools throughout the Nation constitutes the most logical instrumentality by which the job can be attacked.

Let us look briefly, then, at the job before us. In so doing, perhaps we can bring into a better focus our particular responsibilities as public school administrators.

Our first glance reveals an unhappy picture. As we move into the space age, only 10 States in the United States give systematic support to the education of adults; yet we find that more than 60 million Americans, 25 years of age or older, have not completed high school. Forty-four million have not completed the ninth grade. Almost 10 million are functionally illiterate. These are the individuals upon whom the heaviest blow will fall in the years immediately ahead. These, truly, will be our social ciphers, our economic liabilities—unless something is done. And their number is too great for something not to be done.

A second glance shows that despite compulsory school laws and the tremendous improvements we have made in elementary and secondary education over the past years, an appalling number of our young people are still leaving school prior to graduation. Retention studies by the Office of Education show that approximately 40 percent of our youth who enter the fifth grade leave prior to graduation from high school.[4] At the same time, other studies[5] reveal that no organized effort is being made by the public schools in almost two of every three school districts throughout the United States to encourage this 40 percent of our youth to continue their formal education as adults. At a time when the Nation must make the most efficient possible use of its human resources, it is unthinkable that this dreadful waste of our potentialities should continue.

A third dimension of the task before us has to do with the millions of Americans who must be reeducated and retrained as a result of automation and the new technology. During the 1960's, the extent of automation in industry will increase sharply. According to a recent article in Life magazine, more than $7 billion will be invested this year (1960) alone in automated machinery. This means that thousands upon thousands of jobs will disappear from the American labor market. Present holders of these jobs, if they are to remain employed, must move into newly created jobs in the sales, servicing, and distribution branches of industry which will expand rapidly as a result of the increased volume of production made possible by automation.
